Aboriginal title lands are lands which the natives possess for occupation and use at their own discretion, subject to the Crown's ultimate title (see *Guerin v. The Queen*, *supra*, at p. 382); federal and provincial legislation applies to aboriginal title lands, pursuant to the governments' respective general legislative authority. Aboriginal title of this kind is founded on the common law and strict conditions must be fulfilled for such title to be recognized: see *Calder v. Attorney-General of British Columbia*, *supra*, and *Baker Lake v. Minister of Indian Affairs and Northern Development*, [1980] 1 F.C. 518. In fact, aboriginal title exists when the bundle of aboriginal rights is large enough to command the recognition of a *sui generis* proprietary interest to occupy and use the land. It follows that aboriginal rights can be incidental to aboriginal title but need not be; these rights are severable from and can exist independently of aboriginal title. As I have already noted elsewhere, the source of these rights is the historic occupation and use of ancestral lands by the natives.

Les terres visées par un titre aborigène sont les terres que possèdent les autochtones et qu'ils peuvent occuper et utiliser à leur gré, sous réserve du fait que c'est Sa Majesté qui, en dernier ressort, en détient le titre (voir *Guerin c. La Reine*, précité, à la p. 382). Les lois fédérales et provinciales s'appliquent aux terres visées par un titre aborigène, conformément au pouvoir général de légiférer respectif de ces deux ordres de gouvernement. Un titre aborigène de cette nature est fondé sur la common law et doit respecter des conditions strictes pour être reconnu: voir *Calder c. Procureur général de la Colombie-Britannique*, précité; et *Baker Lake c. Ministre des Affaires indiennes et du Nord canadien*, [1980] 1 C.F. 518. De fait, le titre aborigène existe lorsque l'ensemble des droits ancestraux est suffisamment important pour commander la reconnaissance d'un droit foncier *sui generis* d'occupation et d'utilisation des terres visées. Il s'ensuit que des droits ancestraux peuvent être des éléments accessoires d'un titre aborigène, mais pas nécessairement. Ces droits sont dissociables du titre aborigène et peuvent exister indépendamment de celui-ci. Comme je l'ai déjà mentionné, la source de ces droits est l'occupation et l'utilisation historiques par les autochtones de leurs terres ancestrales.

120

Aboriginal title can also be founded on treaties concluded between the natives and the competent

Un titre aborigène peut également être fondé sur un traité entre les autochtones concernés et le gou-

government: see *Simon v. The Queen*, [1985] 2 S.C.R. 387, and *R. v. Horseman*, [1990] 1 S.C.R. 901. Where this occurs, the aboriginal rights crystallized in the treaty become treaty rights and their scope must be delineated by the terms of the agreement. The rights arising out of a treaty are immune from provincial legislation — even that enacted under s. 88 of the *Indian Act* — unless the treaty incorporates such legislation, as in *R. v. Badger*, [1996] 1 S.C.R. 771. A treaty, however, does not exhaust aboriginal rights; such rights continue to exist apart from the treaty, provided that they are not substantially connected to the rights crystallized in the treaty or extinguished by its terms.

Finally, aboriginal right lands are those lands on which only specific aboriginal rights exist (e.g., the right to hunt for food, social and ceremonial purposes) because the occupation and use by the particular group of aboriginal people is too limited and, as a result, does not meet the criteria for the recognition, at common law, of aboriginal title. In these cases, the aboriginal rights on the land are restricted to residual portions of the aboriginal title — such as the rights to hunt, fish or trap — or to other matters not connected to land; they do not, therefore, entail the full *sui generis* proprietary right to occupy and use the land.

Both the Canadian Parliament and provincial legislatures can enact legislation, pursuant to their respective general legislative competence, that affect native activities on aboriginal right lands. As Cory J. puts it in *Nikal*, *supra* (at para. 92): “[t]he government must ultimately be able to determine and direct the way in which these rights [of the natives and of the rest of Canadian society] should interact”. See also, *Calder v. Attorney-General of British Columbia*, *supra*, at pp. 328-29, *per* Judson J., and at p. 401, *per* Hall J; *Guerin*, *supra*, at pp. 377-78, *Sparrow*, *supra*, at p. 1103, and

vernement compétent: voir *Simon c. La Reine*, [1985] 2 R.C.S. 387, et *R. c. Horseman*, [1990] 1 R.C.S. 901. Dans un tel cas, les droits ancestraux cristallisés dans le traité deviennent des droits issus de traités et leur portée doit être déterminée eu égard aux conditions de cet accord. Les droits découlant d'un traité sont soustraits à l'application des lois provinciales — même celles édictées en vertu de l'art. 88 de la *Loi sur les Indiens* — sauf si le traité incorpore ces lois, voir l'arrêt *R. c. Badger*, [1996] 1 R.C.S. 771. Cependant, un traité ne fait pas disparaître les droits ancestraux. De tels droits continuent d'exister, indépendamment du traité, pourvu qu'ils ne se rattachent pas de façon importante aux droits qui ont été cristallisés dans le traité ou éteints par les conditions de celui-ci.

Enfin, les terres visées par un droit ancestral sont les terres auxquelles ne peuvent se rattacher que des droits ancestraux spécifiques (p. ex., le droit de chasser à des fins alimentaires, sociales et rituelles), parce que l'occupation et l'utilisation des terres par le groupe autochtone concerné sont trop limitées et, en conséquence, ne respectent pas le critère applicable en vue de la reconnaissance, en common law, d'un titre aborigène. Dans de tels cas, les droits ancestraux visant ces terres se limitent aux aspects résiduels du titre aborigène — tel le droit de chasser, de pêcher ou de piéger — ou à d'autres aspects ne se rapportant pas au territoire. Ces droits ne comportent donc pas le plein droit de propriété *sui generis* d'occuper et d'utiliser les terres.

Tant le législateur fédéral que les assemblées législatives provinciales peuvent édicter, conformément à leur pouvoir général respectif de légiférer, des mesures législatives applicables aux activités des autochtones sur les terres visées par des droits ancestraux. Comme le dit le juge Cory dans l'arrêt *R. c. Nikal*, précité (au par. 92): «[l]e gouvernement doit, en dernier ressort, être capable d'établir ou de régir la façon dont ces droits [ceux des autochtones et du reste de la société canadienne] devraient interagir». Voir aussi *Calder c. Procureur général de la Colombie-Britannique*, précité, aux pp. 328 et 329, le juge Judson, et à la p. 401, le juge Hall, *Guerin*, précité, aux pp. 377 et

123

These types of lands are not static or mutually exclusive. A piece of land can be conceived of as aboriginal title land and later become reserve land for the exclusive use of Indians; such land is then, reserve land on aboriginal title land. Further, aboriginal title land can become aboriginal right land because the occupation and use by the particular group of aboriginal people has narrowed to specific activities. The bottom line is this: on every type of land described above, to a larger or smaller degree, aboriginal rights can arise and be recognized.

Le classement d'une terre dans un type donné n'est pas immuable. De plus, une terre peut appartenir à plus d'un type. Ainsi, on peut imaginer que des terres qualifiées de terres visées par un titre aborigène deviennent par la suite des terres de réserve mises de côté pour l'usage exclusif des Indiens. Ces terres sont alors des terres de réserve situées sur des terres visées par un titre aborigène. Par ailleurs, des terres visées par un titre aborigène peuvent devenir des terres visées par un droit ancestral, si le groupe autochtone concerné ne les occupent et ne les utilisent que pour des activités spécifiques. Bref, la situation est la suivante: sur chacun des types de terres que j'ai décrits précédemment, des droits ancestraux peuvent naître et être reconnus, dans une plus ou moins grande mesure.

124

This being said, the instant case is confined to the recognition of an aboriginal right and does not involve by-laws on a reserve or claims of aboriginal title, nor does it relate to any treaty rights. The contention of the appellant is simply that the Sto:lo, of which she is one, possess an aboriginal right to fish — arising out of the historic occupation and use of their lands — which includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes.

Cela dit, le présent pourvoi ne vise qu'à faire reconnaître un droit ancestral et il ne met en jeu ni règlement administratif décrété dans une réserve ni revendication d'un titre aborigène, et il ne concerne aucun droit issu de traité. L'appelante soutient simplement que le peuple Sto:lo, dont elle fait partie, possède — du fait de l'occupation et de l'utilisation historiques de ses terres — un droit de pêche ancestral qui inclut le droit de vendre et d'échanger du poisson à des fins de subsistance.

125

Prior to 1982, the doctrine of aboriginal rights was founded only on the common law and aboriginal rights could be extinguished by treaty, conquest and legislation as they were "dependent upon the good will of the Sovereign": see *St. Catherine's Milling and Lumber Co. v. The Queen*, *supra*, at p. 54, also *R. v. George*, [1966] S.C.R. 267, *Sikyea v. The Queen*, [1964] S.C.R. 642, and *Calder v. Attorney-General of British Columbia*, *supra*; see also, regarding the mode of extinguishing aboriginal rights, Kenneth Lysyk, "The Indian Title Question in Canada: An Appraisal in the Light of *Calder*" (1973), 51 *Can. Bar Rev.* 450.

Avant 1982, la doctrine des droits ancestraux n'était fondée que sur la common law, et les droits ancestraux pouvaient en conséquence être éteints par traité, par conquête et par voie législative puisqu'ils [TRADUCTION] «dépendaient de la bonne volonté du Souverain»: voir *St. Catherine's Milling and Lumber Co. c. The Queen*, précité, à la p. 54, *R. c. George*, [1966] R.C.S. 267, *Sikyea c. The Queen*, [1964] R.C.S. 642 et *Calder c. Procureur général de la Colombie-Britannique*, précité; voir aussi, en ce qui concerne le mode d'extinction des droits ancestraux, Kenneth Lysyk, «The Indian Title Question in Canada: An Appraisal in the Light of *Calder*» (1973), 51 *R. du B. can.* 450.

Since then, however, s. 35(1) of the *Constitution Act, 1982* provides constitutional protection to aboriginal interests arising out of the native historic occupation and use of ancestral lands through the recognition and affirmation of "existing aboriginal and treaty rights of the aboriginal peoples of Canada": see Brian Slattery, "First Nations and the Constitution: A Question of Trust" (1992), 71 *Can. Bar Rev.* 261, at p. 263. Consequently, as I shall examine in some detail, the general legislative authority over native activities is now limited and legislation which infringes upon existing aboriginal or treaty rights must be justified.

The general analytical framework developed under s. 35(1) will now be outlined before proceeding with the interpretation of the nature and extent of constitutionally protected aboriginal rights.

II. Section 35(1) of the *Constitution Act, 1982* and the *Sparrow* Test

The analysis of the issue before us must start with s. 35(1) of the *Constitution Act, 1982*, found in Part II of that Act entitled "Rights of the Aboriginal Peoples of Canada", which provides:

35. (1) The existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognized and affirmed.

The scope of s. 35(1) was discussed in *Sparrow*, *supra*. In that case, a member of the Musqueam Band, Ronald Edward Sparrow, was charged under s. 61(1) of the *Fisheries Act* with the offence of fishing with a drift-net in excess of the 25-fathom depth permitted by the terms of the band's Indian food fishing licence. The fishing occurred in a narrow channel of the Fraser River, a few miles upstream from Vancouver International Airport. Sparrow readily admitted having fished as alleged, but he contended that, because the Musqueam had an aboriginal right to fish, the attempt to regulate net length was inconsistent with s. 35(1) and was

Depuis ce temps, cependant, le par. 35(1) de la *Loi constitutionnelle de 1982* confère la protection de la Constitution aux intérêts des autochtones qui découlent de l'occupation et de l'utilisation historiques par ceux-ci de leurs terres ancestrales, en reconnaissant et en confirmant «[l]es droits existants — ancestraux ou issus de traités — des peuples autochtones du Canada»: voir Brian Slattery, «First Nations and the Constitution: A Question of Trust» (1992), 71 *R. du B. can.* 261, à la p. 263. En conséquence, comme je l'examinerai de façon approfondie, le pouvoir général de légiférer à l'égard des activités des autochtones est maintenant limité, et toute mesure législative portant atteinte à des droits ancestraux ou issus de traités doit être justifiée.

Avant de passer à l'interprétation de la nature et de l'étendue des droits ancestraux protégés par la Constitution, je vais exposer ci-après le cadre d'analyse général qui a été élaboré pour l'application du par. 35(1).

II. Le paragraphe 35(1) de la *Loi constitutionnelle de 1982* et le test établi dans *Sparrow*

L'analyse de la question dont nous sommes saisis commence par l'examen du par. 35(1) de la *Loi constitutionnelle de 1982*, qui figure à la partie II de cette loi et qui est intitulée «Droits des peuples autochtones du Canada». Ce paragraphe est ainsi rédigé:

35. (1) Les droits existants — ancestraux ou issus de traités — des peuples autochtones du Canada sont reconnus et confirmés.

La portée du par. 35(1) a été examinée dans *Sparrow*, précité. Dans cette affaire, un membre de la bande indienne des Musqueams, Ronald Edward Sparrow, avait été accusé, en vertu du par. 61(1) de la *Loi sur les pêcheries*, d'avoir pêché avec un filet dérivant plus long que les 25 brasses autorisées par le permis de pêche de subsistance des Indiens de la bande. L'accusé avait pêché dans un étroit passage du fleuve Fraser, à quelques milles en amont de l'Aéroport international de Vancouver. Sparrow a volontiers reconnu avoir pêché de la manière reprochée, mais il a prétendu que, en raison du droit de pêche ancestral des Musqueams, les

126

1996 CanLII 216 (SCC)

127

128

129

thus rendered of no force or effect by s. 52 of the *Constitution Act, 1982*.

mesures visant à réglementer la longueur des filets étaient incompatibles avec le par. 35(1) et, par conséquent, inopérantes en vertu de l'art. 52 de la *Loi constitutionnelle de 1982*.

130 I pause here to note that in *Sparrow*, Dickson C.J. and La Forest J. stressed the importance of taking a case-by-case approach to the interpretation of the rights involved in s. 35(1). They stated at p. 1111:

We wish to emphasize the importance of context and a case-by-case approach to s. 35(1). Given the generality of the text of the constitutional provision, and especially in light of the complexities of aboriginal history, society and rights, the contours of a justificatory standard must be defined in the specific factual context of each case.

See also *Kruger v. The Queen*, [1978] 1 S.C.R. 104, and *R. v. Taylor* (1981), 62 C.C.C. (2d) 227 (Ont. C.A.).

Je m'arrête ici un moment pour signaler que, dans *Sparrow*, le juge en chef Dickson et le juge La Forest ont souligné l'importance de procéder à un examen cas par cas en matière d'interprétation des droits visés par le par. 35(1). Ils ont affirmé ce qui suit, à la p. 1111:

Nous tenons à souligner relativement au par. 35(1) l'importance du contexte et d'un examen cas par cas. Étant donné la généralité du texte de la disposition constitutionnelle en cause et compte tenu surtout des complexités que présentent l'histoire, la société et les droits des autochtones, les limites d'une norme justificative doivent être fixées dans le contexte factuel particulier de chaque cas.

Voir également *Kruger c. La Reine*, [1978] 1 R.C.S. 104 et *R. c. Taylor* (1981), 62 C.C.C. (2d) 227 (C.A. Ont.).

131 The Court, nevertheless, developed a basic analytical framework for constitutional claims of aboriginal right protection under s. 35(1). The test set out in *Sparrow* includes three steps, namely: (1) the assessment and definition of an existing aboriginal right (including extinguishment); (2) the establishment of a *prima facie* infringement of such right; and (3) the justification of the infringement. I shall briefly discuss each of them in turn.

Notre Cour a néanmoins élaboré un cadre fondamental d'analyse des affaires constitutionnelles dans lesquelles on demande qu'un droit soit protégé en tant que droit ancestral en vertu du par. 35(1). Le test énoncé dans *Sparrow* comporte trois étapes: (1) l'évaluation et la définition d'un droit ancestral existant (y compris son extinction), (2) l'établissement d'une atteinte *prima facie* à ce droit, et (3) la justification de cette atteinte. Je vais examiner brièvement chacune de ces étapes à tour de rôle.

132 The rights of aboriginal people constitutionally protected in s. 35(1) are those in existence at the time of the enactment of the *Constitution Act, 1982*. However, the manner in which they were regulated in 1982 is irrelevant to the definition of aboriginal rights because they must be assessed in their contemporary form; aboriginal rights are not frozen in time: see *Sparrow*, at p. 1093; see also Brian Slattery, "The Constitutional Guarantee of Aboriginal and Treaty Rights", *supra*, Kent McNeil, "The Constitutional Rights of the Aboriginal Peoples of Canada" (1982), 4 *Sup. Ct. L. Rev.* 255, and William Pentney, "The Rights of the

Les droits des peuples autochtones qui sont protégés par la Constitution au par. 35(1) sont ceux qui existaient au moment de l'édiction de la *Loi constitutionnelle de 1982*. Cependant, la façon dont ces droits étaient réglementés en 1982 n'est pas pertinente pour la définition des droits ancestraux, étant donné que ceux-ci doivent être appréciés dans leur état actuel; les droits ancestraux ne sont pas figés dans le temps: voir *Sparrow*, à la p. 1093; voir aussi Brian Slattery, «The Constitutional Guarantee of Aboriginal and Treaty Rights», *loc. cit.*; Kent McNeil, «The Constitutional Rights of the Aboriginal Peoples of Canada» (1982), 4

Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee” (1988), 22 *U.B.C. L. Rev.* 207. The onus is on the claimant to prove that he or she benefits from an existing aboriginal right. I will return later to this first step to elaborate on the interpretation of the nature and extent of aboriginal rights.

Also, the Crown could extinguish aboriginal rights by legislation prior to 1982, but its intention to do so had to be clear and plain. Therefore, the regulation of an aboriginal activity does not amount to its extinguishment (*Sparrow*, at p. 1097) and legislation necessarily inconsistent with the continued enjoyment of aboriginal rights is not sufficient to meet the test. The “clear and plain” hurdle for extinguishment is, as a result, quite high: see *Simon*, *supra*. The onus of proving extinguishment is on the party alleging it, that is, the Crown.

As regards the second step of the *Sparrow* test, when an existing aboriginal right has been established, the claimant must demonstrate that the impugned legislation constitutes a *prima facie* infringement of the right. Put another way, the question becomes whether the legislative provision under scrutiny is in conflict with the recognized aboriginal right, either because of its object or its effects. In *Sparrow*, Dickson C.J. and La Forest J. provided the following guidelines, at p. 1112, regarding infringement:

To determine whether the fishing rights have been interfered with such as to constitute a *prima facie* infringement of s. 35(1), certain questions must be asked. First, is the limitation unreasonable? Second, does the regulation impose undue hardship? Third, does the regulation deny to the holders of the right their preferred means of exercising that right? The onus of proving a *prima facie* infringement lies on the individual or group challenging the legislation. In relation to the facts of this appeal, the regulation would be found to be a *prima facie* interference if it were found to be an adverse restriction on the Musqueam exercise of their

Sup. Ct. L. Rev. 255 et William Pentney, «The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee» (1988), 22 *U.B.C. L. Rev.* 207. Il incombe au demandeur de prouver qu’il bénéficie d’un droit ancestral existant. Je reviendrai plus loin sur cette première étape pour élaborer sur l’interprétation de la nature et de l’étendue des droits ancestraux.

De plus, avant 1982, Sa Majesté pouvait éteindre des droits ancestraux par une mesure législative, mais son intention de le faire devait être claire et expresse. Par conséquent, la réglementation d’une activité autochtone n’équivaut pas à son extinction (*Sparrow*, à la p. 1097), et une mesure législative nécessairement incompatible avec la jouissance continue de droits ancestraux ne suffit pas pour satisfaire au test. La condition relative à l’intention «claire et expresse» d’éteindre un droit est, en conséquence, très exigeante: voir *Simon*, précité. Le fardeau de prouver l’extinction des droits visés incombe à la partie qui l’allègue, en l’occurrence Sa Majesté.

En ce qui concerne la deuxième étape du test formulé dans *Sparrow*, une fois qu’il a établi l’existence d’un droit ancestral, le demandeur doit démontrer que la mesure législative contestée porte atteinte *prima facie* à ce droit. Autrement dit, la question est alors de savoir si la disposition législative examinée est, de par son objet ou de par ses effets, incompatible avec le droit ancestral reconnu. Dans *Sparrow*, le juge en chef Dickson et le juge La Forest ont formulé les lignes directrices suivantes relativement à la question de l’atteinte, aux pp. 1112 et 1113:

Pour déterminer si les droits de pêche ont subi une atteinte constituant une violation à première vue du par. 35(1), on doit poser certaines questions. Premièrement, la restriction est-elle déraisonnable? Deuxièmement, le règlement est-il indûment rigoureux? Troisièmement, le règlement refuse-t-il aux titulaires du droit le recours à leur moyen préféré de l’exercer? C’est au particulier ou au groupe qui conteste la mesure législative qu’il incombe de prouver qu’il y a eu violation à première vue. En ce qui concerne les faits du présent pourvoi, le règlement serait jugé constituer une atteinte à première vue si on concluait qu’il impose une restriction néfaste à

right to fish for food. We wish to note here that the issue does not merely require looking at whether the fish catch has been reduced below that needed for the reasonable food and ceremonial needs of the Musqueam Indians. Rather the test involves asking whether either the purpose or the effect of the restriction on net length unnecessarily infringes the interests protected by the fishing right.

l'exercice par les Musqueams de leur droit de pêcher à des fins de subsistance. Nous tenons à souligner ici que la question en litige n'exige pas simplement qu'on examine si la prise autorisée de poissons a été réduite au-dessous de ce qui est requis pour subvenir aux besoins alimentaires et rituels raisonnables des Musqueams. Le critère nécessite plutôt qu'on se demande si, de par son objet ou son effet, la restriction imposée quant à la longueur des filets porte atteinte inutilement aux intérêts protégés par le droit de pêche.

135 Thirdly, after the claimant has demonstrated that the legislation in question constitutes a *prima facie* infringement of his or her aboriginal right, the onus then shifts again to the Crown to prove that the infringement is justified. Courts will be asked, at this stage, to balance and reconcile the conflicting interests of native people, on the one hand, and of the rest of Canadian society, on the other. Specifically, this last step of the *Sparrow* test requires the assessment of both the validity of the objective of the legislation and the reasonableness of the limitation.

Troisièmement, après que le demandeur a établi que la mesure législative en question constitue une atteinte *prima facie* à son droit ancestral, le fardeau de la preuve se déplace à nouveau et il incombe alors à Sa Majesté de prouver que cette atteinte est justifiée. À cette étape, les tribunaux sont appelés à mettre en équilibre et à concilier les intérêts opposés des peuples autochtones d'une part, et ceux du reste de la société canadienne d'autre part. De façon plus particulière, il faut, au cours de la dernière étape du test établi dans *Sparrow*, apprécier la validité de l'objectif de la mesure législative ainsi que le caractère raisonnable de la restriction.

136 As to the objective, there is no doubt that a legislative scheme aimed at conservation and management of natural resources will suffice (*Sparrow*, at p. 1113). Other legislative objectives found to be substantial and compelling, such as the security of the public, can also be valid, depending on the circumstances of each case. The notion of public interest, however, is too vague and broad to constitute a valid objective to justify the infringement of an aboriginal right (*Sparrow*, at p. 1113).

En ce qui concerne l'objectif de la mesure législative, il ne fait aucun doute que si celle-ci vise la conservation et la gestion des ressources naturelles, il s'agira là d'un objectif suffisant (*Sparrow*, à la p. 1113). D'autres objectifs législatifs jugés impérieux et réels, comme la sécurité du public, peuvent être également valides, compte tenu des circonstances de chaque cas. Cependant, la notion d'intérêt public est trop vague et générale pour constituer un objectif valide justifiant une atteinte à un droit ancestral (*Sparrow*, à la p. 1113).

137 With respect to the reasonableness of the limits upon the existing aboriginal right, the special trust relationship and the responsibility of the Crown *vis-à-vis* aboriginal people have to be contemplated. At a minimum, this fiduciary duty commands that some priority be afforded to the natives in the regulatory scheme governing the activity recognized as aboriginal right: see *Sparrow*, at pp. 1115-17, also *Jack v. The Queen*, [1980] 1 S.C.R. 294, and *R. v. Denny* (1990), 55 C.C.C. (3d) 322 (N.S.C.A.).

En ce qui concerne le caractère raisonnable des restrictions imposées au droit ancestral existant, il faut examiner les rapports spéciaux de fiduciaire et la responsabilité de Sa Majesté envers les autochtones. Cette obligation de fiduciaire commande à tout le moins que soit accordée une certaine priorité aux autochtones dans le cadre du régime de réglementation régissant l'activité reconnue comme un droit ancestral: voir *Sparrow*, aux pp. 1115 à 1117; aussi *Jack c. La Reine*, [1980] 1 R.C.S. 294 et *R. c. Denny* (1990), 55 C.C.C. (3d) 322 (C.A.N.-É.).

A number of other elements may have to be weighed in the assessment of justification. In *Sparrow*, Dickson C.J. and La Forest J. drew up the following non-exhaustive list of factors relating to justification at p. 1119:

Within the analysis of justification, there are further questions to be addressed, depending on the circumstances of the inquiry. These include the questions of whether there has been as little infringement as possible in order to effect the desired result; whether, in a situation of expropriation, fair compensation is available; and, whether the aboriginal group in question has been consulted with respect to the conservation measures being implemented. The aboriginal peoples, with their history of conservation-consciousness and interdependence with natural resources, would surely be expected, at the least, to be informed regarding the determination of an appropriate scheme for the regulation of the fisheries.

In the case at bar, the issue relates only to the interpretation of the nature and extent of the Sto:lo's aboriginal right to fish and whether it includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes; i.e., the very first step of the *Sparrow* test, dealing with the assessment and definition of aboriginal rights. If it becomes necessary to proceed to extinguishment or to the questions of *prima facie* infringement and justification, the parties agreed that the case should be remitted to trial, as the summary appeal judge did, given that there is insufficient evidence to enable this Court to decide those issues.

In order to determine whether the Sto:lo benefit from an existing aboriginal right to fish which includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes, it is necessary to elaborate on the appropriate approach to interpreting the nature and extent of aboriginal rights in general. That I now propose to do.

De plus, il pourrait également être nécessaire de tenir compte d'un certain nombre d'autres éléments dans l'appréciation de la justification. Dans *Sparrow*, le juge en chef Dickson et le juge La Forest ont dressé une liste non exhaustive de facteurs à prendre en considération relativement à la justification, à la p. 1119:

Il y a, dans l'analyse de la justification, d'autres questions à aborder, selon les circonstances de l'enquête. Il s'agit notamment des questions de savoir si, en tentant d'obtenir le résultat souhaité, on a porté le moins possible atteinte à des droits, si une juste indemnisation est prévue en cas d'expropriation et si le groupe d'autochtones en question a été consulté au sujet des mesures de conservation mises en œuvre. On s'attendrait certainement à ce que les peuples autochtones, traditionnellement sensibilisés à la conservation et ayant toujours vécu dans des rapports d'interdépendance avec les ressources naturelles, soient au moins informés relativement à la conception d'un régime approprié de réglementation de la pêche.

Ceci dit, la question en litige en l'espèce concerne uniquement l'interprétation de la nature et de l'étendue du droit de pêche ancestral des Sto:lo et la question de savoir si ce droit inclut le droit de vendre et d'échanger du poisson à des fins de subsistance, c'est-à-dire la première étape même du test établi dans *Sparrow*, qui porte sur l'évaluation et la définition des droits ancestraux. S'il devient nécessaire d'examiner la question de l'extinction d'un droit ou celles de l'atteinte *prima facie* et de la justification, les parties ont convenu que, comme la preuve est insuffisante pour permettre à notre Cour de trancher ces questions, l'affaire devrait être renvoyée pour la tenue d'un nouveau procès, comme l'a fait le juge d'appel des poursuites sommaires.

Pour déterminer si les Sto:lo bénéficient d'un droit de pêche ancestral existant qui inclut le droit de vendre et d'échanger du poisson à des fins de subsistance, il est nécessaire d'explicitier la méthode qu'il convient d'appliquer pour interpréter la nature et l'étendue des droits ancestraux en général. C'est ce que je me propose de faire maintenant.

III. Interpretation of Aboriginal Rights

III. Interprétation des droits ancestraux

141 While I am in general agreement with the Chief Justice on the fundamental interpretative canons relating to aboriginal law which he discussed, the application of those rules to his definition of aboriginal rights under s. 35(1) of the *Constitution Act, 1982* does not, in my view, sufficiently reflect them. For the sake of convenience, I will summarize them here.

Bien que je sois dans l'ensemble d'accord avec les règles fondamentales d'interprétation du droit relatif aux autochtones qu'a examinées le Juge en chef, l'application qu'il a fait de ces règles pour définir les droits ancestraux visés au par. 35(1) de la *Loi constitutionnelle de 1982* n'en tient pas suffisamment compte à mon avis. Pour plus de commodité, je vais résumer ces règles ici.

142 First, as with all constitutional provisions, s. 35(1) must be given a generous, large and liberal interpretation in order to give full effect to its purposes: see, regarding the *Constitution Act, 1867*, *Edwards v. Attorney-General for Canada*, [1930] A.C. 124 (P.C.), *Attorney General of Quebec v. Blaikie (No. 1)*, [1979] 2 S.C.R. 1016, *Re Residential Tenancies Act, 1979*, [1981] 1 S.C.R. 714; in the context of the *Charter*, *Hunter v. Southam Inc.*, [1984] 2 S.C.R. 145, *R. v. Big M Drug Mart Ltd.*, [1985] 1 S.C.R. 295, *R. v. Keegstra*, [1990] 3 S.C.R. 697; and, particular to aboriginal rights in s. 35(1), *Sparrow, supra*, at p. 1108, where Dickson C.J. and La Forest J. wrote that "s. 35(1) is a solemn commitment that must be given meaningful content".

Premièrement, le par. 35(1) doit, comme toutes les autres dispositions constitutionnelles, recevoir une interprétation généreuse, large et libérale permettant la réalisation de ses objectifs: relativement à la *Loi constitutionnelle de 1867*, voir les arrêts *Edwards c. Attorney-General for Canada*, [1930] A.C. 124 (C.P.), *Procureur général du Québec c. Blaikie (n° 1)*, [1979] 2 R.C.S. 1016, *Renvoi relatif à la Loi de 1979 sur la location résidentielle*, [1981] 1 R.C.S. 714, dans le contexte de la *Charte*, *Hunter c. Southam Inc.*, [1984] 2 R.C.S. 145, *R. c. Big M Drug Mart Ltd.*, [1985] 1 R.C.S. 295, *R. c. Keegstra*, [1990] 3 R.C.S. 697; et en ce qui concerne tout particulièrement les droits ancestraux visés au par. 35(1), *Sparrow*, précité, à la p. 1108, où le juge en chef Dickson et le juge La Forest ont écrit que «le par. 35(1) constitue un engagement solennel qui doit avoir un sens utile».

143 Further, the very nature of ancient aboriginal records, such as treaties, agreements with the Crown and other documentary evidence, commands a generous interpretation, and uncertainties, ambiguities or doubts should be resolved in favour of the natives: see *R. v. Sutherland*, [1980] 2 S.C.R. 451, *Moosehunter v. The Queen*, [1981] 1 S.C.R. 282, *Nowegijick v. The Queen*, [1983] 1 S.C.R. 29, *Simon, supra*, *Horseman, supra*, *Sioui, supra*, *Sparrow, supra*, and *Mitchell, supra*; see also William Pentney, "The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee", *supra*, at p. 255.

Qui plus est, la nature même des documents autochtones anciens tels que les traités, les accords avec Sa Majesté et les autres éléments de preuve documentaire commandent une interprétation généreuse, et les ambiguïtés, doutes ou incertitudes doivent être résolus en faveur des autochtones: voir *R. c. Sutherland*, [1980] 2 R.C.S. 451, *Moosehunter c. La Reine*, [1981] 1 R.C.S. 282, *Nowegijick c. La Reine*, [1983] 1 R.C.S. 29, *Simon*, précité, *Horseman*, précité, *Sioui*, précité, *Sparrow*, précité et *Mitchell*, précité; voir aussi William Pentney, «The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee», *loc. cit.*, à la p. 255.

144 Second, aboriginal rights must be construed in light of the special trust relationship and the responsibility of the Crown *vis-à-vis* aboriginal

Deuxièmement, les droits ancestraux doivent être interprétés à la lumière des rapports spéciaux de fiduciaire et de la responsabilité de Sa Majesté

people: see *Taylor, supra*, and *Guerin, supra*. This fiduciary obligation attaches because of the historic power and responsibility assumed by the Crown over aboriginal people. In *Sparrow, supra*, the Court succinctly captured this obligation at p. 1108:

That is, the Government has the responsibility to act in a fiduciary capacity with respect to aboriginal peoples. The relationship between the Government and aboriginals is trust-like, rather than adversarial, and contemporary recognition and affirmation of aboriginal rights must be defined in light of this historic relationship. [Emphasis added.]

See also Alain Lafontaine, "La coexistence de l'obligation de fiduciaire de la Couronne et du droit à l'autonomie gouvernementale des peuples autochtones" (1995), 36 *C. de D.* 669.

Finally, but most importantly, aboriginal rights protected under s. 35(1) have to be interpreted in the context of the history and culture of the specific aboriginal society and in a manner that gives the rights meaning to the natives. In that respect, the following remarks of Dickson C.J. and La Forest J. in *Sparrow*, at p. 1112, are particularly apposite:

While it is impossible to give an easy definition of fishing rights, it is possible, and, indeed, crucial, to be sensitive to the aboriginal perspective itself on the meaning of the rights at stake. [Emphasis added.]

Unlike the Chief Justice, I do not think it appropriate to qualify this proposition by saying that the perspective of the common law matters as much as the perspective of the natives when defining aboriginal rights.

These principles of interpretation are important to keep in mind when determining the proper approach to the question of the nature and extent of aboriginal rights protected in s. 35(1) of the *Constitution Act, 1982*, to which I now turn.

The starting point in contemplating whether an aboriginal practice, tradition or custom warrants

envers les autochtones: voir *Taylor* et *Guerin*, précités. Cette obligation de fiduciaire existe en raison du pouvoir et de la responsabilité historiques assumés par Sa Majesté vis-à-vis des autochtones. Dans *Sparrow*, précité, notre Cour a exprimé succinctement cette obligation, à la p. 1108:

... savoir, le gouvernement a la responsabilité d'agir en qualité de fiduciaire à l'égard des peuples autochtones. Les rapports entre le gouvernement et les autochtones sont de nature fiduciaire plutôt que contradictoire et la reconnaissance et la confirmation contemporaines des droits ancestraux doivent être définies en fonction de ces rapports historiques. [Je souligne.]

Voir également Alain Lafontaine, «La coexistence de l'obligation de fiduciaire de la Couronne et du droit à l'autonomie gouvernementale des peuples autochtones» (1995), 36 *C. de D.* 669.

Enfin, la dernière et la plus importante de ces règles est que les droits ancestraux protégés par le par. 35(1) doivent être interprétés dans le contexte de l'histoire et de la culture de la société autochtone concernée, de manière à leur donner un sens pour les autochtones. À cet égard, les observations suivantes du juge en chef Dickson et du juge La Forest dans *Sparrow* sont particulièrement à propos, à la p. 1112:

S'il est impossible de donner une définition simple des droits de pêche, il est possible et même crucial de se montrer ouvert au point de vue des autochtones eux-mêmes quant à la nature des droits en cause. [Je souligne.]

Contrairement au Juge en chef, je n'estime pas approprié de restreindre la portée de cet énoncé en affirmant que, dans la définition des droits ancestraux, la perspective de la common law importe autant que celle des autochtones.

Il faut garder ces principes d'interprétation à l'esprit en déterminant la méthode qu'il convient de suivre dans l'examen de la nature et de l'étendue des droits ancestraux protégés par le par. 35(1) de la *Loi constitutionnelle de 1982*, question que j'aborde maintenant.

Dans *Sparrow*, précité, notre Cour a fait allusion au point de départ de l'examen de la question de

constitutional protection under s. 35(1) was hinted at by this Court in *Sparrow*, *supra*. Dickson C.J. and La Forest J. made this observation, at p. 1099, regarding the role of the fishery in Musqueam life:

The scope of the existing Musqueam right to fish must now be delineated. The anthropological evidence relied on to establish the existence of the right suggests that, for the Musqueam, the salmon fishery has always constituted an integral part of their distinctive culture. [Emphasis added.]

savoir s'il est justifié d'accorder à une coutume, pratique ou tradition autochtone la protection de la Constitution en vertu du par. 35(1). Le juge en chef Dickson et le juge La Forest ont fait l'observation suivante relativement au rôle de la pêche dans la vie des Musqueams à la p. 1099:

Il nous faut maintenant préciser la portée du droit de pêche existant des Musqueams. D'après la preuve anthropologique produite pour établir l'existence de ce droit, la pêche au saumon a toujours fait partie intégrante de la culture distinctive des Musqueams. [Je souligne.]

148

The crux of the debate at the British Columbia Court of Appeal in the present appeal, and in most of the appeals heard contemporaneously, lies in the application of this standard of "integral part of their distinctive culture" to defining the nature and extent of the particular aboriginal right claimed to be protected in s. 35(1) of the *Constitution Act, 1982*. This broad statement of what characterizes aboriginal rights must be elaborated and made more specific so that it becomes a defining criterion. In particular, two aspects must be examined in detail, namely (1) what are the necessary characteristics of aboriginal rights, and (2) what is the period of time relevant to the assessment of such characteristics.

Characteristics of aboriginal rights

149

The issue of the nature and extent of aboriginal rights protected under s. 35(1) is fundamentally about characterization. Which aboriginal practices, traditions and customs warrant constitutional protection? It appears from the jurisprudence developed in the courts below (see the reasons of the British Columbia Court of Appeal and the decision in *Delgamuukw v. British Columbia* (1993), 104 D.L.R. (4th) 470) that two approaches to this difficult question have emerged. The first one, which the Chief Justice endorses, focuses on the particular aboriginal practice, tradition or custom. The second approach, more generic, describes aboriginal rights in a fairly high level of abstraction. For the reasons that follow, I favour the latter approach.

Le cœur du débat en Cour d'appel de la Colombie-Britannique dans la présente affaire, ainsi que dans la plupart des appels entendus concurremment, porte sur l'application de la norme de «la partie intégrante de la culture distinctive concernée» en vue de définir la nature et l'étendue du droit ancestral qui, prétend-on, est protégé par le par. 35(1) de la *Loi constitutionnelle de 1982*. Cet énoncé général des caractéristiques des droits ancestraux doit être précisé davantage pour devenir le test de leur définition. Deux aspects en particulier doivent être examinés en profondeur: (1) les caractéristiques nécessaires des droits ancestraux, et (2) la période pertinente pour l'appréciation de ces caractéristiques.

Les caractéristiques des droits ancestraux

La question de la nature et de l'étendue des droits ancestraux protégés par le par. 35(1) est fondamentalement une question de caractérisation. Lesquelles des coutumes, pratiques et traditions autochtones nécessitent la protection de la Constitution? Deux méthodes d'analyse de cette difficile question semblent se dégager des jugements des tribunaux inférieurs (voir les motifs de la Cour d'appel de la Colombie-Britannique dans la présente affaire, et l'arrêt *Delgamuukw c. British Columbia* (1993), 104 D.L.R. (4th) 470). La première, à laquelle souscrit le Juge en chef, est axée sur la coutume, pratique ou tradition en cause. La deuxième, plus générale, décrit les droits ancestraux avec un degré d'abstraction assez élevé. Pour les motifs qui suivent, je préfère cette deuxième méthode.

The approach based on aboriginal practices, traditions and customs considers only discrete parts of aboriginal culture, separating them from the general culture in which they are rooted. The analysis turns on the manifestations of the “integral part of [aboriginals’] distinctive culture” introduced in *Sparrow*, *supra*, at p. 1099. Further, on this view, what makes aboriginal culture distinctive is that which differentiates it from non-aboriginal culture. The majority of the Court of Appeal adopted this position, as the following passage from Macfarlane J.A.’s reasons reveals (at para. 37):

What was happening in the aboriginal society before contact with the Europeans is relevant in identifying the unique traditions of the aborigines which deserved protection by the common law. It is also necessary to separate those traditions from practices which are not a unique part of Indian culture, but which are common to Indian and non-Indian alike. [Emphasis added.]

Accordingly, if an activity is integral to a culture other than that of aboriginal people, it cannot be part of aboriginal people’s distinctive culture. This approach should not be adopted for the following reasons.

First, on the pure terminology angle of the question, this position misconstrues the words “distinctive culture”, used in the above excerpt of *Sparrow*, by interpreting it as if it meant “distinct culture”. These two expressions connote quite different meanings and must not be confused. The word “distinctive” is defined in *The Concise Oxford Dictionary* (9th ed. 1995) as “distinguishing, characteristic” where the word “distinct” is described as “1 (often foll. by *from*) a not identical; separate; individual. b different in kind or quality; unlike”. While “distinct” mandates comparison and evaluation from a separate vantage point, “distinctive” requires the object to be observed on its own. While describing an object’s “distinctive” qualities may entail describing how the object is different from others (i.e., “distinguishing”), there is nothing in the term that requires it to be plainly different. In fact, all that “distinctive culture” requires is the characterization of aboriginal cul-

La méthode fondée sur l’examen des coutumes, pratiques et traditions autochtones ne s’attache qu’à des éléments distincts de la culture autochtone, et les isolent de la culture générale dans laquelle elles sont enracinées. L’analyse porte sur les manifestations de la «partie intégrante de la culture distinctive [des autochtones visés]» formulée dans *Sparrow*, à la p. 1099. De plus, suivant ce point de vue, ce qui rend la culture autochtone distinctive c’est ce qui la distingue de la culture non autochtone. La Cour d’appel à la majorité a adopté ce point de vue, comme le révèle l’extrait qui suit des motifs du juge Macfarlane (au par. 37):

[TRADUCTION] Il est pertinent d’examiner ce qui se passait dans la société autochtone avant le contact avec les Européens pour établir quelles étaient les traditions uniques qui valaient d’être protégées par la common law. Il est également nécessaire de séparer ces traditions des pratiques qui ne constituent pas un aspect propre à la culture indienne, mais qui sont communes aux Indiens et aux non-Indiens. [Je souligne.]

En conséquence, si une activité fait partie intégrante d’une culture autre que celle des autochtones, elle ne peut faire partie de la culture distinctive de ceux-ci. Cette méthode ne devrait pas être adoptée, et ce pour les motifs suivants.

Premièrement, sous l’angle de pure terminologie, cette méthode décrit mal l’expression «culture distinctive» utilisée dans l’extrait précité de l’arrêt *Sparrow*, en lui donnant le sens de «culture distincte». Il ne faut pas confondre ces deux expressions qui ont des sens fort différents. Dans *The Concise Oxford Dictionary* (9^e éd. 1995), le terme «distinctive» est défini ainsi: [TRADUCTION] «ce qui distingue, une caractéristique», alors qu’on y définit de la manière suivante le mot «distinct»: [TRADUCTION] «1 (souvent suivi de la préposition «de») a qui n’est pas identique; séparé; individuel. b de qualité ou d’espèce différentes; différent». Alors que le mot «distinct» appelle une comparaison et une évaluation d’un point de vue particulier, le mot «distinctive» exige que l’objet soit observé individuellement. Même si la description des qualités «distinctives» d’un objet peut amener à décrire en quoi celui-ci diffère d’autres objets («ce qui distingue»), le mot «distinctive» ne demande

ture, not its differentiation from non-aboriginal cultures.

pas que l'objet soit nettement différent. De fait, tout ce qu'exige l'expression «culture distinctive» c'est que l'on caractérise la culture autochtone et non qu'on la différencie des cultures non autochtones.

152 While the Chief Justice recognizes the difference between “distinctive” and “distinct”, he applies it only as regards the manifestations of the distinctive aboriginal culture, i.e., the individualized practices, traditions and customs of a particular group of aboriginal people. As I will examine in more detail in a moment, the “distinctive” aboriginal culture has, in my view, a generic and much broader application.

Bien que le Juge en chef reconnaisse la différence entre les mots «distinctive» et «distinct», il n'applique cette différence qu'à l'égard des manifestations de la culture autochtone distinctive, c'est-à-dire les coutumes, pratiques et traditions propres à un groupe particulier d'autochtones. Comme je vais l'examiner plus en détail dans un moment, l'expression culture autochtone «distinctive» a, à mon avis, une application générale et beaucoup plus large.

153 Second, holding that what is common to both aboriginal and non-aboriginal cultures must necessarily be non-aboriginal and thus not aboriginal for the purpose of s. 35(1) is, to say the least, an overly majoritarian approach. This is diametrically opposed to the view propounded in *Sparrow*, *supra*, that the interpretation of aboriginal rights be informed by the fiduciary responsibility of the Crown *vis-à-vis* aboriginal people as well as by the aboriginal perspective on the meaning of the rights. Such considerations command that practices, traditions and customs which characterize aboriginal societies as the original occupiers and users of Canadian lands be protected, despite their common features with non-aboriginal societies.

Deuxièmement, affirmer que ce qui est commun aux cultures autochtones et non autochtones est nécessairement non autochtone et donc non ancestral pour l'application du par. 35(1) est, pour le moins, une analyse qui accorde beaucoup trop d'importance au point de vue de la majorité. Cette conception est diamétralement opposée au point de vue avancé dans *Sparrow*, précité, suivant lequel l'interprétation des droits ancestraux doit tenir compte de la responsabilité de fiduciaire de Sa Majesté *vis-à-vis* les peuples autochtones, ainsi que de la perspective autochtone quant à la signification des droits en cause. Ces considérations exigent que soient protégées, malgré leurs points communs avec les sociétés non autochtones, les coutumes, pratiques et traditions qui caractérisent les sociétés autochtones en tant que premiers occupants et usagers du territoire canadien.

154 Finally, an approach based on a dichotomy between aboriginal and non-aboriginal practices, traditions and customs literally amounts to defining aboriginal culture and aboriginal rights as that which is left over after features of non-aboriginal cultures have been taken away. Such a strict construction of constitutionally protected aboriginal rights flies in the face of the generous, large and liberal interpretation of s. 35(1) of the *Constitution Act, 1982* advocated in *Sparrow*.

Enfin, une analyse fondée sur la dichotomie entre les coutumes, pratiques et traditions autochtones et non autochtones revient à définir la culture autochtone et les droits ancestraux comme étant ce qu'il en reste après qu'on en ait retranché les caractéristiques des cultures non autochtones. Une interprétation aussi rigide des droits ancestraux protégés par la Constitution est contraire à l'interprétation généreuse, large et libérale du par. 35(1) de la *Loi constitutionnelle de 1982* préconisée dans *Sparrow*.

A better approach, in my view, is to examine the question of the nature and extent of aboriginal rights from a certain level of abstraction and generality.

A generic approach to defining the nature and extent of aboriginal rights starts from the proposition that the notion of "integral part of [aboriginals'] distinctive culture" constitutes a general statement regarding the purpose of s. 35(1). Instead of focusing on a particular practice, tradition or custom, this conception refers to a more abstract and profound concept. In fact, similar to the values enshrined in the *Canadian Charter of Rights and Freedoms*, aboriginal rights protected under s. 35(1) should be contemplated on a multi-layered or multi-faceted basis: see Andrea Bowker, "Sparrow's Promise: Aboriginal Rights in the B.C. Court of Appeal" (1995), 53 *Toronto Fac. L. Rev.* 1, at pp. 28-29.

Accordingly, s. 35(1) should be viewed as protecting, not a catalogue of individualized practices, traditions or customs, as the Chief Justice does, but the "distinctive culture" of which aboriginal activities are manifestations. Simply put, the emphasis would be on the significance of these activities to natives rather than on the activities themselves.

Although I do not claim to examine the question in terms of liberal enlightenment, an analogy with freedom of expression guaranteed in s. 2(b) of the *Charter* will illustrate this position. Section 2(b) of the *Charter* does not refer to an explicit catalogue of protected expressive activities, such as political speech, commercial expression or picketing, but involves rather the protection of the ability to express: see *Ford v. Quebec (Attorney General)*, [1988] 2 S.C.R. 712, *Irwin Toy Ltd. v. Quebec (Attorney General)*, [1989] 1 S.C.R. 927, *Edmonton Journal v. Alberta (Attorney General)*, [1989] 2 S.C.R. 1326, *Keegstra, supra*; *Committee for the Commonwealth of Canada v. Canada*, [1991] 1 S.C.R. 139, and *RJR-MacDonald Inc. v. Canada (Attorney General)*, [1995] 3 S.C.R. 199. In other words, the constitutional guarantee of

À mon avis, il vaut mieux examiner la question de la nature et de l'étendue des droits ancestraux à partir d'un certain degré d'abstraction et de généralité.

L'application d'une analyse générale pour définir la nature et l'étendue des droits ancestraux repose sur le principe que la notion de «partie intégrante de la culture distinctive [des autochtones visés]» constitue un énoncé général de l'objet du par. 35(1). Au lieu de mettre l'accent sur une coutume, pratique ou tradition particulière, ce principe renvoie à un concept plus abstrait et plus profond. De fait, à l'instar des valeurs constitutionnalisées dans la *Charte canadienne des droits et libertés*, les droits ancestraux protégés au par. 35(1) devraient être examinés au moyen d'une analyse tenant compte d'une multiplicité d'aspects ou de facettes: voir Andrea Bowker, «Sparrow's Promise: Aboriginal Rights in the B.C. Court of Appeal» (1995), 53 *Toronto Fac. L. Rev.* 1, aux pp. 28 et 29.

En conséquence, il faudrait considérer que le par. 35(1) protège non pas une liste de coutumes, pratiques ou traditions propres, comme le soutient le Juge en chef, mais plutôt la «culture distinctive» dont les activités autochtones sont des manifestations. Bref, l'accent serait mis sur l'importance de ces activités pour les autochtones plutôt que sur les activités elles-mêmes.

Même si je ne prétends pas examiner la question selon la philosophie libérale des Lumières, une analogie avec la liberté d'expression garantie à l'al. 2b) de la *Charte* permettra d'illustrer cette position. L'alinéa 2b) de la *Charte* ne dresse pas une liste précise de formes d'expression protégées, comme le discours politique, l'expression commerciale ou le piquetage, mais il vise plutôt à protéger la capacité de s'exprimer: voir *Ford c. Québec (Procureur général)*, [1988] 2 R.C.S. 712, *Irwin Toy Ltd. c. Québec (Procureur général)*, [1989] 1 R.C.S. 927, *Edmonton Journal c. Alberta (Procureur général)*, [1989] 2 R.C.S. 1326, *Keegstra*, précité; *Comité pour la République du Canada c. Canada*, [1991] 1 R.C.S. 139 et *RJR-MacDonald Inc. c. Canada (Procureur général)*, [1995] 3 R.C.S. 199. En d'autres mots, la liberté d'expres-

155

157

158

freedom of expression is conceptualized, not as protecting the possible manifestations of expression, but as preserving the fundamental purposes for which one may express oneself, i.e., the rationales supporting freedom of expression.

sion garantie par la Constitution est conceptualisée non pas comme une façon de protéger les manifestations possibles de cette liberté, mais plutôt comme un moyen de préserver les raisons fondamentales pour lesquelles une personne s'exprime, c'est-à-dire, les motifs qui sont le fondement de la liberté d'expression.

159 Similarly, aboriginal practices, traditions and customs protected under s. 35(1) should be characterized by referring to the fundamental purposes for which aboriginal rights were entrenched in the *Constitution Act, 1982*. As I have already noted elsewhere, s. 35(1) constitutionalizes the common law doctrine of aboriginal rights which recognizes aboriginal interests arising out of the historic occupation and use of ancestral lands by natives. This, in my view, is how the notion of "integral part of a distinctive aboriginal culture" should be contemplated. The "distinctive aboriginal culture" must be taken to refer to the reality that, despite British sovereignty, aboriginal people were the original organized society occupying and using Canadian lands: *Calder v. Attorney-General of British Columbia*, *supra*, at p. 328, *per* Judson J., and *Guerin*, *supra*, at p. 379, *per* Dickson J. (as he then was).

De même, les coutumes, pratiques et traditions autochtones protégées en vertu du par. 35(1) devraient être caractérisées au regard des objets fondamentaux de la constitutionnalisation des droits ancestraux dans la *Loi constitutionnelle de 1982*. Comme je l'ai déjà mentionné, le par. 35(1) constitutionnalise la doctrine de common law des droits ancestraux, qui reconnaît les intérêts des autochtones qui découlent de l'occupation et de l'utilisation historiques par ceux-ci de leurs terres ancestrales. À mon avis, c'est ainsi que devrait être envisagée la notion de «partie intégrante d'une culture autochtone distinctive». L'expression «culture autochtone distinctive» doit être considérée comme tenant compte du fait que, en dépit de la souveraineté britannique, les autochtones ont constitué la première société organisée à occuper et à utiliser le territoire canadien: *Calder c. Procureur général de la Colombie-Britannique*, précité, à la p. 328, le juge Judson; et *Guerin*, précité, à la p. 379, le juge Dickson J. (plus tard Juge en chef).

160 This rationale should inform the characterization of aboriginal activities which warrant constitutional protection as aboriginal rights. The practices, traditions and customs protected under s. 35(1) should be those that are sufficiently significant and fundamental to the culture and social organization of a particular group of aboriginal people. See *Delgamuukw v. British Columbia*, *supra*, at pp. 646-47, *per* Lambert J.A., dissenting; see also Asch and Macklem, "Aboriginal Rights and Canadian Sovereignty: An Essay on *R. v. Sparrow*", *supra*, at p. 505, and Pentney, "The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee", *supra*, at pp. 258-59.

Ce raisonnement devrait être appliqué dans la caractérisation des activités autochtones qui commandent la protection de la Constitution en tant que droits ancestraux. Les coutumes, pratiques et traditions protégées en vertu du par. 35(1) devraient être celles qui sont suffisamment importantes et fondamentales pour l'organisation sociale et la culture d'un groupe particulier d'autochtones. Voir *Delgamuukw c. British Columbia*, précité, aux pp. 646 et 647, le juge Lambert, dissident; voir aussi Asch et Macklem, «Aboriginal Rights and Canadian Sovereignty: An Essay on *R. v. Sparrow*», *loc. cit.*, à la p. 505 et Pentney, «The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee», *loc. cit.*, aux pp. 258 et 259.

161 Put another way, the aboriginal practices, traditions and customs which form the core of the lives

En d'autres mots, les coutumes, pratiques et traditions qui sont au centre de la vie des peuples

of native people and which provide them with a way and means of living as an organized society will fall within the scope of the constitutional protection under s. 35(1). This was described by Lambert J.A., dissenting at the Court of Appeal, as the "social" form of description of aboriginal rights (see para. 140), a formulation the Chief Justice rejects. Lambert J.A. distinguished these aboriginal activities from the practices or habits which were merely incidental to the lives of a particular group of aboriginal people and, as such, would not warrant protection under s. 35(1) of the *Constitution Act, 1982*. I agree with this description which, although flexible, provides a defining criterion for the interpretation of the nature and extent of aboriginal rights and, contrary to what my colleague McLachlin J. suggests, does not suffer from vagueness or overbreadth, as defined by this Court (see *R. v. Nova Scotia Pharmaceutical Society*, [1992] 2 S.C.R. 606, and *Ontario v. Canadian Pacific Ltd.*, [1995] 2 S.C.R. 1031).

Further comments regarding this approach are in order. The criterion of "distinctive aboriginal culture" should not be limited to those activities that only aboriginal people have undertaken or that non-aboriginal people have not. Rather, all practices, traditions and customs which are connected enough to the self-identity and self-preservation of organized aboriginal societies should be viewed as deserving the protection of s. 35(1). Further, a generous, large and liberal construction should be given to these activities in order to give full effect to the constitutional recognition of the distinctiveness of aboriginal culture. Finally, it is almost trite to say that what constitutes a practice, tradition or custom distinctive to native culture and society must be examined through the eyes of aboriginal people, not through those of the non-native majority or the distorting lens of existing regulations.

It is necessary to discuss at this point the period of time relevant to the assessment of the practices,

autochtones et qui leur assurent les moyens de vivre en société organisée relèveront du champ d'application de la protection constitutionnelle offerte par le par. 35(1). C'est ce que le juge Lambert, dans sa dissidence en Cour d'appel, a décrit comme étant la forme «sociale» de description des droits ancestraux (au par. 140), énoncé que rejette le Juge en chef. Le juge Lambert a distingué ces activités autochtones des pratiques ou habitudes qui étaient simplement des aspects accessoires de la vie d'un groupe particulier d'autochtones et qui, en tant que telles, ne commanderaient pas la protection du par. 35(1) de la *Loi constitutionnelle de 1982*. Je suis d'accord avec cette description qui, quoique souple, constitue un critère qui délimite l'interprétation de la nature et de l'étendue des droits ancestraux, et qui, contrairement à ce qu'affirme ma collègue le juge McLachlin, ne souffre pas d'imprécision et n'a pas une portée excessive, suivant le sens donné à ces termes par notre Cour (voir les arrêts *R. c. Nova Scotia Pharmaceutical Society*, [1992] 2 R.C.S. 606 et *Ontario c. Canadien Pacifique Ltée*, [1995] 2 R.C.S. 1031).

D'autres commentaires s'imposent relativement à cette analyse. Le test de la «culture autochtone distinctive» ne devrait pas être restreint aux activités exercées uniquement par les autochtones et non par les non-autochtones. Au contraire, toutes les coutumes, pratiques et traditions ayant un lien suffisant avec le sentiment d'identité et le désir de préservation des sociétés autochtones organisées devraient être considérées comme valant d'être protégées en vertu du par. 35(1). Qui plus est, il faudrait interpréter ces activités de façon généreuse, large et libérale afin de donner plein effet à la reconnaissance constitutionnelle du caractère distinctif de la culture autochtone. Enfin, c'est presque un truisme de dire que ce qui constitue une coutume, pratique ou tradition distinctive pour une culture et une société autochtones doit être examiné avec les yeux des autochtones, plutôt qu'avec ceux de la majorité non autochtone ou encore à travers le prisme déformant des règlements existants.

Il faut maintenant examiner la question de la période pertinente pour apprécier les coutumes,

traditions and customs which form part of the distinctive culture of a particular group of aboriginal people.

Period of time relevant to aboriginal rights

pratiques et traditions qui font partie de la culture distinctive d'un groupe particulier d'autochtones.

Période pertinente pour l'examen des droits ancestraux

164 The question of the period of time relevant to the recognition of aboriginal rights relates to whether the practice, tradition or custom has to exist prior to a specific date, and also to the length of time necessary for an aboriginal activity to be recognized as a right under s. 35(1). Here, again, two basic approaches have been advocated in the courts below (see the decisions of the British Columbia Court of Appeal in this case, and in *Delgamuukw v. British Columbia*, *supra*), namely the "frozen right" approach and the "dynamic right" approach. An examination of each will show that the latter view is to be preferred.

La question de la période pertinente pour la reconnaissance de droits ancestraux amène à se demander si la coutume, pratique ou tradition doit avoir existé avant une date spécifique, et quelle est la période nécessaire pendant laquelle une activité autochtone doit avoir été exercée pour être reconnue comme un droit visé au par. 35(1). Une fois encore, deux méthodes principales ont été préconisées devant les tribunaux inférieurs (voir les arrêts de la Cour d'appel de la Colombie-Britannique en l'espèce et dans *Delgamuukw c. British Columbia*, précité): la méthode fondée sur les «droits figés» et celle fondée sur le «caractère dynamique des droits». L'examen de chacune de ces méthodes démontrera qu'il y a lieu de préférer la dernière.

165 The "frozen right" approach would recognize practices, traditions and customs — forming an integral part of a distinctive aboriginal culture — which have long been in existence at the time of British sovereignty: see Slattery, "Understanding Aboriginal Rights", *supra*, at pp. 758-59. This requires the aboriginal right claimant to prove two elements: (1) that the aboriginal activity has continuously existed for "time immemorial", and (2) that it predated the assertion of sovereignty. Defining existing aboriginal rights by referring to pre-contact or pre-sovereignty practices, traditions and customs implies that aboriginal culture was crystallized in some sort of "aboriginal time" prior to the arrival of Europeans. Contrary to the Chief Justice, I do not believe that this approach should be adopted, for the following reasons.

Suivant la méthode fondée sur les «droits figés», seraient reconnues les coutumes, pratiques et traditions — faisant partie intégrante d'une culture autochtone distinctive — qui existaient depuis longtemps au moment de la souveraineté britannique: voir Slattery, «Understanding Aboriginal Rights», *loc. cit.*, aux pp. 758 et 759. Il s'ensuit que la personne qui revendique les droits ancestraux doit prouver deux choses: (1) que l'activité autochtone existe «de temps immémorial», et (2) qu'elle existait avant l'affirmation de la souveraineté. Déterminer les droits ancestraux existants en fonction des coutumes, pratiques et traditions antérieures au contact avec les Européens ou à l'affirmation de la souveraineté britannique sous-entend que la culture autochtone s'est cristallisée au cours d'une sorte d'«époque aborigène», avant l'arrivée des Européens. Contrairement au Juge en chef, je ne crois pas, pour les motifs qui suivent, qu'il y a lieu d'adopter cette méthode.

166 First, relying on the proclamation of sovereignty by the British imperial power as the "cut-off" for the development of aboriginal practices, traditions and customs overstates the impact of European influence on aboriginal communities: see Bowker,

Premièrement, le fait de s'appuyer sur la proclamation de souveraineté par l'empire britannique comme «date limite» de formation des coutumes, pratiques et traditions autochtones exagère l'incidence de l'influence européenne sur les collecti-

“*Sparrow’s Promise: Aboriginal Rights in the B.C. Court of Appeal*”, *supra*, at p. 22. From the native people’s perspective, the coming of the settlers constitutes one of many factors, though a very significant one, involved in their continuing societal change and evolution. Taking British sovereignty as the turning point in aboriginal culture assumes that everything that the natives did after that date was not sufficiently significant and fundamental to their culture and social organization. This is no doubt contrary to the perspective of aboriginal people as to the significance of European arrival on their rights.

Second, crystallizing aboriginal practices, traditions and customs at the time of British sovereignty creates an arbitrary date for assessing existing aboriginal rights: see Sébastien Grammond, “La protection constitutionnelle des droits ancestraux des peuples autochtones et l’arrêt *Sparrow*” (1991), 36 *McGill L.J.* 1382, at pp. 1403-4. In effect, how would one determine the crucial date of sovereignty for the purpose of s. 35(1)? Is it the very first European contacts with native societies, at the time of the Cabot, Verrazzano and Cartier voyages? Is it at a later date, when permanent European settlements were founded in the early seventeenth century? In British Columbia, did sovereignty occur in 1846 — the year in which the *Oregon Boundary Treaty, 1846* was concluded — as held by the Court of Appeal for the purposes of this litigation? No matter how the deciding date is agreed upon, it will not be consistent with the aboriginal view regarding the effect of the coming of Europeans.

As a third point, in terms of proof, the “frozen right” approach imposes a heavy and unfair burden on the natives: the claimant of an aboriginal right must prove that the aboriginal practice, tradition or custom is not only sufficiently significant and fundamental to the culture and social organization of the aboriginal group, but has also been continuously in existence, but as the Chief Justice stresses,

vités autochtones: voir Bowker, «*Sparrow’s Promise: Aboriginal Rights in the B.C. Court of Appeal*», *loc. cit.*, à la p. 22. Du point de vue des autochtones, l’arrivée des colons est un des nombreux facteurs — facteur très important évidemment — qui ont marqué l’évolution constante de leur société. Le fait de considérer la souveraineté britannique comme le point tournant de la culture autochtone suppose que tout ce que les autochtones ont fait après cette date n’était pas suffisamment important et fondamental pour leur culture et leur organisation sociale. Cette prémisse est sans aucun doute à l’opposé du point de vue des autochtones sur l’importance qu’a eue l’arrivée des Européens sur leurs droits.

Deuxièmement, la cristallisation des coutumes, pratiques et traditions autochtones au moment de la souveraineté britannique a pour effet de fixer une date arbitraire pour l’appréciation des droits ancestraux existants: voir Sébastien Grammond, «La protection constitutionnelle des droits ancestraux des peuples autochtones et l’arrêt *Sparrow*» (1991), 36 *R.D. McGill* 1382, aux pp. 1403 et 1404. En effet, comment déterminerait-on la date cruciale de la souveraineté pour l’application du par. 35(1)? S’agit-il des tout premiers contacts entre les Européens et les sociétés autochtones, à l’époque des voyages de Cabot, de Verrazzano et de Cartier? Est-ce plutôt à une date ultérieure, à la date de la fondation des colonies européennes permanentes au début du XVII^e siècle? En Colombie-Britannique, la souveraineté est-elle survenue en 1846 — année de la signature du Traité Oregon — comme l’a conclu la Cour d’appel en l’espèce? Peu importe la façon dont on convient de la date déterminante, celle-ci sera incompatible avec le point de vue des autochtones sur l’effet de la venue des Européens.

Troisièmement, sur le plan de la preuve, la méthode fondée sur les «droits figés» impose aux autochtones un fardeau lourd et injuste. En effet, le demandeur qui revendique un droit ancestral doit prouver que la coutume, pratique ou tradition autochtone est non seulement suffisamment importante et fondamentale pour l’organisation sociale et la culture du groupe autochtone, mais aussi qu’elle

even if interrupted for a certain length of time, for an indeterminate long period of time prior to British sovereignty. This test embodies inappropriate and unprovable assumptions about aboriginal culture and society. It forces the claimant to embark upon a search for a pristine aboriginal society and to prove the continuous existence of the activity for "time immemorial" before the arrival of Europeans. This, to say the least, constitutes a harsh burden of proof, which the relaxation of evidentiary standards suggested by the Chief Justice is insufficient to attenuate. In fact, it is contrary to the interpretative approach propounded by this Court in *Sparrow*, *supra*, which commands a purposive, liberal and favourable construction of aboriginal rights.

a existé de façon ininterrompue pendant une longue période indéterminée avant la souveraineté britannique, quoique, comme le souligne le Juge en chef, il ait pu y avoir interruption pendant un certain temps. Ce critère intègre des hypothèses inappropriées et improuvables en ce qui concerne la culture et la société autochtones. Il oblige le demandeur à se lancer à la recherche d'une société autochtone originale et à prouver que l'activité existait «de temps immémorial» avant l'arrivée des Européens. Il s'agit là, pour le moins, d'un fardeau de preuve exigeant, que l'assouplissement des normes de preuve suggéré par le Juge en chef ne permet pas d'atténuer. De fait, ce critère va à l'encontre de la méthode d'interprétation avancée par notre Cour dans *Sparrow*, précité, qui commande une interprétation des droits ancestraux libérale, favorable et fondée sur l'objet.

1996 CanLII 2166

169

Moreover, when examining the wording of the constitutional provisions regarding aboriginal rights, it appears that the protection should not be limited to pre-contact or pre-sovereignty practices, traditions and customs. Section 35(2) of the *Constitution Act, 1982* provides that the "aboriginal peoples of Canada" includes the Indian, Inuit and Métis peoples of Canada" (emphasis added). Obviously, there were no Métis people prior to contact with Europeans as the Métis are the result of intermarriage between natives and Europeans: see Pentney, "The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee", *supra*, at pp. 272-74. Section 35(2) makes it clear that aboriginal rights are indeed guaranteed to Métis people. As a result, according to the text of the Constitution of Canada, it must be possible for aboriginal rights to arise after British sovereignty, so that Métis people can benefit from the constitutional protection of s. 35(1). The case-by-case application of s. 35(2) of the *Constitution Act, 1982* proposed by the Chief Justice does not address the issue of the interpretation of s. 35(2).

De plus, l'examen du texte des dispositions constitutionnelles concernant les droits ancestraux tend à indiquer que la protection ne devrait pas s'appliquer uniquement aux coutumes, pratiques et traditions qui existaient avant le contact avec les Européens ou l'affirmation de la souveraineté. En effet, le par. 35(2) de la *Loi constitutionnelle de 1982* dit que l'expression ««peuples autochtones du Canada» s'entend notamment des Indiens, des Inuits et des Métis du Canada»» (je souligne). Il n'existait évidemment pas de Métis avant le contact avec les Européens, puisque les premiers sont issus de mariages entre autochtones et Européens: voir Pentney, «The Rights of the Aboriginal Peoples of Canada in the *Constitution Act, 1982*, Part II — Section 35: The Substantive Guarantee», *loc. cit.*, aux pp. 272 à 274. Le paragraphe 35(2) indique clairement que les droits ancestraux sont effectivement garantis aux Métis. En conséquence, selon le texte de la Constitution du Canada, il faut que des droits ancestraux puissent être nés après l'affirmation de la souveraineté britannique pour que les Métis puissent bénéficier de la protection constitutionnelle offerte par le par. 35(1). L'application cas par cas du par. 35(2) de la *Loi constitutionnelle de 1982* que propose le Juge en chef ne règle pas la question de l'interprétation de cette disposition.

Finally, the “frozen right” approach is inconsistent with the position taken by this Court in *Sparrow*, *supra*, which refused to define existing aboriginal rights so as to incorporate the manner in which they were regulated in 1982. The following passage from Dickson C.J. and La Forest J.’s reasons makes this point (at p. 1093):

Far from being defined according to the regulatory scheme in place in 1982, the phrase “existing aboriginal rights” must be interpreted flexibly so as to permit their evolution over time. To use Professor Slattery’s expression, in “Understanding Aboriginal Rights,” *supra*, at p. 782, the word “existing” suggests that those rights are “affirmed in a contemporary form rather than in their primeval simplicity and vigour”. Clearly, then, an approach to the constitutional guarantee embodied in s. 35(1) which would incorporate “frozen rights” must be rejected. [Emphasis added.]

This broad proposition should be taken to relate, not only to the meaning of the word “existing” found in s. 35(1), but also to the more fundamental question of the time at which the content of the rights themselves is determined. Accordingly, the interpretation of the nature and extent of aboriginal rights must “permit their evolution over time”.

The foregoing discussion shows that the “frozen right” approach to defining aboriginal rights as to their nature and extent involves several important restrictions and disadvantages. A better position, in my view, would be evolutive in character and give weight to the perspective of aboriginal people. As the following analysis will demonstrate, a “dynamic right” approach to the question will achieve these objectives.

The “dynamic right” approach to interpreting the nature and extent of aboriginal rights starts from the proposition that “the phrase ‘existing aboriginal rights’ must be interpreted flexibly so as to permit their evolution over time” (*Sparrow*, at p. 1093). According to this view, aboriginal rights must be permitted to maintain contemporary rele-

Enfin, la méthode fondée sur les «droits figés» est incompatible avec la position adoptée par notre Cour dans *Sparrow*, précité, où elle a refusé de définir les droits ancestraux existants de façon à intégrer la manière dont ils étaient réglementés en 1982. L’extrait suivant des motifs du juge en chef Dickson et du juge La Forest exprime ce point (à la p. 1093):

Loin d’être définie selon le régime de réglementation en vigueur en 1982, l’expression «droits ancestraux existants» doit recevoir une interprétation souple de manière à permettre à ces droits d’évoluer avec le temps. Pour reprendre l’expression du professeur Slattery, dans «Understanding Aboriginal Rights,» précité, à la p. 782, le mot «existants» laisse supposer que ces droits sont [TRADUCTION] «confirmés dans leur état actuel plutôt que dans leur simplicité et vigueur primitives». Il est alors évident qu’il faut rejeter une interprétation de la garantie constitutionnelle énoncée au par. 35(1) qui engloberait des «droits figés». [Je souligne.]

Cette proposition générale doit être considérée comme visant non seulement le sens du mot «existants» qui figure au par. 35(1), mais aussi la question plus fondamentale de la période servant à la détermination du contenu des droits eux-mêmes. En conséquence, l’interprétation de la nature et de l’étendue des droits ancestraux doit «permettre leur évolution dans le temps».

Il ressort de l’examen qui précède que l’application de la méthode fondée sur les «droits figés», afin de définir la nature et l’étendue des droits ancestraux, comporte plusieurs restrictions et inconvénients importants. À mon avis, une meilleure méthode en serait une qui tiendrait compte de l’évolution des droits et de la perspective autochtone. Comme le démontrera l’analyse qui suit, l’application d’une méthode fondée sur le «caractère dynamique des droits» permettra d’atteindre ces objectifs.

L’interprétation de la nature et de l’étendue des droits ancestraux par la méthode fondée sur le «caractère dynamique des droits» repose sur le principe que «l’expression «droits ancestraux existants» doit recevoir une interprétation souple de manière à permettre à ces droits d’évoluer avec le temps» (*Sparrow*, à la p. 1093). Selon ce principe,

vance in relation to the needs of the natives as their practices, traditions and customs change and evolve with the overall society in which they live. This generous, large and liberal interpretation of aboriginal rights protected under s. 35(1) would ensure their continued vitality.

il faut permettre aux droits ancestraux de conserver une pertinence contemporaine par rapport aux besoins des autochtones, au fur et à mesure que leurs coutumes, pratiques et traditions changent et évoluent en même temps que l'ensemble de la société dans laquelle ils vivent. Cette interprétation généreuse, large et libérale des droits ancestraux protégés en vertu du par. 35(1) garantirait leur vitalité continue.

173 Distinctive aboriginal culture would not be frozen as of any particular time but would evolve so that aboriginal practices, traditions and customs maintain a continuing relevance to the aboriginal societies as these societies exist in the contemporary world. Instead of considering it as the turning point in aboriginal culture, British sovereignty would be regarded as having recognized and affirmed practices, traditions and customs which are sufficiently significant and fundamental to the culture and social organization of aboriginal people. This idea relates to the "doctrine of continuity", founded in British imperial constitutional law, to the effect that when new territory is acquired the *lex loci* of organized societies, here the aboriginal societies, continues at common law.

La culture autochtone distinctive ne serait pas figée à un moment donné, mais elle évoluerait, de sorte que les coutumes, pratiques et traditions conserveraient leur pertinence pour les sociétés autochtones qui vivent dans le monde d'aujourd'hui. Au lieu d'être perçue comme le point tournant pour la culture autochtone, la souveraineté britannique serait plutôt considérée comme ayant reconnu et confirmé les coutumes, pratiques et traditions qui sont suffisamment importantes et fondamentales pour l'organisation sociale et la culture des autochtones. Cette idée se rattache à la [TRANSDUCTION] «doctrine de la continuité», fondée sur le droit constitutionnel impérial britannique et selon laquelle, en cas d'acquisition de nouveaux territoires, la *lex loci* des sociétés organisées, en l'occurrence les sociétés autochtones, continue de s'appliquer en vertu de la common law.

174 See, on the doctrine of continuity in general, Sir William Blackstone, *Commentaries on the Laws of England* (1769), vol. 2, at p. 51, Joseph Chitty, *A Treatise on the Law of the Prerogatives of the Crown* (1820), at p. 119, and Sir William Searle Holdsworth, *A History of English Law* (1938), vol. 11, at pp. 3-274. See also, in the context of Canadian aboriginal law, Brian Slattery, *Ancestral Lands, Alien Laws: Judicial Perspectives on Aboriginal Title* (1983), Kent McNeil, *Common Law Aboriginal Title* (1989), Mark Walters, "British Imperial Constitutional Law and Aboriginal Rights: A Comment on *Delgamuukw v. British Columbia*" (1992), 17 *Queen's L.J.* 350, Lafontaine, "La coexistence de l'obligation de fiduciaire de la Couronne et du droit à l'autonomie gouvernementale des peuples autochtones", *supra*, at p. 719; and Émond, "Le sable dans l'engrenage du droit

Voir, sur la doctrine de la continuité en général, Sir William Blackstone, *Commentaries on the Laws of England* (1769), vol. 2, à la p. 51; Joseph Chitty, *A Treatise on the Law of the Prerogatives of the Crown* (1820), à la p. 119; et Sir William Searle Holdsworth, *A History of English Law* (1938), vol. 11, aux pp. 3 à 274. Voir aussi dans le contexte du droit canadien en matière autochtone, Brian Slattery, *Ancestral Lands, Alien Laws: Judicial Perspectives on Aboriginal Title* (1983), Kent McNeil, *Common Law Aboriginal Title* (1989), Mark Walters, «British Imperial Constitutional Law and Aboriginal Rights: A Comment on *Delgamuukw v. British Columbia*» (1992), 17 *Queen's L.J.* 350; Lafontaine, «La coexistence de l'obligation de fiduciaire de la Couronne et du droit à l'autonomie gouvernementale des peuples autochtones», *loc. cit.*, à la p. 719; et Émond, «Le sable

inhérent des autochtones à l'autonomie gouvernementale", *supra*, at p. 96.

Consequently, in order for an aboriginal right to be recognized and affirmed under s. 35(1), it is not imperative for the practices, traditions and customs to have existed prior to British sovereignty and, a fortiori, prior to European contact, which is the cut-off date favoured by the Chief Justice. Rather, the determining factor should only be that the aboriginal activity has formed an integral part of a distinctive aboriginal culture — i.e., to have been sufficiently significant and fundamental to the culture and social organization of the aboriginal group — for a substantial continuous period of time as defined above.

Such a temporal requirement is less stringent than the "time immemorial" criterion developed in the context of aboriginal title: see *Calder v. Attorney-General of British Columbia*, *supra*; and, *Baker Lake v. Minister of Indian Affairs and Northern Development*, *supra*; see also Grammond, "La protection constitutionnelle des droits ancestraux des peuples autochtones et l'arrêt *Sparrow*", *supra*, at p. 1394. This qualification of the time immemorial test finds support in the *obiter dicta* of this Court in *Sparrow*, *supra*, at p. 1095, regarding the Musqueam Band's aboriginal right to fish:

It is true that for the period from 1867 to 1961 the evidence is scanty. But the evidence was not disputed or contradicted in the courts below and there is evidence of sufficient continuity of the right to support the Court of Appeal's finding, and we would not disturb it. [Emphasis added.]

The substantial continuous period of time for which the aboriginal practice, tradition or custom must have been engaged in will depend on the circumstances and on the nature of the aboriginal right claimed. However, as proposed by Professor Slattery, in "Understanding Aboriginal Rights", *supra*, at p. 758, in the context of aboriginal title, "in most cases a period of some twenty to fifty years would seem adequate". This, in my view, should constitute a reference period to determine

dans l'engrenage du droit inhérent des autochtones à l'autonomie gouvernementale», *loc. cit.*, à la p. 96.

En conséquence, pour qu'un droit ancestral soit reconnu et confirmé en vertu du par. 35(1), il n'est pas impératif que les coutumes, pratiques et traditions aient existé avant l'affirmation de la souveraineté britannique et, a fortiori, avant le contact avec les Européens, date limite préconisée par le Juge en chef. De fait, le facteur déterminant devrait uniquement être le fait que l'activité autochtone ait fait partie intégrante d'une culture autochtone distinctive — c'est-à-dire avoir été suffisamment importante et fondamentale pour l'organisation sociale et la culture du groupe autochtone visé — pendant une période considérable et ininterrompue, au sens indiqué précédemment.

Cette exigence temporelle est moins rigoureuse que le critère du «temps immémorial» fixé dans le contexte du titre aborigène: voir *Calder c. Procureur général de la Colombie-Britannique*, précité, et *Baker Lake c. Ministre des Affaires indiennes et du Nord canadien*, précité; voir aussi Grammond, «La protection constitutionnelle des droits ancestraux des peuples autochtones et l'arrêt *Sparrow*», *loc. cit.*, à la p. 1394. Cette réserve apportée au critère du temps immémorial trouve appui dans les *obiter dicta* de notre Cour dans *Sparrow*, précité, à la p. 1095, relativement au droit de pêche ancestral de la bande des Musqueams:

Il est vrai qu'en ce qui concerne la période de 1867 à 1961 la preuve est sommaire. Mais la preuve n'a pas été contestée ni contredite devant les tribunaux d'instance inférieure et il y a preuve d'un exercice ininterrompu suffisant du droit pour justifier la conclusion de la Cour d'appel et nous n'y toucherons pas. [Je souligne.]

En ce qui concerne la période considérable et ininterrompue au cours de laquelle la coutume, pratique ou tradition doit avoir été suivie, elle dépendra des circonstances et de la nature du droit ancestral revendiqué. Cependant, comme l'a proposé le professeur Slattery dans «Understanding Aboriginal Rights», *loc. cit.*, à la p. 758, à l'égard du titre aborigène, [TRADUCTION] «dans la plupart des cas, il semble qu'une période de vingt à cinquante ans serait suffisante». Cette période devrait,

175

1996 CanLII 216 (SCC)

176

177

whether an aboriginal activity has been in existence for long enough to warrant constitutional protection under s. 35(1).

à mon avis, constituer la période de référence pour déterminer si une activité autochtone existe depuis assez longtemps pour justifier que lui soit accordée la protection de la Constitution en vertu du par. 35(1).

178

In short, the substantial continuous period of time necessary to the recognition of aboriginal rights should be assessed based on (1) the type of aboriginal practices, traditions and customs, (2) the particular aboriginal culture and society, and (3) the reference period of 20 to 50 years. Such a time frame does not minimize the fact that in order to benefit from s. 35(1) protection, aboriginal activities must still form the core of the lives of native people; this surely cannot be characterized as an extreme position, as my colleague Justice McLachlin affirms.

Bref, la période considérable et ininterrompue nécessaire pour la reconnaissance des droits ancestraux devrait être appréciée en fonction des critères suivants: (1) le type de coutumes, pratiques et traditions autochtones en cause, (2) la culture et la société autochtones particulières visées, et (3) la période de référence de 20 à 50 ans. Une telle période ne minimise pas le fait que, pour profiter de la protection du par. 35(1), les activités autochtones visées doivent être au centre de la vie des autochtones concernés. Une telle position ne peut certainement pas être qualifiée d'extrême, comme l'affirme ma collègue madame le juge McLachlin.

179

The most appreciable advantage of the "dynamic right" approach to defining the nature and extent of aboriginal rights is the proper consideration given to the perspective of aboriginal people on the meaning of their existing rights. It recognizes that distinctive aboriginal culture is not a reality of the past, preserved and exhibited in a museum, but a characteristic that has evolved with the natives as they have changed, modernized and flourished over time, along with the rest of Canadian society. This, in the aboriginal people's perspective, is no doubt the true sense of the constitutional protection provided to aboriginal rights through s. 35(1) of the *Constitution Act, 1982*.

L'avantage le plus appréciable de la méthode fondée sur le «caractère dynamique des droits» pour interpréter la nature et l'étendue des droits ancestraux est qu'elle permet de tenir compte, comme il se doit, de la perspective des autochtones en ce qui concerne la signification de leurs droits existants. Elle reconnaît que la culture autochtone distinctive n'est pas une chose du passé, préservée et exposée dans un musée, mais bien une caractéristique qui a évolué en même temps que les autochtones, au fur et à mesure que ceux-ci ont changé, se sont modernisés et ont prospéré au fil du temps, parallèlement au reste de la société canadienne. Voilà manifestement quel est, du point de vue des autochtones, le sens véritable de la protection constitutionnelle accordée aux droits ancestraux par le par. 35(1) de la *Loi constitutionnelle de 1982*.

Summary

Résumé

180

In the end, the proposed general guidelines for the interpretation of the nature and extent of aboriginal rights constitutionally protected under s. 35(1) can be summarized as follows. The characterization of aboriginal rights should refer to the rationale of the doctrine of aboriginal rights, i.e., the historic occupation and use of ancestral lands by the natives. Accordingly, aboriginal practices,

En définitive, les lignes directrices générales proposées pour l'interprétation de la nature et de l'étendue des droits protégés constitutionnellement par le par. 35(1) peuvent être résumées ainsi. La caractérisation des droits ancestraux devrait se faire en fonction du fondement de la doctrine des droits ancestraux, c.-à-d. l'occupation et l'utilisation historiques par les autochtones de leurs terres

traditions and customs would be recognized and affirmed under s. 35(1) of the *Constitution Act, 1982* if they are sufficiently significant and fundamental to the culture and social organization of a particular group of aboriginal people. Furthermore, the period of time relevant to the assessment of aboriginal activities should not involve a specific date, such as British sovereignty, which would crystallize aboriginal's distinctive culture in time. Rather, as aboriginal practices, traditions and customs change and evolve, they will be protected in s. 35(1) provided that they have formed an integral part of the distinctive aboriginal culture for a substantial continuous period of time.

This approach being set out, I will turn to the specific issue raised by this case, namely whether the Sto:lo's aboriginal right to fish includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes. Before examining the distinctive aboriginal culture of the Sto:lo people in that respect, a brief review of the case law on aboriginal trade activities, which shows that aboriginal practices, traditions and customs can have different purposes, will be helpful to delineate the issue at bar.

IV. Case Law on Aboriginal Trade Activities

At the British Columbia Court of Appeal, the majority framed the issue as being whether the Sto:lo possess an aboriginal right to fish which includes the right to make commercial use of the fish. Macfarlane J.A. put the question that way because "[i]n essence, [this case] is about an asserted Indian right to sell fish allocated for food purposes on a commercial basis" (see para. 30). I leave aside for the moment the delineation of the aboriginal right claimed in this case in order, first, to examine the case law on treaty and aboriginal rights regarding trade to demonstrate that there is an important distinction to be drawn between, on the one hand, the sale, trade and barter of fish for livelihood, support and sustenance purposes and,

ancestrales. En conséquence, les coutumes, pratiques et traditions autochtones seront reconnues et confirmées en vertu du par. 35(1) de la *Loi constitutionnelle de 1982* si elles sont suffisamment importantes et fondamentales pour l'organisation sociale et la culture d'un groupe particulier d'autochtones. De plus, la période pertinente pour l'appréciation des activités autochtones ne devrait pas être fonction d'une date spécifique, par exemple l'affirmation de la souveraineté britannique, car cela aurait pour effet de cristalliser dans le temps la culture autochtone distinctive. Au contraire, comme les coutumes, pratiques et traditions autochtones changent et évoluent, elles seront protégées par le par. 35(1) si elles ont fait partie intégrante de la culture autochtone distinctive pendant une période considérable et ininterrompue.

Après avoir exposé cette méthode, je vais maintenant aborder la question précise qui se soulève en l'espèce. Est-ce que le droit de pêche ancestral des Sto:lo inclut le droit de vendre et d'échanger du poisson à des fins de subsistance? Avant d'examiner la culture autochtone distinctive des Sto:lo à cet égard, il est utile, pour bien cerner la question en litige, de passer brièvement en revue la jurisprudence concernant les activités d'échange des autochtones, jurisprudence qui montre que les coutumes, pratiques et traditions autochtones peuvent avoir des fins différentes.

IV. La jurisprudence concernant les activités d'échange des autochtones

La Cour d'appel de la Colombie-Britannique à la majorité a indiqué que la question en litige était de savoir si les Sto:lo possèdent un droit de pêche ancestral incluant le droit de faire une utilisation commerciale du poisson. Le juge Macfarlane a formulé la question en ces termes parce que [TRADUCTION] «[e]ssentiellement, [la présente affaire] porte sur la revendication par des Indiens du droit de vendre commercialement du poisson attribué à des fins alimentaires» (par. 30). Je laisse de côté pour le moment la définition du droit ancestral revendiqué en l'espèce afin d'examiner la jurisprudence relative aux droits ancestraux ou issus de traités concernant les échanges pour montrer qu'il faut faire une distinction importante entre, d'une part,

on the other, the sale, trade and barter of fish for purely commercial purposes.

la vente, l'échange et le troc de poisson à des fins de subsistance, et, d'autre part, la vente et l'échange de poisson à des fins purement commerciales.

183 This Court, in *Sparrow*, *supra*, proposed to leave to another day the discussion of commercial aspects of the right to fish, since (at p. 1101) "the case at bar was not presented on the footing of an aboriginal right to fish for commercial or livelihood purposes" (emphasis added). Accordingly, Dickson C.J. and La Forest J. confined their reasons to the aboriginal right to fish for food, social and ceremonial purposes. In so doing, however, it appears that they implicitly distinguished between (1) the right to fish for food, social and ceremonial purposes (which was recognized for the Musqueam Band), (2) the right to fish for livelihood, support and sustenance purposes, and (3) the right to fish for purely commercial purposes (see *Sparrow*, at pp. 1100-1101). The differentiation between the last two classes of purposes, which is of key interest here, was discussed and elaborated upon by Wilson J. in *Horseman*, *supra*.

Dans *Sparrow*, précité, notre Cour a remis à une autre occasion l'examen des aspects commerciaux du droit de pêche, puisque cette (à la p. 1101) «affaire n'a[vait] pas été débattue en fonction de l'existence d'un droit ancestral de pêcher à des fins commerciales ou de subsistance» (je souligne). En conséquence, le juge en chef Dickson et le juge La Forest ont limité leurs motifs au droit ancestral de pêcher à des fins alimentaires, sociales et rituelles. Cependant, ce faisant, ils semblent avoir implicitement établi une distinction entre (1) le droit de pêcher à des fins alimentaires, sociales et rituelles (qui a été reconnu à la bande des Musqueams), (2) le droit de pêcher à des fins de subsistance, et (3) le droit de pêcher à des fins purement commerciales (voir *Sparrow*, aux pp. 1100 et 1101). La distinction entre ces deux dernières catégories, qui revêt une importance capitale en l'espèce, a été examinée et précisée par le juge Wilson dans l'arrêt *R. c. Horseman*, précité.

184 In *Horseman*, this Court examined the scope of the Horse Lakes Indian Band's right to hunt under *Treaty No. 8*, 1899, as amended by the *Natural Resources Transfer Agreement*, 1930 (Alberta) ("NRTA"). In that case, the appellant, Bert Horseman, was charged with the offence of unlawfully "trafficking" in wildlife, contrary to s. 42 of the *Wildlife Act*, R.S.A. 1980, c. W-9, which was defined as "any single act of selling, offering for sale, buying, bartering, soliciting or trading". The appellant had killed a grizzly bear in self-defence, while legally hunting moose for food, and he sold the bear hide because he was in need of money to support his family. Horseman argued that the *Wildlife Act* did not apply to him because he was within his *Treaty No. 8* rights when he sold the grizzly hide.

Dans *Horseman*, notre Cour a examiné la portée du droit de chasse de la bande indienne de Horse Lakes en vertu du *Traité n° 8*, 1899, modifié par la *Convention sur le transfert des ressources naturelles* de 1930 (Alberta) (la «*Convention*»). Dans cette affaire, l'appelant, Bert Horseman, avait été accusé d'avoir illégalement [TRADUCTION] «fait le trafic» d'un animal sauvage en contravention de l'art. 42 de la *Wildlife Act*, R.S.A. 1980, ch. W-9, infraction définie comme étant [TRADUCTION] «le fait de vendre, d'acheter, de troquer, de solliciter ou d'échanger». L'appelant a, dans un acte de légitime défense, tué un grizzly pendant qu'il chassait légalement l'original pour se nourrir. Il a par la suite vendu la peau du grizzly, car il avait besoin d'argent pour subvenir aux besoins de sa famille. Horseman a plaidé que la *Wildlife Act* ne s'appliquait pas à lui parce qu'il avait exercé des droits que lui conférait le *Traité n° 8* quand il a vendu la peau de l'ours.

185 Cory J. (Lamer, La Forest and Gonthier JJ. concurring), for the majority, held that the *Treaty*

Le juge Cory (avec l'appui des juges Lamer, La Forest et Gonthier), s'exprimant au nom de la

No. 8 right to hunt generally has been circumscribed by the *NRTA* to the right to hunt for "food" only. He made it clear, however, that before the *NRTA* (1930), the Horse Lakes people had the right to hunt for commercial purposes under *Treaty No. 8* (at pp. 928-29):

The economy of the Indian population at the time of the Treaty had clearly evolved to such a degree that hunting and fishing for commercial purposes was an integral part of their way of life.

I am in complete agreement with the finding of the trial judge that the original Treaty right clearly included hunting for purposes of commerce. The next question that must be resolved is whether or not that right was in any way limited or affected by the Transfer Agreement of 1930. [Emphasis added.]

This passage recognizes that the practices, traditions and customs of the Horse Lakes people were not frozen at the time of British sovereignty and that when *Treaty No. 8* was concluded in 1899, their activities had evolved so that commercial hunting and fishing formed an "integral part" of their culture and society.

Furthermore, Cory J. upheld the findings of the courts below that the sale of the grizzly hide constituted a commercial hunting activity which, as a consequence, fell outside the ambit of the treaty rights to hunt. He wrote at p. 936:

It has been seen that the Treaty No. 8 hunting rights have been limited by the provisions of the 1930 Transfer Agreement to the right to hunt for food, that is to say, for sustenance for the individual Indian or the Indian's family. In the case at bar the sale of the bear hide was part of a "multi-stage process" whereby the product was sold to obtain funds for purposes which might include purchasing food for nourishment. The courts below correctly found that the sale of the bear hide constituted a hunting activity that had ceased to be that of hunting "for food" but rather was an act of commerce. As a result it was no longer a right protected by Treaty No. 8, as amended by the 1930 Transfer Agreement. [Emphasis added.]

majorité, a statué que la *Convention* avait limité le droit général de chasse énoncé au *Traité n° 8* au droit de chasser pour «se nourrir» seulement. Cependant, il a clairement indiqué que, avant la *Convention* (1930), les Indiens de Horse Lakes avaient le droit de chasser à des fins commerciales en vertu du *Traité n° 8* (aux pp. 928 et 929):

De toute évidence, au moment de la signature du traité, l'économie de la population indienne avait évolué au point où la chasse et la pêche à des fins commerciales faisaient partie intégrante du mode de vie des Indiens.

Je souscris entièrement à la conclusion du juge de première instance que le droit initial conféré par le traité comprenait manifestement la chasse à des fins du commerce. La prochaine question à laquelle il faut répondre est de savoir si ce droit a été de quelque manière limité ou modifié par la Convention de transfert de 1930. [Je souligne.]

Ce passage reconnaît le fait que les coutumes, pratiques et traditions des Indiens de Horse Lakes n'ont pas été figées au moment de l'affirmation de la souveraineté britannique, et que leurs activités avaient, lors de la signature du *Traité n° 8* en 1899, évolué au point où la chasse et la pêche commerciales faisaient «partie intégrante» de leur culture et de leur société.

En outre, le juge Cory a confirmé les conclusions des tribunaux inférieurs que la vente de la peau du grizzli constituait une activité de chasse commerciale qui, en conséquence, n'était pas visée par les droits de chasse conférés par le Traité. Il a écrit ceci, à la p. 936:

Nous avons constaté que la Convention de transfert de 1930 a limité les droits de chasse conférés par le Traité n° 8 au droit de chasser pour se nourrir, c'est-à-dire pour la subsistance de l'Indien ou de sa famille. En l'espèce, la vente de la peau de l'ours s'inscrivait dans un «processus à plusieurs étapes», la vente ayant pour but l'obtention d'argent pour des fins pouvant comprendre l'achat de denrées alimentaires. Les tribunaux d'instance inférieure ont conclu, à juste titre, que la vente de la peau de l'ours constituait un acte relié à la chasse qui n'était plus de la chasse «pour se nourrir», mais plutôt un acte de commerce. Il ne s'agissait plus en conséquence d'un droit protégé par le Traité n° 8, modifié par la Convention de transfert de 1930. [Je souligne.]

Cory J. concluded that the *Wildlife Act* applied and found the appellant guilty of unlawfully trafficking in wildlife.

Le juge Cory a conclu que la *Wildlife Act* s'appliquait et il a déclaré l'appelant coupable d'avoir illégalement fait le trafic d'un animal sauvage.

187

Wilson J. (Dickson C.J. and L'Heureux-Dubé J. concurring), dissenting, was of the view that, from an aboriginal perspective, a simple dichotomy between hunting for domestic use and hunting for commercial purposes should not be determinative of the treaty rights. Rather, *Treaty No. 8* and the *NRTA* should be interpreted so as to preserve the Crown's commitment to respecting the lifestyle of the Horse Lakes people and the way in which they had traditionally pursued their livelihood.

Le juge Wilson (avec l'appui du juge en chef Dickson et de moi-même), dissidente, était d'avis que, du point de vue des autochtones, la simple dichotomie entre la chasse pratiquée pour subvenir à des besoins domestiques et celle pratiquée à des fins commerciales ne devrait pas être déterminante en ce qui concerne les droits issus de traités. Le *Traité n° 8* et la *Convention* devaient plutôt être interprétés de façon à préserver l'engagement solennel que Sa Majesté avait pris de respecter le mode de vie des Indiens de Horse Lakes et la façon dont ceux-ci avaient traditionnellement gagné leur vie.

188

Contrary to Cory J., Wilson J. held that the words "for food" in the *NRTA* did not have the effect of placing substantial limits on the range of hunting activities permitted under *Treaty No. 8*. After reviewing the decisions of this Court in *Frank v. The Queen*, [1978] 1 S.C.R. 95, and *Moosehunter*, *supra*, Wilson J. found that the treaty right to hunt "for food" amounted to a right to hunt for support and sustenance. She explained her view as follows, at p. 919:

Contrairement au juge Cory, le juge Wilson a statué que l'expression «pour se nourrir» dans la *Convention* n'avait pas eu pour effet d'imposer des limites importantes à l'étendue des pratiques de chasse autorisées par le *Traité n° 8*. Après avoir examiné les arrêts de notre Cour *Frank c. La Reine*, [1978] 1 R.C.S. 95, et *Moosehunter*, précité, le juge Wilson a conclu que le droit de chasser «pour se nourrir» prévu au *Traité* équivalait à un droit de chasse à des fins de subsistance. Elle a expliqué ainsi son point de vue, à la p. 919:

And if we are to give para. 12 [of the *NRTA*] the "broad and liberal" construction called for in *Sutherland*, a construction that reflects the principle enunciated in *Nowegijick* and *Simon* that statutes relating to Indians must be given a "fair, large and liberal construction", then we should be prepared to accept that the range of activity encompassed by the term "for food" extends to hunting for "support and subsistence", i.e. hunting not only for direct consumption but also hunting in order to exchange the product of the hunt for other items as was their wont, as opposed to purely commercial or sport hunting.

Et si nous voulons donner à l'art. 12 [de la *Convention*] l'interprétation «large et libérale» qu'exige l'arrêt *Sutherland*, une interprétation qui reflète le principe énoncé dans les arrêts *Nowegijick* et *Simon* que les lois relatives aux Indiens doivent être «interprétées de façon juste, large et libérale», nous devrions alors être prêts à accepter que l'étendue des activités visées par l'expression «pour se nourrir» s'étend à la chasse à des fins de «support et [de] subsistance», c'est-à-dire à la chasse non seulement en vue de la consommation directe mais également à la chasse en vue d'échanger le produit de la chasse pour d'autres articles comme c'était leur habitude, par opposition à la chasse purement commerciale ou sportive.

And, indeed, when one thinks of it this makes excellent sense. The whole emphasis of *Treaty No. 8* was on the preservation of the Indian's traditional way of life. But this surely did not mean that the Indians were to be forever consigned to a diet of meat and fish and were to have no opportunity to share in the advances of modern

Et d'ailleurs, quand on y pense, cela est tout à fait logique. Le *Traité n° 8* était axé principalement sur la préservation du mode de vie traditionnel des Indiens. Mais cela ne voulait certainement pas dire que les Indiens devraient à tout jamais s'astreindre à un régime de viande et de poisson et qu'ils ne pourraient pas béné-

civilization over the next one hundred years. Of course, the Indians' hunting and fishing rights were to be preserved and protected; the Indians could not have survived otherwise. But this cannot mean that in 1990 they are to be precluded from selling their meat and fish to buy other items necessary for their sustenance and the sustenance of their children. Provided the purpose of their hunting is either to consume the meat or to exchange or sell it in order to support themselves and their families, I fail to see why this is precluded by any common sense interpretation of the words "for food". It will, of course, be a question of fact in each case whether a sale is made for purposes of sustenance or for purely commercial profit. [Emphasis added.]

Wilson J. concluded that the *Wildlife Act* could not forbid the activities which fall within the aboriginal traditional way of life and that are linked to the Horse Lakes people's support and sustenance. Consequently, she would have acquitted the appellant because he sold the grizzly hide to buy food for his family, not for commercial profit.

As far as this case is concerned, there are two points which stand out from the foregoing review of the reasons in *Horseman*, *supra*. First, the Horse Lakes people's original practices, traditions and customs regarding hunting were held to have evolved to include, at the time *Treaty No. 8* was concluded, the right to make some commercial use of the game. Second, and more importantly, when determining whether a treaty right exists (which no doubt extends to aboriginal rights), there should be a distinction drawn between, on the one side, activities relating to the support and sustenance of the natives and, on the other, ventures undertaken purely for commercial profit. Such a differentiation is far from being artificial, as McLachlin J. seems to suggest, and, in fact, this distinction ought to be used in the context of s. 35(1) of the *Constitution Act, 1982* as in other contexts; in short, there are sales which do not qualify as commercial sales (see, for example, *Loi sur la protection du consommateur*, L.R.Q. 1977, c. P-40.1).

ficier eux aussi des progrès de la civilisation moderne au cours du siècle suivant. Les droits de chasse et de pêche des Indiens devaient évidemment être conservés et protégés; les Indiens n'auraient pu survivre autrement. Mais cela ne signifie pas qu'en 1990 ils ne peuvent vendre leur viande et leur poisson pour acheter d'autres articles nécessaires à leur subsistance et à celle de leurs enfants. Pourvu qu'ils chassent en vue de consommer la viande, de l'échanger ou de la vendre pour se nourrir et nourrir leur famille, je ne vois pas comment une interprétation conforme au bon sens de l'expression «pour se nourrir» peut interdire cela. Il va sans dire que la question de savoir si une vente est faite à des fins de subsistance ou à des fins purement commerciales est une question de fait à trancher dans chaque cas. [Je souligne.]

Le juge Wilson a statué que la *Wildlife Act* ne pouvait interdire les activités faisant partie du mode de vie autochtone traditionnel et qui sont liées à la subsistance des Indiens de Horse Lakes. En conséquence, elle aurait acquitté l'appelant, étant donné qu'il avait vendu la peau du grizzli non pas à des fins commerciales, mais pour acheter de la nourriture pour sa famille.

En ce qui concerne le présent pourvoi, deux points ressortent de l'analyse qui précède des motifs prononcés dans *Horseman*, précité. Premièrement, il a été jugé que les coutumes, pratiques et traditions originales des Indiens de Horse Lakes en matière de chasse avaient évolué et incluaient, au moment de la conclusion du *Traité n° 8*, le droit de faire une certaine utilisation commerciale du gibier. Deuxièmement, point encore plus important, pour déterminer si un droit issu de traité existe (principe qui s'applique sans aucun doute aussi aux droits ancestraux), il faut établir une distinction entre, d'une part, les activités de subsistance des autochtones, et, d'autre part, celles exercées à des fins purement commerciales. Une telle distinction est loin d'être artificielle, comme semble le suggérer le juge McLachlin, et, de fait, elle devrait être utilisée dans le contexte du par. 35(1) de la *Loi constitutionnelle de 1982* tout comme dans d'autres contextes. Bref, il y a des ventes qui n'ont pas un caractère commercial (voir, par exemple, la *Loi sur la protection du consommateur*, L.R.Q. 1977, ch. P-40.1).

190

This differentiation was adopted by the Ontario Court (Prov. Div.) in *R. v. Jones* (1993), 14 O.R. (3d) 421. In that case, the defendants, members of the Chippewas of Nawash, were charged with the offence of taking more lake trout than permitted by the band's commercial fishing licence, contrary to the *Ontario Fishery Regulations, 1989*, authorized by the *Fisheries Act*. The defendants argued that the quota imposed by the Band's licence interfered with their protected aboriginal right or treaty right to engage in commercial fishing. After referring to both the reasons of Cory J. and of Wilson J. in *Horseman, supra*, Fairgrieve Prov. Ct. J. reached the following conclusions at pp. 440-41:

Consideration of the historical, anthropological and archival evidence leaves an existing aboriginal right to fish for commercial purposes that essentially coincides with the treaty right already stated: the Saugeen have a collective ancestral right to fish for sustenance purposes in their traditional fishing grounds. Apart from the waters adjacent to the two reserves and their unsundered islands, the aboriginal commercial fishing right is not exclusive, but does allow them to fish throughout their traditional fishing grounds on both sides of the peninsula. To use Ms. Blair's language [for the Defendants], the nature of the aboriginal right exercised is one directed "to a subsistence use of the resource as opposed to a commercially profitable enterprise". It is the band's continuing communal right to continue deriving "sustenance" from the fishery resource which has always been an essential part of the community's economic base. [Emphasis added.]

Ct.), at p. 145, as well as the commentators Binnie, "The Sparrow Doctrine: Beginning of the End or End of the Beginning?", *supra*, at pp. 234-35, and Bowker, "Sparrow's Promise: Aboriginal Rights in the B.C. Court of Appeal", *supra*, at p. 8.

191

In sum, as *Sparrow, supra*, suggests, when assessing whether aboriginal practices, traditions and customs have been sufficiently significant and

Cette distinction a été adoptée par la Cour de l'Ontario (Div. prov.) dans l'affaire *R. c. Jones* (1993), 14 O.R. (3d) 421. Dans cette affaire, les défendeurs, membres des Chippewas de Nawash, avaient été accusés de l'infraction d'avoir pêché un nombre de truites supérieur à celui autorisé par le permis de pêche commerciale de la bande, en contravention du *Règlement de pêche de l'Ontario de 1989*, pris en vertu de la *Loi sur les pêches*. Les défendeurs ont prétendu que le contingent imposé par le permis de la bande portait atteinte au droit ancestral ou issu de traité qui leur était garanti en matière de pêche commerciale. Après s'être référé aux motifs du juge Cory et à ceux du juge Wilson dans *Horseman*, précité, le juge Fairgrieve de la Cour provinciale a formulé les conclusions suivantes, aux pp. 440 et 441:

[TRADUCTION] L'examen de la preuve historique, anthropologique et archivistique révèle l'existence d'un droit ancestral existant de pêcher à des fins commerciales qui coïncide essentiellement avec le droit issu de traité déjà mentionné: les Saugeens possèdent un droit ancestral collectif de pêche à des fins de subsistance dans leurs secteurs de pêche traditionnels. Sauf dans les eaux adjacentes aux deux réserves et à leurs îles non cédées, le droit ancestral de pêche à des fins commerciales n'a pas un caractère exclusif, mais il autorise néanmoins les Saugeens à pêcher partout dans leurs secteurs de pêche des deux côtés de la péninsule. Pour employer les termes de M^{me} Blair [pour les défendeurs], la nature du droit ancestral exercé vise "une utilisation de la ressource à des fins de subsistance par opposition à une entreprise commercialement rentable". C'est le droit collectif continu de la bande de continuer de tirer sa "subsistance" des ressources de la pêche, qui a toujours constitué un élément essentiel de la base économique de la collectivité. [Je souligne.]

Voir aussi *R. c. King*, [1993] O.J. No. 1794 (C. Ont. Div. prov.), au par. 51; et *R. c. Fraser*, [1994] 3 C.N.L.R. 139 (C. prov. C.-B.), à la p. 145; ainsi que les auteurs Binnie, "The Sparrow Doctrine: Beginning of the End or End of the Beginning?", *loc. cit.*, aux pp. 234 et 235, et Bowker, "Sparrow's Promise: Aboriginal Rights in the B.C. Court of Appeal", *loc. cit.*, à la p. 8.

Bref, comme l'indique l'arrêt *Sparrow*, précité, les fins pour lesquelles sont exercées les activités en cause sont considérées comme hautement perti-

fundamental to the culture and social organization of a particular group of aboriginal people for a substantial continuing period of time, the purposes for which such activities are undertaken should be considered highly relevant. An aboriginal activity can form an integral part of the distinctive culture of a group of aboriginal people if it is done for certain purposes — e.g., for livelihood, support and sustenance purposes. However, the same activity could be considered not to be part of their distinctive aboriginal culture if it is done for other purposes — e.g., for purely commercial purposes. The Chief Justice fails to draw this distinction, which I believe to be highly relevant, although he agrees that the Court of Appeal mischaracterized the aboriginal right here claimed.

This contemplation of aboriginal or treaty rights based on the purpose of the activity is aimed at facilitating the delineation of the rights claimed as well as the identification and evaluation of the evidence presented in their support. However, as in *Horseman, supra*, to respect aboriginal perspective on the matter, the purposes for which aboriginal activities are undertaken cannot and should not be strictly compartmentalized. Rather, in my view, such purposes should be viewed on a spectrum, with aboriginal activities undertaken solely for food, at one extreme, those directed to obtaining purely commercial profit, at the other extreme, and activities relating to livelihood, support and sustenance, at the centre.

This being said, in this case, as I have already noted elsewhere, the British Columbia Court of Appeal framed the issue as being one of whether the Sto:lo possess an aboriginal right to fish which includes the right to make commercial use of the fish. To state the question in that fashion not only disregards the above distinction between the purposes for which fish can be sold, traded and bartered but also mischaracterizes the facts of this case, misconceives the contentions of the appellant

nentes dans l'examen de la question de savoir si les coutumes, pratiques et traditions autochtones ont été suffisamment importantes et fondamentales pour l'organisation sociale et la culture d'un groupe particulier d'autochtones, et ce pendant une période considérable et ininterrompue. Une activité autochtone peut faire partie intégrante de la culture distinctive d'un groupe d'autochtones si elle est exercée pour certaines fins, par exemple à des fins de subsistance. Toutefois, la même activité pourrait être considérée comme ne faisant pas partie de cette culture autochtone distinctive si elle vise d'autres fins, par exemple des fins purement commerciales. Le Juge en chef omet d'établir cette distinction, que j'estime hautement pertinente, quoiqu'il reconnaisse que la Cour d'appel a mal caractérisé le droit ancestral revendiqué en l'espèce.

Cet examen des droits ancestraux ou issus de traités, qui est fondé sur la fin visée par l'activité en cause, a pour objet de faciliter la définition des droits revendiqués, de même que la détermination et l'appréciation de la preuve présentée au soutien de ces droits. Cependant, tout comme dans *Horseman*, précité, afin de respecter la perspective autochtone sur la question, les fins pour lesquelles les activités autochtones sont exercées ne peuvent pas et ne devraient pas être compartimentées de manière stricte. À mon avis, ces fins devraient plutôt être considérées comme les divers éléments d'une gamme sur laquelle les activités autochtones exercées seulement à des fins alimentaires se trouveraient à une extrémité et celles visant des fins purement commerciales à l'autre extrémité, alors que les activités faites à des fins de subsistance occuperaient le centre.

Cela dit, en l'espèce, comme je l'ai déjà affirmé, la Cour d'appel de la Colombie-Britannique a dit que la question était de savoir si les Sto:lo possèdent un droit de pêche ancestral incluant le droit de faire une utilisation commerciale du poisson. Non seulement une telle formulation ne tient pas compte de la distinction établie précédemment entre les fins pour lesquelles le poisson peut être vendu et échangé, mais elle caractérise erronément les faits de l'espèce, interprète mal les prétentions

and overlooks the legislative provision here under constitutional challenge.

de l'appelante et fait abstraction de la disposition législative visée par la présente contestation constitutionnelle.

194

First, the facts giving rise to this case do not support the Court of Appeal's framing of the issue in terms of commercial fishing. The appellant, Dorothy Van der Peet, was charged with the offence of selling salmon which were legally caught by her common law spouse and his brother. The appellant sold 10 salmon. There is no evidence as to the purposes of the sale or as to what the money was going to be used for. It is clear, however, that the offending transaction proven by the Crown is not part of a commercial venture, nor does it constitute an act directed at profit. It would be different if the Crown had shown, for instance, that the appellant sold 10 salmon every day for a year or that she was selling fish to provide for commercial profit. This is not, however, the scenario presented to us and, as the facts stand on the record, it is reasonable to infer from them that the appellant sold the 10 salmon, not for profit, but for the support and sustenance of herself and her family.

Premièrement, les faits à l'origine de la présente affaire ne permettent pas, comme l'a fait la Cour d'appel, de formuler la question sous l'angle de la pêche commerciale. L'appelante, Dorothy Van der Peet, a été accusée d'avoir vendu des saumons qui avaient été pêchés légalement par son conjoint de fait et le frère de celui-ci. L'appelante a vendu 10 saumons. Il n'existe pas de preuve concernant les fins de la vente ou l'utilisation qu'on entendait faire du produit de celle-ci. Cependant, il est clair que l'opération reprochée et dont le ministère public a fait la preuve, ne s'inscrit pas dans le cadre d'une entreprise commerciale et ne constitue pas non plus un acte visant à réaliser un profit. Toutefois, la situation serait différente si le ministère public avait démontré, par exemple, que l'appelante avait vendu 10 saumons par jour pendant une année, ou encore qu'elle vendait du poisson à des fins commerciales. Cependant, ce n'est pas le scénario qui nous a été présenté et, suivant les faits au dossier, il est raisonnable d'inférer de ceux-ci que l'appelante a vendu les 10 saumons non pas à des fins commerciales, mais pour subvenir à ses besoins et à ceux de sa famille.

195

Furthermore, the appellant did not argue in the courts below or before this Court that the Sto:lo possess an aboriginal right to fish for commercial purposes. The submissions were only to the effect that the Sto:lo's aboriginal right to fish includes the right to sell, trade and barter fish for their livelihood, support and sustenance. In fact, before this Court, the appellant relied on the dissenting opinion of Lambert J.A., at the Court of Appeal, who stated (at para. 150) that the Sto:lo had the right to "catch and, if they wish, sell, themselves and through other members of the Sto:lo people, sufficient salmon to provide all the people who wish to be personally engaged in the fishery, and their dependent families, when coupled with their other financial resources, with a moderate livelihood" (italics omitted, underlining added). It is well settled that in framing the issue in a case courts cannot overlook the contentions of the parties; in the

Qui plus est, l'appelante n'a pas plaidé devant les tribunaux inférieurs ni devant notre Cour que les Sto:lo possèdent un droit ancestral de pêcher à des fins commerciales. Elle a seulement prétendu que le droit de pêche ancestral des Sto:lo inclut le droit de vendre et d'échanger du poisson à des fins de subsistance. De fait, devant notre Cour, l'appelante s'est fondée sur l'opinion dissidente du juge Lambert de la Cour d'appel qui a affirmé (au par. 150) que les Sto:lo avaient le droit [TRADUCTION] «de prendre et, s'ils le désirent, de vendre eux-mêmes et par l'entremise d'autres Sto:lo, suffisamment de saumon pour assurer à tous ceux qui souhaitent pêcher — ainsi qu'aux personnes à leur charge —, compte tenu de leurs autres ressources financières, une subsistance convenable» (j'ai omis les italiques et je souligne). Il est bien établi que, dans la formulation de la question en litige, les tribunaux ne peuvent faire abstraction des prétentions

case at bar, the appellant did not seek the recognition and affirmation of an aboriginal right to fish for commercial purposes.

Finally, the legislative provision under constitutional challenge is not only aimed at commercial fishing, but also forbids both commercial and non-commercial sale, trade and barter of fish. For convenience, here is again s. 27(5) of the *British Columbia Fishery (General) Regulations*:

27. . . .

(5) No person shall sell, barter or offer to sell or barter any fish caught under the authority of an Indian food fish licence. [Emphasis added.]

The scope of s. 27(5) encompasses any sale, trade or barter of fish caught under an Indian food fish licence. If the prohibition were directed at the sale, trade and barter of fish for commercial purposes, the question of the validity of the Regulations would raise a different issue, one which does not arise on the facts of this case since an aboriginal right to fish commercially is not claimed here. Section 27(5) prohibits the sale, trade and barter of fish for livelihood, support and sustenance, and we must determine whether, as it stands, this provision complies with the constitutional protection afforded to aboriginal rights under s. 35(1) of the *Constitution Act, 1982*.

An aboriginal activity does not need to be undertaken for livelihood, support and sustenance purposes to benefit from s. 35(1) protection. In other words, the above distinction based on the purposes of aboriginal activities does not impose an additional burden on the claimant of an aboriginal right. It may be that, for a particular group of aboriginal people, the practices, traditions and customs relating to some commercial activities meet the test for the recognition of an aboriginal right, i.e., to be sufficiently significant and fundamental to the culture and social organization for a substantial continuing period of time. This will have to be

des parties. En l'espèce, l'appelante n'a pas demandé que soit reconnu et confirmé un droit ancestral de pêcher à des fins commerciales.

Enfin, la disposition législative visée par la présente contestation constitutionnelle ne concerne pas seulement la pêche commerciale, mais elle interdit de vendre et d'échanger du poisson tant à des fins commerciales que non commerciales. Par souci de commodité, je reproduis à nouveau le par. 27(5) du *Règlement de pêche général de la Colombie-Britannique*:

27. . . .

(5) Il est interdit à quiconque de vendre, d'échanger ou d'offrir de vendre ou d'échanger du poisson pris en vertu d'un permis de pêche de subsistance des Indiens. [Je souligne.]

Le paragraphe 27(5) vise la vente et l'échange de poisson pris en vertu d'un permis de pêche de subsistance des Indiens. Si l'interdiction visait la vente et l'échange de poisson à des fins commerciales, la question de la validité du Règlement soulèverait une question différente, qui ne se présente pas compte tenu des faits de la présente affaire, étant donné qu'aucun droit ancestral de pêcher à des fins commerciales n'est revendiqué en l'espèce. Le paragraphe 27(5) interdit de vendre et d'échanger du poisson à des fins de subsistance, et il nous faut déterminer si cette disposition, de la façon dont elle est libellée, est compatible avec la protection constitutionnelle accordée aux droits ancestraux par le par. 35(1) de la *Loi constitutionnelle de 1982*.

Cela dit, il n'est pas nécessaire qu'une activité autochtone soit accomplie à des fins de subsistance pour bénéficier de la protection du par. 35(1). En d'autres termes, la distinction faite précédemment et fondée sur les fins visées par les activités autochtones n'impose pas un fardeau additionnel au demandeur qui revendique un droit ancestral. Il est possible que, pour un groupe particulier d'autochtones, les coutumes, pratiques et traditions se rapportant à certaines activités commerciales respectent le critère applicable en vue de la reconnaissance d'un droit ancestral, c'est-à-dire avoir été suffisamment importantes et fondamentales pour

determined on the specific facts giving rise to each case, as proven by the Crown, in view of the particular aboriginal culture and the evidence supporting the recognition of such right. In fact, the consideration of aboriginal activities based on their purposes is simply aimed at facilitating the delineation of the aboriginal rights claimed as well as the identification and evaluation of the evidence presented in support of the rights.

leur organisation sociale et leur culture pendant une période considérable et ininterrompue. Cette question doit être tranchée à partir des faits propres à chaque cas et prouvés par le ministère public, compte tenu de la culture autochtone en cause et de la preuve étayant la reconnaissance du droit revendiqué. De fait, l'examen des activités autochtones en fonction des fins visées par celles-ci a tout simplement pour but de faciliter la définition des droits ancestraux revendiqués, ainsi que la détermination et l'appréciation de la preuve présentée à l'appui de ces droits.

In the instant case, this Court is only required to decide whether the Sto:lo's right to fish includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes, and not whether it includes the right to make commercial use of the fish. In that respect, it is necessary to review the evidence to determine whether such activities have formed an integral part of the Sto:lo's distinctive aboriginal culture for a substantial continuous period of time so as to give rise to an aboriginal right. That is what I now propose to do.

En l'espèce, notre Cour est uniquement appelée à décider si le droit de pêche des Sto:lo inclut le droit de vendre et d'échanger du poisson à des fins de subsistance, et non pas si ce droit inclut celui de faire une utilisation commerciale du poisson. À cet égard, il est nécessaire d'examiner la preuve afin de déterminer si ces activités ont fait partie intégrante de la culture autochtone distinctive des Sto:lo pendant une période considérable et ininterrompue, de façon à donner naissance à un droit ancestral. C'est maintenant ce que je me propose de faire.

V. The Case

V. Le présent pourvoi

The question here is whether the particular group of aboriginal people, the Sto:lo Band, of which the appellant is a member, has engaged in the sale, trade and barter of fish for livelihood, support and sustenance purposes, in a manner sufficiently significant and fundamental to their culture and social organization, for a substantial continuous period of time, entitling them to benefit from a constitutionally protected aboriginal right to that extent.

En l'espèce, la question est de savoir si le groupe particulier d'autochtones, la bande Sto:lo, dont fait partie l'appelante, a vendu et échangé du poisson à des fins de subsistance, et ce d'une manière suffisamment importante et fondamentale pour son organisation sociale et sa culture pendant une période considérable et ininterrompue, de sorte que ce groupe bénéficierait à cet égard d'un droit ancestral protégé par la Constitution.

At trial, after having examined the historical evidence presented by the parties, Scarlett Prov. Ct. J. arrived at the following conclusions (at p. 160):

Au procès, après avoir examiné la preuve de nature historique présentée par les parties, le juge Scarlett de la Cour provinciale est arrivé aux conclusions suivantes (à la p. 160):

This court was not satisfied upon the evidence that aboriginal trade in salmon took place in any regularized or market sense. Oral evidence demonstrated that trade was incidental to fishing for food purposes. Anthropological and archaeological evidence was in conflict. This court accepts the evidence of Dr. Stryd and John

[TRADUCTION] La présente cour n'est pas convaincue, à la lumière de la preuve, que le commerce du saumon existait chez les autochtones au sens d'un commerce organisé, d'un marché. Il ressort des témoignages oraux que le commerce était un aspect accessoire de la pêche pratiquée à des fins alimentaires. Les éléments de

1996 CanLII 215 (SCC)

Dewhurst [*sic*] in preference to Dr. Daly and therefore, accepts that the Sto:lo were a band culture as opposed to tribal. While bands were guided by siem or prominent families, no regularized trade in salmon existed in aboriginal times. Such trade as took place was either for ceremonial purposes or opportunistic exchanges taking place on a casual basis. Such trade as did take place was incidental only. Evidence led by the Crown that the Sto:lo had no access to salt for food preservation is accepted.

Exchange of fish was subject to local conditions of availability, transportation and preservation. It was the establishment by the Hudson's Bay Company at the fort at Langley that created the market and trade in fresh salmon. Trade in dried salmon in aboriginal times was, as stated, minimal and opportunistic. This court concludes on the evidence, therefore, that the Sto:lo aboriginal right to fish for food and ceremonial purposes does not include the right to sell such fish. [Emphasis added.]

I agree with the Chief Justice that it is well established, both in criminal and civil contexts, that an appellate court will not disturb the findings of fact made by a trial judge in the absence of "some palpable and overriding error which affected his [or her] assessment of the facts" (emphasis added): see *Stein v. The Ship "Kathy K"*, [1976] 2 S.C.R. 802, at p. 808; see also *Beaudoin-Daigneault v. Richard*, [1984] 1 S.C.R. 2, *Lensen v. Lensen*, [1987] 2 S.C.R. 672, *Laurentide Motels Ltd. v. Beauport (City)*, [1989] 1 S.C.R. 705, *Ontario (Attorney General) v. Bear Island Foundation*, [1991] 2 S.C.R. 570, *Lapointe v. Hôpital Le Gardeur*, [1992] 1 S.C.R. 351, *R. v. Burns*, [1994] 1 S.C.R. 656, *Hodgkinson v. Simms*, [1994] 3 S.C.R. 377, and *Schwartz v. Canada*, [1996] 1 S.C.R. 254.

At the British Columbia Supreme Court, Selbie J. was of the view that the trial judge committed such an error and, as a consequence, substituted his own findings of fact (at paras. 15 and 16):

preuve anthropologique et archéologique étaient contradictoires. La présente cour préfère les témoignages de M. Stryd et de John Dewhurst [*sic*] à celui de M. Daly et, en conséquence, accepte que la culture des Sto:lo était celle d'une bande plutôt que d'une tribu. Même si les bandes étaient guidées par des siem ou familles importantes, il n'y avait pas de commerce organisé du saumon au temps des aborigènes. Le commerce qui se faisait résultait soit d'échanges faits à des fins rituelles soit d'échanges découlant d'occasions fortuites. Ces échanges avaient seulement un caractère accessoire. La preuve présentée par le ministère public que les Sto:lo ne disposaient pas de sel permettant de conserver le poisson est acceptée.

Les échanges de poisson étaient tributaires des conditions locales sur le plan de la disponibilité, du transport et de la conservation. C'est l'établissement de la Compagnie de la Baie d'Hudson au fort situé à Langley qui a créé le marché et le commerce du saumon frais. Les échanges de saumon séché au temps des aborigènes n'avaient, comme il a été dit plus tôt, qu'un caractère minimal et fortuit. Par conséquent, la Cour conclut, à la lumière de la preuve, que le droit ancestral des Sto:lo de pêcher à des fins alimentaires et rituelles n'inclut pas le droit de vendre le poisson ainsi pris [Je souligne.]

Je suis d'accord avec le Juge en chef qu'il est bien établi, tant en matière criminelle que civile, qu'une cour d'appel ne modifie pas les conclusions de fait du juge du procès en l'absence d'une «erreur manifeste et dominante qui a faussé son appréciation des faits» (je souligne): voir *Stein c. Le navire «Kathy K»*, [1976] 2 R.C.S. 802, à la p. 808; voir aussi *Beaudoin-Daigneault c. Richard*, [1984] 1 R.C.S. 2, *Lensen c. Lensen*, [1987] 2 R.C.S. 672, *Laurentide Motels Ltd. c. Beauport (Ville)*, [1989] 1 R.C.S. 705, *Ontario (Procureur général) c. Bear Island Foundation*, [1991] 2 R.C.S. 570, *Lapointe c. Hôpital Le Gardeur*, [1992] 1 R.C.S. 351, *R. c. Burns*, [1994] 1 R.C.S. 656, *Hodgkinson c. Simms*, [1994] 3 R.C.S. 377 et *Schwartz c. Canada*, [1996] 1 R.C.S. 254.

Le juge Selbie de la Cour suprême de la Colombie-Britannique a estimé que le juge du procès avait commis une telle erreur et il a en conséquence substitué ses propres conclusions de fait (aux par. 15 et 16):

With respect, in my view the learned judge erred in using contemporary tests for “marketing” to determine whether the aboriginal acted in ways which were consistent with trade albeit in a rudimentary way as dictated by the times.

In my view, the evidence in this case, oral, historical and opinion, looked at in the light of the principles of interpreting aboriginal rights referred to earlier, is more consistent with the aboriginal right to fish including the right to sell, barter or exchange than otherwise and must be found so. We are, after all, basically considering the existence in antiquity of an aboriginal's right to dispose of his fish other than by eating it himself or using it for ceremonial purposes — the words “sell”, “barter”, “exchange”, “share”, are but variations on the theme of “disposing”. It defies common sense to think that if the aboriginal did not want the fish for himself, there would be some stricture against him disposing of it by some other means to his advantage. We are speaking of an aboriginal “right” existing in antiquity which should not be restrictively interpreted by today's standards. I am satisfied that when the first Indian caught the first salmon he had the “right” to do anything he wanted with it — eat it, trade it for deer meat, throw it back or keep it against a hungrier time. As time went on and for an infinite variety of reasons, that “right” to catch the fish and do anything he wanted with it became hedged in by rules arising from religion, custom, necessity and social change. One such restriction requiring an adjustment to his rights was the need dictated by custom or religion to share the first catch — to do otherwise would court punishment by his god and by the people. One of the social changes that occurred was the coming of the white man, a circumstance, as any other, to which he must adjust. With the white man came new customs, new ways and new incentives to colour and change his old life, including his trading and bartering ways. The old customs, rightly or wrongly, for good or for bad, changed and he must needs change with them — and he did. A money economy eventually developed and he adjusted to that also — he traded his fish for money. This was a long way from his ancient sharing, bartering and trading practices but it was the logical progression of such. It has been held that the aboriginal right to hunt is not frozen in time so that only the bow and arrow can be used in exercising it — the right evolves with the times: see *Simon v. R.*, [1985] 2 S.C.R. 387 So, in my view, with the right to fish and dispose of them, which I find on the evidence includes the right to trade and barter them. The Indian right to trade his fish is not frozen in time to doing so only by the medium of the potlatch and

[TRADUCTION] Avec égards, je suis d'avis que le juge du procès a commis une erreur en utilisant des critères contemporains de «commercialisation» pour déterminer si l'autochtone avait agi d'une façon compatible avec les usages du commerce, quoique de la manière rudimentaire dictée par l'époque.

À mon avis, lorsqu'on examine la preuve en l'espèce — orale, historique et d'opinion — à la lumière des principes d'interprétation des droits ancestraux qui ont été mentionnés plus tôt, on constate qu'elle est davantage compatible avec l'existence d'un droit de pêche ancestral incluant le droit de vendre ou d'échanger le produit de la pêche, que le contraire, et il faut conclure en ce sens. Après tout, fondamentalement nous examinons l'existence, dans les temps anciens, du droit d'un autochtone de disposer de son poisson autrement qu'en le consommant lui-même ou en l'utilisant à des fins rituelles — les termes «vendre», «troquer», «échanger», «partager» n'étant que des variantes de l'idée de «disposer». Il est contraire au bon sens de penser que si un autochtone ne voulait pas le poisson pour lui-même, — quelque chose l'empêchait d'en disposer d'une façon qui l'avantagerait. Nous parlons d'un «droit» autochtone qui existait dans les temps anciens et qui ne devrait pas être interprété restrictivement par rapport aux normes actuelles. Je suis convaincu que quand le premier Indien a pris le premier saumon il avait le «droit» d'en faire ce qu'il voulait — le manger, l'échanger contre de la viande de chevreuil, le remettre à l'eau ou le garder pour les temps plus difficiles. Au fil du temps, et pour une gamme de raisons, ce «droit» de prendre du poisson et d'en disposer à sa guise a été circonscrit par des règles fondées sur la religion, la coutume, la nécessité et les changements sociaux. L'une de ces restrictions, qui a entraîné une adaptation des droits du premier Indien, a été l'obligation dictée par la coutume ou la religion de partager la première capture — ne pas le faire l'aurait exposé au châtement de son dieu ou du peuple. L'un des changements sociaux a été l'arrivée des Blancs, circonstance à laquelle, comme toutes les autres, l'Indien a dû s'adapter. Les Blancs sont arrivés avec de nouvelles coutumes, de nouvelles manières de faire et de nouveaux incitatifs à modifier son mode de vie, y compris ses méthodes de troc et d'échange. À tort ou à raison, pour le meilleur ou pour le pire, les vieilles coutumes ont changé et l'Indien a dû évoluer avec elles — ce qu'il a fait. Une économie monétaire s'est éventuellement établie et l'Indien s'y est également adapté — commençant à vendre du poisson pour de l'argent. Il s'agissait d'un changement considérable par rapport à ses anciennes pratiques de partage, d'échange et de troc, mais néanmoins d'une progression logique. Il a été sta-

the like; he is entitled, subject to extinguishment or justifiable restrictions, to evolve with the times and dispose of them by modern means, if he so chooses, such as the sale of them for money. It is thus my view that the aboriginal right of the Sto:lo peoples to fish includes the right to sell, trade or barter them after they have been caught. It is my view that the learned judge imposed a verdict inconsistent with the evidence and the weight to be given it. [Emphasis added.]

At the British Columbia Court of Appeal, Macfarlane J.A. (Taggart J.A. concurring) and Wallace J.A., for the majority, took the position that an aboriginal right would be recognized only if the manifestations of the distinctive aboriginal culture — i.e., the particular aboriginal practices, traditions or customs — were particular to native culture and not common to non-aboriginal societies. Further, the evidence would need to show that the activities in question have been engaged in for time immemorial at the time sovereignty was asserted by Britain. Macfarlane J.A. wrote (at para. 21):

To be so regarded those practices must have been integral to the distinctive culture of the aboriginal society from which they were said to have arisen. A modernized form of such a practice would be no less an aboriginal right. A practice which had not been integral to the organized society and its distinctive culture, but which became prevalent merely as a result of European influences, would not qualify for protection as an aboriginal right. [Emphasis added.]

The majority of the Court of Appeal agreed with the trial judge's findings and held that the Sto:lo's practices, traditions and customs did not justify the recognition of an aboriginal right to fish for commercial purposes.

tué que le droit de chasse ancestral n'est pas figé dans le temps — sinon, l'autochtone ne pourrait se servir que d'un arc et des flèches pour l'exercer — que le droit évolue avec le temps: voir *Simon c. R.*, [1985] 2 R.C.S. 387 . . . En conséquence, à mon avis, le droit de prendre du poisson et d'en disposer inclut, selon la preuve, le droit de l'échanger ou de le troquer. Le droit de l'Indien d'échanger le poisson n'est pas figé dans le temps — sinon il ne pourrait en disposer que dans le cadre de potlatch et d'autres occasions du genre; de fait, sous réserve d'extinction du droit ou de restrictions justifiables de celui-ci, l'Indien peut profiter des progrès réalisés avec le temps et disposer du poisson par des méthodes modernes, s'il le désire, comme le fait de le vendre contre de l'argent. Je suis donc d'avis que le droit de pêche ancestral des Sto:lo inclut le droit de vendre et d'échanger le poisson pris. A mon avis, le juge a rendu une décision incompatible avec la preuve et l'importance qui devait lui être accordée. [Je souligne.]

S'exprimant au nom de la Cour d'appel de la Colombie-Britannique à la majorité, le juge Macfarlane (avec l'appui du juge Taggart) et le juge Wallace ont exprimé le point de vue qu'un droit ancestral ne sera reconnu que si les manifestations de la culture autochtone distinctive — les coutumes, pratiques ou traditions autochtones particulières — étaient propres à la culture autochtone et non communes aux sociétés non autochtones. De plus, il faudrait que la preuve établisse que, au moment de l'affirmation de la souveraineté britannique, les activités en question étaient exercées de temps immémorial. Le juge Macfarlane a écrit ce qui suit (au par. 21):

[TRADUCTION] Pour être considérées comme telles, ces pratiques doivent avoir fait partie intégrante de la culture distinctive de la société autochtone qui leur aurait donné naissance. Une forme modernisée d'une telle pratique n'en constituerait pas moins un droit ancestral. Une pratique qui n'aurait pas fait partie intégrante de la société organisée et de sa culture distinctive, mais qui ne se serait répandue [que] du seul fait des influences européennes, ne pourrait pas être protégée en tant que droit ancestral. [Je souligne.]

La Cour d'appel à la majorité a souscrit aux conclusions du juge du procès et statué que les coutumes, pratiques et traditions des Sto:lo ne justifiaient pas la reconnaissance d'un droit ancestral de pêcher à des fins commerciales.

204

Lambert J.A., in dissent, applied what he called a "social" form of description of aboriginal rights, one which does not "freeze" native practices, traditions and customs in time. In light of the evidence, he concluded that the distinctive aboriginal culture of the Sto:lo warranted the recognition of an aboriginal right to sell, trade and barter fish in order to provide them with a "moderate livelihood". He stated (at para. 150):

For those reasons I conclude that the best description of the aboriginal customs, traditions and practices of the Sto:lo people in relation to the sockeye salmon run on the Fraser River is that their aboriginal customs, traditions and practices have given rise to an aboriginal right, to be exercised in accordance with their rights of self-regulation including recognition of the need for conservation to catch and, if they wish, sell, themselves and through other members of the Sto:lo people, sufficient salmon to provide all the people who wish to be personally engaged in the fishery, and their dependent families, when coupled with their other financial resources, with a moderate livelihood, and, in any event, not less than the quantity of salmon needed to provide every one of the collective holders of the aboriginal right with the same amount of salmon per person per year as would have been consumed or otherwise utilized by each of the collective holders of the right, on average, from a comparable year's salmon run, in, say, 1800. [Italics in original; emphasis added.]

205

It appears from the foregoing review of the judgments that the conclusions on the findings of fact relating to whether the Sto:lo possess an aboriginal right to sell, trade and barter fish varied depending on the delineation of the aboriginal right claimed and on the approach used to interpreting such right. The trial judge, as well as the majority of the Court of Appeal, framed the issue as being whether the Sto:lo possess an aboriginal right to fish for commercial purposes and used an approach based on the manifestations of distinctive aboriginal culture which differentiates between aboriginal and non-aboriginal practices and which "freezes" aboriginal rights in a pre-contact or pre-sovereignty aboriginal time. The summary appeal judge, as well as Lambert J.A. at the Court of Appeal, described the issue in terms of whether the Sto:lo possess an aboriginal right to sell, trade and

Le juge Lambert, dissident, a appliqué ce qu'il a appelé une forme «sociale» de description des droits ancestraux n'ayant pas pour effet de «figer» les coutumes, pratiques et traditions autochtones. Au vu de la preuve, il a conclu que la culture autochtone distinctive des Sto:lo justifiait de leur reconnaître un droit ancestral de vendre et d'échanger du poisson de manière à s'assurer «une subsistance convenable». Il a déclaré ceci (au para. 150):

[TRADUCTION] *Pour ces motifs, je conclus que la meilleure façon de décrire les coutumes, pratiques et traditions autochtones des Sto:lo relativement à la remonte de saumon rouge dans le fleuve Fraser est de dire que leurs coutumes, pratiques et traditions ont donné naissance à un droit ancestral, qui doit être exercé conformément à leurs droits à l'autoréglementation, y compris la reconnaissance des besoins de conservation, de prendre et, s'ils le désirent, de vendre eux-mêmes et par l'entremise d'autres Sto:lo suffisamment de saumon pour assurer à tous ceux qui veulent pêcher — ainsi qu'aux personnes à leur charge —, compte tenu de leurs autres ressources financières, une subsistance convenable; la quantité de saumon ne devant pas, quoi qu'il en soit, être inférieure à la quantité requise pour fournir à chacun des détenteurs à titre collectif du droit ancestral la même quantité annuelle de saumon par personne que ces derniers auraient pu consommer ou utiliser par ailleurs, en moyenne, lors d'une remonte annuelle comparable de saumon, disons en 1800. [En italique dans l'original; je souligne.]*

Il ressort de l'examen que je viens de faire des jugements des tribunaux inférieurs que les conclusions tirées des constatations de fait touchant la question de savoir si les Sto:lo possèdent un droit ancestral de vendre et d'échanger du poisson ont varié en fonction de la définition du droit ancestral revendiqué et de la méthode utilisée pour interpréter ce droit. Le juge du procès et les juges de la majorité de la Cour d'appel ont dit que la question était de savoir si les Sto:lo possèdent un droit ancestral de pêcher à des fins commerciales, et ils ont appliqué une méthode fondée sur les manifestations de la culture autochtone distinctive, qui distingue entre les pratiques autochtones et non autochtones et qui «fige» les droits ancestraux dans l'état où ils étaient à une époque autochtone, avant le contact avec les Européens ou l'affirmation de la souveraineté britannique. Le juge d'ap-

barter fish for livelihood. Further, they examined the aboriginal right claimed at a certain level of abstraction, which focused on the distinctive aboriginal culture of the Sto:lo and which was evolutive in nature.

As I have already noted elsewhere, the issue in the present appeal is whether the Sto:lo's aboriginal right to fish includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes. Accordingly, the trial judge and the majority of the Court of Appeal erred in framing the issue. Furthermore, it is my view that the nature and extent of aboriginal rights protected under s. 35(1) of the *Constitution Act, 1982* must be defined by referring to the notion of "integral part of a distinctive aboriginal culture", i.e., whether an aboriginal practice, tradition or custom has been sufficiently significant and fundamental to the culture and social organization of the particular group of aboriginal people for a substantial continuous period of time. Therefore, by using a "frozen right" approach focusing on aboriginal practice to defining the nature and extent of the aboriginal right, Scarlett Prov. Ct. J. and the majority of the Court of Appeal were also in error.

Consequently, when the trial judge assessed the historical evidence presented at trial, he asked himself the wrong questions and erred as to the proper evidentiary basis necessary to establish an aboriginal right under s. 35(1) of the *Constitution Act, 1982*. He thus made no finding of fact, or insufficient findings of fact, as regards the Sto:lo's distinctive aboriginal culture relating to the sale, trade and barter of fish for livelihood, support and sustenance purposes. It is also noteworthy that the first appellate judge, who asked himself the right ques-

pel des poursuites sommaires et le juge Lambert de la Cour d'appel ont pour leur part estimé que la question était de savoir si les Sto:lo possèdent un droit ancestral de vendre et d'échanger du poisson à des fins de subsistance. De plus, ils ont examiné le droit ancestral revendiqué selon un certain niveau d'abstraction, mettant l'accent sur la culture autochtone distinctive des Sto:lo et le caractère évolutif du droit.

Comme je l'ai déjà mentionné, la question qui se pose dans le présent pourvoi est de savoir si le droit de pêche ancestral inclut le droit de vendre et d'échanger du poisson à des fins de subsistance. En conséquence, le juge du procès et les juges de la majorité de la Cour d'appel ont commis une erreur dans la formulation de la question en litige. En outre, je suis d'avis que la nature et l'étendue des droits ancestraux protégés par le par. 35(1) de la *Loi constitutionnelle de 1982* doivent être interprétées par application de la notion de «partie intégrante d'une culture autochtone distinctive», c.-à-d. en se demandant si la coutume, pratique ou tradition autochtone en cause a été suffisamment importante et fondamentale pour l'organisation sociale et la culture du groupe particulier d'autochtones, pendant une période considérable et ininterrompue. En conséquence, en appliquant la méthode des «droits figés», qui est axée sur la pratique autochtone, pour définir la nature et l'étendue du droit ancestral, le juge Scarlett de la Cour provinciale et les juges de la majorité de la Cour d'appel ont également commis une erreur.

Par conséquent, lorsque le juge du procès a apprécié la preuve historique présentée, il s'est posé les mauvaises questions et a fait erreur quant à la preuve requise pour établir l'existence d'un droit ancestral visé au par. 35(1) de la *Loi constitutionnelle de 1982*. En conséquence, il n'a pas tiré de conclusion de fait — ou celles qu'il a tirées étaient insuffisantes — au sujet de la culture autochtone distinctive des Sto:lo en ce qui a trait à la vente et à l'échange de poisson à des fins de subsistance. Il convient également de signaler que le premier juge d'appel, qui lui s'est posé les bonnes questions, a tiré des conclusions de fait dia-

tions, made diametrically opposed findings of fact on the evidence presented at trial.

métralement opposées à partir de la preuve présentée au procès.

208

The result of these palpable and overriding errors, which affected the trial judge's assessment of the facts, is that an appellate court is justified in intervening — as did the summary appeal judge — in the trial judge's findings of fact and substituting its own assessment of the evidence presented at trial: see *Stein v. The Ship "Kathy K"*, *supra*. I note also that this Court, as a subsequent appellate court in such circumstances, does not have to show any deference to the assessment of the evidence made by lower appellate courts. Since this Court is in no less advantageous or privileged position than the lower appellate courts in assessing the evidence on the record, we are free to reconsider the evidence and substitute our own findings of fact (see *Schwartz v. Canada*, *supra*, at paras. 36-37). I find myself, however, in general agreement with the findings of fact of Selbie J., the summary appeal judge, and of Lambert J.A. Nonetheless, I will revisit the evidence to determine whether it reveals that the sale, trade and barter of fish for livelihood, support and sustenance purposes have formed an integral part of the Sto:lo's distinctive aboriginal culture for a substantial continuous period of time.

Vu ces erreurs manifestes et dominantes, qui ont faussé l'appréciation des faits par le juge du procès, une cour d'appel est justifiée de modifier — comme l'a fait le juge d'appel des poursuites sommaires — les conclusions de fait du juge de première instance et de substituer son appréciation de la preuve présentée au procès à celle du juge de première instance: voir l'arrêt *Stein c. Le navire «Kathy K»*, précité. Je tiens aussi à faire remarquer que notre Cour, en tant que juridiction subséquente d'appel dans de telles circonstances, n'a pas à faire preuve de retenue à l'égard de l'appréciation de la preuve faite par les tribunaux d'appel inférieurs. Comme notre Cour n'est pas dans une situation moins avantageuse ou moins privilégiée que les tribunaux d'appel inférieurs pour apprécier la preuve à partir du dossier, nous sommes libres de réexaminer la preuve et de substituer nos propres conclusions de fait (voir l'arrêt *Schwartz c. Canada*, précité, aux par. 36 et 37) à celles déjà tirées. Cependant, je suis d'accord de façon générale avec les conclusions de fait du juge Selbie, juge d'appel des poursuites sommaires, et celles du juge Lambert de la Cour d'appel. Néanmoins, je vais réexaminer la preuve afin de déterminer si elle révèle que la vente et l'échange de poisson à des fins de subsistance ont fait partie intégrante de la culture autochtone distinctive des Sto:lo pendant une période considérable et ininterrompue.

209

The Sto:lo, who are part of the Coast Salish Nation, have lived in their villages along the Fraser River from Langley to above Yale. They were an organized society, whose main socio-political unit was the extended family. The Fraser River was their main source of food the year around and, as such, the Sto:lo considered it to be sacred. It is interesting to note that their name, the "Sto:lo", means "people of the river": see Wilson Duff, *The Upper Stalo Indians of the Fraser Valley, British Columbia (Anthropology in British Columbia — Memoir No. 1)*, 1952, at p. 11.

Les Sto:lo, qui font partie de la nation des Salish de la côte, ont vécu dans leurs villages le long du fleuve Fraser, de Langley jusqu'à Yale. Ils formaient une société organisée, dont la principale unité socio-politique était la famille élargie. Le fleuve Fraser était leur principale source de nourriture à longueur d'année et, pour cette raison, les Sto:lo considéraient ce cours d'eau comme sacré. Il est intéressant de noter que leur nom, les «Sto:lo», signifie «les gens du fleuve»: voir Wilson Duff, *The Upper Stalo Indians of the Fraser Valley, British Columbia (Anthropology in British Columbia — Memoir No. 1)*, 1952, à la p. 11.

210

Archaeological evidence demonstrates that the Sto:lo have relied on the fishery for centuries.

La preuve archéologique démontre que les Sto:lo vivent de la pêche depuis des siècles. Située

Located near the mouth of the Fraser River, the Sto:lo fishery consists of five species of salmon — sockeye, chinook, coho, chum and pink — as well as sturgeon, eulachons and trout. The Sto:lo used many methods and devices to fish salmon, such as dip-nets, harpoons, weirs, traps and hooks. Both the wind and the heat retention capacity of the geography of the Fraser Canyon result in an excellent area for wind drying fish. Therefore, although fresh fish were procurable year around, they dried or smoked large amounts at the end of the summer to use for the hard times of winter.

The Sto:lo community is geographically located between two biogeoclimatic zones: the interior plateau region and the coastal maritime area. As such, they have long enjoyed the exchange of regional goods with the people living in these zones. See, in that respect, the report of Dr. Richard Daly, an expert in social and cultural anthropology called by the appellant and who gave expert opinion evidence on the social structure and culture of the Sto:lo, and also Duff, *The Upper Stalo Indians of the Fraser Valley, British Columbia*, *supra*, at p. 95.

The oral histories, corroborated by expert evidence, show a long tradition of trading relationships among the Sto:lo and with their neighbours, both before the arrival of Europeans and to the present day. Dr. Arnoud Henry Stryd, an expert in archaeology with a strong background in anthropology called by the respondent to give expert opinion evidence and to speak to the archaeological record, testified that exchanging goods has been a feature of the human condition from the earliest times:

Q. Yes. You say there's evidence for trade in non-perishable items throughout much of the archaeological record for British Columbia.

près de l'embouchure du fleuve Fraser, la pêche compte cinq espèces de saumon — le saumon rouge, le saumon quinnat, le saumon coho, le saumon keta et le saumon rose — ainsi que de l'esturgeon, de l'eulakane et de la truite. Les Sto:lo utilisaient de nombreuses méthodes et de nombreux engins pour pêcher le saumon: époussette, harpon, bordigue, trappe en filet et gaffe. Tant le vent dans le canyon du Fraser que la capacité calorifique de la géographie de ce lieu font de celui-ci un excellent endroit pour le séchage au vent du poisson. En conséquence, même s'ils pouvaient se procurer du poisson frais tout au long de l'année, les Sto:lo en séchaient ou en boucanaient de grandes quantités à la fin de l'été en vue des périodes difficiles de l'hiver.

Comme, sur le plan géographique, la collectivité sto:lo est située entre deux zones biogéoclimatiques — la région du plateau intérieur et la région côtière maritime —, ses membres ont depuis longtemps l'occasion d'échanger des produits régionaux avec les habitants de ces zones. À cet égard, voir le rapport de M. Richard Daly, expert en anthropologie sociale et culturelle, qui a été assigné par l'appelante et a témoigné en cette qualité sur l'organisation sociale et la culture des Sto:lo, et aussi Duff, *The Upper Stalo Indians of the Fraser Valley, British Columbia*, *op. cit.*, à la p. 95.

Les récits oraux, corroborés par les témoignages d'expert, démontrent l'existence d'une longue tradition de rapports commerciaux entre les Sto:lo et leurs voisins, tant avant l'arrivée des Européens que de nos jours. Monsieur Arnoud Henry Stryd, spécialiste de l'archéologie possédant un solide bagage en anthropologie, qui a été assigné par l'intimée pour témoigner à titre d'expert et parler des documents archéologiques, a affirmé que l'échange de biens est une caractéristique de l'humanité depuis les temps les plus anciens:

[TRADUCTION]

Q. Oui. Vous dites qu'on trouve dans la majeure partie des documents archéologiques concernant la Colombie-Britannique des preuves de l'existence d'un commerce d'articles non périssables.

A. Well, that's right. In my point of view, the tendency to trade is one that's very human and if you have things that you have that you don't need and your neighbours have something that you would like that they are willing to, that they don't need, that it seems very obvious that some kind of exchange of goods would take place and the earliest part of the human condition to exchange items. [Emphasis added.]

Likewise, John Trevor Dewhirst, an anthropologist and ethno-historian called by the respondent, gave expert opinion evidence on the aboriginal trade of salmon of the Sto:lo. Although he insisted that there was no "organized regularized large scale exchange of salmon" in pre-contact or pre-sovereignty aboriginal time, he testified to the effect that the Sto:lo did exchange, trade and barter salmon among themselves and with other native people, and that such activities were rooted in their culture:

Q. We had reached the stage, sir, as I understand it where — we're now at the point with your evidence, sir, that the exchange of salmon amongst the Indians — you've mentioned that, sir, there was some exchange of salmon amongst the Indians?

A. Oh, yes, very definitely.

Q. Yes. Could you expand on that, please?

A. Yes. I think it's very clear from the — both from the historical record and — and from the anthropological evidence, the ethnographic evidence collected by various workers, Wilson Duff, Marion Smith, Dr. Daly and others whom we've mentioned — and Suttles — exchange of salmon for other foodstuffs and perhaps non-food items definitely took place amongst the Sto:Lo and was a definite feature of their society and culture.

What I'd like to do is go over some of that material evidence regarding the exchange of salmon and examine that in terms of — of trade and the — try — try to deter-

R. Oui, c'est exact. À mon avis, la tendance à commercer est quelque chose de très humain; si vous avez quelque chose dont vous n'avez pas besoin et que vos voisins ont quelque chose que vous aimeriez avoir et dont ils n'ont pas besoin, il semble très évident qu'il se produira un certain type d'échange de biens; l'échange de biens remonte au tout début de l'humanité. [Je souligne.]

De même, M. John Trevor Dewhirst, anthropologue et ethno-historien assigné par l'intimée, a témoigné à titre d'expert relativement au commerce du saumon par les ancêtres des Sto:lo. Même s'il a insisté sur le fait qu'il n'y avait pas [TRADUCTION] «d'activités systématisées et organisées d'échange de saumon sur une grande échelle» au temps des aborigènes, avant le contact avec les Européens ou l'affirmation de la souveraineté britannique, il a témoigné que les Sto:lo échangeaient et troquaient effectivement du saumon, entre eux et avec d'autres peuples autochtones, et que ces activités étaient enracinées dans leur culture:

[TRADUCTION]

Q. Monsieur, nous en étions au point, si j'ai bien compris, où — nous en sommes au point dans votre témoignage, Monsieur, où il est question d'échange de saumon entre les Indiens — vous avez mentionné, Monsieur, qu'il y avait échange de saumon entre les Indiens?

R. Oui. Très certainement.

Q. Oui. Pourriez-vous préciser s'il vous plaît?

R. Oui. J'estime qu'il ressort très clairement — tant des archives historiques que — de la preuve anthropologique, de la preuve ethnographique recueillies par diverses personnes, Wilson Duff, Marion Smith, M. Daly et d'autres personnes que nous avons mentionnées — et Suttles — que l'échange de saumon contre d'autres denrées alimentaires et peut-être d'autres produits non alimentaires se pratiquait sûrement chez les Sto:lo et constituait nettement une caractéristique de leur société et culture.

J'aimerais passer en revue certains de ces éléments de preuve matérielle concernant l'échange de saumon et les examiner sous l'angle — du commerce et — essayer —

mine — try to develop a context for in fact what was happening at least in some of these instances.

essayer de déterminer — essayer d'établir le contexte de ce qui se passait dans les faits, à tout le moins dans certains de ces cas.

A. That — I believe that the record does not indicate the presence of an organized regularized large scale exchange of salmon amongst the Sto:Lo or between the Sto:Lo and other Native peoples and by this large scale exchange I — I think — rather, by the exchange of salmon I think it's important to look at this context and see if in fact there is a kind of a market situation. I mean, most cultures, most societies do exchange items between relatives and friends and so on. I think that this is debatable whether you can call this trade in — in the sense of a — of a kind of a marketplace and I'd like to turn now to some of the — some of the evidence that's been presented. [Emphasis added.]

R. Je crois que le dossier ne révèle pas l'existence d'activités systématiques et organisées d'échange de saumon sur une grande échelle, entre les Sto:lo eux-mêmes ou entre les Sto:lo et d'autres peuples autochtones; par échange sur une grande échelle, je — je pense — plutôt, par échange de saumon, je pense qu'il est important d'examiner ce contexte et de déterminer s'il existe en fait une sorte de situation de marché. Je veux dire que, dans la plupart des cultures, dans la plupart des sociétés, il y a échange de biens entre parents, amis et ainsi de suite. Je pense que l'on peut se demander s'il est possible dans ce cas de parler de commerce — dans le sens d'une — sorte de marché, et j'aimerais maintenant examiner certains des — certains éléments de preuve présentés. [Je souligne.]

It seems well founded to conclude, as the expert witnesses for the respondent did, that no formalized market system of trade of salmon existed in the original Sto:lo society because, as a matter of fact, organized large scale trade in salmon appears to run contrary to the Sto:lo's aboriginal culture. They viewed salmon as more than just food; they treated salmon with a degree of respect since the Sto:lo community was highly reliant and dependant on the fish resources. On the one hand, the Sto:lo pursued salmon very aggressively in order to get them for livelihood, support and sustenance purposes. On the other, however, they were sufficiently mindful not to exploit the abundance of the river and they taught their children a thoughtful attitude towards salmon and also how to conserve them.

Il semble bien fondé de conclure, comme l'ont fait les témoins experts de l'intimée, qu'il n'existait pas de système de marché organisé pour le commerce du saumon au sein de la société sto:lo originale, étant donné que le commerce organisé du saumon sur une grande échelle paraît, en fait, aller à l'encontre de la culture autochtone des Sto:lo. Pour eux, le saumon était plus qu'une denrée alimentaire, ils le traitaient avec un certain respect puisque leur collectivité dépendait beaucoup des ressources de la pêche. D'une part, les Sto:lo pêchaient le saumon très activement à des fins de subsistance. D'autre part, toutefois, ils étaient suffisamment soucieux de ne pas abuser des richesses du fleuve, et ils enseignaient à leurs enfants une attitude de parcimonie à l'égard du saumon ainsi que les moyens de conserver cette ressource.

As the social and cultural anthropologist Dr. Richard Daly explained at trial, the exchange of salmon among the Sto:lo and with their neighbours was informed by the ethic of feeding people, catching and trading only what was necessary for their needs and the needs of face-to-face relationships:

Comme l'a expliqué, au procès, Richard Daly, anthropologue social et culturel, l'échange de saumon pratiqué par les Sto:lo entre eux et avec leurs voisins était guidé par le principe qu'il fallait nourrir la population et ne prendre et n'échanger que le poisson nécessaire pour subvenir à leurs propres besoins et à ceux des personnes avec qui ils avaient des rapports directs:

Q. Is the sale of fish or other foodstuff, in your opinion, also part of the Sto:lo culture?

A. The way it is explained to me by people in the Sto:lo community, that it's all part of feeding yourself and feeding others. You're looking after your basic necessities. And today it's all done through the medium of cash. And you may not have anything to reciprocate when — when other native people from a different area come to you with say tanned hides from the Interior for making — for handicraft work. You may not have anything to give them in return at that time and you pay for it, like anyone else would. But then when you — you've put up your salmon or you're able to take them a load of fresh salmon you reciprocate and they pay you. But it's — it's considered to be a similar procedure as the bartering because it's satisfying the basic needs.

And also people tell me that they go fishing in order to get the money for the gas to drive to the fishing sites, to look after the repair of their nets and to — to make some of the necessary amounts of cash needed for their day-to-day existence. And I have observed people going out to fish with an intention of selling. They don't go to get a maximum number of fish and sell them on the market for the — the going price. They sell it at the going price but they — they won't take any more fish than they have orders for because that's — that's the wrong attitude towards the fish and fishing. So I think in a sense it — it's very consistent with the type of bartering that has preceded it and it's sort of still couched in that same idiom, as well. [Emphasis added.]

[TRANSDUCTION]

Q. À votre avis, la vente de poisson ou d'autres denrées alimentaires fait-elle également partie de la culture sto:lo?

R. Comme me l'ont expliqué des membres de la collectivité sto:lo, tout cela fait partie du fait de se nourrir et de nourrir les autres. On doit subvenir à ses besoins essentiels. Et aujourd'hui, tout se fait au moyen de l'argent. Il est possible qu'on n'ait rien à offrir en contrepartie lorsque — lorsque des autochtones d'une autre région arrivent de l'Intérieur avec des peaux tannées — qui serviront à la confection d'objets d'artisanat. Vous pourriez n'avoir rien à offrir en échange, auquel cas vous payez ces peaux comme le ferait toute autre personne. Cependant, lorsque vous offrez votre saumon ou que vous pouvez leur apporter une cargaison de saumon frais, vous faites de même et ils vous paient. Mais c'est — c'est considéré comme une procédure analogue au troc parce que ça satisfait les besoins essentiels.

Les gens me disent également qu'ils vont à la pêche pour obtenir de l'argent pour acheter de l'essence pour se rendre aux sites de pêche, pour faire réparer leurs filets et — pour gagner une partie de l'argent dont ils ont besoin pour subvenir à leurs besoins courants. Et j'ai observé que des gens vont à la pêche avec l'intention de vendre le poisson pris. Ils ne vont pas prendre le plus de poissons possible et les vendre sur le marché — au prix courant. Ils les vendent au prix courant — mais ils ne prennent pas plus que le nombre qu'on leur a commandé parce que c'est — ce n'est pas la bonne attitude à avoir à l'égard du poisson et de la pêche. À mon avis, dans un sens, ces pratiques sont très conformes au type de troc qui les ont précédées, et elles y sont assimilables en quelque sorte. [Je souligne.]

216 The foregoing review of the historical evidence on the record reveals that there was trade of salmon for livelihood, support and sustenance purposes among the Sto:lo and with other native people and, more importantly, that such activities formed part of, and were undoubtedly rooted in, the distinctive aboriginal culture of the Sto:lo. In short, the fishery has always provided a focus for life and livelihood for the Sto:lo and they have always traded salmon for the sustenance and support of themselves and their families. Accordingly, to use the terminology of the test propounded above, the sale, trade and barter of fish for livelihood, support and sustenance purposes was suffi-

L'examen qui précède de la preuve de nature historique au dossier révèle qu'il y avait, entre les Sto:lo eux-mêmes et entre les Sto:lo et d'autres peuples autochtones, des échanges de saumon à des fins de subsistance, et, fait encore plus important, que ces activités faisaient partie de la culture autochtone distinctive des Sto:lo et étaient indubitablement enracinées dans celle-ci. Bref, la pêche a toujours été un aspect central de la vie et de la subsistance des Sto:lo, qui ont toujours échangé du saumon afin d'assurer leur subsistance et celle de leur famille. En conséquence, pour employer la formulation du critère proposé plus tôt, les activités de vente et d'échange de poisson à des fins de

ciently significant and fundamental to the culture and social organization of the Sto:lo.

The period of intensive trade of fish in a market-type economy involving the Sto:lo began after the coming of the Europeans, in approximately 1820, when the Hudson's Bay Company established a post at Fort Langley on the Fraser River. Following that, the Sto:lo participated in a thriving commercial fishery centred around the trade of salmon. According to Jamie Morton, an historian called by the appellant to give expert opinion evidence on the history of the European trade with native people, approximately 1,500 to 3,000 barrels of salmon (with 60-90 fish per barrel) were cured per year, which the Hudson's Bay Company bought and shipped to Hawaii and other international ports. (See also Lambert J.A., at para. 121.)

This trade of salmon in a market economy, however, is not relevant to determine whether the Sto:lo possess an aboriginal right to sell, trade and barter fish for livelihood, support and sustenance purposes. I note, in passing, that such commercial use of the fish would seem to be intrinsically incompatible with the pre-contact or pre-sovereignty culture of the Sto:lo which commanded that the utilization of the salmon, including its sale, trade and barter, be restricted to providing livelihood, support and sustenance, and did not entail obtaining purely commercial profit.

As far as the issue here is concerned, the sale, trade and barter of fish for livelihood, support and sustenance purposes have always been sufficiently significant and fundamental to the culture and social organization of the Sto:lo. This conclusion is no doubt in line with the perspective of the Sto:lo regarding the importance of the trade of salmon in their society. Consequently, the criterion regarding the characterization of aboriginal rights protected under s. 35(1) of the *Constitution Act, 1982* is met.

subsistance étaient suffisamment importantes et fondamentales pour l'organisation sociale et la culture des Sto:lo.

Cela dit, précisons que la période de commerce intensif du poisson dans une économie de marché à laquelle ont participé les Sto:lo a commencé après l'arrivée des Européens, vers 1820, lorsque la Compagnie de la Baie d'Hudson a établi un poste de traite à Fort Langley, le long du fleuve Fraser. Par la suite, les Sto:lo ont participé à de florissantes activités de pêche commerciale axées sur le commerce du saumon. Selon Jamie Morton, historien assigné par l'appelante pour déposer, à titre de témoin expert, sur l'histoire du commerce des Européens avec les autochtones, environ 1 500 à 3 000 barils de saumon fumé (60 à 90 poissons par baril) étaient vendus chaque année à la Compagnie de la Baie d'Hudson, qui les expédiait ensuite à destination d'Hawaii et d'autres ports internationaux. (Voir aussi les motifs du juge Lambert de la Cour d'appel, au par. 121.)

Cependant, l'existence de ce commerce du saumon dans une économie de marché n'est pas un fait pertinent pour déterminer si les Sto:lo possèdent le droit ancestral de vendre et d'échanger du poisson à des fins de subsistance. En passant, je tiens à préciser qu'une telle utilisation commerciale du poisson semble intrinsèquement incompatible avec la culture des Sto:lo avant le contact avec les Européens ou l'affirmation de la souveraineté britannique, culture qui commandait que l'utilisation du saumon, y compris la vente et l'échange de ce bien, ne vise que des fins de subsistance, et non des fins purement commerciales.

En ce qui concerne la question en litige en l'espèce, les activités de vente et d'échange de poisson à des fins de subsistance ont toujours été suffisamment importantes et fondamentales pour l'organisation sociale et la culture des Sto:lo. Cette conclusion est sans aucun doute compatible avec le point de vue des Sto:lo en ce qui concerne l'importance du commerce du saumon dans leur société. En conséquence, le critère applicable afin de caractériser les droits ancestraux protégés par le par. 35(1) de la *Loi constitutionnelle de 1982* est respecté.

217

1996 CanLII 216 (SCC)

218

219

220 Furthermore, there is no doubt that these activities did form part of the Sto:lo's distinctive aboriginal culture for a substantial continuous period of time. In that respect, we must consider the type of aboriginal practices, traditions and customs, the particular aboriginal culture and society, and the reference period of 20 to 50 years. Here, the historical evidence shows that the Sto:lo's practices, traditions and customs relating to the trade of salmon for livelihood, support and sustenance purposes have existed for centuries before the arrival of Europeans. As well, it appears that such activities have continued, though in modernized forms, until the present day. Accordingly, the time requirement for the recognition of an aboriginal right is also met in this case.

221 As a consequence, I conclude that the Sto:lo Band, of which the appellant is a member, possess an aboriginal right to sell, trade and barter fish for livelihood, support and sustenance purposes. Under s. 35(1) of the *Constitution Act, 1982* this right is protected.

VI. Disposition

222 In the result, I would allow the appeal on the question of whether the Sto:lo possess an aboriginal right to fish which includes the right to sell, trade and barter fish for livelihood, support and sustenance purposes. The question of the extinguishment of such right, as well as the issues of *prima facie* infringement and justification, must be remitted to trial since there is insufficient evidence to enable this Court to decide upon them. Consequently, the constitutional question can only be answered partially:

Question: Is s. 27(5) of the *British Columbia Fishery (General) Regulations*, SOR/84-248, as it read on September 11, 1987, of no force or effect with respect to the appellant in the circumstances of these proceedings, in virtue of s. 52 of the *Constitution Act, 1982*, by reason of the aboriginal rights within the

Qui plus est, il n'y a pas de doute que ces activités ont fait partie de la culture autochtone distinctive des Sto:lo pendant une période considérable et ininterrompue. Sur ce point, il nous faut tenir compte du type de coutumes, pratiques et traditions autochtones en cause, de la culture et de la société autochtones visées et, enfin, de la période de référence de 20 à 50 ans. En l'espèce, la preuve historique révèle que les coutumes, pratiques et traditions des Sto:lo relativement au commerce du saumon à des fins de subsistance ont existé pendant des siècles avant l'arrivée des Européens. De plus, il semble que ces activités continuent d'être pratiquées de nos jours, quoique sous des formes modernes. En conséquence, l'exigence de durée applicable pour la reconnaissance d'un droit ancestral est également satisfaite.

Par conséquent, je conclus que la bande des Sto:lo, dont fait partie l'appelante, possède le droit ancestral de vendre et d'échanger du poisson à des fins de subsistance. Ce droit est protégé par le par. 35(1) de la *Loi constitutionnelle de 1982*.

VI. Dispositif

Je suis donc d'avis d'accueillir le pourvoi en ce qui concerne la question de savoir si les Sto:lo possèdent un droit de pêche ancestral incluant le droit de vendre et d'échanger du poisson à des fins de subsistance. La question de l'extinction de ce droit ainsi que les questions de l'atteinte *prima facie* et de la justification doivent être renvoyées au tribunal de première instance en vue de la tenue d'un nouveau procès, étant donné que la preuve est insuffisante pour permettre à notre Cour de statuer sur celles-ci. En conséquence, il n'est possible de répondre à la question constitutionnelle qu'en partie:

Question: Le paragraphe 27(5) du *Règlement de pêche général de la Colombie-Britannique*, DORS/84-248, tel qu'il se lisait le 11 septembre 1987, est-il, dans les circonstances de la présente affaire, inopérant à l'égard de l'appelante en vertu de l'art. 52 de la *Loi constitutionnelle de 1982*, en raison des

meaning of s. 35 of the *Constitution Act, 1982* invoked by the appellant?

Answer: The aboriginal rights within the meaning of s. 35 of the *Constitution Act, 1982* invoked by the appellant, are recognized and the question of whether s. 27(5) of the *British Columbia Fishery (General) Regulations* is of no force or effect with respect to the appellant in the circumstances of these proceedings, in virtue of s. 52 of the *Constitution Act, 1982*, will depend on the issues of extinguishment, *prima facie* infringement and justification as determined in a new trial.

There will be no costs to either party.

The following are the reasons delivered by

MCLACHLIN J. (dissenting) — This appeal concerns the right of the Sto:lo of British Columbia to sell fish caught in the Fraser River. The appellant, Mrs. Van der Peet, sold salmon caught under an Indian food fishing licence by her common law husband and his brother. The sale of salmon caught under an Indian food licence was prohibited. Mrs. Van der Peet was charged with selling fish contrary to the Regulations of the *Fisheries Act*, R.S.C. 1970, c. F-14. At trial, she raised the defence that the regulations under which she was charged was invalid because it infringed her aboriginal right, confirmed by s. 35 of the *Constitution Act, 1982* to catch and sell fish. If so, s. 52 of the *Constitution Act, 1982* acts to invalidate the regulation to the extent of the conflict.

The inquiry thus focuses on s. 35(1) of the *Constitution Act, 1982*, which provides that “[t]he existing aboriginal and treaty rights of the aboriginal peoples of Canada are hereby recognized and affirmed”. Section 35(1) gives constitutional protection not only to aboriginal rights codified

droits ancestraux au sens de l’art. 35 de la *Loi constitutionnelle de 1982*, qu’elle invoque?

Réponse: Les droits ancestraux au sens de l’art. 35 de la *Loi constitutionnelle de 1982* invoqués par l’appelante sont reconnus, et la réponse à la question visant de savoir si le par. 27(5) du *Règlement de pêche général de la Colombie-Britannique* est, dans les circonstances de la présente affaire, inopérant à l’égard de l’appelante en vertu de l’art. 52 de la *Loi constitutionnelle de 1982*, dépendra de la façon dont seront tranchées au cours d’un nouveau procès, les questions de l’extinction, de l’atteinte *prima facie* et de la justification.

Le tout sans frais.

Version française des motifs rendus par

LE JUGE MCLACHLIN (dissidente) — Le présent pourvoi concerne le droit des Sto:lo de la Colombie-Britannique de vendre du poisson pris dans le fleuve Fraser. L’appelante, M^{me} Van der Peet, a vendu du saumon qui avait été pris par son conjoint de fait et le frère de celui-ci en vertu d’un permis de pêche de subsistance des Indiens. Or, il était interdit de vendre du saumon pris en vertu d’un tel permis de pêche. Madame Van der Peet a été accusée d’avoir vendu du poisson contrairement à un règlement d’application de la *Loi sur les pêcheries*, S.R.C. 1970, ch. F-14. Au procès, elle a fait valoir en défense que les dispositions réglementaires en vertu desquelles elle a été accusée étaient invalides parce qu’elles portaient atteinte à son droit ancestral, confirmé par l’art. 35 de la *Loi constitutionnelle de 1982*, de prendre et de vendre du poisson. Si c’est le cas, l’art. 52 de la *Loi constitutionnelle de 1982* rend ces dispositions réglementaires inopérantes.

L’examen porte donc principalement sur le par. 35(1) de la *Loi constitutionnelle de 1982*, qui dit que «[l]es droits existants — ancestraux ou issus de traités — des peuples autochtones du Canada sont reconnus et confirmés». Le paragraphe 35(1) accorde la protection de la Constitution non seule-

through treaties at the time of its adoption in 1982, but also to aboriginal rights which had not been formally recognized at that date: *R. v. Sparrow*, [1990] 1 S.C.R. 1075, per Dickson C.J. and La Forest J., at pp. 1105-6. The Crown has never entered into a treaty with the Sto:lo. They rely not on a codified aboriginal right, but on one which they ask the courts to recognize under s. 35(1).

ment aux droits ancestraux qui étaient codifiés dans des traités au moment de son adoption en 1982, mais également aux droits ancestraux qui n'avaient pas été officiellement reconnus à cette date: *R. c. Sparrow*, [1990] 1 R.C.S. 1075, le juge en chef Dickson et le juge La Forest, aux pp. 1105 et 1106. L'État n'a jamais conclu de traité avec les Sto:lo. Ceux-ci invoquent non pas un droit ancestral codifié, mais plutôt un droit ancestral qu'ils demandent aux tribunaux de reconnaître en vertu du par. 35(1).

226

Against this background, I turn to the questions posed in this appeal:

1. Do the Sto:lo possess an aboriginal right under s. 35(1) of the *Constitution Act, 1982* which entitles them to sell fish?
 - (a) Has a *prima facie* right been established?
 - (b) If so, has it been extinguished?
2. If a right is established, do the government regulations prohibiting sale infringe the right?
3. If the regulations infringe the right, are they justified?

Sur cette toile de fond, je me penche maintenant sur les questions que soulève le présent pourvoi:

1. Les Sto:lo possèdent-ils, en vertu du par. 35(1) de la *Loi constitutionnelle de 1982*, un droit ancestral de vendre du poisson?
 - a) A-t-on établi, à première vue, l'existence d'un tel droit?
 - b) Si oui, ce droit a-t-il été éteint?
2. Si l'existence du droit a été établie, les dispositions réglementaires prises par l'État pour interdire la vente portent-elles atteinte à ce droit?
3. Si les dispositions réglementaires portent atteinte à ce droit, sont-elles justifiées?

227

My conclusions on this appeal may be summarized as follows. The issue of what constitutes an aboriginal right must, in my view, be answered by looking at what the law has historically accepted as fundamental aboriginal rights. These encompass the right to be sustained from the land or waters upon which an aboriginal people have traditionally relied for sustenance. Trade in the resource to the extent necessary to maintain traditional levels of sustenance is a permitted exercise of this right. The right endures until extinguished by treaty or otherwise. The right is limited to the extent of the aboriginal people's historic reliance on the resource, as well as the power of the Crown to limit or prohibit exploitation of the resource incompatible with its responsible use. Applying these principles, I conclude that the Sto:lo possess an aboriginal right to fish commercially for pur-

Mes conclusions dans le cadre du présent pourvoi peuvent être résumées ainsi. Je suis d'avis que, pour répondre à la question de savoir ce qui constitue un droit ancestral, il convient d'examiner les droits qui ont historiquement été reconnus, en droit, comme étant des droits ancestraux fondamentaux. Sont compris parmi ces droits celui qu'a un peuple autochtone de tirer sa subsistance du territoire ou des eaux qu'il a traditionnellement exploités à cette fin. Ce peuple peut exercer le droit en question en échangeant la ressource dans la mesure nécessaire pour s'assurer la subsistance qu'il en a traditionnellement tirée. Ce droit subsiste tant qu'il n'a pas été éteint par traité ou autrement. Ce droit est restreint par les limites de l'exploitation historique de la ressource faite par le peuple autochtone, ainsi que par le pouvoir de l'État de limiter ou d'interdire l'exploitation de la ressource

poses of basic sustenance, that this right has not been extinguished, that the regulation prohibiting the sale of any fish constitutes a *prima facie* infringement of it, and that this infringement is not justified. Accordingly, I conclude that the appellant's conviction must be set aside.

1. Do the Sto:lo Possess an Aboriginal Right to Sell Fish Protected under Section 35(1) of the Constitution Act, 1982?

A. *Is a Prima Facie Right Established?*

I turn first to the principles which govern the inquiry into the existence of an aboriginal right.

(i) General Principles of Interpretation

This Court in *Sparrow*, *supra*, discussed the dual significance of s. 35(1) of the *Constitution Act, 1982* in the context of fishing. Section 35(1) is significant, first, because it entrenches aboriginal rights as of the date of its adoption in 1982. Prior to that date, aboriginal rights to fish were subject to regulation and extinguishment by unilateral government act. After the adoption of s. 35, these rights can be limited only by treaty. But s. 35(1) is significant in a second, broader sense. It may be seen as recognition of the right of aboriginal peoples to fair recognition of aboriginal rights and settlement of aboriginal claims. Thus Dickson C.J. and La Forest J. wrote in *Sparrow*, at p. 1105:

... s. 35(1) of the *Constitution Act, 1982*, represents the culmination of a long and difficult struggle in both the political forum and the courts for the constitutional recognition of aboriginal rights. The strong representations of native associations and other groups concerned with

qui serait incompatible avec l'utilisation responsable de celle-ci. Appliquant ces principes, je conclus que les Sto:lo possèdent un droit ancestral de pêcher commercialement pour pourvoir à leurs besoins fondamentaux, que ce droit n'a pas été éteint, que la disposition réglementaire interdisant complètement la vente de poisson constitue une atteinte à première vue à ce droit et que cette atteinte n'est pas justifiée. En conséquence, je conclus que la déclaration de culpabilité prononcée contre l'appelante doit être annulée.

1. Les Sto:lo possèdent-ils un droit ancestral de vendre du poisson qui est protégé par le par. 35(1) de la Loi constitutionnelle de 1982?

A. *A-t-on établi, à première vue, l'existence d'un tel droit?*

Je vais d'abord examiner les principes applicables pour déterminer l'existence d'un droit ancestral.

(i) Principes généraux d'interprétation

Dans *Sparrow*, précité, notre Cour a étudié, dans le contexte de la pêche, l'importance que revêt, à deux égards, le par. 35(1) de la *Loi constitutionnelle de 1982*. Le paragraphe 35(1) est important à un premier égard en ce qu'il constitutionnalise les droits ancestraux qui existaient à la date de son adoption en 1982. Avant cette date, les droits de pêche ancestraux pouvaient être réglementés et éteints par décision unilatérale de l'État. Depuis l'adoption de l'art. 35, ces droits ne peuvent être restreints que par traité. Toutefois, le par. 35(1) est également important à un autre égard, plus général celui-là. En effet, il peut être considéré comme la consécration du droit des peuples autochtones d'obtenir, en toute justice, la reconnaissance de leurs droits ancestraux et le règlement de leurs revendications. Voici d'ailleurs ce qu'ont écrit le juge en chef Dickson et le juge La Forest dans l'arrêt *Sparrow*, à la p. 1105:

... le par. 35(1) de la *Loi constitutionnelle de 1982* représente l'aboutissement d'une bataille longue et difficile à la fois dans l'arène politique et devant les tribunaux pour la reconnaissance de droits ancestraux. La forte représentation des associations autochtones et

the welfare of Canada's aboriginal peoples made the adoption of s. 35(1) possible. . . . Section 35(1), at the least, provides a solid constitutional base upon which subsequent negotiations can take place. It also affords aboriginal peoples constitutional protection against provincial legislative power.

Quoting from Professor Lyon in "An Essay on Constitutional Interpretation" (1988), 26 *Osgoode Hall L.J.* 95, at p. 100, Dickson C.J. and La Forest J. continued at p. 1106:

. . . the context of 1982 is surely enough to tell us that this is not just a codification of the case law on aboriginal rights that had accumulated by 1982. Section 35 calls for a just settlement for aboriginal peoples. It renounces the old rules of the game under which the Crown established courts of law and denied those courts the authority to question sovereign claims made by the Crown.

d'autres groupes soucieux du bien-être des peuples autochtones du Canada a rendu possible l'adoption du par. 35(1) [. . .] Le paragraphe 35(1) procure, tout au moins, un fondement constitutionnel solide à partir duquel des négociations ultérieures peuvent être entreprises. Il accorde également aux autochtones une protection constitutionnelle contre la compétence législative provinciale.

Le juge en chef Dickson et le juge La Forest ont poursuivi, à la p. 1106, en citant les propos suivants du professeur Lyon dans «An Essay on Constitutional Interpretation» (1988), 26 *Osgoode Hall L.J.* 95, à la p. 100:

[TRADUCTION] . . . le contexte de l'année 1982 nous fournit assurément une indication suffisante qu'il ne s'agit pas d'une simple codification de la jurisprudence portant sur les droits ancestraux qui existait en 1982. L'article 35 exige un règlement équitable en faveur des peuples autochtones. Il écarte les anciennes règles du jeu en vertu desquelles Sa Majesté établissait des cours de justice auxquelles elle refusait le pouvoir de mettre en doute Ses revendications souveraines.

Il n'est peut-être pas faux d'affirmer, à l'instar du Juge en chef, que le par. 35(1) vise deux objets: premièrement, reconnaître le fait que, avant l'arrivée des Européens, le territoire était occupé; et, deuxièmement, concilier l'affirmation de la souveraineté sur ce territoire avec cette occupation antérieure. Toutefois, en toute déférence, je suis d'avis que cette affirmation est incomplète. Comme l'attestent les passages précités de l'arrêt *Sparrow*, le par. 35(1) reconnaît non seulement l'occupation antérieure du territoire par les autochtones, mais également l'existence d'un régime juridique antérieur ayant donné naissance à des droits ancestraux qui subsistent, à moins d'avoir été éteints. Ce paragraphe vise non seulement à concilier ces droits avec la colonisation du territoire par les Européens et l'affirmation de leur souveraineté sur celui-ci, mais également à les concilier d'une manière propre à servir d'assise à un règlement juste et durable des revendications autochtones, compatible avec la norme élevée que le droit impose à l'État dans ses rapports avec les peuples autochtones.

Appliquant ces préceptes, notre Cour a déclaré, aux pp. 1106 et 1107, dans *Sparrow*, que le par. 35(1) doit recevoir une interprétation géné-

It may not be wrong to assert, as the Chief Justice does, that the dual purposes of s. 35(1) are first to recognize the fact that the land was occupied prior to European settlement and second, to reconcile the assertion of sovereignty with this prior occupation. But it is, with respect, incomplete. As the foregoing passages from *Sparrow* attest, s. 35(1) recognizes not only prior aboriginal occupation, but also a prior legal regime giving rise to aboriginal rights which persist, absent extinguishment. And it seeks not only to reconcile these claims with European settlement and sovereignty but also to reconcile them in a way that provides the basis for a just and lasting settlement of aboriginal claims consistent with the high standard which the law imposes on the Crown in its dealings with aboriginal peoples.

Following these precepts, this Court in *Sparrow* decreed, at pp. 1106-7, that s. 35(1) be construed in a generous, purposive and liberal way. It repre-

sents "a solemn commitment that must be given meaningful content" (p. 1108). It embraces and confirms the fiduciary obligation owed by the government to aboriginal peoples (p. 1109). It does not oust the federal power to legislate with respect to aboriginals, nor does it confer absolute rights. Federal power is to be reconciled with aboriginal rights by means of the doctrine of justification. The federal government can legislate to limit the exercise of aboriginal rights, but only to the extent that the limitation is justified and only in accordance with the high standard of honourable dealing which the Constitution and the law imposed on the government in its relations with aboriginals (p. 1109).

To summarize, a court approaching the question of whether a particular practice is the exercise of a constitutional aboriginal right under s. 35(1) must adopt an approach which: (1) recognizes the dual purposes of s. 35(1) (to preclude extinguishment and to provide a firm foundation for settlement of aboriginal claims); (2) is liberal and generous toward aboriginal interests; (3) considers the aboriginal claim in the context of the historic way of life of the people asserting it; and (4) above all, is true to the position of the Crown throughout Canadian history as trustee or fiduciary for the first peoples of this country. Finally, I would join with the Chief Justice in asserting, as Mark Walters counsels in "British Imperial Constitutional Law and Aboriginal Rights: A Comment on *Delgamuukw v. British Columbia*" (1992), 17 *Queen's L.J.* 350, at pp. 413 and 412, respectively, that "a morally and politically defensible conception of aboriginal rights will incorporate both [the] legal perspectives" of the "two vastly dissimilar legal cultures" of European and aboriginal societies. We apply the common law, but the common law we apply must give full recognition to the pre-existing aboriginal tradition.

reuse, libérale et fondée sur l'objet qu'il vise. Il constitue «un engagement solennel qui doit avoir un sens utile» (p. 1108). Il englobe et confirme l'obligation de fiduciaire de l'État envers les peuples autochtones (p. 1109). Il ne supprime pas le pouvoir du fédéral de légiférer à l'égard des autochtones, et les droits qu'il confère ne sont pas absolus. Le pouvoir fédéral doit être concilié avec les droits ancestraux par l'application de la doctrine de la justification. Le gouvernement fédéral peut légiférer afin de limiter l'exercice de droits ancestraux, mais seulement dans la mesure où cette limitation est justifiée et respecte la norme élevée — savoir celle d'agir honorablement — que la Constitution et les autres règles de droit imposent à l'État dans ses rapports avec les peuples autochtones (p. 1109).

En résumé, le tribunal qui est appelé à décider si une pratique donnée est l'exercice d'un droit ancestral protégé par la Constitution en vertu du par. 35(1) doit adopter une méthode (1) qui reconnaisse les deux objets du par. 35(1) (savoir empêcher l'extinction des droits ancestraux et constituer une assise solide en vue du règlement des revendications autochtones), (2) qui soit libérale et généreuse envers les intérêts des autochtones, (3) qui considère le droit ancestral revendiqué dans le contexte du mode de vie historique du peuple qui l'invoque; (4) et, par-dessus tout, qui soit respectueuse du rôle de fiduciaire que l'État joue depuis toujours auprès des premiers habitants du pays. Finalement, je souscris aux propos du Juge en chef qui affirme, conformément à l'opinion émise par Mark Walters, dans «British Imperial Constitutional Law and Aboriginal Rights: A Comment on *Delgamuukw v. British Columbia*» (1992), 17 *Queen's L.J.* 350, aux pp. 413 et 412 respectivement, qu'[TRADUCTION] «une conception moralement et politiquement défendable des droits ancestraux intégrera [les] deux points de vue juridiques», qui émanent des «deux cultures juridiques extrêmement dissemblables» des sociétés européennes et autochtones. Nous appliquons la common law, mais la common law que nous appliquons doit reconnaître pleinement la tradition autochtone préexistante.

(ii) The Right Asserted — the Right to Fish for Commercial Purposes

233 The first step is to ascertain the aboriginal right which is asserted by Mrs. Van der Peet. Are we concerned with the right to fish, the right to sell fish on a small sustenance-related level, or commercial fishing?

234 The Chief Justice and Justice L'Heureux-Dubé state that this appeal does not raise the issue of the right of the Sto:lo to engage in commercial fishery. They argue that the sale of one or two fish to a neighbour cannot be considered commerce, and that the British Columbia courts erred in treating it as such.

235 I agree that this case was defended on the ground that the fish sold by Mrs. Van der Peet were sold for purposes of sustenance. This was not a large corporate money-making activity. In the end, as will be seen, I agree with Justice L'Heureux-Dubé that a large operation geared to producing profits in excess of what the people have historically taken from the river might not be constitutionally protected.

236 This said, I see little point in labelling Mrs. Van der Peet's sale of fish something other than commerce. When one person sells something to another, that is commerce. Commerce may be large or small, but commerce it remains. On the view I take of the case, the critical question is not whether the sale of the fish is commerce or non-commerce, but whether the sale can be defended as the exercise of a more basic aboriginal right to continue the aboriginal people's historic use of the resource.

237 Making an artificial distinction between the exchange of fish for money or other goods on the one hand and for commercial purposes on the other, may have serious consequences, if not in

(ii) Le droit revendiqué — le droit de pêcher à des fins commerciales

La première étape consiste à déterminer quel est le droit ancestral revendiqué par M^{me} Van der Peet. S'agit-il du droit de pêcher, de celui de vendre, sur une petite échelle, du poisson à des fins de subsistance ou encore du droit de pêcher commercialement?

Le Juge en chef et le juge L'Heureux-Dubé disent que le présent pourvoi ne soulève pas la question du droit des Sto:lo de pratiquer la pêche commerciale. Ils affirment que la vente de quelques poissons à un voisin ne saurait être assimilée à un acte de commerce et que les tribunaux de la Colombie-Britannique ont commis une erreur en pensant ainsi.

Je suis aussi d'avis que la défense de M^{me} Van der Peet repose sur l'argument qu'elle a vendu le poisson à des fins de subsistance. Il ne s'agissait pas d'une activité lucrative d'une grosse entreprise commerciale. En fin de compte, comme nous le verrons, je suis d'accord avec le juge L'Heureux-Dubé qu'une opération de grande envergure, visant la réalisation de bénéfices excédant ce que les autochtones ont historiquement tiré de l'exploitation du fleuve pourrait ne pas bénéficier de la protection de la Constitution.

Cela dit, je vois peu d'intérêt à qualifier autrement que d'acte de commerce la vente de poisson faite par M^{me} Van der Peet. Quand une personne vend quelque chose à autrui, c'est du commerce. Le commerce peut se faire sur une grande ou sur une petite échelle, mais ça reste du commerce. À mon sens, la question cruciale qui se pose n'est pas de savoir si, en l'espèce, la vente du poisson est ou non un acte de commerce, mais bien si elle peut être justifiée en tant qu'exercice d'un droit ancestral plus fondamental, qui serait la poursuite, par les autochtones concernés, de l'utilisation historique de la ressource.

Le fait d'établir une distinction artificielle entre l'échange de poisson contre de l'argent ou d'autres biens, d'une part, et l'échange de poisson à des fins commerciales, d'autre part, pourrait avoir des

this case, in others. If the aboriginal right at issue is defined as the right to trade on a massive, modern scale, few peoples may be expected to establish a commercial right to fish. As the Chief Justice observes in *R. v. N.T.C. Smokehouse Ltd.*, [1996] 2 S.C.R. 672, “[t]he claim to an aboriginal right to exchange fish commercially places a more onerous burden” on the aboriginal claimant “than a claim to an aboriginal right to exchange fish for money or other goods” (para. 20). In the former case, the trade must be shown to have existed pre-contact “on a scale best characterized as commercial” (para. 20). With rare exceptions (see the evidence in *R. v. Gladstone*, [1996] 2 S.C.R. 723, released concurrently) aboriginal societies historically were not interested in massive sales. Even if they had been, their societies did not afford them mass markets.

(iii) Aboriginal Rights versus the Exercise of Aboriginal Rights

It is necessary to distinguish at the outset between an aboriginal right and the exercise of an aboriginal right. Rights are generally cast in broad, general terms. They remain constant over the centuries. The exercise of rights, on the other hand, may take many forms and vary from place to place and from time to time.

If a specific modern practice is treated as the right at issue, the analysis may be foreclosed before it begins. This is because the modern practice by which the more fundamental right is exercised may not find a counterpart in the aboriginal culture of two or three centuries ago. So if we ask whether there is an aboriginal right to a particular kind of trade in fish, i.e., large-scale commercial trade, the answer in most cases will be negative. On the other hand, if we ask whether there is an aboriginal right to use the fishery resource for the purpose of providing food, clothing or other needs,

conséquences sérieuses, sinon dans la présente espèce, alors dans d’autres affaires. Si le droit ancestral en cause est défini comme étant le droit de commercer massivement, au sens où on l’entend aujourd’hui, peu de peuples autochtones pourraient vraisemblablement établir un droit de pratiquer la pêche commerciale. Comme le Juge en chef le fait observer dans l’arrêt *R. c. N.T.C. Smokehouse Ltd.*, [1996] 2 R.C.S. 672 «[l]a revendication du droit ancestral d’échanger du poisson commercialement impose» à l’autochtone qui revendique le droit un fardeau plus lourd «que la revendication du droit d’échanger du poisson contre de l’argent ou d’autres biens» (par. 20). Dans la première hypothèse, il faut prouver que le commerce était pratiqué avant le contact avec les Européens et «sur une échelle qu’il convient de qualifier de commerciale» (par. 20). Sauf rares exceptions (voir la preuve dans *R. c. Gladstone*, [1996] 2 R.C.S. 723 rendu à la même date), historiquement les autochtones n’étaient pas intéressés à effectuer des ventes massives. D’ailleurs, même s’ils l’avaient été, les sociétés dans lesquelles ils vivaient ne constituaient pas des marchés de masse.

(iii) Droits ancestraux et exercice de tels droits

Il est nécessaire, au départ, de faire une distinction entre un droit ancestral et l’exercice d’un tel droit. Les droits sont généralement énoncés en termes larges et généraux. Ils ne changent pas au fil des siècles. L’exercice des droits, en revanche, peut prendre diverses formes et varier selon les lieux et les époques.

Si une pratique moderne spécifique est considérée comme étant le droit en cause, l’analyse peut alors devenir sans objet, avant même d’avoir commencé, car il est possible que la pratique moderne par laquelle est exercé le droit plus fondamental n’ait pas eu d’équivalent dans la culture autochtone qui existait il y a deux ou trois siècles. Par conséquent, si nous nous demandons s’il existe un droit ancestral de pratiquer un type particulier de commerce du poisson, par exemple d’en faire le commerce sur une grande échelle, la réponse sera négative dans la plupart des cas. Au contraire, si

the answer may be quite different. Having defined the basic underlying right in general terms, the question then becomes whether the modern practice at issue may be characterized as an exercise of the right.

nous nous demandons s'il existe un droit ancestral d'utiliser les ressources halieutiques en vue de pourvoir aux besoins alimentaires, vestimentaires ou autres, il est bien possible que la réponse soit tout à fait différente. Une fois le droit fondamental sous-jacent défini en termes généraux, la question devient alors de savoir si la pratique moderne en cause peut être qualifiée d'exercice de ce droit.

240

This is how we reconcile the principle that aboriginal rights must be ancestral rights with the uncompromising insistence of this Court that aboriginal rights not be frozen. The rights are ancestral; they are the old rights that have been passed down from previous generations. The exercise of those rights, however, takes modern forms. To fail to recognize the distinction between rights and the contemporary form in which the rights are exercised is to freeze aboriginal societies in their ancient modes and deny to them the right to adapt, as all peoples must, to the changes in the society in which they live.

Voilà de quelle façon nous concilions le principe que les droits des peuples autochtones qui sont reconnus et confirmés au par. 35(1) doivent être des droits ancestraux et l'insistance indéfectible de notre Cour sur le principe que les droits ancestraux ne sont pas figés. Il s'agit de droits ancestraux, c'est-à-dire des droits anciens qui ont été transmis par les générations précédentes. Toutefois, l'exercice de ces droits prend des formes modernes. Ne pas reconnaître la distinction entre les droits et la façon contemporaine dont ils sont exercés équivaut à figer les sociétés autochtones dans leurs anciens modes de vie et à les priver du droit qu'elles ont, à l'instar de tous les autres peuples, de s'adapter aux changements du monde dans lequel elles vivent.

241

I share the concern of L'Heureux-Dubé J. that the Chief Justice defines the rights at issue with too much particularity, enabling him to find no aboriginal right where a different analysis might find one. By insisting that Mrs. Van der Peet's modern practice of selling fish be replicated in pre-contact Sto:lo practices, he effectively condemns the Sto:lo to exercise their right precisely as they exercised it hundreds of years ago and precludes a finding that the sale constitutes the exercise of an aboriginal right.

Je partage la préoccupation exprimée par le juge L'Heureux-Dubé que, dans sa définition des droits en cause, le Juge en chef applique un trop fort degré de particularisation, ce qui lui permet de conclure à l'inexistence d'un droit ancestral là où une analyse différente aurait pu mener au résultat contraire. En insistant pour que la pratique moderne de M^{me} Van der Peet en matière de vente de poisson ait eu son équivalent dans les pratiques des Sto:lo avant le contact avec les Européens, il condamne effectivement les Sto:lo à exercer leur droit précisément comme ils le faisaient il y a des siècles, et exclut toute conclusion que la vente constitue l'exercice d'un droit ancestral.

242

To constitute a right under s. 35(1) of the *Constitution Act, 1982*, the right must be of constitutional significance. A right of constitutional significance may loosely be defined as a right which has priority over ordinary legal principles. It is a maxim which sets the boundaries within which the law must operate. While there were no formal constitutional guarantees of aboriginal rights prior to 1982, we may nevertheless discern certain princi-

Pour constituer un droit visé au par. 35(1) de la *Loi constitutionnelle de 1982*, le droit doit avoir une importance constitutionnelle. Un droit d'importance constitutionnelle peut être défini de façon générale comme un droit qui a priorité sur les principes juridiques ordinaires. Il s'agit d'une maxime qui fixe les limites à l'intérieur desquelles le droit doit s'appliquer. Même si les droits ancestraux n'étaient pas formellement garantis par la Consti-

ples relating to aboriginal peoples which were so fundamental as to have been generally observed by those charged with dealing with aboriginal peoples and with making and executing the laws that affected them.

The activity for which constitutional protection is asserted in this case is selling fish caught in the area of the Fraser River where the Sto:lo traditionally fished for the purpose of sustaining the people. The question is whether this activity may be seen as the exercise of a right which has either been recognized or which so resembles a recognized right that it should, by extension of the law, be so recognized.

(iv) The Time Frame

The Chief Justice and L'Heureux-Dubé J. differ on the time periods one looks to in identifying aboriginal rights. The Chief Justice stipulates that for a practice to qualify as an aboriginal right it must be traceable to pre-contact times and be identifiable as an "integral" aspect of the group's culture at that early date. Since the barter of fish was not shown to be more than an incidental aspect of Sto:lo society prior to the arrival of the Europeans, the Chief Justice concludes that it does not qualify as an aboriginal right.

L'Heureux-Dubé J., by contrast, minimizes the historic origin of the alleged right. For her, all that is required is that the practice asserted as a right have constituted an integral part of the group's culture and social organization for a period of at least 20 to 50 years, and that it continue to be an integral part of the culture at the time of the assertion of the right.

My own view falls between these extremes. I agree with the Chief Justice that history is important. A recently adopted practice would generally not qualify as being aboriginal. Those things which have in the past been recognized as aboriginal rights have been related to the traditional prac-

tution avant 1982, nous pouvons néanmoins dégager certains principes touchant les peuples autochtones qui étaient si fondamentaux qu'ils étaient généralement observés par ceux qui étaient chargés de traiter avec les peuples autochtones et de rédiger et d'appliquer des lois les concernant.

L'activité à l'égard de laquelle la protection de la Constitution est revendiquée en l'espèce est la vente de poisson pris dans le secteur du fleuve Fraser où les Sto:lo ont traditionnellement pêché pour subvenir aux besoins des leurs. Il s'agit de décider si cette activité peut être assimilée à l'exercice d'un droit qui soit a été reconnu, soit ressemble à tel point à un droit reconnu qu'il devrait, par extension de la loi, être reconnu comme tel.

(iv) La période de référence

Le Juge en chef et le juge L'Heureux-Dubé ne s'entendent pas sur la période à prendre en considération pour identifier les droits ancestraux. Le Juge en chef affirme que pour qu'une pratique soit considérée comme un droit ancestral elle doit remonter à l'époque qui a précédé le contact avec les Européens et avoir fait «partie intégrante», dans ces temps anciens, de la culture du groupe visé. Comme il n'a pas été établi que le troc de poisson était autre chose qu'un aspect accessoire de la société Sto:lo avant l'arrivée des Européens, le Juge en chef conclut que cette pratique ne constitue pas un droit ancestral.

À l'opposé, le juge L'Heureux-Dubé minimise l'importance des origines historiques du droit revendiqué. Pour elle, tout ce qui est requis c'est que la pratique qui, affirme-t-on, serait un droit, ait fait partie intégrante de l'organisation sociale et de la culture du groupe concerné pendant une période d'au moins 20 à 50 ans, et qu'elle continue de faire partie intégrante de la culture au moment où le droit est revendiqué.

Mon point de vue se situe entre ces deux pôles extrêmes. Je suis d'accord avec le Juge en chef pour dire que l'histoire est un facteur important. Une pratique d'adoption récente ne saurait généralement être qualifiée d'ancestrale. Les pratiques qui, dans le passé, ont été reconnues comme étant

tices of aboriginal peoples. For this reason, this Court has always been at pains to explore the historical origins of alleged aboriginal rights. For example, in *Sparrow*, this Court began its inquiry into the aboriginal right to fish for food with a review of the fishing practices of the Musqueam Band prior to European contact.

des droits ancestraux se rapportaient aux pratiques traditionnelles des peuples autochtones. Pour cette raison, notre Cour s'est toujours efforcée d'examiner les origines historiques des droits ancestraux revendiqués. Par exemple, dans *Sparrow*, notre Cour a commencé son examen du droit ancestral de pêcher à des fins alimentaires par l'étude des pratiques des Musqueams en matière de pêche avant le contact avec les Européens.

247

I cannot agree with the Chief Justice, however, that it is essential that a practice be traceable to pre-contact times for it to qualify as a constitutional right. Aboriginal rights find their source not in a magic moment of European contact, but in the traditional laws and customs of the aboriginal people in question. As Brennan J. (as he then was) put it in *Mabo v. Queensland [No. 2]* (1992), 175 C.L.R. 1, at p. 58, "Native title has its origin in and is given its content by the traditional laws acknowledged by and the traditional customs observed by the indigenous inhabitants of a territory." The French version of s. 35(1) aptly captures the governing concept. "*Les droits existants — ancestraux ou issus de traités* —" tells us that the rights recognized and affirmed by s. 35(1) must be rooted in the historical or ancestral practices of the aboriginal people in question. This Court in *Guerin v. The Queen*, [1984] 2 S.C.R. 335, adopted a similar approach: Dickson J. (as he then was) refers at p. 376 to "aboriginal title as a legal right derived from the Indians' historic occupation and possession of their tribal lands". One finds no mention in the text of s. 35(1) or in the jurisprudence of the moment of European contact as the definitive all-or-nothing time for establishing an aboriginal right. The governing concept is simply the traditional customs and laws of people prior to imposition of European law and customs. What must be established is continuity between the modern practice at issue and a traditional law or custom of the native people. Most often, that law or tradition will be traceable to time immemorial; otherwise it would not be an ancestral aboriginal law or custom. But date of contact is not the only

Toutefois, je ne peux souscrire à l'avis du Juge en chef qu'il est essentiel qu'une pratique remonte à l'époque qui a précédé le contact avec les Européens pour être reconnue comme un droit constitutionnel. Les droits ancestraux ont leur origine non pas dans le moment magique du contact avec les Européens, mais dans les lois et coutumes traditionnelles du peuple autochtone en cause. Comme l'a dit le juge Brennan (tel était alors son titre) dans l'arrêt *Mabo c. Queensland [No. 2]* 1992, 175 C.L.R. 1, à la p. 58, [TRADUCTION] «Le titre aborigène tire son origine et son contenu des coutumes et des lois traditionnelles observées et reconnues par les habitants autochtones d'un territoire.» Le texte français du par. 35(1) rend bien le principe directeur en la matière. En effet, les mots «[I]es droits existants — ancestraux ou issus de traités —» nous indiquent que les droits reconnus et confirmés par le par. 35(1) doivent avoir leur source dans les pratiques historiques ou ancestrales des autochtones concernés. Dans *Guerin c. La Reine*, [1984] 2 R.C.S. 335, notre Cour a appliqué un principe analogue: le juge Dickson (plus tard juge en chef) a décrit, à la p. 376, le «titre aborigène comme un droit, en common law, découlant de l'occupation et de la possession historiques par les Indiens de leurs terres tribales». On ne trouve, ni dans le par. 35(1) ni dans la jurisprudence, aucune indication que le contact avec les Européens serait la date décisive pour établir l'existence d'un droit ancestral. Le principe directeur est tout simplement fondé sur les coutumes et les lois que respectait le peuple en question avant que ne lui soient imposées celles des Européens. Ce qui doit être prouvé c'est l'existence d'une continuité entre la pratique moderne en cause et une loi ou coutume traditionnelle du peuple autochtone. La plupart du temps, il sera possible de retracer les

moment to consider. What went before and after can be relevant too.

My concern is that we not substitute an inquiry into the precise moment of first European contact — an inquiry which may prove difficult — for what is really at issue, namely the ancestral customs and laws observed by the indigenous peoples of the territory. For example, there are those who assert that Europeans settled the eastern maritime regions of Canada in the 7th and 8th centuries A.D. To argue that aboriginal rights crystallized then would make little sense; the better question is what laws and customs held sway before superimposition of European laws and customs. To take another example, in parts of the west of Canada, over a century elapsed between the first contact with Europeans and imposition of “Canadian” or “European” law. During this period, many tribes lived largely unaffected by European laws and customs. I see no reason why evidence as to the laws and customs and territories of the aboriginals in this interval should not be considered in determining the nature and scope of their aboriginal rights. This approach accommodates the specific inclusion in s. 35(1) of the *Constitution Act, 1982* of the aboriginal rights of the Métis people, the descendants of European explorers and traders and aboriginal women.

Not only must the proposed aboriginal right be rooted in the historical laws or customs of the people, there must also be continuity between the historic practice and the right asserted. As Brennan J. put it in *Mabo*, at p. 60:

The common law can, by reference to the traditional laws and customs of an indigenous people, identify and

origines de cette loi ou tradition aux temps immémoriaux; autrement, il ne s’agirait pas d’une loi ou coutume ancestrale autochtone. Cependant, la date du contact avec les Européens n’est pas le seul moment à prendre en considération. Ce qui s’est passé avant et après cette date peut aussi être pertinent.

Mon inquiétude est qu’on substitue un examen fondé sur le moment précis du contact avec les Européens — examen qui peut s’avérer difficile — à la véritable question litigieuse, savoir les coutumes et lois ancestrales observées par les peuples autochtones habitant le territoire. Par exemple, d’aucuns affirment que les Européens ont colonisé les régions maritimes de l’Est du Canada aux VII^e et VIII^e siècles après Jésus-Christ. Il serait peu logique de soutenir que les droits ancestraux se sont cristallisés à ce moment-là. Il est préférable de se demander quelles sont les lois et coutumes qui avaient cours avant qu’on leur surimpose les lois et coutumes européennes. Pour donner un autre exemple, mentionnons que, dans certaines régions de l’Ouest canadien, il s’est écoulé plus d’un siècle entre le premier contact avec les Européens et l’assujettissement au droit «canadien» ou «européen». Durant cette période, de nombreuses tribus ont, dans une large mesure, vécu sans être touchées par les lois et coutumes européennes. Je ne vois aucune raison de ne pas prendre en considération, afin de déterminer la nature et la portée de leurs droits ancestraux, la preuve concernant les lois et coutumes respectées par les autochtones et les territoires occupés par ces derniers durant cet intervalle. Cette méthode est compatible avec l’inclusion expresse, au par. 35(1) de la *Loi constitutionnelle de 1982*, des droits de Métis, qui sont les descendants d’explorateurs et de marchands européens et de femmes autochtones.

Non seulement le droit ancestral proposé doit avoir sa source dans les lois et coutumes historiques du peuple concerné, mais il faut également qu’il y ait continuité entre la pratique historique et le droit revendiqué. Comme l’a dit le juge Brennan dans l’arrêt *Mabo*, à la p. 60:

[TRADUCTION] La common law peut, par référence aux lois et coutumes traditionnelles d’un peuple autochtone,

protect the native rights and interests to which they give rise. However, when the tide of history has washed away any real acknowledgment of traditional law and any real observance of traditional customs, the foundation of native title has disappeared.

The continuity requirement does not require the aboriginal people to provide a year-by-year chronicle of how the event has been exercised since time immemorial. Indeed, it is not unusual for the exercise of a right to lapse for a period of time. Failure to exercise it does not demonstrate abandonment of the underlying right. All that is required is that the people establish a link between the modern practice and the historic aboriginal right.

identifier et protéger les droits et intérêts des autochtones auxquels les premières donnent naissance. Toutefois, quand, par suite de la marche du temps, les coutumes et les lois traditionnelles ont, dans les faits, cessé d'être observées, le fondement du titre aborigène a disparu.

L'exigence de continuité n'oblige pas les autochtones à faire une chronique indiquant comment, année après année, le droit a été exercé depuis les temps immémoriaux. De fait, il n'est pas exceptionnel qu'un droit cesse d'être exercé pendant un certain temps. Le fait de ne pas exercer un droit ne prouve pas que celui-ci a été abandonné. Tout ce que les autochtones sont requis de faire, c'est d'établir un lien entre la pratique moderne et le droit historique qu'ils revendiquent.

250

While aboriginal rights will generally be grounded in the history of the people asserting them, courts must, as I have already said, take cognizance of the fact that the way those rights are practised will evolve and change with time. The modern exercise of a right may be quite different from its traditional exercise. To deny it the status of a right because of such differences would be to deny the reality that aboriginal cultures, like all cultures, change and adapt with time. As Dickson C.J. and La Forest J. put it in *Sparrow*, at p. 1093 "[t]he phrase 'existing aboriginal rights' [in s. 35(1) of the *Constitution Act, 1982*] must be interpreted flexibly so as to permit their evolution over time".

Même si les droits ancestraux trouvent généralement leur origine dans l'histoire du peuple qui les revendique, les tribunaux doivent, comme je l'ai dit plus tôt, tenir compte du fait que la façon dont ces droits sont exercés évolue et change avec le temps. La façon dont un droit est exercé aujourd'hui peut être très différente de son exercice traditionnel. Refuser de reconnaître un droit en raison de telles différences serait nier la réalité que les cultures autochtones, à l'instar de toutes les autres cultures, changent avec le temps et s'adaptent. Comme l'ont dit le juge en chef Dickson et le juge La Forest dans *Sparrow*, à la p. 1093, «[l']expression «droits ancestraux existants» [au par. 35(1) de la *Loi constitutionnelle de 1982*] doit recevoir une interprétation souple de manière à permettre à ces droits d'évoluer avec le temps».

(v) The Procedure for Determining the Existence of an Aboriginal Right

(v) La méthode permettant de déterminer l'existence d'un droit ancestral

251

Aboriginal peoples, like other peoples, define themselves through a myriad of activities, practices and claims. A few of these, the *Canadian Charter of Rights and Freedoms* tells us, are so fundamental that they constitute constitutional "rights" of such importance that governments cannot trench on them without justification. The problem before this Court is how to determine what activities, practices and claims fall within this class of constitutionally protected rights.

Comme les autres peuples, les peuples autochtones se définissent par une myriade de pratiques, d'activités et de droits, dont un certain nombre, nous dit la *Charte canadienne des droits et libertés*, ont un caractère si fondamental qu'ils sont des «droits» constitutionnels d'une importance telle que l'État ne peut leur porter atteinte sans justification. Le problème que notre Cour doit résoudre est de déterminer quelles sont les activités, pratiques et droits qui relèvent de la catégorie des droits protégés par la Constitution.

1996 CanLII 210 (SCC)

The first and obvious category of constitutionally protected aboriginal rights and practices are those which had obtained legal recognition prior to the adoption of s. 35(1) of the *Constitution Act, 1982*. Section 35(1) confirms “existing” aboriginal rights. Rights granted by treaties or recognized by the courts prior to 1982 must, it follows, remain rights under s. 35(1).

But aboriginal rights under s. 35(1) are not confined to rights formally recognized by treaty or the courts before 1982. As noted above, this Court has held that s. 35(1) “is not just a codification of the case law on aboriginal rights that had accumulated by 1982. Section 35 calls for a just settlement for aboriginal peoples”: *Sparrow*, at p. 1106, quoting Noel Lyon, “An Essay on Constitutional Interpretation”, *supra*, at p. 100. This poses the question of what new, previously unrecognized aboriginal rights may be asserted under s. 35(1).

The Chief Justice defines aboriginal rights as specific pre-contact practices which formed an “integral part” of the aboriginal group’s “specific distinct culture”. L’Heureux-Dubé J., adopting a “dynamic” rights approach, extends aboriginal rights to any activity, broadly defined, which forms an integral part of a distinctive aboriginal group’s culture and social organization, regardless of whether the activity pre-dates colonial contact or not. In my respectful view, while both these approaches capture important facets of aboriginal rights, neither provides a satisfactory test for determining whether an aboriginal right exists.

(vi) The “Integral-Incidental” Test

I agree with the Chief Justice, at para. 46, that to qualify as an aboriginal right “an activity must be an element of practice, custom or tradition integral to the distinctive culture of the aboriginal group

La première catégorie évidente de droits et pratiques autochtones protégés par la Constitution est formée de ceux qui avaient été reconnus en droit avant l’adoption du par. 35(1) de la *Loi constitutionnelle de 1982*. Le paragraphe 35(1) confirme les droits ancestraux «existants». Il s’ensuit que les droits issus de traités ou reconnus par les tribunaux avant 1982 restent des droits visés au par. 35(1).

Toutefois, les droits ancestraux visés au par. 35(1) ne se limitent pas aux droits reconnus formellement par traité ou par les tribunaux avant 1982. Comme il a été indiqué précédemment, notre Cour a statué que le par. 35(1) n’est pas «une simple codification de la jurisprudence portant sur les droits ancestraux qui existait en 1982. L’article 35 exige un règlement équitable en faveur des peuples autochtones»: *Sparrow*, à la p. 1106, citation des propos de Noel Lyon dans «An Essay on Constitutional Interpretation», *loc. cit.*, à la p. 100. Il faut donc se demander quels droits ancestraux nouveaux, non déjà reconnus, peuvent être revendiqués en vertu du par. 35(1).

Le Juge en chef définit les droits ancestraux comme étant les pratiques particulières qui datent d’avant le contact avec les Européens et faisaient «partie intégrante» de la «culture distinctive spécifique» du groupe autochtone visé. Adoptant une méthode fondée sur le caractère «dynamique» des droits, le juge L’Heureux-Dubé élargit la définition de droits ancestraux à toute activité, largement définie, qui fait partie intégrante de l’organisation sociale et de la culture distinctive d’un groupe d’autochtones, peu importe que l’activité précède ou non le contact avec les Européens. En toute déférence, même si ces deux approches tiennent compte de certaines facettes importantes des droits ancestraux, ni l’une ni l’autre ne constituent un critère satisfaisant pour déterminer si un droit ancestral existe.

(vi) Le critère de la «partie intégrante ou accessoire»

Je conviens avec le Juge en chef qui a dit, au par. 46, que pour constituer un droit ancestral, «une activité doit être un élément d’une coutume, pratique ou tradition faisant partie intégrante de la

claiming the right". I also agree with L'Heureux-Dubé J. that an aboriginal right must be "integral" to a "distinctive aboriginal group's culture and social organization". To say this is simply to affirm the foundation of aboriginal rights in the laws and customs of the people. It describes an essential quality of an aboriginal right. But, with respect, a workable legal test for determining the extent to which, if any, commercial fishing may constitute an aboriginal right, requires more. The governing concept of integrality comes from a description in the *Sparrow* case where the extent of the aboriginal right (to fish for food) was not seriously in issue. It was never intended to serve as a test for determining the extent of disputed exercises of aboriginal rights.

culture distinctive du groupe autochtone qui revendique le droit en question». Je conviens aussi avec le juge L'Heureux-Dubé qu'un droit ancestral doit faire «partie intégrante» de «l'organisation sociale et de la culture distinctive du groupe autochtones concerné». Dire cela, c'est simplement confirmer que le fondement des droits ancestraux réside dans les lois et les coutumes du peuple visé. C'est définir un attribut essentiel d'un droit ancestral. En toute déférence, toutefois, cela ne suffit pas pour constituer un critère juridique applicable pour déterminer, le cas échéant, la mesure dans laquelle la pêche commerciale peut constituer un droit ancestral. Le principe directeur de partie intégrante découle d'une description faite dans *Sparrow*, affaire où l'étendue du droit ancestral en cause (savoir celui de pêcher à des fins alimentaires) n'était pas vraiment en litige. Ce principe ne s'est jamais voulu un critère pour déterminer la portée d'exercices contestés de droits ancestraux.

256

My first concern is that the proposed test is too broad to serve as a legal distinguisher between constitutional and non-constitutional rights. While the Chief Justice in the latter part of his reasons seems to equate "integral" with "not incidental", the fact remains that "integral" is a wide concept, capable of embracing virtually everything that an aboriginal people customarily did. *The Shorter Oxford English Dictionary*, vol. 1 (3rd ed. 1973), offers two definitions of "integral": 1. "Of or pertaining to a whole . . . constituent, component"; and 2. "Made up of component parts which together constitute a unity". To establish a practice as "integral" to a group's culture, it follows, one must show that the practice is part of the unity of practices which together make up that culture. This suggests a very broad definition: anything which can be said to be part of the aboriginal culture would qualify as an aboriginal right protected by the *Constitution Act, 1982*. This would confer constitutional protection on a multitude of activities, ranging from the trivial to the vital. The Chief Justice attempts to narrow the concept of "integral" by emphasizing that the proposed right must be part of what makes the group "distinctive", the "specific" people which they are, stopping short, however, of asserting that the practice must be unique

Ma première préoccupation est que le critère proposé est trop large pour servir à distinguer, en droit, les droits garantis par la Constitution de ceux qui ne le sont pas. Bien que, dans la dernière partie de ses motifs, le Juge en chef semble assimiler «partie intégrante» à «élément non accessoire», il n'en reste pas moins que la notion de «partie intégrante» est large et capable d'englober pratiquement tout ce qu'un peuple autochtone faisait sur une base coutumière. Le *Shorter Oxford English Dictionary*, vol. 1 (3^e éd. 1973), donne deux acceptions du mot anglais «*integral*» («partie intégrante»): [TRADUCTION] 1. «Relatif au tout [...] composant, élément constitutif»; 2. «Composé d'éléments constitutifs contribuant à l'intégrité d'un ensemble». Il s'ensuit que, pour établir qu'une pratique fait «partie intégrante» de la culture d'un groupe, il faut démontrer qu'elle fait partie de l'ensemble des pratiques qui forment cette culture. Cela laisse supposer une définition très large: toute chose qui peut être considérée comme faisant partie de la culture autochtone constituerait un droit ancestral protégé par la *Loi constitutionnelle de 1982*. Bénéficieraient ainsi de la protection de la Constitution une multitude d'activités allant des plus banales aux plus vitales. Le Juge en chef tente de restreindre la notion de «partie inté-

to the group and adhere to none other. But the addition of concepts of distinctness and specificity do not, with respect, remedy the overbreadth of the test. Minor practices, falling far short of the importance which we normally attach to constitutional rights, may qualify as distinct or specific to a group. Even the addition of the notion that the characteristic must be central or important rather than merely "incidental", fails to remedy the problem; it merely poses another problem, that of determining what is central and what is incidental to a people's culture and social organization.

The problem of overbreadth thus brings me to my second concern, the problem of indeterminacy. To the extent that one attempts to narrow the test proposed by the Chief Justice by the addition of concepts of distinctiveness, specificity and centrality, one encounters the problem that different people may entertain different ideas of what is distinctive, specific or central. To use such concepts as the markers of legal rights is to permit the determination of rights to be coloured by the subjective views of the decision-maker rather than objective norms, and to invite uncertainty and dispute as to whether a particular practice constitutes a legal right.

Finally, the proposed test is, in my respectful opinion, too categorical. Whether something is integral or not is an all or nothing test. Once it is concluded that a practice is integral to the people's culture, the right to pursue it obtains unlimited protection, subject only to the Crown's right to impose limits on the ground of justification. In this appeal, the Chief Justice's exclusion of "commercial fishing" from the right asserted masks the lack of internal limits in the integral test. But the logic of the test remains ineluctable, for all that: assum-

grante» en soulignant que le droit proposé doit faire partie de ce qui rend le groupe «distinctif», de ce qui en fait le peuple «spécifique» qu'il est, sans toutefois aller jusqu'à affirmer que la pratique doit être propre à ce groupe et n'appartenir à aucun autre. Cependant, l'addition des notions de caractère distinctif et de spécificité ne contrebalance pas, en toute déférence, la portée excessive du critère. Des pratiques mineures, qui n'ont pas l'importance que nous associons normalement aux droits de nature constitutionnelle, pourraient constituer des pratiques distinctes d'un groupe ou des pratiques spécifiques à celui-ci. Même l'ajout du facteur qui exige que la caractéristique soit fondamentale ou importante et non pas simplement «accessoire» ne résout pas le problème. Au contraire, elle ne fait que créer un problème supplémentaire, celui de déterminer ce qui est fondamental pour l'organisation sociale et la culture d'un peuple, et ce qui est accessoire.

Le problème de la portée excessive m'amène à faire état de ma deuxième préoccupation, savoir le problème de l'indétermination. Chercher à restreindre le critère proposé par le Juge en chef en y intégrant les notions de caractère distinctif, de spécificité et de caractère fondamental, c'est se buter au problème des conceptions individuelles de ce qui est distinctif, spécifique ou fondamental. Recourir à de telles notions comme balises des droits, c'est permettre que la détermination de ces droits soit teintée par les vues subjectives du décideur plutôt que fondée sur des normes objectives, c'est aussi susciter l'incertitude et la contestation dans l'examen visant à déterminer si une pratique donnée constitue un droit.

Finalement, le critère proposé est, en toute déférence, trop catégorique. Décider si une chose fait partie intégrante d'une autre, c'est appliquer le critère du tout ou rien. Une fois qu'il a été jugé qu'une pratique fait partie intégrante de la culture du peuple concerné, le droit de continuer cette pratique jouit alors d'une protection illimitée, sous réserve seulement du droit de l'État d'imposer des limites justifiées. Dans le présent pourvoi, l'exclusion par le Juge en chef de la «pêche commerciale» du droit revendiqué masque l'absence de

ing that another people in another case establishes that commercial fishing was integral to its ancestral culture, that people will, on the integral test, logically have an absolute priority over non-aboriginal and other less fortunate aboriginal fishers, subject only to justification. All others, including other native fishers unable to establish commercial fishing as integral to their particular cultures, may have no right to fish at all.

limite intrinsèque dans le critère de la partie intégrante. La logique du critère n'en demeure pas moins inéluctable malgré tout: à supposer qu'un autre peuple, dans une autre affaire, établisse que la pêche commerciale faisait partie intégrante de sa culture ancestrale, logiquement ce peuple bénéficiera alors, suivant le critère de la partie intégrante, de la priorité absolue sur les pêcheurs non autochtones et sur les autres pêcheurs autochtones moins chanceux, sous réserve seulement de l'existence de limites justifiées. Tous les autres pêcheurs, y compris les pêcheurs autochtones incapables d'établir que la pêche commerciale faisait partie intégrante de leur culture particulière, pourraient bien n'avoir aucun droit de pêche que ce soit.

259

The Chief Justice recognizes the all or nothing logic of the "integral" test in relation to commercial fishing rights in his reasons in *Gladstone*, *supra*. Having determined in that case that an aboriginal right to commercial fishing is established, he notes at para. 61 that unlike the Indian food fishery, which is defined in terms of the peoples' need for food, the right to fish commercially "has no internal limitations". Reasoning that where the test for the right imposes no internal limit on the right, the court may do so, he adopts a broad justification test which would go beyond limiting the use of the right in ways essential to its exercise as envisioned in *Sparrow*, to permit partial reallocation of the aboriginal right to non-natives. The historically based test for aboriginal rights which I propose, by contrast, possesses its own internal limits and adheres more closely to the principles that animated *Sparrow*, as I perceive them.

Dans ses motifs dans l'arrêt *R. c. Gladstone*, précité, rendu à la même date, le Juge en chef reconnaît la logique du tout ou rien dont procède le critère de la «partie intégrante» en matière de droits de pêche commerciale. Après avoir conclu, dans cet arrêt, à l'existence d'un droit de pêche commerciale, il fait remarquer, au par. 61, que, contrairement à la pêche pratiquée par les Indiens à des fins alimentaires, qui est définie en fonction des besoins alimentaires des gens concernés, le droit de pêcher commercialement «n'est pas assorti de limite intrinsèque». Faisant le raisonnement que, dans les cas où l'application du critère de détermination de l'existence d'un droit révèle que celui-ci n'est pas assorti de limite intrinsèque, le tribunal peut en imposer une, le Juge en chef adopte un large critère de justification qui ne ferait pas que limiter, comme cela est envisagé dans *Sparrow*, l'usage du droit aux fins essentielles à son exercice, mais permettrait la réaffectation partielle du droit ancestral à des non-autochtones. Par contraste, le critère fondé sur l'histoire que je propose d'appliquer à l'égard des droits ancestraux comporte ses propres limites intrinsèques et respecte davantage les principes sur lesquels repose, selon moi, l'arrêt *Sparrow*.

(vii) The Empirical Historic Approach

(vii) L'approche empirico-historique

260

The tests proposed by my colleagues describe qualities which one would expect to find in aboriginal rights. To this extent they may be informative and helpful. But because they are overinclusive,

Les critères proposés par mes collègues définissent les attributs que sont censés posséder les droits ancestraux. Dans cette mesure, ils peuvent être informatifs et utiles. Toutefois, comme ils ont

indeterminate, and ultimately categorical, they fall short, in my respectful opinion, of providing a practically workable principle for identifying what is embraced in the term "existing aboriginal rights" in s. 35(1) of the *Constitution Act, 1982*.

In my view, the better approach to defining aboriginal rights is an empirical approach. Rather than attempting to describe *a priori* what an aboriginal right is, we should look to history to see what sort of practices have been identified as aboriginal rights in the past. From this we may draw inferences as to the sort of things which may qualify as aboriginal rights under s. 35(1). Confronted by a particular claim, we should ask, "Is this like the sort of thing which the law has recognized in the past?". This is the time-honoured methodology of the common law. Faced with a new legal problem, the court looks to the past to see how the law has dealt with similar situations in the past. The court evaluates the new situation by reference to what has been held in the past and decides how it should be characterized. In this way, legal principles evolve on an incremental, pragmatic basis.

Just as there are two fundamental types of scientific reasoning — reasoning from first principles and empirical reasoning from experience — so there are two types of legal reasoning. The approach adopted by the Chief Justice and L'Heureux-Dubé J. in this appeal may be seen as an example of reasoning from first principles. The search is for a governing principle which will control all future cases. Given the complexity and sensitivity of the issue of defining hitherto undefined aboriginal rights, the pragmatic approach typically adopted by the common law — reasoning from the experience of decided cases and recognized rights — has much to recommend it. In this spirit, and bearing in mind the important truths captured by the "integral" test proposed by the Chief Justice and L'Heureux-Dubé J., I turn to the question of

une portée excessive, qu'ils sont indéterminés et, en fin de compte, catégoriques, ils ne sauraient, en toute déférence, constituer un principe applicable, dans la pratique, pour cerner ce qui est visé par l'expression «droits ancestraux existants» au par. 35(1) de la *Loi constitutionnelle de 1982*.

À mon avis, la meilleure façon de définir les droits ancestraux consiste à appliquer une approche empirique. Plutôt que d'essayer de définir *a priori* ce qu'est un droit ancestral, nous devons étudier l'histoire pour voir quelles sortes de pratiques ont été considérées comme des droits ancestraux dans le passé. Il est alors possible d'en tirer des inférences sur ce qui peut constituer un droit ancestral visé au par. 35(1). Lorsque nous sommes saisis d'une revendication donnée, nous devons nous demander: «S'agit-il d'une chose analogue à celles qui ont été reconnues en droit dans le passé?». C'est la méthode consacrée en common law. Le tribunal appelé à trancher un point de droit nouveau examine les solutions apportées dans le passé dans des cas analogues. Il évalue la nouvelle situation à la lumière des décisions rendues jusqu'à et décide de la qualification appropriée. Ainsi, les principes juridiques évoluent de manière progressive et pragmatique.

Tout comme il y a deux types fondamentaux de raisonnement scientifique — le raisonnement fondé sur des postulats de base et le raisonnement empirique, fondé sur l'expérience — il existe deux types de raisonnement juridique. L'approche adoptée par le Juge en chef et le juge L'Heureux-Dubé dans le présent pourvoi peut être considérée comme un exemple de raisonnement fondé sur des postulats de base. On cherche un principe directeur qui sera applicable dans tous les cas ultérieurs. Vu le caractère complexe et délicat de la question de la définition de droits ancestraux qui n'ont encore jamais été définis, l'approche pragmatique généralement appliquée en common law — le raisonnement fondé sur l'expérience découlant des précédents et des droits reconnus — présente maints avantages. Dans cet esprit, et compte tenu des vérités importantes qui ressortent du critère de la «partie intégrante» proposé par le Juge en chef et par le juge L'Heureux-Dubé, je vais maintenant

what the common law and Canadian history tell us about aboriginal rights.

(viii) The Common Law Principle: Recognition of Pre-Existing Rights and Customs

The history of the interface of Europeans and the common law with aboriginal peoples is a long one. As might be expected of such a long history, the principles by which the interface has been governed have not always been consistently applied. Yet running through this history, from its earliest beginnings to the present time is a golden thread — the recognition by the common law of the ancestral laws and customs the aboriginal peoples who occupied the land prior to European settlement.

examiner ce que nous enseignent la common law et l'histoire du Canada au sujet des droits ancestraux.

(viii) Le principe de common law: la reconnaissance des coutumes et droits préexistants

L'histoire des rapports entre les Européens et la common law, d'une part, et les peuples autochtones, d'autre part, s'étale sur une longue période. Comme on peut s'y attendre, les principes régissant ces rapports n'ont pas toujours été appliqués uniformément durant cette longue histoire. Et pourtant, cette histoire, depuis les tout débuts jusqu'à nos jours, est illuminée par un fil d'or — la reconnaissance par la common law des lois et coutumes ancestrales des peuples autochtones qui occupaient le territoire avant la colonisation européenne.

For centuries, it has been established that upon asserting sovereignty the British Crown accepted the existing property and customary rights of the territory's inhabitants. Illustrations abound. For example, after the conquest of Ireland, it was held in *The Case of Tanistry* (1608), Davis 28, 80 E.R. 516, that the Crown did not take actual possession of the land by reason of conquest and that pre-existing property rights continued. Similarly, Lord Sumner wrote in *In re Southern Rhodesia*, [1919] A.C. 211, at p. 233 that "it is to be presumed, in the absence of express confiscation or of subsequent expropriatory legislation, that the conqueror has respected [pre-existing aboriginal rights] and forborne to diminish or modify them". Again, Lord Denning affirmed the same rule in *Oyekan v. Adele*, [1957] 2 All E.R. 785, at p. 788:

Il est établi que, pendant des siècles, lorsqu'elle affirmait sa souveraineté sur un territoire, la Couronne britannique reconnaissait les droits de propriété et les droits fondés sur la coutume existants de ses occupants. Les exemples abondent. Ainsi, après la conquête de l'Irlande, il a été décidé dans l'arrêt *The Case of Tanistry* (1608), Davis 28, 80 E.R. 516, que la Couronne n'avait pas effectivement pris possession des terres par la conquête et que les droits de propriété préexistants continuaient d'exister. De même, dans *In re Southern Rhodesia*, [1919] A.C. 211, à la p. 233, lord Sumner a écrit [TRADUCTION] «qu'il faut présumer, en l'absence de confiscation expresse ou de loi d'expropriation ultérieure, que le conquérant a respecté [les droits ancestraux préexistants] et a renoncé à les restreindre ou à les modifier». Lord Denning a confirmé cette règle dans *Oyekan c. Adele*, [1957] 2 All E.R. 785, à la p. 788:

In inquiring . . . what rights are recognised, there is one guiding principle. It is this: The courts will assume that the British Crown intends that the rights of property of the inhabitants are to be fully respected. Whilst, therefore, the British Crown, as Sovereign, can make laws enabling it compulsorily to acquire land for public purposes, it will see that proper compensation is awarded to every one of the inhabitants who has by native law an interest in it; and the courts will declare the inhabitants entitled to compensation according to their interests,

[TRADUCTION] En se demandant . . . quels droits sont reconnus, il existe un principe directeur. Ce principe est le suivant: Les tribunaux présumeront que la Couronne britannique veut que l'on respecte intégralement les droits de propriété des habitants. Par conséquent, bien qu'en sa qualité de souverain, elle puisse adopter des lois lui permettant d'acquérir de force des terres à des fins publiques, la Couronne britannique verra à ce qu'une juste indemnité soit accordée à chacun des habitants qui possède un intérêt en vertu du droit autochtone;

even though those interests are of a kind unknown to English law. . . . [Emphasis added.]

Most recently in *Mabo*, the Australian High Court, after a masterful review of Commonwealth and American jurisprudence on the subject, concluded that the Crown must be deemed to have taken the territories of Australia subject to existing aboriginal rights in the land, even in the absence of acknowledgment of those rights. As Brennan J. put it at p. 58: "an inhabited territory which became a settled colony was no more a legal desert than it was 'desert uninhabited'. . . ." Once the "fictions" of *terra nullius* are stripped away, "[t]he nature and incidents of native title must be ascertained as a matter of fact by reference to [the] laws and customs" of the indigenous people.

In Canada, the Courts have recognized the same principle. Thus in *Calder v. Attorney-General of British Columbia*, [1973] S.C.R. 313 at p. 328, Judson J. referred to the asserted right "to continue to live on their lands as their forefathers had lived and that this right has never been lawfully extinguished". In the same case, Hall J. (dissenting on another point) rejected at p. 416 as "wholly wrong" "the proposition that after conquest or discovery the native peoples have no rights at all except those subsequently granted or recognized by the conqueror or discoverer". Subsequent decisions in this Court are consistent with the view that the Crown took the land subject to pre-existing aboriginal rights and that such rights remain in the aboriginal people, absent extinguishment or surrender by treaty.

In *Guerin*, *supra*, this Court re-affirmed this principle, stating at pp. 377-78:

In recognizing that the Proclamation is not the sole source of Indian title the *Calder* decision went beyond the judgment of the Privy Council in *St. Catherine's*

et les tribunaux déclareront que chaque habitant a droit à une indemnité selon son intérêt, même si pareil intérêt est d'un genre inconnu en droit anglais . . . [Je souligne.]

Récemment, dans l'arrêt *Mabo*, la Haute Cour d'Australie, après un exposé remarquable de la jurisprudence des pays du Commonwealth et des États-Unis sur la question, a conclu que Sa Majesté doit être considérée comme ayant pris possession des territoires de l'Australie, sous réserve des droits ancestraux existants sur ces terres, même en l'absence de reconnaissance de tels droits. Comme l'a dit le juge Brennan, à la p. 58: [TRADUCTION] «un territoire habité, devenu une colonie, n'était pas davantage un désert au sens de la loi qu'il n'était dans les faits un «désert» . . . ». Une fois écartées les «fictions» découlant de la notion de territoire sans maître (*terra nullius*), [TRADUCTION] «[l]a nature et les attributs du titre aborigène doivent être déterminés en tant que question de fait, eu égard [aux] lois et coutumes» des autochtones visés.

Au Canada, les tribunaux ont reconnu le même principe. Ainsi, dans l'arrêt *Calder c. Procureur général de la Colombie-Britannique*, [1973] R.C.S. 313 à la p. 328, le juge Judson a dit que le droit revendiqué était celui «de continuer à vivre sur leurs terres comme l'avaient fait leurs ancêtres et que ce droit n'a jamais été juridiquement éteint». À la page 416 du même arrêt, le juge Hall (dissident sur un autre point) a rejeté comme étant «entièrement erronée» «la proposition qu'après la conquête ou la découverte, les peuples aborigènes n'ont aucun droit à l'exception de ceux qui leur sont par la suite accordés ou reconnus par le conquérant ou le découvreur». Les décisions subséquentes de notre Cour sont compatibles avec le point de vue que l'État a pris possession des terres, sous réserve des droits ancestraux préexistants, et que les autochtones conservent ces droits, en l'absence d'extinction ou de cession par traité.

Dans l'arrêt *Guerin*, précité, notre Cour a réaffirmé ce principe et déclaré ceci, aux pp. 377 et 378:

En reconnaissant que la Proclamation ne constitue pas l'unique fondement du titre indien, l'arrêt *Calder* va plus loin que l'arrêt du Conseil privé *St. Catherine's*

265

1996 CanLII 216 (SCC)

266

267

Milling and Lumber Co. v. The Queen (1888), 14 App. Cas. 46. In that case Lord Watson acknowledged the existence of aboriginal title but said it had its origin in the Royal Proclamation. In this respect *Calder* is consistent with the position of Chief Justice Marshall in the leading American cases of *Johnson v. M'Intosh*, 8 Wheaton 543 (1823), and *Worcester v. State of Georgia*, 6 Peters 515 (1832), cited by Judson and Hall JJ. in their respective judgments.

In *Johnson v. M'Intosh* Marshall C.J., although he acknowledged the Proclamation of 1763 as one basis for recognition of Indian title, was nonetheless of opinion that the rights of Indians in the lands they traditionally occupied prior to European colonization both predated and survived the claims to sovereignty made by various European nations in the territories of the North American continent. The principle of discovery which justified these claims gave the ultimate title in the land in a particular area to the nation which had discovered and claimed it. In that respect at least the Indians' rights in the land were obviously diminished; but their rights of occupancy and possession remained unaffected. [Emphasis added.]

This Court's judgment in *Sparrow*, *supra*, reaffirmed that approach.

(ix) The Nature of the Interests and Customs Recognized by the Common Law

This much is clear: the Crown, upon discovering and occupying a "new" territory, recognized the law and custom of the aboriginal societies it found and the rights in the lands they traditionally occupied that these supported. At one time it was suggested that only legal interests consistent with those recognized at common law would be recognized. However, as Brennan J. points out in *Mabo*, at p. 59, that rigidity has been relaxed since the decision of the Privy Council in *Tijani v. Secretary, Southern Nigeria*, [1921] 2 A.C. 399, "[t]he general principle that the common law will recognize a customary title only if it be consistent with the common law is subject to an exception in favour of traditional native title".

Milling and Lumber Co. v. The Queen (1888), 14 App. Cas. 46, où lord Watson a reconnu l'existence du titre aborigène, mais a affirmé que celui-ci avait son origine dans la Proclamation royale. À cet égard, l'arrêt *Calder* est compatible avec le point de vue exprimé par le juge en chef Marshall dans les arrêts de principe américains *Johnson v. M'Intosh*, 8 Wheaton 543 (1823), et *Worcester v. State of Georgia*, 6 Peters 515 (1832), que les juges Judson et Hall ont cités dans leurs motifs respectifs.

Dans l'arrêt *Johnson v. M'Intosh*, le juge en chef Marshall, tout en reconnaissant que la Proclamation royale de 1763 constitue l'un des fondements du titre indien, a néanmoins estimé que les droits des Indiens sur les terres qu'ils avaient traditionnellement occupées avant la colonisation européenne existaient avant les revendications de souveraineté de différentes nations européennes sur les territoires du continent nord-américain et qu'ils ont continué d'exister après ces revendications. Selon le principe de la découverte, sur lequel reposaient ces revendications, les terres situées dans une région donnée appartenaient en dernière analyse à la nation qui en avait fait la découverte et qui en avait réclamé la possession. Sous ce rapport du moins, les droits des Indiens sur leurs terres ont été manifestement diminués, mais leurs droits d'occupation et de possession sont restés inchangés. [Je souligne.]

Notre Cour a réaffirmé ce point de vue dans *Sparrow*, précité.

(ix) La nature des intérêts et coutumes reconnus par la common law

Une chose est claire, lorsqu'elle découvrait et occupait un «nouveau» territoire, la Couronne reconnaissait les lois et coutumes des sociétés autochtones qui y vivaient, ainsi que les droits sur les terres que ces dernières avaient traditionnellement occupées et qui dérivait de ces lois et coutumes. Il a été dit que seuls seraient reconnus les intérêts juridiques coïncidant avec ceux reconnus par la common law. Toutefois, comme le juge Brennan le souligne dans l'arrêt *Mabo*, à la p. 59, cette attitude rigide s'est atténuée depuis l'arrêt du Conseil privé *Tijani c. Secretary, Southern Nigeria*, [1921] 2 A.C. 399: [TRADUCTION] «[l]e principe général que la common law ne reconnaît un titre fondé sur la coutume que s'il est compatible avec la common law souffre une exception dans le cas du titre aborigène traditionnel».

It may now be affirmed with confidence that the common law accepts all types of aboriginal interests, “even though those interests are of a kind unknown to English law”: *per* Lord Denning in *Oyekan*, *supra*, at p. 788. What the laws, customs and resultant rights are “must be ascertained as a matter of fact” in each case, *per* Brennan J. in *Mabo*, at p. 58. It follows that the Crown in Canada must be taken as having accepted existing native laws and customs and the interests in the land and waters they gave rise to, even though they found no counterpart in the law of England. In so far as an aboriginal people under internal law or custom had used the land and its waters in the past, so it must be regarded as having the continuing right to use them, absent extinguishment or treaty.

This much appears from the *Royal Proclamation of 1763*, R.S.C., 1985, App. II, No. 1, which set out the rules by which the British proposed to govern the territories of much of what is now Canada. The Proclamation, while not the sole source of aboriginal rights, recognized the presence of aboriginals as existing occupying peoples. It further recognized that they had the right to use and alienate the rights they enjoyed the use of those territories. The assertion of British sovereignty was thus expressly recognized as not depriving the aboriginal people of Canada of their pre-existing rights; the maxim of *terra nullius* was not to govern here. Moreover, the Proclamation evidences an underlying concern for the continued sustenance of aboriginal peoples and their descendants. It stipulated that aboriginal people not be permitted to sell their land directly but only through the intermediary of the Crown. The purpose of this stipulation was to ensure that the aboriginal peoples obtained a fair exchange for the rights they enjoyed in the territories on which they had traditionally lived — an exchange which would ensure the sustenance not only of the current generation but also of generations to come. (See *Guerin*, *supra*, at p. 376; see also Brian Slaterry, “Under-

Il est désormais possible d'affirmer avec confiance que la common law accepte tous les types d'intérêts autochtones, [TRADUCTION] «même si [les] intérêts [en question] sont d'un genre inconnu en droit anglais»: lord Denning dans l'arrêt *Oyekan*, précité, à la p. 788. La question de savoir quels sont ces lois et ces coutumes, ainsi que les droits qui en découlent, «doi[t] être déterminé[e] en tant que question de fait» dans chaque cas, le juge Brennan dans l'arrêt *Mabo*, à la p. 58. Il s'ensuit qu'il faut considérer que, au Canada, la Couronne a accepté les lois et coutumes autochtones existantes, ainsi que les intérêts dans les terres et les eaux auxquels elles donnaient naissance, même s'ils n'avaient pas d'équivalents dans le droit d'Angleterre. Dans la mesure où un peuple autochtone avait, en vertu de ses lois ou coutumes internes, utilisé les terres et les eaux s'y trouvant dans le passé, il doit être considéré comme ayant toujours le droit de les utiliser, en l'absence d'extinction ou de traité.

Voilà ce qui ressort de la *Proclamation royale de 1763*, L.R.C. (1985), app. II, n° 1, qui énonce les règles selon lesquelles les Britanniques se proposaient de gouverner une grande partie des territoires qui constituent aujourd'hui le Canada. Bien qu'elle ne soit pas l'unique source des droits ancestraux, la Proclamation a reconnu la présence des autochtones en tant que peuples occupant les territoires. Elle a aussi reconnu qu'ils avaient le droit d'utiliser ces territoires et de se départir de ces droits d'usage. Il y est donc expressément reconnu que l'affirmation de la souveraineté britannique n'avait pas pour effet de priver les autochtones du Canada de leurs droits préexistants; la règle du territoire sans maître ne devrait pas s'appliquer ici. De plus, la Proclamation atteste le souci d'assurer aux peuples autochtones et à leurs descendants la possibilité de pourvoir à leur subsistance. Il y est stipulé que les autochtones ne sont pas autorisés à vendre leurs terres directement, mais qu'ils doivent le faire seulement par l'entremise de Sa Majesté. Cette stipulation visait à faire en sorte que les peuples autochtones reçoivent une juste contrepartie en échange des droits dont ils jouissaient sur les terres où ils avaient vécu traditionnellement — contrepartie qui assurerait la sub-

standing Aboriginal Rights" (1987), 66 *Can. Bar Rev.* 727.)

271 The stipulation against direct sale to Europeans was coupled with a policy of entering into treaties with various aboriginal peoples. The treaties typically sought to provide the people in question with a land base, termed a reserve, as well as other benefits enuring to the signatories and generations to come — cash payments, blankets, foodstuffs and so on. Usually the treaties conferred a continuing right to hunt and fish on Crown lands. Thus the treaties recognized that by their own laws and customs, the aboriginal people had lived off the land and its waters. They sought to preserve this right in so far as possible as well as to supplement it to make up for the territories ceded to settlement.

272 These arrangements bear testimony to the acceptance by the colonizers of the principle that the aboriginal peoples who occupied what is now Canada were regarded as possessing the aboriginal right to live off their lands and the resources found in their forests and streams to the extent they had traditionally done so. The fundamental understanding — the *Grundnorm* of settlement in Canada — was that the aboriginal people could only be deprived of the sustenance they traditionally drew from the land and adjacent waters by solemn treaty with the Crown, on terms that would ensure to them and to their successors a replacement for the livelihood that their lands, forests and streams had since ancestral times provided them. (In making this comment, I do not foreclose the possibility that other arguments might be made with respect to areas in Canada settled by France.)

273 The same notions held sway in the colony of British Columbia prior to union with Canada in 1871. An early governor, Governor Douglas, pro-

sistance non seulement de la génération cédant les droits mais celle des générations futures. (Voir *Guerin*, précité, à la p. 376; voir aussi Brian Slattery, «Understanding Aboriginal Rights» (1987), 66 *R. du B. can.* 727.)

La stipulation interdisant la vente directe aux Européens s'ajoutait à une politique visant la conclusion de traités avec les peuples autochtones. Les traités avaient généralement pour but de fournir aux autochtones concernés une assise territoriale, appelée réserve, ainsi que des avantages pour les signataires et leurs descendants — paiements en espèces, couvertures, denrées alimentaires et autres choses du genre. D'ordinaire, les traités conféraient un droit permanent de chasse et de pêche sur les terres domaniales. Les traités reconnaissaient donc le fait que, suivant leurs propres lois et coutumes, les autochtones tiraient leur subsistance du territoire et des eaux s'y trouvant, et ils visaient à préserver ce droit dans toute la mesure du possible et à le compléter pour compenser les territoires cédés à des fins de colonisation.

Ces dispositions témoignent de l'acceptation par les colonisateurs du principe que les peuples autochtones qui occupaient ce qui est maintenant le Canada étaient considérés comme possédant le droit ancestral de tirer leur subsistance de leurs terres et des ressources des forêts et des cours d'eau, dans la mesure où ils l'avaient fait traditionnellement. La stipulation essentielle — la norme fondamentale de la colonisation au Canada — était que les peuples autochtones ne pouvaient être privés des moyens de subsistance qu'ils tiraient traditionnellement des terres et des eaux y adjacentes que par un traité solennel conclu avec Sa Majesté, à des conditions garantissant à ceux-ci ainsi qu'à leurs descendants des moyens de remplacer la subsistance qu'ils tiraient, depuis les temps ancestraux, des terres, forêts et cours d'eau. (En faisant cette observation, je n'exclus pas la possibilité que d'autres arguments puissent être présentés relativement aux régions du pays colonisées par la France.)

Les mêmes notions avaient cours dans la colonie de la Colombie-Britannique avant son union avec le Canada en 1871. Un des premiers gouverneurs,

nounced a policy of negotiating solemn treaties with the aboriginal peoples similar to that pursued elsewhere in Canada. Tragically, that policy was overtaken by the less generous views that accompanied the rapid settlement of British Columbia. The policy of negotiating treaties with the aboriginals was never formally abandoned. It was simply overridden, as the settlers, aided by administrations more concerned for short-term solutions than the duty of the Crown toward the first peoples of the colony settled where they wished and allocated to the aboriginals what they deemed appropriate. This did not prevent the aboriginal peoples of British Columbia from persistently asserting their right to an honourable settlement of their ancestral rights — a settlement which most of them still await. Nor does it negate the fundamental proposition acknowledged generally throughout Canada's history of settlement that the aboriginal occupants of particular territories have the right to use and be sustained by those territories.

Generally speaking, aboriginal rights in Canada were group rights. A particular aboriginal group lived on or controlled a particular territory for the benefit of the group as a whole. The aboriginal rights of such a group inure to the descendants of the group, so long as they maintain their connexion with the territory or resource in question. In Canada, as in Australia, "many clans or groups of indigenous people have been physically separated from their traditional land and have lost their connexion with it" (p. 59). But "[w]here a clan or group has continued to acknowledge the laws and (so far as practicable) to observe the customs based on the traditions of that clan or group, whereby their traditional connexion with the land has been substantially maintained, the traditional community title of that clan or group can be said to remain in existence" (*Mabo*, at pp. 59-60).

Douglas, a établi une politique de négociation de traités solennels avec les peuples autochtones analogue à celle appliquée ailleurs au Canada. Tragiquement, cette politique a été écartée par la vision moins généreuse qui a accompagné la colonisation rapide de la Colombie-Britannique. La politique de négociation de traités avec les autochtones n'a jamais été officiellement abandonnée. Elle a simplement été foulée aux pieds parce que les colons, avec l'appui d'administrations plus soucieuses d'appliquer des solutions à court terme que de respecter les obligations de la Couronne envers les premiers habitants de la colonie, se sont établis là où ils le voulaient et ils n'ont accordé aux autochtones que ce qu'ils jugeaient convenable. Cela n'a pas empêché les peuples autochtones de la Colombie-Britannique de faire valoir avec ténacité leur droit d'obtenir un règlement honorable de leurs droits ancestraux — règlement que la plupart d'entre eux attendent encore. Cela n'invalide pas non plus la proposition fondamentale, généralement reconnue tout au long de l'histoire de la colonisation du pays, que les occupants autochtones de territoires donnés ont le droit d'utiliser ces territoires et d'en tirer leur subsistance.

De façon générale, les droits ancestraux au Canada étaient des droits collectifs. Un groupe d'autochtones particulier habitait un territoire ou exerçait sa domination sur celui-ci au profit de l'ensemble du groupe. Les droits ancestraux de ce groupe échoient aux descendants du groupe, tant que ceux-ci maintiennent des liens avec le territoire ou la ressource en question. Au Canada, tout comme en Australie, [TRADUCTION] «de nombreux clans ou groupes d'autochtones ont été physiquement séparés de leur territoire traditionnel et ils ont cessé d'être rattachés à celui-ci» (p. 59). Toutefois, [TRADUCTION] «[q]uand un clan ou un groupe a continué de reconnaître les lois et (si c'était matériellement possible) d'observer les coutumes fondées sur ses traditions, maintenant ainsi de façon substantielle ses liens traditionnels avec le territoire, il est possible d'affirmer que le titre communautaire traditionnel de ce clan ou groupe a continué d'exister» (arrêt *Mabo*, aux pp. 59 et 60).

275

It thus emerges that the common law and those who regulated the British settlement of this country predicated dealings with aboriginals on two fundamental principles. The first was the general principle that the Crown took subject to existing aboriginal interests in the lands they traditionally occupied and their adjacent waters, even though those interests might not be of a type recognized by British law. The second, which may be viewed as an application of the first, is that the interests which aboriginal peoples had in using the land and adjacent waters for their sustenance were to be removed only by solemn treaty with due compensation to the people and its descendants. This right to use the land and adjacent waters as the people had traditionally done for its sustenance may be seen as a fundamental aboriginal right. It is supported by the common law and by the history of this country. It may safely be said to be enshrined in s. 35(1) of the *Constitution Act, 1982*.

(x) The Right to Fish for Sale

276

Against this background, I come to the issue at the heart of this case. Do aboriginal people enjoy a constitutional right to fish for commercial purposes under s. 35(1) of the *Constitution Act, 1982*? The answer is yes, to the extent that the people in question can show that it traditionally used the fishery to provide needs which are being met through the trade.

277

If an aboriginal people can establish that it traditionally fished in a certain area, it continues to have a similar right to do so, barring extinguishment or treaty. The same justice that compelled those who drafted treaties with the aboriginals in the nineteenth century to make provision for the continuing sustenance of the people from the land, compels those dealing with aboriginals with whom treaties were never made, like the Sto:lo, to make similar provision.

Il ressort donc de ces observations que la common law et les responsables de la colonisation britannique de notre pays ont fondé leurs rapports avec les autochtones sur deux principes fondamentaux. Le premier était le principe général que Sa Majesté prenait possession du territoire sous réserve des droits existants des autochtones sur les terres qu'ils avaient traditionnellement occupées et sur les eaux y adjacentes, même s'il ne s'agissait pas de droits appartenant à un type reconnu par le droit britannique. Le second, qui peut être considéré comme une application du premier, est que les droits des peuples autochtones d'utiliser les terres et les eaux y adjacentes pour assurer leur subsistance ne devaient leur être enlevés que par traité solennel et moyennant octroi à ceux-ci et à leurs descendants d'une juste indemnité. Ce droit des autochtones visés d'utiliser les terres et les eaux y adjacentes comme ils l'avaient fait traditionnellement pour assurer leur subsistance peut être considéré comme un droit ancestral fondamental. Il trouve appui dans la common law et dans l'histoire du pays. Il est possible d'affirmer avec confiance que ce droit est constitutionnalisé au par. 35(1) de la *Loi constitutionnelle de 1982*.

(x) Le droit de pêcher en vue de la vente

Après avoir exposé le contexte, j'aborde maintenant la question qui est au cœur du présent pourvoi. Les autochtones possèdent-ils, en vertu du par. 35(1) de la *Loi constitutionnelle de 1982*, un droit constitutionnel de pêcher à des fins commerciales? La réponse est oui, dans la mesure où les autochtones concernés peuvent démontrer qu'ils ont traditionnellement utilisé la pêche pour pourvoir à des besoins qui sont satisfaits par le commerce.

Si des autochtones peuvent établir qu'ils ont traditionnellement pêché dans un certain secteur, ils continuent d'avoir le droit de le faire, sauf extinction ou traité. Le même sentiment de justice qui obligeait ceux qui rédigeaient les traités conclus avec les autochtones au XIX^e siècle à inclure dans ceux-ci des dispositions pour que les autochtones puissent continuer à tirer leur subsistance du territoire oblige ceux qui transigent avec des autochtones qui n'ont jamais conclu de traité, comme les Sto:lo, à prendre de telles mesures.

The aboriginal right to fish may be defined as the right to continue to obtain from the river or the sea in question that which the particular aboriginal people have traditionally obtained from the portion of the river or sea. If the aboriginal people show that they traditionally sustained themselves from the river or sea, then they have a *prima facie* right to continue to do so, absent a treaty exchanging that right for other consideration. At its base, the right is not the right to trade, but the right to continue to use the resource in the traditional way to provide for the traditional needs, albeit in their modern form. However, if the people demonstrate that trade is the only way of using the resource to provide the modern equivalent of what they traditionally took, it follows that the people should be permitted to trade in the resource to the extent necessary to provide the replacement goods and amenities. In this context, trade is but the mode or practice by which the more fundamental right of drawing sustenance from the resource is exercised.

The right to trade the products of the land and adjacent waters for other goods is not unlimited. The right stands as a continuation of the aboriginal people's historical reliance on the resource. There is therefore no justification for extending it beyond what is required to provide the people with reasonable substitutes for what it traditionally obtained from the resource. In most cases, one would expect the aboriginal right to trade to be confined to what is necessary to provide basic housing, transportation, clothing and amenities — the modern equivalent of what the aboriginal people in question formerly took from the land or the fishery, over and above what was required for food and ceremonial purposes. Beyond this, aboriginal fishers have no priority over non-aboriginal commercial or sport fishers. On this principle, where the aboriginal people can demonstrate that they historically have drawn a moderate livelihood from the fishery, the aboriginal right to a "moderate livelihood" from the fishery may be established (as Lambert J.A. concluded in the British Columbia

Le droit de pêche ancestral peut être défini comme étant le droit de continuer à tirer du fleuve, de la rivière ou de la mer en question ce que les autochtones concernés ont traditionnellement tiré du secteur exploité. Si les autochtones démontrent qu'ils ont traditionnellement tiré leur subsistance du fleuve, de la rivière ou de la mer, ils ont alors à première vue le droit de continuer à le faire, s'ils n'ont pas, par traité, échangé ce droit contre autre chose. Essentiellement, ce n'est pas le droit de faire du commerce, mais le droit de continuer d'utiliser la ressource de la manière traditionnelle, afin de pourvoir aux besoins traditionnels, quoique sous leur forme moderne. Toutefois, si les autochtones démontrent que le commerce est la seule manière d'utiliser la ressource de façon à leur permettre de se procurer l'équivalent moderne de ce qu'ils ont traditionnellement tiré de celle-ci, il s'ensuit qu'ils devraient être autorisés à faire le commerce de cette ressource dans la mesure nécessaire pour obtenir des biens et des commodités de remplacement. Dans ce contexte, le commerce n'est rien d'autre que la méthode ou la pratique par laquelle est exercé le droit plus fondamental qui consiste à tirer sa subsistance de la ressource.

Le droit d'échanger les produits du territoire et des eaux y adjacentes contre d'autres biens n'est pas illimité. Ce droit est la poursuite de l'exploitation historique de la ressource par les autochtones visés. Il n'y a donc rien qui justifie d'élargir le droit au-delà de ce qui est nécessaire pour permettre aux autochtones de se procurer des biens de remplacement raisonnables à la place de ceux qu'ils ont traditionnellement obtenus pour la ressource. Dans la plupart des cas, il est permis de penser que le droit ancestral de commercer se limite à ce qui est nécessaire pour pourvoir aux besoins de base en matière de logement, de transport, d'habillement et de commodités de la vie — l'équivalent moderne de ce que les autochtones en question tiraient dans le passé du territoire ou de la pêche, en sus de leurs besoins alimentaires et rituels. Au-delà de ces besoins, les pêcheurs autochtones n'ont aucun droit de priorité sur les non-autochtones qui pratiquent la pêche commerciale ou sportive. Suivant ce principe, si les autochtones peuvent démontrer qu'ils ont histori-

Court of Appeal). However, there is no automatic entitlement to a moderate or any other livelihood from a particular resource. The inquiry into what aboriginal rights a particular people possess is an inquiry of fact, as we have seen. The right is established only to the extent that the aboriginal group in question can establish historical reliance on the resource. For example, evidence that a people used a water resource only for occasional food and sport fishing would not support a right to fish for purposes of sale, much less to fish to the extent needed to provide a moderate livelihood. There is, on this view, no generic right of commercial fishing, large-scale or small. There is only the right of a particular aboriginal people to take from the resource the modern equivalent of what by aboriginal law and custom it historically took. This conclusion echoes the suggestion in *Jack v. The Queen*, [1980] 1 S.C.R. 294, approved by Dickson C.J. and La Forest J. in *Sparrow*, of a "limited" aboriginal priority to commercial fishing.

quement tiré une subsistance convenable de la pêche, il est alors possible d'établir l'existence d'un droit ancestral de tirer une «subsistance convenable» de la pêche (comme l'a conclu le juge Lambert de la Cour d'appel de la Colombie-Britannique). Cependant, il n'existe pas automatiquement de droit de tirer une subsistance convenable ou autre d'une ressource particulière. Comme nous l'avons vu, l'examen de la nature des droits ancestraux que possède un peuple donné porte sur les faits. L'existence du droit n'est établie que dans la mesure où le peuple autochtone en cause peut démontrer qu'il a traditionnellement exploité la ressource. Par exemple, la preuve qu'un peuple utilisait des eaux seulement à des fins d'occupation traditionnelle de pêche occasionnelle à des fins alimentaires et sportives n'appuierait pas l'existence du droit de pêcher en vue de vendre du poisson, et encore moins de pêcher dans la mesure requise pour s'assurer une subsistance convenable. À mon avis, il n'existe pas de droit général de pêche commerciale, à quelque échelle que ce soit. Le seul droit qui existe est celui que possède un peuple autochtone particulier de tirer de la ressource l'équivalent moderne de ce qu'il en a historiquement tiré suivant les lois et coutumes autochtones. Cette conclusion reprend l'opinion qui a été émise dans *Jack c. La Reine*, [1980] 1 R.C.S. 294, et approuvée par le juge en chef Dickson et le juge La Forest dans *Sparrow*, et suivant laquelle les autochtones jouissant d'une priorité «restreinte» en matière de pêche commerciale.

280

A further limitation is that all aboriginal rights to the land or adjacent waters are subject to limitation on the ground of conservation. These aboriginal rights are founded on the right of the people to use the land and adjacent waters. There can be no use, on the long term, unless the product of the lands and adjacent waters is maintained. So maintenance of the land and the waters comes first. To this may be added a related limitation. Any right, aboriginal or other, by its very nature carries with it the obligation to use it responsibly. It cannot be used, for example, in a way which harms people, aboriginal or non-aboriginal. It is up to the Crown to establish a regulatory regime which respects these objectives. In the analytic framework usually

Une autre limite est que tous les droits ancestraux sur les terres et les eaux y adjacentes sont assujettis aux restrictions imposées pour des fins de conservation. Ces droits ancestraux sont fondés sur le droit des autochtones concernés d'utiliser les terres et les eaux y adjacentes. À long terme cette utilisation est impossible à moins de protéger les produits tirés des terres et des eaux adjacentes à celles-ci. La protection des terres et des eaux vient donc au premier rang. À tout cela, s'ajoute une limite connexe. En effet, tout droit — ancestral ou autre — emporte de par sa nature même l'obligation de l'utiliser de façon responsable. Par exemple, il ne peut être utilisé d'une manière préjudiciable à autrui, qu'il s'agisse ou non d'autoch-

used in cases such as this, the right of the government to limit the aboriginal fishery on grounds such as these is treated as a matter of justifying a limit on a "*prima facie*" aboriginal right. Following this framework, I will deal with it in greater detail under the heading of justification.

(xi) Is an Aboriginal Right to Sell Fish for Commerce Established in this Case?

I have concluded that subject to conservation needs, aboriginal peoples may possess a constitutional right under s. 35(1) of the *Constitution Act, 1982*, to use a resource such as a river site beside which they have traditionally lived to provide the modern equivalent of the amenities which they traditionally have obtained from the resource, whether directly or indirectly, through trade. The question is whether, on the evidence, Mrs. Van der Peet has established that the Sto:lo possessed such a right.

The evidence establishes that by custom of the aboriginal people of British Columbia, the Sto:lo have lived since time immemorial at the place of their present settlement on the banks of the Fraser River. It also establishes that as a fishing people, they have for centuries used the fish from that river to sustain themselves. One may assume that the forest and vegetation on the land provided some of their shelter and clothing. However, their history indicates that even in days prior to European contact, the Sto:lo relied on fish, not only for food and ceremonial purposes, but also for the purposes of obtaining other goods through trade. Prior to contact with Europeans, this trade took place with other tribes; after contact, sales on a larger scale were made to the Hudson's Bay Company, a practice which continued for almost a century. In summary, the evidence conclusively establishes that over many centuries, the Sto:lo have used the fishery not only for food and ceremonial purposes, but

tones. Il incombe à l'État d'établir un régime de réglementation qui respecte ces objectifs. Conformément au cadre d'analyse habituellement appliqué dans les cas comme celui qui nous occupe, le droit de l'État de restreindre la pêche autochtone pour des motifs de cet ordre soulève la question de la justification des limites apportées à un droit ancestral dont l'existence a été établie à première vue. Appliquant ce cadre, je vais étudier ce point plus en détail lorsque je traiterai de la justification.

(xi) L'existence d'un droit ancestral de vendre du poisson commercialement a-t-elle été établie en l'espèce?

J'ai conclu que, sous réserve des besoins de conservation, il est possible que des peuples autochtones possèdent, en vertu du par. 35(1) de la *Loi constitutionnelle de 1982*, le droit constitutionnel d'utiliser une ressource tel un secteur dans une rivière au bord de laquelle ils ont traditionnellement vécu, pour en tirer l'équivalent moderne des commodités de la vie qu'ils ont traditionnellement obtenues au moyen de cette ressource, directement ou indirectement, par voie d'échange. Il s'agit de décider si, d'après la preuve, M^{me} Van der Peet a établi que les Sto:lo possèdent un tel droit.

La preuve établit que, selon la coutume des autochtones de la Colombie-Britannique, les Sto:lo vivent depuis des temps immémoriaux au lieu de leur établissement actuel sur les berges du fleuve Fraser. La preuve démontre également que, en tant que pêcheurs, ils utilisent depuis des siècles le poisson de ce fleuve pour assurer leur subsistance. Il est permis de supposer qu'ils ont tiré des forêts et de la végétation une partie des choses nécessaires pour se loger et se vêtir. Toutefois, leur histoire indique que, même avant l'arrivée des Européens, les Sto:lo exploitaient le poisson non seulement à des fins alimentaires et rituelles, mais également pour obtenir d'autres biens par voie d'échange. Avant le contact avec les Européens, ces échanges avaient lieu avec d'autres tribus. Après le contact, des ventes à une plus grande échelle ont été faites à la Compagnie de la Baie d'Hudson, pratique qui s'est poursuivie pendant presque un siècle. En résumé, la preuve établit

also to satisfy a variety of other needs. Unless that right has been extinguished, and subject always to conservation requirements, they are entitled to continue to use the river for these purposes. To the extent that trade is required to achieve this end, it falls within that right.

283 I agree with L'Heureux-Dubé J. that the scale of fishing evidenced by the case at bar falls well within the limit of the traditional fishery and the moderate livelihood it provided to the Sto:lo.

284 For these reasons I conclude that Mrs. Van der Peet's sale of the fish can be defended as an exercise of her aboriginal right, unless that right has been extinguished.

B. *Is the Aboriginal Right Extinguished?*

285 The Crown has never concluded a treaty with the Sto:lo extinguishing its aboriginal right to fish. However, it argues that any right the Sto:lo people possess to fish commercially was extinguished prior to 1982 through regulations limiting commercial fishing by licence. The appellant, for her part, argues that general regulations controlling the fishery do not evidence the intent necessary to establish extinguishment of an aboriginal right.

286 For legislation or regulation to extinguish an aboriginal right, the intention to extinguish must be "clear and plain": *Sparrow*, *supra*, at p. 1099. The Canadian test for extinguishment of aboriginal rights borrows from the American test, enunciated in *United States v. Dion*, 476 U.S. 734 (1986), at pp. 739-40: "[w]hat is essential [to satisfy the "clear and plain" test] is clear evidence that [the government] actually considered the conflict between its intended action on the one hand and Indian treaty rights on the other, and chose to resolve that conflict by abrogating the treaty" or right.

décisivement que, pendant des siècles, les Sto:lo ont pêché non seulement à des fins alimentaires et rituelles, mais aussi pour satisfaire divers autres besoins. À moins que ce droit ait été éteint, et sous réserve toujours des exigences en matière de conservation, les Sto:lo ont le droit de continuer d'exploiter le fleuve à ces fins. Dans la mesure où le commerce est nécessaire pour réaliser cet objectif, il fait partie de ce droit.

Je conviens avec le juge L'Heureux-Dubé que l'ampleur des activités de pêche révélées par la preuve reste bien en deçà des limites de la pêche traditionnelle pratiquée par les Sto:lo et de la subsistance convenable qu'ils en tiraient.

Pour ces motifs, je conclus que la vente du poisson par Mme Van der Peet peut être justifiée comme étant l'exercice de son droit ancestral, à moins que ce droit ait été éteint.

B. *Le droit ancestral a-t-il été éteint?*

L'État n'a jamais conclu avec les Sto:lo de traité éteignant leur droit de pêche ancestral. Le ministère public soutient toutefois que tout droit des Sto:lo de pêcher commercialement a été éteint avant 1982 par voie de règlements limitant la pêche commerciale aux activités pratiquées en vertu de permis. Pour sa part, l'appelante affirme que des règlements généraux visant à contrôler la pêche n'attestent pas l'intention nécessaire pour établir l'extinction d'un droit ancestral.

Pour qu'une mesure législative ou réglementaire éteigne un droit ancestral, cette intention doit être «claire et expresse»: *Sparrow*, précité, à la p. 1099. Le critère appliqué au Canada en matière d'extinction des droits ancestraux s'inspire du critère américain énoncé dans l'arrêt *United States c. Dion*, 476 U.S. 734 (1986), aux pp. 739 et 740: [TRADUCTION] «[c]e qui est essentiel [pour satisfaire au critère de l'intention «claire et expresse»], c'est une preuve claire que [l'État] a réellement pris en considération le conflit entre la mesure qu'il entend prendre, d'une part, et les droits issus de traités des Indiens, d'autre part, et qu'il a choisi de résoudre ce conflit en abrogeant le traité» ou le droit.

Following this approach, this Court in *Sparrow* rejected the Crown's argument that pre-1982 regulations imposing conditions on the exercise of an aboriginal right extinguished it to the extent of the regulation. To accept that argument, it reasoned at p. 1091, would be to elevate such regulations as applied in 1982 to constitutional status and to "incorporate into the Constitution a crazy patchwork of regulations". Rejecting this "snapshot" approach to constitutional rights, the Court distinguished between regulation of the exercise of a right, and extinguishment of the right itself.

In this case, the Crown argues that while the regulatory scheme may not have extinguished the aboriginal right to fish for food (*Sparrow*) it nevertheless extinguished any aboriginal right to fish for sale. It relies in particular on Order in Council, P.C. 2539, of September 11, 1917, which provided:

Whereas it is represented that since time immemorial, it has been the practice of the Indians of British Columbia to catch salmon by means of spears and otherwise after they have reached the upper non-tidal portions of the rivers;

And whereas while after commercial fishing began it became eminently desirable that all salmon that succeeded in reaching the upper waters should be allowed to go on to their spawning beds unmolested, in view of the great importance the Indians attached to their practice of catching salmon they have been permitted to do so for their own food purposes only. . . .

And whereas the Department of the Naval Service is informed that the Indians have concluded that this regulation is ineffective, and this season arrangements are being made by them to carry on fishing for commercial purposes in an extensive way;

And whereas it is considered to be in the public interest that this should be prevented and the Minister of the Naval Service, after consultation with the Department of Justice on the subject, recommends that action as follows be taken;

Appliquant cette approche, notre Cour a, dans *Sparrow*, rejeté l'argument du ministère public que les règlements d'avant 1982 qui assujétissaient l'exercice d'un droit ancestral à certaines conditions avaient eu pour effet d'éteindre ce droit dans la mesure des conditions imposées. Accepter cet argument, a raisonné notre Cour, à la p. 1091, reviendrait à conférer un statut constitutionnel aux règlements applicables en 1982 et à «introduire dans la Constitution un ensemble de règlements disparates». Rejetant l'application de cette approche «ponctuelle» aux droits constitutionnels, notre Cour a établi une distinction entre la réglementation de l'exercice d'un droit et l'extinction du droit lui-même.

En l'espèce, le ministère public prétend que, bien que le régime de réglementation n'ait peut-être pas éteint le droit ancestral de pêcher à des fins alimentaires (*Sparrow*), il a néanmoins éteint tout droit ancestral de pêcher à des fins de vente. Le ministère public se fonde en particulier sur le décret C.P. 2539 du 11 septembre 1917, qui prévoyait ceci:

[TRADUCTION] Attendu qu'on fait valoir que, depuis des temps immémoriaux, les Indiens de la Colombie-Britannique ont pour pratique de capturer le saumon au harpon ou par d'autres moyens après que le poisson a atteint les parties supérieures des eaux sans marée des cours d'eau;

Et attendu que, depuis le début de la pêche commerciale, il est devenu éminemment souhaitable que tous les saumons qui réussissent à remonter dans ces eaux puissent atteindre indemnes les frayères, vu la grande importance que les Indiens attachent à cette pratique, il leur a été permis de le faire pour se nourrir seulement . . .

Et attendu que le ministère du Service naval a été informé que les Indiens ont conclu que le présent règlement est inefficace, et que, cette saison, ils font des préparatifs en vue de pêcher à des fins commerciales sur une grande échelle;

Et attendu qu'il est jugé être dans l'intérêt public d'empêcher ces activités, et que le ministère du Service naval, après avoir consulté le ministère de la Justice à cet égard, recommande que soient prises les mesures suivantes;

Therefore His Excellency the Governor General in Council, under the authority of section 45 of the Fisheries Act, 4-5 George V, Chapter 8, is pleased to order and it is hereby ordered as follows: —

2. An Indian may, at any time, with the permission of the Chief Inspector of Fisheries, catch fish to be used as food for himself and his family, but for no other purpose

À ces causes, il plaît à Son Excellence le Gouverneur général en conseil, sous l'empire de l'article 45 de la *Loi des pêcheries*, 4-5 George V, chapitre 8, de décréter ce qui suit:

2. Les Indiens avec la permission de l'inspecteur en chef des pêcheries, peuvent en tout temps capturer du poisson destiné à leur alimentation et à celle de leur famille, mais il leur est défendu de faire servir à d'autres fins, le poisson ainsi capturé

289 The argument that Regulation 2539 extinguished any aboriginal right to fish commercial faces two difficulties. The first is the absence of any indication that the government of the day considered the aboriginal right on the one hand, and the effect of its proposed action on that right on the other, as required by the "clear and plain" test. There is no recognition in the words of the regulation of any aboriginal right to fish. They acknowledge no more than an aboriginal "practice" of fishing for food. The regulation takes note of the aboriginal position that the regulations confining them to food fishing are "ineffective". However, it does not accept that position. It rather rejects it and affirms that free fishing by natives for sale will not be permitted. This does not meet the test for regulatory extinction of aboriginal rights which requires: acknowledgment of right, conflict of the right proposed with policy, and resolution of the two.

290 The second difficulty the Crown's argument encounters is that the passage quoted does not present a full picture of the regulatory scheme imposed. To determine the intent of Parliament, one must consider the statute as a whole: *Driedger on the Construction of Statutes* (3rd ed. 1994). Similarly, to determine the intent of the Governor in Council making a regulation, one must look to the effect of a regulatory scheme as a whole.

291 The effect of Regulation 2539 was that Indians were no longer permitted to sell fish caught pursuant to their right to fish for food. However, Regu-

L'argument que le règlement 2539 a éteint tout droit ancestral de pêche commerciale se heurte à deux difficultés. La première est l'absence de toute indication que le gouvernement d'alors a, comme l'exige le critère de l'intention «claire et expresse», pris en considération le droit ancestral, d'une part, et l'effet sur ce droit de la mesure qu'il se proposait de prendre, d'autre part. Le texte du règlement ne reconnaît d'aucune façon l'existence de quelque droit de pêche ancestral. On y reconnaît tout au plus l'existence d'une «pratique» des autochtones de pêcher à des fins alimentaires. Le règlement constate la position des autochtones que le règlement qui ne les autorise qu'à pêcher pour se nourrir est «inefficace». Toutefois, cette position n'est pas acceptée, mais au contraire rejetée, et on déclare que les autochtones ne seront pas libres de pêcher dans le but de vendre du poisson. Cela ne satisfait pas au critère de l'extinction des droits ancestraux par voie de réglementation, critère qui comprend trois éléments: la reconnaissance de l'existence du droit; un conflit entre le droit et la politique proposée; la résolution du conflit.

La seconde difficulté à laquelle se bute l'argument du ministère public est que le passage cité ne présente pas un tableau complet du régime de réglementation imposé. Pour dégager l'intention du législateur fédéral, il faut examiner une loi dans son ensemble: *Driedger on the Construction of Statutes* (3^e éd. 1994). De même, pour établir quelle était l'intention du gouverneur en conseil lorsqu'il a pris un règlement, il faut tenir compte de l'effet de l'ensemble du régime de réglementation.

L'effet du règlement 2539 était que les Indiens n'étaient désormais plus autorisés à vendre le poisson pris en vertu de leur droit de pêcher à des fins

lation 2539 was only a small part of a much larger regulatory scheme, dating back to 1908, in which aboriginal peoples played a significant part. While the 1917 regulation prohibits aboriginal peoples from selling fish obtained under their food rights, it did not prevent them from obtaining licences to fish commercially under the general regulatory scheme laid down in 1908 and modified through the years. In this way, the regulations recognized the aboriginal right to participate in the commercial fishery. Instead of barring aboriginal fishers from the commercial fishery, government regulations and policy before and after 1917 have consistently given them preferences in obtaining the necessary commercial licences. Far from extinguishing the aboriginal right to fish, this policy may be seen as tacit acceptance of a "limited priority" in aboriginal fishers to the commercial fishery of which Dickson J. spoke in *Jack* and which was approved in *Sparrow*.

Evidence of the participation in commercial fishing by aboriginal people prior to the regulations in 1917 in commercial fishing was discussed by Dickson J. in *Jack*, *supra*. That case was concerned with the policy of the Colonialists prior to Confederation. Without repeating the entirety of that discussion here, it is sufficient to note the conclusion reached at p. 311:

... the Colony gave priority to the Indian fishery as an appropriate pursuit for the coastal Indians, primarily for food purposes and, to a lesser extent, for barter purposes with the white residents.

This limited priority for aboriginal commercial fishing is reflected in the government policy of extending preferences to aboriginals engaged in the fishery. The 1954 Regulations, as amended in 1974, provided for reduced licensing fees for aboriginal fishers. For example, either a gill-net fishing licence that would cost a non-aboriginal fisher \$2,000, or a seine fishing licence that would cost a non-native fisher \$200, would cost a native

alimentaires. Toutefois, le règlement 2539 n'était qu'une petite partie d'un régime de réglementation beaucoup plus large, datant de 1908 et dans le cadre duquel les peuples autochtones jouaient un rôle important. Même si le règlement de 1917 interdit aux autochtones de vendre du poisson pris en vertu de leur droit de pêcher à des fins alimentaires, il ne les empêche pas d'obtenir des permis de pêche commerciale sous l'empire du régime général établi en 1908 et modifié au fil des ans. Vu sous cet angle, le règlement reconnaissait le droit des autochtones de participer à la pêche commerciale. Au lieu d'interdire la pêche commerciale aux pêcheurs autochtones, la réglementation et la politique gouvernementales, tant avant qu'après 1917, leur ont continuellement accordé des mesures préférentielles en vue de l'obtention des permis de pêche commerciale requis. Il est possible d'affirmer que, loin d'éteindre le droit de pêche ancestral, cette politique peut être considérée comme une acceptation tacite de la [TRADUCTION] «priorité restreinte» des pêcheurs autochtones en matière de pêche commerciale dont a fait état le juge Dickson dans l'arrêt *Jack* et qui a été approuvée dans *Sparrow*.

La preuve de la participation des autochtones à la pêche commerciale avant la réglementation, en 1917, de la pêche commerciale a été examinée par le juge Dickson dans *Jack*, précité. Cette affaire portait sur la politique des colonialistes avant la Confédération. Sans répéter l'intégralité des propos du juge Dickson, il suffit de citer la conclusion qu'il tire, à la p. 311:

... la colonie accordait la priorité à la pêche par les Indiens des régions côtières parce qu'elle leur permettait d'abord de se nourrir et, à un degré moindre, de faire du troc avec les Blancs.

Cette priorité restreinte accordée à la pêche commerciale autochtone ressort de la politique de l'État qui consiste à prendre des mesures préférentielles en faveur des autochtones qui participent à cette pêche. Le règlement de 1954, modifié en 1974, fixait des droits de permis réduits pour ces derniers. Par exemple, les permis de pêche au filet maillant et les permis de pêche à la seine qui coûtaient respectivement 2 000 \$ et 200 \$ aux

fisher \$10. Moreover, the evidence available indicates that there has been significant aboriginal participation in the commercial fishery. Specifically, a review of aboriginal participation in the commercial fishery for 1985 found that 20.5 per cent of the commercial fleet was Indian-owned or Indian-operated and that that segment of the commercial fleet catches 27.7 per cent of the commercial catch. Since the regulatory scheme is cast in terms of individual rights, it has never expressly recognized the right of a particular aboriginal group to a specific portion of the fishery. However, it has done so implicitly by granting aboriginal fishers preferences based on their membership in an aboriginal group.

pêcheurs non autochtones ne coûtaient que 10 \$ aux pêcheurs autochtones. De plus, la preuve disponible indique que les autochtones participent de façon importante à la pêche commerciale. De façon plus précise, une étude sur la participation des autochtones à la pêche commerciale en 1985 a révélé que 20,5 pour 100 de la flotte commerciale appartenait à des Indiens ou était exploitée par des Indiens, et que cette partie de la flotte comptait pour 27,7 pour 100 des prises commerciales. Comme le régime de réglementation est établi en fonction des droits individuels, on n'y a jamais reconnu expressément le droit d'un groupe particulier d'autochtones à une part déterminée de la pêche. Toutefois, cette reconnaissance découle implicitement des mesures préférentielles accordées aux pêcheurs autochtones du fait de leur appartenance à un groupe autochtone.

294 It thus emerges that the regulatory scheme in place since 1908, far from extinguishing the aboriginal right to fish for sale, confirms that right and even suggests recognition of a limited priority in its exercise. I conclude that the aboriginal right of the Sto:lo to fish for sustenance has not been extinguished.

Il s'ensuit donc que, loin d'avoir éteint le droit ancestral de pêcher à des fins de vente, le régime de réglementation en place depuis 1908 confirme ce droit et tend même à reconnaître une priorité restreinte à l'exercice de ce droit. Je conclus que le droit ancestral des Sto:lo de pêcher à des fins de subsistance n'a pas été éteint.

295 The remaining questions are whether the regulation infringes the Sto:lo's aboriginal right to fish for trade to supplement the fish they took for food and ceremonial purposes and, if so, whether that infringement constitutes a justifiable limitation on the right.

Les questions qu'il reste à trancher sont celles de savoir si la disposition réglementaire en cause porte atteinte au droit ancestral des Sto:lo de prendre, à des fins de vente, du poisson en sus de celui qu'ils prenaient à des fins alimentaires et rituelles, et, dans l'affirmative, si cette atteinte constitue une limitation justifiable de ce droit.

2. Is the Aboriginal Right Infringed?

2. Y a-t-il atteinte au droit ancestral?

296 The right established, the next inquiry, following *Sparrow*, is whether the regulation constitutes a *prima facie* infringement of the aboriginal right. If it does, the inquiry moves on to the question of whether the *prima facie* infringement is justified.

Une fois l'existence du droit établie, l'étape suivante de l'examen prévu par l'arrêt *Sparrow* consiste à déterminer si le règlement constitue une atteinte à première vue au droit ancestral. Dans l'affirmative, il faut ensuite se demander si l'atteinte à première vue est justifiée.

297 The test for *prima facie* infringement prescribed by *Sparrow* is "whether the legislation in question has the effect of interfering with an existing aboriginal right" (p. 1111). If it has this effect, the *prima facie* infringement is made out. Having set

Le critère de l'atteinte à première vue, prescrit par l'arrêt *Sparrow*, consiste à déterminer «si la loi en question a pour effet de porter atteinte à un droit ancestral existant» (p. 1111). Si oui, l'atteinte à première vue est établie. Après avoir énoncé ce

out this test, Dickson C.J. and La Forest J. supplement it by stating that the court should consider whether the limit is unreasonable, whether it imposes undue hardship, and whether it denies to the holders of the right their "preferred means of exercising that right" (p. 1112). These questions appear more relevant to the stage two justification analysis than to determining the *prima facie* right; as the Chief Justice notes in *Gladstone* (at para. 43), they seem to contradict the primary assertion that a measure which has the effect of interfering with the aboriginal right constitutes a *prima facie* violation. In any event, I agree with the Chief Justice that a negative answer to the supplementary questions does not negate a *prima facie* infringement.

The question is whether the regulatory scheme under which Mrs. Van der Peet stands charged has the "effect" of "interfering with an existing aboriginal right", in this case the right of the Sto:lo to sell fish to the extent required to provide for needs they traditionally by native law and custom took from the section of the river whose banks they occupied. The inquiry into infringement in a case like this may be viewed in two stages. At the first stage, the person charged must show that he or she had a *prima facie* right to do what he or she did. That established, it falls to the Crown to show that the regulatory scheme meets the particular entitlement of the Sto:lo to fish for sustenance.

The first requirement is satisfied in this case by demonstration of the aboriginal right to sell fish prohibited by regulation. The second requirement, however, has not been satisfied. Notwithstanding the evidence that aboriginal fishers as a class enjoy a significant portion of the legal commercial market and that considerable fish caught as "food fish" is illegally sold, the Crown has not established that the existing regulations satisfy the particular right of the Sto:lo to fish commercially for sustenance.

critère, le juge en chef Dickson et le juge La Forest le complètent en déclarant que le tribunal doit se demander si la restriction est déraisonnable, si elle est indûment rigoureuse et si elle refuse aux titulaires du droit le recours à «leur moyen préféré de l'exercer» (p. 1112). Or, ces questions semblent plus pertinentes pour la seconde étape de l'analyse, celle de la justification, que pour l'établissement du droit à première vue. Comme le souligne le Juge en chef dans l'arrêt *Gladstone* (au par. 43), ces questions semblent contredire l'assertion de départ selon laquelle une mesure qui a pour effet de porter atteinte au droit ancestral constitue une violation à première vue. Quoiqu'il en soit, je conviens avec le Juge en chef qu'une réponse négative aux questions supplémentaires n'exclut pas de l'existence d'une atteinte à première vue.

La question qui se pose en l'espèce est de savoir si le régime de réglementation en vertu duquel Mme Van der Peet est accusée a «pour effet» de «porter atteinte à un droit ancestral existant», en l'occurrence le droit des Sto:lo de vendre du poisson dans la mesure nécessaire pour pourvoir aux besoins qu'ils ont traditionnellement satisfaits en exploitant, conformément aux lois et coutumes autochtones, le secteur du fleuve dont ils occupaient les berges. Dans un cas comme la présente espèce, l'examen de la question de l'atteinte peut être considéré comme comportant deux étapes. Au cours de la première étape, la personne accusée doit établir qu'elle avait, à première vue, le droit de faire ce qu'elle a fait. Une fois ce droit établi, il incombe alors au ministère public de prouver que le régime de réglementation respecte le droit particulier des Sto:lo de pêcher à des fins de subsistance.

En l'espèce, la première condition est remplie par la preuve de l'existence du droit ancestral de vendre du poisson qui est interdit par le règlement. Toutefois, la deuxième condition n'est pas remplie. En effet, malgré la preuve que les pêcheurs autochtones jouissent, collectivement, d'une part importante du marché commercial légal et qu'une quantité considérable de poisson pris «à des fins alimentaires» est vendue illégalement, le ministère public n'a pas établi que la réglementation exis-

The issue is not the quantity of fish currently caught, which may or may not satisfy the band's sustenance requirements. The point is rather that the Crown, by denying the Sto:lo the right to sell any quantity of fish, denies their limited aboriginal right to sell fish for sustenance. The conclusion of *prima facie* infringement of the collective aboriginal right necessarily follows.

tante respecte le droit particulier des Sto:lo de pêcher commercialement à des fins de subsistance. Le litige ne porte pas sur la quantité de poisson qui est prise présentement, quantité qui peut ou non satisfaire les besoins de la bande pour assurer sa subsistance. Il s'agit plutôt de savoir si, en niant aux Sto:lo le droit de vendre toute quantité de poisson, l'État les prive de leur droit ancestral restreint de vendre du poisson à des fins de subsistance. D'où la conclusion inéluctable qu'il y a atteint à première vue au droit ancestral collectif.

300 The Crown argued that regulation of a fishery to meet the sustenance needs of a particular aboriginal people is administratively unworkable. The appellant responded with evidence of effective regulation in the State of Washington of aboriginal treaty rights to sustenance fishing. I conclude that the sustenance standard is not so inherently indeterminate that it cannot be regulated. It is for the Crown, charged with administering the resource, to determine effective means to regulate its lawful use. The fact that current regulations fail to do so confirms the infringement, rather than providing a defence to it.

Le ministère public a fait valoir qu'il est administrativement impossible de réglementer une pêche de manière à respecter les besoins d'un peuple autochtone particulier à des fins de subsistance. L'appelante a répliqué en présentant des éléments de preuve indiquant que, dans l'État de Washington, on réglemente de façon efficace les droits issus de traités des autochtones de pêcher à des fins de subsistance. J'en conclus que la norme des besoins en matière de subsistance n'est pas si intrinsèquement indéterminée qu'elle ne peut être réglementée. Il appartient à l'État, qui est chargé de la gestion de la ressource, de mettre en œuvre des moyens efficaces d'en réglementer l'utilisation légale. Le fait que la réglementation actuelle soit déficiente à cet égard confirme l'atteinte, au lieu de la justifier.

3. Is the Government's Limitation of Mrs. Van der Peet's Right to Fish for Sustenance Justified?

3. La restriction par l'État du droit de M^{me} Van der Peet de pêcher à des fins de subsistance est-elle justifiée?

301 Having concluded that the Sto:lo possess a limited right to engage in fishing for commerce and that the regulation constitutes a *prima facie* infringement of this right, it remains to consider whether the infringement is justified. The inquiry into justification is in effect an inquiry into the extent the state can limit the exercise of the right on the ground of policy.

Après avoir conclu que les Sto:lo possèdent un droit restreint de pêcher à des fins commerciales et que le règlement constitue une atteinte à première vue à ce droit, il reste à se demander si cette atteinte est justifiée. L'examen de la question de la justification revient en fait à se demander dans quelle mesure l'État peut, pour des considérations de politique générale, restreindre l'exercice du droit.

302 Just as I parted company with the Chief Justice on the issue of what constitutes an aboriginal right, so I must respectfully dissent from his view of what constitutes justification. Having defined the right at issue in such a way that it possesses no

Tout comme je me suis dissociée des propos du Juge en chef sur la question de savoir ce qui constitue un droit ancestral, je dois également, en toute déférence, exprimer ma dissidence à l'égard de son opinion sur ce qui constitue une justification.

internal limits, the Chief Justice compensates by adopting a large view of justification which cuts back the right on the ground that this is required for reconciliation and social harmony: *Gladstone*, at paras. 73 to 75. I would respectfully decline to adopt this concept of justification for three reasons. First, it runs counter to the authorities, as I understand them. Second, it is indeterminate and ultimately more political than legal. Finally, if the right is more circumspectly defined, as I propose, this expansive definition of justification is not required. I will elaborate on each of these difficulties in turn, arguing that they suggest a more limited view of justification: that the Crown may prohibit exploitation of the resource that is incompatible with its continued and responsible use.

I turn first to the authorities. The doctrine of justification was elaborated in *Sparrow*. Dickson C.J. and La Forest J. endorsed a two-part test. First, the Crown must establish that the law or regulation at issue was enacted for a "compelling and substantial" (p. 1113) purpose. Conserving the resource was cited as such a purpose. Also valid, "would be objectives purporting to prevent the exercise of s. 35(1) rights that would cause harm to the general populace or to aboriginal peoples themselves" (p. 1113). Second, the government must show that the law or regulation is consistent with the fiduciary duty of the Crown toward aboriginal peoples. This means, Dickson C.J. and La Forest J. held, that the Crown must demonstrate that it has given the aboriginal fishery priority in a manner consistent with the views of Dickson J. (as he then was) in *Jack*: absolute priority to the Crown to act in accordance with conservation; clear priority to Indian food fishing; and "limited priority" for aboriginal commercial fishing "over the competing

Ayant défini le droit en cause de telle manière que celui-ci ne comporte aucune limite intrinsèque, le Juge en chef compense en adoptant une conception large de la justification, qui ampute le droit pour le motif que cela est nécessaire à des fins de réconciliation et d'harmonie sociales: *Gladstone*, aux par. 73 à 75. En toute déférence, je refuse d'adopter cette conception de la justification, et ce pour trois raisons. Premièrement, elle est, à mon sens, contraire à la jurisprudence. Deuxièmement, elle est indéterminée et, en dernière analyse, elle est plus politique que juridique. Enfin, si le droit est délimité avec plus de circonspection, comme je le propose, cette définition élargie de la justification n'est pas nécessaire. Je vais expliciter chacune de ces difficultés, en faisant valoir qu'elles suggèrent une conception plus limitée de la justification, savoir qu'il est loisible à l'État d'interdire l'exploitation de la ressource qui est incompatible avec son utilisation continue et responsable.

Je vais d'abord examiner la jurisprudence. La doctrine de la justification a été élaborée dans l'arrêt *Sparrow*. Le juge en chef Dickson et le juge La Forest y ont approuvé un critère à deux volets. Premièrement, le ministère public doit établir que la loi ou le règlement en cause vise un objectif «impérieux et réel» (p. 1113). La conservation de la ressource a été mentionnée comme étant un objectif de cette nature. Seraient également valides des objectifs «visant apparemment à empêcher l'exercice de droits visés au par. 35(1) lorsque cet exercice nuirait à l'ensemble de la population ou aux peuples autochtones eux-mêmes» (p. 1113). Deuxièmement, le ministère public doit démontrer que la loi ou le règlement est compatible avec l'obligation de fiduciaire qu'assume l'État envers les peuples autochtones. Cela signifie, de conclure le juge en chef Dickson et le juge La Forest, que l'État doit prouver qu'il a donné priorité à la pêche autochtone d'une manière compatible avec l'opinion formulée par le juge Dickson (plus tard Juge en chef) dans l'arrêt *Jack*: priorité absolue à l'État pour agir en conformité avec des objectifs de conservation; priorité manifeste à la pêche pratiquée par les Indiens à des fins alimentaires; et «priorité restreinte» à la pêche commerciale autochtone

demands of commercial and sport fishing” (p. 311).

«[sur les besoins de] la pêche commerciale et sportive» (p. 311).

304 The Chief Justice interprets the first requirement of the *Sparrow* test for justification, a compelling and substantial purpose, as extending to any goal which can be justified for the good of the community as a whole, aboriginal and non-aboriginal. This suggests that once conservation needs are met, the inquiry is whether the government objective is justifiable, having regard to regional interests and the interests of non-aboriginal fishers. The Chief Justice writes in *Gladstone* (at para. 75):

... I would suggest that with regards to the distribution of the fisheries resource after conservation goals have been met, objectives such as the pursuit of economic and regional fairness, and the recognition of the historical reliance upon, and participation in, the fishery by non-aboriginal groups, are the type of objectives which can (at least in the right circumstances) satisfy this standard. [Emphasis added.]

Le Juge en chef estime que la première exigence du critère de justification établi dans *Sparrow*, savoir l'existence d'un objectif impérieux et réel, vise tout objectif qui peut être justifié comme étant pour le bien de l'ensemble de la collectivité, autochtone et non autochtone. Cela donne à penser que, une fois les besoins en matière de conservation assurés, l'examen vise à déterminer si l'objectif gouvernemental est justifiable, eu égard aux intérêts régionaux et à ceux des pêcheurs non autochtones. Le Juge en chef écrit ceci, dans l'arrêt *Gladstone* (au par. 75):

... je dirais qu'en ce qui concerne la répartition de ressources halieutiques données, une fois que les objectifs de conservation ont été respectés, des objectifs tels que la poursuite de l'équité sur les plans économique et régional ainsi que la reconnaissance du fait que, historiquement, des groupes non autochtones comptent sur ces ressources et participent à leur exploitation, sont le genre d'objectifs susceptibles (du moins dans les circonstances appropriées) de satisfaire à cette norme. [Je souligne.]

305 Leaving aside the undefined limit of “proper circumstances”, the historical reliance of the participation of non-aboriginal fishers in the fishery seems quite different from the compelling and substantial objectives this Court described in *Sparrow* — conservation of the resource, prevention of harm to the population, or prevention of harm to the aboriginal people themselves. These are indeed compelling objectives, relating to the fundamental conditions of the responsible exercise of the right. As such, it may safely be said that right-thinking persons would agree that these limits may properly be applied to the exercise of even constitutionally entrenched rights. Conservation, for example, is the condition upon which the right to use the resource is itself based; without conservation, there can be no right. The prevention of harm to others is equally compelling. No one can be permitted to exercise rights in a way that will harm others. For example, in the domain of property, the common law has long provided remedies against those who

Indépendamment des contours indéfinis de la notion de «circonstances appropriées», la reconnaissance du fait que, historiquement, des pêcheurs non autochtones ont compté sur cette pêcherie et ont participé à son exploitation semble assez différent des objectifs impérieux et réels mentionnés par notre Cour dans *Sparrow* — conservation de la ressource ou prévention des activités nuisibles à l'ensemble de la population ou aux autochtones eux-mêmes. Voilà effectivement des objectifs impérieux, se rapportant aux conditions fondamentales de l'exercice responsable du droit en question. En conséquence, on peut sans crainte affirmer que toute personne sensée conviendrait que ces limites peuvent à juste titre s'appliquer même à l'exercice de droits inscrits dans la Constitution. La conservation, par exemple, est la condition sur laquelle repose le droit même d'exploiter la ressource, car sans conservation, point de droit. La prévention des activités nuisibles a également un caractère impérieux. En effet, nul ne peut être autorisé à exercer des droits d'une manière qui nuise à autrui. Ainsi, en droit des biens, la com-

pollute streams or use their land in ways that detrimentally affect others.

Viewed thus, the compelling objectives foreseen in *Sparrow* may be seen as united by a common characteristic; they constitute the essential pre-conditions of any civilized exercise of the right. It may be that future cases may endorse limitation of aboriginal rights on other bases. For the purposes of this case, however, it may be ventured that the range of permitted limitation of an established aboriginal right is confined to the exercise of the right rather than the diminution, extinguishment or transfer of the right to others. What are permitted are limitations of the sort that any property owner or right holder would reasonably expect — the sort of limitations which must be imposed in a civilized society if the resource is to be used now and in the future. They do not negate the right, but rather limit its exercise. The extension of the concept of compelling objective to matters like economic and regional fairness and the interests of non-aboriginal fishers, by contrast, would negate the very aboriginal right to fish itself, on the ground that this is required for the reconciliation of aboriginal rights and other interests and the consequent good of the community as a whole. This is not limitation required for the responsible exercise of the right, but rather limitation on the basis of the economic demands of non-aboriginals. It is limitation of a different order than the conservation, harm prevention type of limitation sanctioned in *Sparrow*.

The Chief Justice, while purporting to apply the *Sparrow* test for justification, deviates from its second requirement as well as the first, in my respectful view. Here the stipulations are that the limitation be consistent with the Crown's fiduciary duty to the aboriginal people and that it reflect the priority set out by Dickson J. in *Jack*. The duty of a

mon law reconnaît depuis longtemps des recours contre ceux qui polluent un cours d'eau ou exploitent leurs biens-fonds d'une manière nuisible à autrui.

Vus sous cet angle, les objectifs impérieux envisagés dans *Sparrow* peuvent être considérés comme possédant tous une caractéristique commune: ils constituent des préalables essentiels à tout exercice civilisé du droit en question. Il est possible que, dans des instances futures, des limites imposées à des droits ancestraux soient acceptées sur d'autres fondements. Toutefois, aux fins de la présente espèce, on peut dire que les différentes limites qui peuvent être imposées à un droit ancestral établi concernent l'exercice de ce droit et non sa dilution, son extinction ou son transfert à autrui. Sont permises les limites du genre de celles auxquelles tout propriétaire foncier ou titulaire d'un droit s'attendrait raisonnablement d'être assujéti — savoir le type de limites qui doivent être imposées dans une société civilisée pour assurer l'exploitation présente et future de la ressource. Ces limites n'ont pas pour effet de dénier le droit, mais plutôt de restreindre son exercice. En revanche, le fait d'élargir la notion d'objectif impérieux à des considérations telles que l'équité sur les plans économique et régional et les intérêts des pêcheurs non autochtones aurait pour effet de dénier le droit de pêche ancestral lui-même, pour le motif qu'une telle mesure est nécessaire pour concilier les droits ancestraux et d'autres intérêts, et ainsi assurer le bien de l'ensemble de la collectivité. Ce ne sont pas là des limites nécessaires à l'exercice responsable du droit en cause, mais plutôt de limites fondées sur les exigences économiques des non-autochtones. Il ne s'agit pas de limites du même ordre que la conservation des ressources ou la prévention des activités nuisibles, objectifs qui ont été approuvés dans *Sparrow*.

En toute déférence, même s'il se propose d'appliquer le critère de justification établi dans *Sparrow*, le Juge en chef s'écarte de la seconde exigence de ce critère tout comme de la première. En l'occurrence, cette exigence veut que la limite soit conforme à l'obligation de fiduciaire que l'État assume envers les autochtones et qu'elle tienne

fiduciary, or trustee, is to protect and conserve the interest of the person whose property is entrusted to him. In the context of aboriginal rights, this requires that the Crown not only preserve the aboriginal people's interest, but also manage it well: *Guerin*. The Chief Justice's test, however, would appear to permit the constitutional aboriginal fishing right to be conveyed by regulation, law or executive act to non-native fishers who have historically fished in the area in the interests of community harmony and reconciliation of aboriginal and non-aboriginal interests. Moreover, the Chief Justice's scheme has the potential to violate the priority scheme for fishing set out in *Jack*. On his test, once conservation is satisfied, a variety of other interests, including the historical participation of non-native fishers, may justify a variety of regulations governing distribution of the resource. The only requirement is that the distribution scheme "take into account" the aboriginal right. Such an approach, I fear, has the potential to violate not only the Crown's fiduciary duty toward native peoples, but also to render meaningless the "limited priority" to the non-commercial fishery endorsed in *Jack* and *Sparrow*.

compte de l'ordre de priorité établi par le juge Dickson dans l'arrêt *Jack*. L'obligation d'un fiduciaire ou administrateur du bien d'autrui est de protéger et de préserver les intérêts de la personne dont les biens lui sont confiés. Dans le contexte des droits ancestraux, cette obligation emporte non seulement que l'État préserve les intérêts des autochtones, mais aussi qu'il les gère bien: *Guerin*. Or le critère du Juge en chef semble permettre que le droit de pêche ancestral reconnu par la Constitution soit accordé, par règlement, loi ou acte de l'exécutif, aux pêcheurs non autochtones qui ont historiquement pêché dans la région visée, au nom de l'harmonie sociale et de la conciliation des intérêts autochtones et non autochtones. Qui plus est, le critère du Juge en chef est susceptible de violer l'ordre de priorité en matière de pêche établi dans *Jack*. D'après le critère du Juge en chef, une fois les besoins de conservation pris en considération, divers autres intérêts, dont la participation historique des pêcheurs non autochtones à l'exploitation de la ressource, peuvent justifier la prise de règlements régissant la répartition de la ressource. La seule exigence est que le mécanisme de répartition «tienne compte» du droit ancestral. Une telle approche, je le crains, est susceptible de violer non seulement l'obligation de fiduciaire de l'État envers les peuples autochtones, mais aussi de priver de toute signification la «priorité restreinte» reconnue à la pêche commerciale dans les arrêts *Jack* et *Sparrow*.

308 Put another way, the Chief Justice's approach might be seen as treating the guarantee of aboriginal rights under s. 35(1) as if it were a guarantee of individual rights under the *Charter*. The right and its infringement are acknowledged. However, the infringement may be justified if this is in the interest of Canadian society as a whole. In the case of individual rights under the *Charter*, this is appropriate because s. 1 of the *Charter* expressly states that these rights are subject to such "reasonable limits prescribed by law as can be demonstrably justified in a free and democratic society". However, in the case of aboriginal rights guaranteed by s. 35(1) of the *Constitutional Act, 1982*, the framers of s. 35(1) deliberately chose not to subordinate the exercise of aboriginal rights to the good of

En d'autres termes, l'approche du Juge en chef pourrait être interprétée comme traitant la garantie applicable aux droits ancestraux prévue au par. 35(1) comme s'il s'agissait de la garantie des droits individuels prévue par la *Charte*. Le droit et l'atteinte à celui-ci sont reconnus. Toutefois, l'atteinte peut être justifiée si elle est dans l'intérêt de l'ensemble de la société canadienne. Dans le cas des droits individuels protégés par la *Charte*, cela est approprié étant donné que l'article premier de la *Charte* prévoit expressément que ces droits peuvent être restreints «par une règle de droit, dans des limites qui soient raisonnables et dont la justification puisse se démontrer dans le cadre d'une société libre et démocratique». Toutefois, dans le cas des droits ancestraux garantis par le par. 35(1)

society as a whole. In the absence of an express limitation on the rights guaranteed by s. 35(1), limitations on them under the doctrine of justification must logically and as a matter of constitutional construction be confined, as *Sparrow* suggests, to truly compelling circumstances, like conservation, which is the *sine qua non* of the right, and restrictions like preventing the abuse of the right to the detriment of the native community or the harm of others — in short, to limitations which are essential to its continued use and exploitation. To follow the path suggested by the Chief Justice is, with respect, to read judicially the equivalent of s. 1 into s. 35(1), contrary to the intention of the framers of the Constitution.

A second objection to the approach suggested by the Chief Justice is that it is indeterminate and ultimately may speak more to the politically expedient than to legal entitlement. The imprecision of the proposed test is apparent. "In the right circumstances", themselves undefined, governments may abridge aboriginal rights on the basis of an undetermined variety of considerations. While "account" must be taken of the native interest and the Crown's fiduciary obligation, one is left uncertain as to what degree. At the broadest reach, whatever the government of the day deems necessary in order to reconcile aboriginal and non-aboriginal interests might pass muster. In narrower incarnations, the result will depend on doctrine yet to be determined. Upon challenge in the courts, the focus will predictably be on the social justifiability of the measure rather than the rights guaranteed. Courts may properly be expected, the Chief Justice suggests, not to be overly strict in their review; as under s. 1 of the *Charter*, the courts should not negate the government decision, so long as it represents a "reasonable" resolution of conflicting interests. This, with respect, falls short of the "solid constitutional base upon which subsequent

de la *Loi constitutionnelle de 1982*, les rédacteurs ont délibérément choisi de ne pas subordonner l'exercice des droits ancestraux au bien de l'ensemble de la société. En l'absence de limitation expresse des droits garantis par le par. 35(1), les limites qui leur sont imposées en vertu de la doctrine de la justification doivent, logiquement et conformément aux règles d'interprétation constitutionnelle, uniquement viser, comme l'indique l'arrêt *Sparrow*, des circonstances véritablement impérieuses telle la conservation, condition *sine qua non* de l'existence du droit en question, et des restrictions comme la prévention des exercices abusifs du droit nuisibles à la communauté autochtone ou à d'autres — en bref, les restrictions essentielles à l'utilisation et à l'exploitation continues de la ressource visée par le droit. En toute déférence, suivre la voie préconisée par le Juge en chef revient, pour les tribunaux, à considérer que s'applique au par. 35(1) l'équivalent de l'article premier, contrairement à l'intention des rédacteurs de la Constitution.

Une deuxième objection à l'approche préconisée par le Juge en chef est qu'elle est indéterminée et que, en dernière analyse, elle tient davantage de l'expédient politique que de la reconnaissance de droits. L'imprécision du critère proposé est manifeste. «Dans les circonstances appropriées» — circonstances elles-mêmes non définies —, les gouvernements pourraient restreindre des droits ancestraux pour une gamme indéterminée de considérations. Bien qu'il faille «tenir compte» des intérêts des autochtones et de l'obligation de fiduciaire de l'État, l'étendue de cette obligation n'est pas précisée. À la limite, toute mesure que le gouvernement estimerait nécessaire pour concilier les intérêts des autochtones et des non-autochtones pourrait être jugée acceptable. Dans des cas moins extrêmes, le résultat dépendra d'une doctrine qui reste à établir. En cas de contestation judiciaire, il est possible de prévoir que l'examen serait axé sur le caractère socialement justifiable de la mesure plutôt que sur les droits garantis. On peut à juste titre s'attendre, comme le suggère le Juge en chef, à ce que les tribunaux ne se montrent pas trop stricts dans leur examen. Tout comme dans les cas où ils sont appelés à appliquer l'article premier de

negotiations can take place” of which Dickson C.J. and La Forest J. wrote in *Sparrow*, at p. 1105.

la *Charte*, les tribunaux ne devraient pas annuler la décision du gouvernement dans la mesure où elle représente une solution «raisonnable» à un conflit d'intérêts opposés. En toute déférence, cela ne constitue pas le «fondement constitutionnel solide à partir duquel des négociations ultérieures peuvent être entreprises», dont ont fait état le juge en chef Dickson et le juge La Forest dans l'arrêt *Sparrow*, à la p. 1105.

310

My third observation is that the proposed departure from the principle of justification elaborated in *Sparrow* is unnecessary to provide the “reconciliation” of aboriginal and non-aboriginal interests which is said to require it. The Chief Justice correctly identifies reconciliation between aboriginal and non-aboriginal communities as a goal of fundamental importance. This desire for reconciliation, in many cases long overdue, lay behind the adoption of s. 35(1) of the *Constitution Act, 1982*. As *Sparrow* recognized, one of the two fundamental purposes of s. 35(1) was the achievement of a just and lasting settlement of aboriginal claims. The Chief Justice also correctly notes that such a settlement must be founded on reconciliation of aboriginal rights with the larger non-aboriginal culture in which they must, of necessity, find their exercise. It is common ground that “. . . a morally and politically defensible conception of aboriginal rights will incorporate both [the] legal perspectives” of the “two vastly dissimilar legal cultures” of European and aboriginal cultures: Walters, *supra*, at pp. 413 and 412, respectively. The question is how this reconciliation of the different legal cultures of aboriginal and non-aboriginal peoples is to be accomplished. More particularly, does the goal of reconciliation of aboriginal and non-aboriginal interests require that we permit the Crown to require a judicially authorized transfer of the aboriginal right to non-aboriginals without the consent of the aboriginal people, without treaty, and without compensation? I cannot think it does.

Ma troisième observation est que la dérogation proposée à la norme de justification établie dans *Sparrow* n'est pas, contrairement à ce qu'on prétend, nécessaire à la «conciliation» des intérêts des autochtones et des non-autochtones. Le Juge en chef a raison de dire que la réconciliation entre les communautés autochtones et non autochtones est un objectif d'une importance fondamentale. Ce désir de réconciliation qui, dans de nombreux cas, tarde depuis trop longtemps a inspiré l'adoption du par. 35(1) de la *Loi constitutionnelle de 1982*. Comme il a été reconnu dans *Sparrow*, l'un des deux objets fondamentaux du par. 35(1) était la réalisation d'un règlement juste et durable des revendications autochtones. Le Juge en chef souligne aussi à juste titre qu'un tel règlement doit reposer sur la conciliation des droits ancestraux avec la culture non autochtone plus large dans laquelle ils doivent, par nécessité, être exercés. Il est bien établi qu' [TRADUCTION] «une conception moralement et politiquement défendable des droits ancestraux intégrera [les . . .] points de vue [. . .]» de «deux cultures juridiques extrêmement dissimilaires», les cultures européenne et autochtone: Walters, *loc. cit.*, aux pp. 413 et 412 respectivement. La question est de savoir comment s'accomplira cette conciliation des cultures juridiques différentes des peuples autochtones et non autochtones. Plus particulièrement, est-ce que l'objectif de conciliation des intérêts des autochtones et des non-autochtones exige que nous permettions à l'État de demander que le droit ancestral soit transféré à des non-autochtones, avec l'aval des tribunaux, sans le consentement des autochtones concernés, sans conclusion d'un traité et sans indemnisation? Je ne peux imaginer que ce soit le cas.

My reasons are twofold. First, as suggested earlier, if we adopt a conception of aboriginal rights founded in history and the common law rather than what is "integral" to the aboriginal culture, the need to adopt an expansive concept of justification diminishes. As the Chief Justice observes, the need to expand the *Sparrow* test stems from the lack of inherent limits on the aboriginal right to commercial fishing he finds to be established in *Gladstone*. On the historical view I take, the aboriginal right to fish for commerce is limited to supplying what the aboriginal people traditionally took from the fishery. Since these were not generally societies which valued excess or accumulated wealth, the measure will seldom, on the facts, be found to exceed the basics of food, clothing and housing, supplemented by a few amenities. This accords with the "limited priority" for aboriginal commercial fishing that this Court endorsed in *Sparrow*. Beyond this, commercial and sports fishermen may enjoy the resource as they always have, subject to conservation. As suggested in *Sparrow*, the government should establish what is required to meet what the aboriginal people traditionally by law and custom took from the river or sea, through consultation and negotiation with the aboriginal people. In normal years, one would expect this to translate to a relatively small percentage of the total commercial fishing allotment. In the event that conservation concerns virtually eliminated commercial fishing, aboriginal commercial fishing, limited as it is, could itself be further reduced or even eliminated.

On this view, the right imposes its own internal limit — equivalence with what by ancestral law and custom the aboriginal people in question took from the resource. The government may impose

Mes raisons sont de deux ordres. Premièrement, si, comme il a été suggéré précédemment, nous adoptons une conception des droits ancestraux fondée sur l'histoire et la common law plutôt que sur la notion de «partie intégrante» de la culture autochtone, le besoin de recourir à un critère élargi de justification diminue. Comme le fait observer le Juge en chef, la nécessité d'élargir le critère établi dans *Sparrow* découle du fait que le droit ancestral de pêche commerciale qu'il a jugé établi dans *Gladstone* ne comporte pas de limites intrinsèques. Or, suivant le point de vue historique que j'adopte, le droit ancestral de pêcher à des fins commerciales ne vise qu'à procurer aux autochtones ce qu'ils ont traditionnellement tiré de l'exploitation de la pêcherie. Comme il ne s'agissait généralement pas de sociétés qui valorisaient l'accumulation de surplus ou de richesses, les besoins à combler dépasseront rarement, dans les faits, les choses essentielles, c'est-à-dire la nourriture, le vêtement et le logement, complétées par quelques commodités de la vie. Cette conclusion est conforme à la «priorité restreinte» reconnue à la pêche commerciale autochtone par notre Cour dans *Sparrow*. Une fois ces priorités respectées, les pêcheurs commerciaux et sportifs peuvent jouir de la ressource comme ils l'ont toujours fait, sous réserve des exigences de conservation. Comme il a été suggéré dans *Sparrow*, l'État devrait établir, par voie de consultations et de négociations, les quantités requises pour procurer aux autochtones concernés ce qu'ils ont traditionnellement tiré de l'exploitation de la rivière, du fleuve ou de la mer conformément à leurs lois et coutumes. Au cours des années normales, on peut s'attendre à ce que cela se traduise par un pourcentage relativement peu élevé des prises totales accordées à la pêche commerciale. Dans l'hypothèse où, pour des besoins de conservation, il faudrait supprimer pratiquement toute pêche commerciale, la pêche commerciale autochtone, déjà restreinte comme elle l'est, pourrait elle-même être réduite davantage, voire supprimée.

De ce point de vue, le droit comporte sa propre limite intrinsèque, savoir l'équivalent de ce que, conformément aux lois et coutumes ancestrales, les autochtones concernés tiraient de la ressource.

additional limits under the rubric of justification to ensure that the right is exercised responsibly and in a way that preserves it for future generations. There is no need to impose further limits on it to affect reconciliation between aboriginal and non-aboriginal peoples.

L'État peut, en respectant le critère de justification, imposer des limites additionnelles visant à faire en sorte que le droit soit exercé de façon responsable et de manière à en assurer la jouissance aux générations futures. Il n'est cependant nul besoin de limiter davantage le droit pour permettre la réconciliation des autochtones et des non-autochtones.

313

The second reason why it is unnecessary to adopt the broad doctrine of justification proposed by the Chief Justice is that other means, yet unexploited, exist for resolving the different legal perspectives of aboriginal and non-aboriginal people. In my view, a just calibration of the two perspectives starts from the premise that full value must be accorded to such aboriginal rights as may be established on the facts of the particular case. Only by fully recognizing the aboriginal legal entitlement can the aboriginal legal perspective be satisfied. At this stage of the process — the stage of defining aboriginal rights — the courts have an important role to play. But that is not the end of the matter. The process must go on to consider the non-aboriginal perspective — how the aboriginal right can be legally accommodated within the framework of non-aboriginal law. Traditionally, this has been done through the treaty process, based on the concept of the aboriginal people and the Crown negotiating and concluding a just solution to their divergent interests, given the historical fact that they are irretrievably compelled to live together. At this stage, the stage of reconciliation, the courts play a less important role. It is for the aboriginal peoples and the other peoples of Canada to work out a just accommodation of the recognized aboriginal rights. This process — definition of the rights guaranteed by s. 35(1) followed by negotiated settlements — is the means envisioned in *Sparrow*, as I perceive it, for reconciling the aboriginal and non-aboriginal legal perspectives. It has not as yet been tried in the case of the Sto:lo. A century and one-half after European settlement, the Crown has yet to conclude a treaty with them. Until we have exhausted the traditional means by which aboriginal and non-aboriginal legal perspectives may be reconciled, it seems difficult to assert that it is necessary for the courts to suggest more

La seconde raison pour laquelle il n'est pas nécessaire de recourir au critère élargi de justification proposé par le Juge en chef est qu'il existe d'autres moyens, encore inexploités, de concilier les points de vue juridiques différents des autochtones et des non-autochtones. À mon avis, la recherche d'un juste équilibre entre les deux points de vue part du postulat qu'il faut accorder leur pleine valeur aux droits ancestraux dont les faits d'une espèce particulière établissent l'existence. Ce n'est qu'en reconnaissant pleinement les droits ancestraux des autochtones que leur point de vue juridique pourra être respecté. À cette étape du processus — la définition des droits ancestraux — les tribunaux ont un rôle important à jouer. Mais le processus ne s'arrête pas là. Il doit se poursuivre par la prise en considération du point de vue non autochtone, c'est-à-dire l'examen de la question de savoir comment le droit ancestral en cause peut juridiquement s'inscrire dans le cadre du droit non autochtone. Traditionnellement, cela s'est fait par voie de traité, conclu au terme de négociations entre le peuple autochtone concerné et l'État et visant à trouver une solution équitable à leurs intérêts divergents, compte tenu du fait historique qu'ils sont irrémédiablement tenus de cohabiter. À cette étape, celle de la conciliation, les tribunaux jouent un rôle moins important. En effet, il appartient aux peuples autochtones et aux autres habitants du Canada de trouver un juste compromis à l'égard des droits ancestraux reconnus. Ce processus — c'est-à-dire la définition des droits garantis par le par. 35(1), suivie de règlements négociés — est, à mon sens, le moyen envisagé dans *Sparrow* pour concilier les points de vue juridiques des autochtones et des non-autochtones. Il n'a pas encore été mis à l'épreuve dans le cas des Sto:lo. Un siècle et demi après l'arrivée des Européens, l'État n'a pas encore conclu de traité avec les

1996 CanLII 110 (CC)

radical methods of reconciliation possessing the potential to erode aboriginal rights seriously.

I have argued that the broad approach to justification proposed by the Chief Justice does not conform to the authorities, is indeterminate, and is, in the final analysis unnecessary. Instead, I have proposed that justifiable limitation of aboriginal rights should be confined to regulation to ensure their exercise conserves the resource and ensures responsible use. There remains a final reason why the broader view of justification should not be accepted. It is, in my respectful opinion, unconstitutional.

The Chief Justice's proposal comes down to this. In certain circumstances, aboriginals may be required to share their fishing rights with non-aboriginals in order to effect a reconciliation of aboriginal and non-aboriginal interests. In other words, the Crown may convey a portion of an aboriginal fishing right to others, not by treaty or with the consent of the aboriginal people, but by its own unilateral act. I earlier suggested that this has the potential to violate the Crown's fiduciary duty to safeguard aboriginal rights and property. But my concern is more fundamental. How, without amending the Constitution, can the Crown cut down the aboriginal right? The exercise of the rights guaranteed by s. 35(1) is subject to reasonable limitation to ensure that they are used responsibly. But the rights themselves can be diminished only through treaty and constitutional amendment. To reallocate the benefit of the right from aboriginals to non-aboriginals, would be to diminish the substance of the right that s. 35(1) of the *Constitution Act, 1982* guarantees to the aboriginal people. This no court can do.

Sto:lo. Tant que les moyens traditionnels de conciliation des points de vue juridiques des autochtones et des non-autochtones n'auront pas été épuisés, il paraît difficile d'affirmer qu'il est nécessaire que les tribunaux proposent des méthodes de conciliation plus radicales, susceptibles de miner gravement les droits ancestraux.

J'ai avancé que le critère élargi de justification proposé par le Juge en chef n'est pas conforme à la jurisprudence, qu'il est indéterminé et, en dernière analyse, qu'il est inutile. Au lieu de ce critère, j'ai suggéré que seraient justifiables les limites qui seraient imposées aux droits ancestraux uniquement pour en réglementer l'exercice afin d'assurer la conservation de la ressource et l'utilisation responsable de celle-ci. Il y a une dernière raison pour laquelle le critère élargi de justification ne devrait pas être retenu. En toute déférence, il est inconstitutionnel.

La proposition du Juge en chef peut se résumer ainsi. Dans certaines circonstances, les autochtones peuvent être requis de partager leurs droits de pêche avec des non-autochtones au nom de la conciliation des intérêts des autochtones et des non-autochtones. En d'autres termes, l'État peut accorder à d'autres une portion d'un droit ancestral de pêche, et ce non pas par traité ou avec le consentement des autochtones visés, mais de son propre chef, par décision unilatérale. J'ai dit précédemment que cette méthode était susceptible de violer l'obligation de fiduciaire qu'a l'État de protéger les droits et les biens autochtones. Mais ma préoccupation est plus fondamentale. Comment, sans modifier la Constitution, l'État peut-il diminuer le droit ancestral? L'exercice des droits garantis par le par. 35(1) peut être assujéti à des limites raisonnables, visant à ce que ceux-ci soient utilisés de façon responsable. Mais les droits eux-mêmes ne peuvent être diminués que par traité ou modification constitutionnelle. Enlever les avantages du droit ancestral à des autochtones pour les attribuer à des non-autochtones aurait pour effet de diminuer la substance du droit que le par. 35(1) de la *Loi constitutionnelle de 1982* garantit aux autochtones. Cela, aucun tribunal ne peut le faire.

I therefore conclude that a government limitation on an aboriginal right may be justified, provided the limitation is directed to ensuring the conservation and responsible exercise of the right. Limits beyond this cannot be saved on the ground that they are required for societal peace or reconciliation. Specifically, limits that have the effect of transferring the resource from aboriginal people without treaty or consent cannot be justified. Short of repeal of s. 35(1), such transfers can be made only with the consent of the aboriginal people. It is for the governments of this country and the aboriginal people to determine if this should be done, not the courts. In the meantime, it is the responsibility of the Crown to devise a regulatory scheme which ensures the responsible use of the resource and provides for the division of what remains after conservation needs have been met between aboriginal and non-aboriginal peoples.

J'en arrive par conséquent à la conclusion que la restriction par le gouvernement d'un droit ancestral peut être justifiée, pourvu qu'elle vise à assurer la conservation de la ressource et l'exercice responsable du droit. La validité de restrictions qui iraient plus loin ne saurait être sauvegardée pour le motif que celles-ci sont nécessaires pour assurer la réconciliation ou la paix sociales. Plus précisément, des restrictions ayant pour effet de retirer à des autochtones la jouissance de la ressource pour la transférer à d'autres, et ce sans conclure de traite avec les premiers ou obtenir leur consentement, ne sauraient être justifiées. À moins d'abrogation du par. 35(1), pareils transferts ne peuvent survenir qu'avec le consentement des autochtones visés. C'est aux gouvernements de ce pays et aux autochtones qu'il revient d'en décider, non aux tribunaux. Dans l'intervalle, l'État a la responsabilité de concevoir un régime de réglementation assurant l'utilisation responsable de la ressource et pourvoyant à la répartition, entre les autochtones et les non-autochtones, de ce qui est disponible après avoir tenu compte des besoins de conservation.

The picture of aboriginal rights that emerges resembles that put forward by Dickson J. (as he then was) in *Jack* and endorsed in *Sparrow*. Reasoning from the premise that the *British Columbia Terms of Union*, R.S.C., 1985, App. II, No. 10, required the federal government to adopt an aboriginal "policy as liberal" as that of the colonial government of British Columbia, Dickson J. opined at p. 311:

Le tableau des droits ancestraux qui se dégage de ce qui précède ressemble à celui brossé par le juge Dickson (plus tard Juge en chef) dans *Jack* et approuvé dans *Sparrow*. Partant du postulat que les *Conditions de l'adhésion de la Colombie-Britannique*, L.R.C. (1985), app. II, n° 10, exigeaient du gouvernement fédéral qu'il adopte une «ligne de conduite aussi libérale» que celle du gouvernement colonial de la Colombie-Britannique, le juge Dickson a exprimé l'avis suivant, à la p. 311:

... one could suggest that "a policy as liberal" would require clear priority to Indian food fishing and some priority to limited commercial fishing over the competing demands of commercial and sport fishing. Finally, there can be no serious question that conservation measures for the preservation of the resource — effectively unknown to the regulatory authorities prior to 1871 — should take precedence over any fishing, whether by Indians, sportsmen, or commercial fishermen.

... il est permis de penser qu'on entendait par l'expression «une ligne de conduite aussi libérale», accorder la première priorité à la pêche par les Indiens à des fins d'alimentation et une certaine priorité à une pêche commerciale restreinte, [sur les besoins de] la pêche commerciale et sportive. Finalement, il est clair que les mesures destinées à la protection des ressources — totalement absentes des textes réglementaires avant 1871 — priment sur tout genre de pêche, qu'il s'agisse de la pêche par les Indiens, de pêche commerciale ou sportive.

The relationship between the relative interests in a fishery with respect to which an aboriginal right has been established in the full sense, that is of

Les rapports entre les divers intérêts dans une pêcherie à l'égard de laquelle a été établie l'existence d'un droit ancestral au sens plein du terme

food, ceremony and articles to meet other needs obtained directly from the fishery or through trade and barter of fish products, may be summarized as follows:

1. The state may limit the exercise of the right of the aboriginal people, for purposes associated with the responsible use of the right, including conservation and prevention of harm to others;
2. Subject to these limitations, the aboriginal people have a priority to fish for food, ceremony, as well as supplementary sustenance defined in terms of the basic needs that the fishery provided to the people in ancestral times;
3. Subject to (1) and (2) non-aboriginal peoples may use the resource.

In times of plentitude, all interests may be satisfied. In times of limited stocks, aboriginal food fishing will have priority, followed by additional aboriginal commercial fishing to satisfy the sustenance the fishery afforded the particular people in ancestral times. The aboriginal priority to commercial fishing is limited to satisfaction of these needs, which typically will be confined to basic amenities. In this sense, the right to fish for commerce is a "limited" priority. If there is insufficient stock to satisfy the entitlement of all aboriginal peoples after required conservation measures, allocations must be made between them. Allocations between aboriginal peoples may also be required to ensure that upstream bands are allowed their fair share of the fishery, whether for food or supplementary sustenance. All this is subject to the overriding power of the state to limit or indeed, prohibit fishing in the interests of conservation.

— savoir le droit de pêcher à des fins alimentaires et rituelles et pour satisfaire d'autres besoins qui étaient comblés directement par l'exploitation de la pêcherie ou par la vente et l'échange du poisson et des produits du poisson — peuvent se résumer ainsi:

1. L'État peut limiter l'exercice du droit des autochtones visés à des fins liées à l'exercice responsable du droit, y compris la conservation de la ressource et la prévention des activités nuisibles à autrui;
2. sous réserve de ces limites, les autochtones visés ont la priorité pour pêcher à des fins alimentaires et rituelles, ainsi qu'à des fins supplémentaires de subsistance, c'est-à-dire pour satisfaire les besoins fondamentaux que la pêcherie permettait à leurs ancêtres de combler;
3. sous réserve des par. (1) et (2), les non-autochtones peuvent exploiter la ressource.

En périodes d'abondance des stocks, tous les intérêts peuvent être comblés. En périodes de rareté, la pêche autochtone à des fins alimentaires aura la priorité, suivie d'un droit additionnel de pêcher commercialement à des fins de subsistance pour satisfaire les besoins que la pêcherie permettait à leurs ancêtres de combler. La priorité des autochtones en matière de pêche commerciale est restreinte à ce qui est requis pour satisfaire ces besoins, lesquels se limiteront d'ordinaire aux besoins fondamentaux. En ce sens, le droit de pêcher à des fins commerciales ne jouit que d'une priorité «restreinte». Si les stocks de poisson ne permettent pas de satisfaire les besoins des divers peuples autochtones concernés, une fois prises les mesures de conservation requises, la ressource doit alors être répartie entre ceux-ci. Il est également possible que, dans la répartition, il faille assurer aux bandes vivant en amont leur juste part de la pêche, que ce soit à des fins alimentaires ou à des fins supplémentaires de subsistance. Toutes ces mesures sont subordonnées au pouvoir prépondérant de l'État de limiter, voire de prohiber la pêche pour des fins de conservation de la ressource.

320 The consequence of this system of priorities is that the Crown may limit aboriginal fishing by aboriginal people found to possess a right to fish for sustenance on two grounds: (1) on the ground that a limited amount of fish is required to satisfy the basic sustenance requirement of the band, and (2) on the ground of conservation and other limits required to ensure the responsible use of the resource (justification).

321 Against this background, I return to the question of whether the regulation preventing the Sto:lo from selling any fish is justified. In my view it is not. No compelling purpose such as that proposed in *Sparrow* has been demonstrated. The denial to the Sto:lo of their right to sell fish for basic sustenance has not been shown to be required for conservation or for other purposes related to the continued and responsible exploitation of the resource. The regulation, moreover, violates the priorities set out in *Jack* and *Sparrow* and breaches the fiduciary duty of the Crown to preserve the rights of the aboriginal people to fish in accordance with their ancestral customs and laws by summarily denying an important aspect of the exercise of the right.

4. Conclusion

322 I would allow the appeal to the extent of confirming the existence in principle of an aboriginal right to sell fish for sustenance purposes, and set aside the appellant's conviction. I would answer the constitutional question as follows:

Question: Is s. 27(5) of the *British Columbia Fishery (General) Regulations*, SOR/84-248, as it read on September 11, 1987, of no force or effect with respect to the appellant in the circumstances of these proceedings, in virtue of s. 52 of the *Constitution Act, 1982*, by reason of the aboriginal rights within the meaning of s. 35 of the *Constitution Act, 1982*, invoked by the appellant?

Ce régime de priorités a pour conséquence que l'État peut limiter le droit de pêcher à des fins de subsistance reconnu à une bande autochtone pour deux motifs: (1) parce qu'une quantité limitée de poisson est nécessaire pour satisfaire les besoins fondamentaux de la bande, et (2) pour des fins de conservation de la ressource et parce que d'autres restrictions sont nécessaires pour l'utilisation responsable de celle-ci (justification).

Sur cette toile de fond, je reviens à la question de savoir si la disposition réglementaire qui interdit complètement aux Sto:lo de vendre du poisson est justifiée. À mon avis, elle ne l'est pas. Aucun objectif impérieux du genre de ceux évoqués dans *Sparrow* n'a été établi. Il n'a pas été démontré qu'il était nécessaire, pour des fins de conservation de la ressource ou pour d'autres fins se rapportant à l'exploitation continue et responsable de celle-ci, de dénier au peuple Sto:lo le droit de vendre du poisson pour subvenir à ses besoins fondamentaux. Qui plus est, la disposition réglementaire viole l'ordre de priorité énoncé dans les arrêts *Jack* et *Sparrow* et elle contrevient à l'obligation de fiduciaire qu'a l'État de préserver les droits des autochtones concernés de pêcher conformément à leurs lois et coutumes ancestrales, en leur déniant sommairement un aspect important de l'exercice de ce droit.

4. Conclusion

Je suis d'avis d'accueillir le pourvoi et de confirmer l'existence en principe d'un droit ancestral de vendre du poisson à des fins de subsistance. J'annulerais la déclaration de culpabilité prononcée contre l'appelante et répondrais comme suit à la question constitutionnelle:

Question: Le paragraphe 27(5) du *Règlement de pêche général de la Colombie-Britannique*, DORS/84-248, tel qu'il se lisait le 11 septembre 1987, est-il, dans les circonstances de la présente affaire, inopérant à l'égard de l'appelante en vertu de l'art. 52 de la *Loi constitutionnelle de 1982*, en raison des droits ancestraux au sens de l'art. 35 de la *Loi constitutionnelle de 1982*, qu'elle invoque?

Answer: Section 27(5) of the *British Columbia Fishery (General) Regulations*, SOR/84-248, as it read on September 11, 1987, is of no force or effect with respect to the appellant in the circumstances of these proceedings, in virtue of s. 52 of the *Constitution Act, 1982*, by reason of the aboriginal rights within the meaning of s. 35 of the *Constitution Act, 1982*, as invoked by the appellant.

Appeal dismissed, L'HEUREUX-DUBÉ and McLACHLIN JJ. dissenting.

constraints on provincial regulation of Aboriginal title land — Division of powers — Doctrine of interjurisdictional immunity — Infringement and justification framework under s. 35 Constitution Act, 1982 — Province issuing commercial logging licence in area regarded by semi-nomadic First Nation as traditional territory — First Nation claiming Aboriginal title to land — Whether provincial laws of general application apply to Aboriginal title land — Whether Forest Act on its face applies to Aboriginal title land — Whether application of Forest Act ousted by operation of Constitution — Whether doctrine of interjurisdictional immunity should be applied to lands held under Aboriginal title — Forest Act, R.S.B.C. 1995, c. 157 — Constitution Act, 1982, s. 35.

For centuries the Tsilhqot'in Nation, a semi-nomadic grouping of six bands sharing common culture and history, have lived in a remote valley bounded by rivers and mountains in central British Columbia. It is one of hundreds of indigenous groups in B.C. with unresolved land claims. In 1983, B.C. granted a commercial logging licence on land considered by the Tsilhqot'in to be part of their traditional territory. The band objected and sought a declaration prohibiting commercial logging on the land. Talks with the Province reached an impasse and the original land claim was amended to include a claim for Aboriginal title to the land at issue on behalf of all Tsilhqot'in people. The federal and provincial governments opposed the title claim.

The Supreme Court of British Columbia held that occupation was established for the purpose of proving title by showing regular and exclusive use of sites or territory within the claim area, as well as to a small area outside that area. Applying a narrower test based on site-specific occupation requiring proof that the Aboriginal group's ancestors intensively used a definite tract of land with reasonably defined boundaries at the time of European sovereignty, the British Columbia Court of Appeal held that the Tsilhqot'in claim to title had not been established.

générale — Contraintes constitutionnelles sur la réglementation, par la province, du territoire visé par le titre ancestral — Partage des compétences — Doctrine de l'exclusivité des compétences — Atteinte et cadre d'analyse de la justification relatif à l'art. 35 de la Loi constitutionnelle de 1982 — Province accordant un permis commercial de coupe de bois dans un secteur qu'une Première Nation semi-nomade considère être son territoire ancestral — Première Nation revendiquant le titre ancestral sur le territoire — Les lois provinciales d'application générale s'appliquent-elles au territoire visé par le titre ancestral? — La Forest Act s'applique-t-elle à première vue au territoire visé par le titre ancestral? — La Constitution a-t-elle pour effet d'écarter l'application de la Forest Act? — La doctrine de l'exclusivité des compétences devrait-elle s'appliquer à des terres grevées du titre ancestral? — Forest Act, R.S.B.C. 1995, ch. 157 — Loi constitutionnelle de 1982, art. 35.

Depuis des siècles, la Nation Tsilhqot'in, un regroupement de six bandes semi-nomades ayant une culture et une histoire communes, vit dans une vallée éloignée entourée de rivières et de montagnes dans le centre de la Colombie-Britannique. Ce n'est qu'un groupe autochtone parmi des centaines en Colombie-Britannique dont les revendications territoriales ne sont pas réglées. En 1983, la province a accordé un permis commercial de coupe de bois sur des terres que les Tsilhqot'in considèrent faire partie de leur territoire ancestral. La bande s'y est opposée et a sollicité un jugement déclaratoire interdisant l'exploitation forestière commerciale sur le territoire. La négociation avec la province a mené à une impasse et la revendication territoriale initiale a été modifiée de manière à inclure une revendication du titre ancestral sur le territoire en cause au nom de tous les Tsilhqot'in. Les gouvernements fédéral et provincial ont contesté la revendication du titre.

La Cour suprême de la Colombie-Britannique a conclu que l'occupation était établie dans le but de fonder l'existence du titre par la démonstration d'une utilisation régulière et exclusive de certains sites ou du territoire revendiqué ainsi que d'un petit secteur à l'extérieur de ce territoire. Appliquant un critère plus restreint fondé sur l'occupation d'un site spécifique exigeant la preuve qu'au moment de l'affirmation de la souveraineté européenne, les ancêtres du groupe autochtone utilisaient intensément une parcelle de terrain spécifique dont les limites sont raisonnablement définies, la Cour d'appel de la Colombie-Britannique a conclu que l'existence du titre revendiqué par les Tsilhqot'in n'avait pas été établie.

Held: The appeal should be allowed and a declaration of Aboriginal title over the area requested should be granted. A declaration that British Columbia breached its duty to consult owed to the Tsilhqot'in Nation should also be granted.

The trial judge was correct in finding that the Tsilhqot'in had established Aboriginal title to the claim area at issue. The claimant group, here the Tsilhqot'in, bears the onus of establishing Aboriginal title. The task is to identify how pre-sovereignty rights and interests can properly find expression in modern common law terms. Aboriginal title flows from occupation in the sense of regular and exclusive use of land. To ground Aboriginal title "occupation" must be sufficient, continuous (where present occupation is relied on) and exclusive. In determining what constitutes sufficient occupation, which lies at the heart of this appeal, one looks to the Aboriginal culture and practices, and compares them in a culturally sensitive way with what was required at common law to establish title on the basis of occupation. Occupation sufficient to ground Aboriginal title is not confined to specific sites of settlement but extends to tracts of land that were regularly used for hunting, fishing or otherwise exploiting resources and over which the group exercised effective control at the time of assertion of European sovereignty.

In finding that Aboriginal title had been established in this case, the trial judge identified the correct legal test and applied it appropriately to the evidence. While the population was small, he found evidence that the parts of the land to which he found title were regularly used by the Tsilhqot'in, which supports the conclusion of sufficient occupation. The geographic proximity between sites for which evidence of recent occupation was tendered and those for which direct evidence of historic occupation existed also supports an inference of continuous occupation. And from the evidence that prior to the assertion of sovereignty the Tsilhqot'in repelled other people from their land and demanded permission from outsiders who wished to pass over it, he concluded that the Tsilhqot'in treated the land as exclusively theirs. The Province's criticisms of the trial judge's findings on the facts are primarily rooted in the erroneous thesis that only specific, intensively occupied areas can support Aboriginal title. Moreover, it was the trial judge's task to sort out conflicting evidence and make findings of fact.

Arrêt : Le pourvoi est accueilli et la Cour reconnaît l'existence du titre ancestral sur le territoire que vise la revendication. La Cour déclare également que la Colombie-Britannique a manqué à son obligation de consultation envers la Nation Tsilhqot'in.

Le juge de première instance a eu raison de conclure que les Tsilhqot'in avaient établi l'existence du titre ancestral sur le territoire revendiqué en cause. Il incombe au groupe revendicateur, en l'espèce les Tsilhqot'in, d'établir l'existence du titre ancestral. Il faut déterminer la façon dont les droits et intérêts qui existaient avant l'affirmation de la souveraineté peuvent trouver leur juste expression en common law moderne. Le titre ancestral découle de l'occupation, c'est-à-dire d'une utilisation régulière et exclusive des terres. Pour fonder l'existence du titre ancestral, l'« occupation » doit être suffisante, continue (si l'occupation actuelle est invoquée) et exclusive. Pour déterminer ce qui constitue une occupation suffisante, l'exigence qui se trouve au cœur du présent pourvoi, il faut examiner la culture et les pratiques des Autochtones et les comparer, tout en tenant compte de leurs particularités culturelles, à ce qui était requis en common law pour établir l'existence d'un titre fondé sur l'occupation. L'occupation suffisante pour fonder l'existence d'un titre ancestral ne se limite pas aux lieux spécifiques d'établissement, mais s'étend aux parcelles de terre régulièrement utilisées pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation des ressources et sur lesquelles le groupe exerçait un contrôle effectif au moment de l'affirmation de la souveraineté européenne.

En concluant que l'existence du titre ancestral avait été établie en l'espèce, le juge de première instance a identifié le bon critère juridique et l'a correctement appliqué à la preuve. Le territoire était peu peuplé, mais il a relevé des éléments de preuve indiquant que les parties du territoire sur lesquelles il a conclu à l'existence du titre étaient régulièrement utilisées par les Tsilhqot'in, ce qui appuyait sa conclusion quant à la possession suffisante. La proximité géographique entre les sites à l'égard desquels une preuve d'occupation récente a été produite et ceux à l'égard desquels il existait une preuve directe d'occupation passée appuyait également l'inférence d'une occupation continue. Au vu de la preuve indiquant que les Tsilhqot'in, avant l'affirmation de la souveraineté, ont repoussé d'autres peuples de leurs terres et ont exigé que les étrangers qui désiraient passer sur leurs terres leur demandent la permission, il a conclu que les Tsilhqot'in considéraient qu'ils possédaient leurs terres en exclusivité. Les critiques de la province à l'endroit des conclusions de fait du juge de première

The presence of conflicting evidence does not demonstrate palpable and overriding error. The Province has not established that the conclusions of the trial judge are unsupported by the evidence or otherwise in error. Nor has it established his conclusions were arbitrary or insufficiently precise. Absent demonstrated error, his findings should not be disturbed.

The nature of Aboriginal title is that it confers on the group that holds it the exclusive right to decide how the land is used and the right to benefit from those uses, subject to the restriction that the uses must be consistent with the group nature of the interest and the enjoyment of the land by future generations. Prior to establishment of title, the Crown is required to consult in good faith with any Aboriginal groups asserting title to the land about proposed uses of the land and, if appropriate, accommodate the interests of such claimant groups. The level of consultation and accommodation required varies with the strength of the Aboriginal group's claim to the land and the seriousness of the potentially adverse effect upon the interest claimed.

Where Aboriginal title has been established, the Crown must not only comply with its procedural duties, but must also justify any incursions on Aboriginal title lands by ensuring that the proposed government action is substantively consistent with the requirements of s. 35 of the *Constitution Act, 1982*. This requires demonstrating both a compelling and substantial governmental objective and that the government action is consistent with the fiduciary duty owed by the Crown to the Aboriginal group. This means the government must act in a way that respects the fact that Aboriginal title is a group interest that inheres in present and future generations, and the duty infuses an obligation of proportionality into the justification process: the incursion must be necessary to achieve the government's goal (rational connection); the government must go no further than necessary to achieve it (minimal impairment); and the benefits that may be expected to flow from that goal must not be outweighed by adverse effects on the Aboriginal interest (proportionality of impact). Allegations of infringement or failure to adequately consult can be avoided by obtaining the consent of the interested Aboriginal group. This s. 35

instance reposent principalement sur la thèse erronée voulant que le titre ancestral s'attache uniquement à des secteurs spécifiques occupés intensivement. En outre, il appartenait au juge de première instance de faire la part des éléments de preuve contradictoires et de tirer des conclusions de fait. La présence d'éléments de preuve contradictoires ne démontre pas l'existence d'une erreur manifeste et dominante. La province n'a pas démontré que les conclusions du juge de première instance ne sont pas étayées par la preuve ou qu'elles sont autrement erronées. Elle n'a pas non plus démontré que ses conclusions étaient arbitraires ou manquaient de précision. En l'absence d'une erreur manifeste, ses conclusions ne devraient pas être modifiées.

De par sa nature, le titre ancestral confère au groupe qui le détient le droit exclusif de déterminer l'utilisation qu'il est fait des terres et de bénéficier des avantages que procure cette utilisation, pourvu que les utilisations respectent la nature collective de ce droit et préservent la jouissance des terres pour les générations futures. Avant que l'existence du titre soit établie, la Couronne est tenue de consulter de bonne foi les groupes autochtones qui revendiquent le titre sur des terres au sujet de ses projets d'utilisation des terres et, s'il y a lieu, de trouver des accommodements aux intérêts de ces groupes. Le niveau de consultation et d'accommodement requis varie en fonction de la solidité de la revendication du groupe autochtone et de la gravité de l'effet préjudiciable éventuel du projet sur l'intérêt revendiqué.

Lorsque l'existence du titre ancestral a été établie, la Couronne doit non seulement se conformer à ses obligations procédurales, mais elle doit aussi justifier toute incursion sur les terres visées par le titre ancestral en s'assurant que la mesure gouvernementale proposée est fondamentalement conforme aux exigences de l'art. 35 de la *Loi constitutionnelle de 1982*. Elle doit à cette fin démontrer l'existence d'un objectif public réel et impérieux, et la compatibilité de la mesure gouvernementale avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone. Le gouvernement doit donc agir d'une manière qui respecte le fait que le titre ancestral est un droit collectif inhérent aux générations actuelles et futures et que l'obligation fiduciaire de la Couronne insufflé une obligation de proportionnalité dans le processus de justification : l'atteinte doit être nécessaire pour atteindre l'objectif gouvernemental (lien rationnel); le gouvernement ne doit pas aller au-delà de ce qui est nécessaire pour atteindre cet objectif (atteinte minimale); et les effets préjudiciables sur l'intérêt autochtone ne doivent pas l'emporter sur les avantages qui devraient découler de cet objectif (proportionnalité de l'incidence).

framework permits a principled reconciliation of Aboriginal rights with the interests of all Canadians.

The alleged breach in this case arises from the issuance by the Province of licences affecting the land in 1983 and onwards, before title was declared. The honour of the Crown required that the Province consult the Tsilhqot'in on uses of the lands and accommodate their interests. The Province did neither and therefore breached its duty owed to the Tsilhqot'in.

While unnecessary for the disposition of the appeal, the issue of whether the *Forest Act* applies to Aboriginal title land is of pressing importance and is therefore addressed. As a starting point, subject to the constitutional constraints of s. 35 of the *Constitution Act, 1982* and the division of powers in the *Constitution Act, 1867*, provincial laws of general application apply to land held under Aboriginal title. As a matter of statutory construction, the *Forest Act* on its face applied to the land in question at the time the licences were issued. The British Columbia legislature clearly intended and proceeded on the basis that lands under claim remain "Crown land" for the purposes of the *Forest Act* at least until Aboriginal title is recognized. Now that title has been established, however, the timber on it no longer falls within the definition of "Crown timber" and the *Forest Act* no longer applies. It remains open to the legislature to amend the Act to cover lands over which Aboriginal title has been established, provided it observes applicable constitutional restraints.

This raises the question of whether provincial forestry legislation that on its face purports to apply to Aboriginal title lands, such as the *Forest Act*, is ousted by the s. 35 framework or by the limits on provincial power under the *Constitution Act, 1867*. Under s. 35, a right will be infringed by legislation if the limitation is unreasonable, imposes undue hardship, or denies the holders of the right their preferred means of exercising the right. General regulatory legislation, such as legislation aimed at managing the forests in a way that deals with pest invasions or prevents forest fires, will often pass this test and

Les allégations d'atteinte aux droits ou de manquement à l'obligation de consulter adéquatement le groupe peuvent être évitées par l'obtention du consentement du groupe autochtone en question. Ce cadre d'analyse relatif à l'art. 35 permet une conciliation rationnelle des droits ancestraux et des intérêts de tous les Canadiens.

En l'espèce, le manquement allégué découle de la délivrance, par la province, de permis de coupe de bois sur les terres à compter de 1983, avant que l'existence du titre soit reconnue. Le principe de l'honneur de la Couronne obligeait la province à consulter les Tsilhqot'in à propos des utilisations des terres et à trouver des accommodements à leurs intérêts. La province n'a fait ni l'un ni l'autre et a donc manqué à son obligation envers les Tsilhqot'in.

La question de l'application de la *Forest Act* aux terres visées par un titre ancestral revêt une grande importance, et bien qu'il ne soit pas nécessaire de la trancher pour les besoins du présent pourvoi, il convient de l'examiner. Comme point de départ, sous réserve des contraintes constitutionnelles qu'imposent l'art. 35 de la *Loi constitutionnelle de 1982* et le partage des compétences prévu dans la *Loi constitutionnelle de 1867*, les lois provinciales d'application générale s'appliquent aux terres détenues en vertu d'un titre ancestral. Suivant les règles d'interprétation législative, la *Forest Act* s'appliquait, à première vue, aux terres en question à l'époque où les permis ont été délivrés. Le législateur de la Colombie-Britannique entendait clairement que les terres revendiquées demeurent des « terres publiques » pour les besoins de la *Forest Act*, du moins jusqu'à ce que le titre ancestral soit reconnu; c'est sur quoi la province s'est fondée pour accorder le permis. Cependant, maintenant que l'existence du titre a été établie, la définition de « bois des terres publiques » ne s'applique plus au bois qui se trouve sur ces terres et la *Forest Act* ne s'applique plus à ces terres. Le législateur peut toujours modifier la *Forest Act* afin qu'elle s'applique au territoire sur lequel le titre ancestral a été établi, à la condition de respecter les contraintes constitutionnelles applicables.

Cela soulève la question de savoir si le cadre d'analyse relatif à l'art. 35, ou les limites à la compétence que la *Loi constitutionnelle de 1867* accorde à la province, écartent les lois provinciales régissant l'exploitation forestière, telle la *Forest Act*, qui sont à première vue censées s'appliquer aux terres visées par un titre ancestral. Aux termes de l'art. 35, une loi portera atteinte à un droit si la restriction est déraisonnable, si elle est indûment rigoureuse ou si elle refuse aux titulaires du droit le recours à leur moyen préféré de l'exercer. Une loi de nature réglementaire de portée générale, par

no infringement will result. However, the issuance of timber licences on Aboriginal title land is a direct transfer of Aboriginal property rights to a third party and will plainly be a meaningful diminution in the Aboriginal group's ownership right amounting to an infringement that must be justified in cases where it is done without Aboriginal consent.

Finally, for purposes of determining the validity of provincial legislative incursions on lands held under Aboriginal title, the framework under s. 35 displaces the doctrine of interjurisdictional immunity. There is no role left for the application of the doctrine of interjurisdictional immunity and the idea that Aboriginal rights are at the core of the federal power over "Indians" under s. 91(24) of the *Constitution Act, 1867*. The doctrine of interjurisdictional immunity is directed to ensuring that the two levels of government are able to operate without interference in their core areas of exclusive jurisdiction. This goal is not implicated in cases such as this. Aboriginal rights are a limit on both federal and provincial jurisdiction. The problem in cases such as this is not competing provincial and federal power, but rather tension between the right of the Aboriginal title holders to use their land as they choose and the province which seeks to regulate it, like all other land in the province. Interjurisdictional immunity — premised on a notion that regulatory environments can be divided into watertight jurisdictional compartments — is often at odds with modern reality. Increasingly, as our society becomes more complex, effective regulation requires cooperation between interlocking federal and provincial schemes. Interjurisdictional immunity may thwart such productive cooperation.

In the result, provincial regulation of general application, including the *Forest Act*, will apply to exercises of Aboriginal rights such as Aboriginal title land, subject to the s. 35 infringement and justification framework. This carefully calibrated test attempts to reconcile general legislation with Aboriginal rights in a sensitive way as required by s. 35 of the *Constitution Act, 1982* and is fairer and more practical from a policy perspective than the blanket inapplicability imposed by the doctrine of interjurisdictional immunity. The result is a balance that

exemple une loi visant la gestion des forêts en prévenant les infestations de ravageurs ou les feux de forêt, satisfera souvent à ce critère et il n'en résultera aucune atteinte. Toutefois, la délivrance de permis de coupe de bois sur des terres grevées du titre ancestral constitue un transfert direct à des tiers de droits de propriété des Autochtones et entraîne manifestement une diminution significative du droit de propriété du groupe autochtone assimilable à une atteinte qui doit être justifiée dans les cas où les Autochtones n'y ont pas consenti.

Enfin, lorsqu'il s'agit de déterminer la validité d'une atteinte causée par l'application des lois provinciales à des terres visées par un titre ancestral, le cadre d'analyse relatif à l'art. 35 écarte la doctrine de l'exclusivité des compétences. L'application de la doctrine de l'exclusivité des compétences et la notion que les droits ancestraux font partie du contenu essentiel du pouvoir fédéral sur les « Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867* ne sont alors d'aucune utilité. La doctrine de l'exclusivité des compétences vise à faire en sorte que les deux niveaux de gouvernement soient en mesure de fonctionner sans que l'un empiète sur le contenu essentiel des domaines de compétence exclusive de l'autre. Cet objectif n'est pas en cause dans les affaires telles que celle qui nous occupe. Les droits ancestraux constituent une limite à l'exercice des compétences tant fédérales que provinciales. Le problème dans des cas comme celui-ci ne résulte pas d'une confrontation entre le pouvoir des provinces et celui du gouvernement fédéral mais plutôt d'une tension entre le droit des titulaires du titre ancestral d'utiliser leurs terres comme ils l'entendent et la volonté de la province de réglementer ces terres au même titre que toutes les autres terres dans la province. La doctrine de l'exclusivité des compétences — fondée sur l'idée que les contextes réglementaires peuvent être divisés en compartiments étanches — va souvent à l'encontre de la réalité moderne. Notre société devient plus complexe, et pour être efficace, la réglementation exige de plus en plus la coopération des régimes fédéral et provincial interreliés. La doctrine de l'exclusivité des compétences peut contrecarrer une telle coopération.

En conséquence, la réglementation provinciale d'application générale, notamment la *Forest Act*, s'appliquera à l'exercice des droits ancestraux tels que le titre ancestral sur des terres, sous réserve de l'application du cadre d'analyse relatif à l'art. 35 qui permet de justifier une atteinte. Ce critère soigneusement conçu vise à concilier la loi d'application générale et les droits ancestraux avec la délicatesse qu'exige l'art. 35 de la *Loi constitutionnelle de 1982*, et il est plus équitable et pratique du point de vue de la politique générale que l'inapplicabilité générale

preserves the Aboriginal right while permitting effective regulation of forests by the province. In this case, however, the Province's land use planning and forestry authorizations under the *Forest Act* were inconsistent with its duties owed to the Tsilhqot'in people.

qu'impose la doctrine de l'exclusivité des compétences. Il en résulte un équilibre qui préserve le droit ancestral tout en permettant une réglementation efficace des forêts par la province. En l'espèce toutefois, le projet d'aménagement du territoire prévu par la province et les autorisations d'exploitation forestière qu'elle a accordées en vertu de la *Forest Act* étaient incompatibles avec les obligations qu'elle avait envers le peuple Tsilhqot'in.

THE CHIEF JUSTICE —

LA JUGE EN CHEF —

I. Introduction

I. Introduction

[1] What is the test for Aboriginal title to land? If title is established, what rights does it confer? Does the British Columbia *Forest Act*, R.S.B.C. 1996, c. 157, apply to land covered by Aboriginal title? What are the constitutional constraints on provincial regulation of land under Aboriginal

[1] Quel critère permet d'établir l'existence d'un titre ancestral sur un territoire? Si l'existence d'un titre est établie, quels droits confère-t-il? La *Forest Act*, R.S.B.C. 1996, ch. 157, de la Colombie-Britannique s'applique-t-elle aux terres visées par un titre ancestral? Quelles contraintes

title? Finally, how are broader public interests to be reconciled with the rights conferred by Aboriginal title? These are among the important questions raised by this appeal.

[2] These reasons conclude:

- Aboriginal title flows from occupation in the sense of regular and exclusive use of land.
- In this case, Aboriginal title is established over the area designated by the trial judge.
- Aboriginal title confers the right to use and control the land and to reap the benefits flowing from it.
- Where title is asserted, but has not yet been established, s. 35 of the *Constitution Act, 1982* requires the Crown to consult with the group asserting title and, if appropriate, accommodate its interests.
- Once Aboriginal title is established, s. 35 of the *Constitution Act, 1982* permits incursions on it only with the consent of the Aboriginal group or if they are justified by a compelling and substantial public purpose and are not inconsistent with the Crown's fiduciary duty to the Aboriginal group; for purposes of determining the validity of provincial legislative incursions on lands held under Aboriginal title, this framework displaces the doctrine of interjurisdictional immunity.
- In this case, the Province's land use planning and forestry authorizations were inconsistent with its duties owed to the Tsilhqot'in people.

constitutionnelles sont imposées à la réglementation, par la province, des terres visées par un titre ancestral? Enfin, comment concilier l'intérêt public général et les droits conférés par un titre ancestral? Voilà quelques questions importantes soulevées dans le présent pourvoi.

[2] Voici les conclusions tirées dans les présents motifs :

- Le titre ancestral découle de l'occupation, c'est-à-dire d'une utilisation régulière et exclusive des terres.
- En l'espèce, l'existence d'un titre ancestral est établie à l'égard du territoire désigné par le juge de première instance.
- Le titre ancestral confère le droit d'utiliser et de contrôler le territoire et de tirer les avantages qui en découlent.
- Lorsque le titre est revendiqué, mais que son existence n'a pas encore été établie, l'art. 35 de la *Loi constitutionnelle de 1982* oblige la Couronne à consulter le groupe qui revendique ce titre et, s'il y a lieu, à trouver des accommodements à ses intérêts.
- Une fois établie l'existence du titre ancestral, l'art. 35 de la *Loi constitutionnelle de 1982* permet d'y porter atteinte seulement si le groupe autochtone y consent ou si l'atteinte est justifiée par un objectif public réel et impérieux et si elle est compatible avec l'obligation fiduciaire de la Couronne envers le groupe autochtone; lorsqu'il s'agit de déterminer la validité d'une atteinte causée par l'application des lois provinciales aux terres visées par un titre ancestral, ce cadre d'analyse écarte la doctrine de l'exclusivité des compétences.
- En l'espèce, le projet d'aménagement du territoire de la province et les autorisations d'exploitation forestière accordées par elle étaient incompatibles avec les obligations qu'elle avait envers le peuple Tsilhqot'in.

II. The Historic Backdrop

[3] For centuries, people of the Tsilhqot'in Nation — a grouping of six bands sharing common culture and history — have lived in a remote valley bounded by rivers and mountains in central British Columbia. They lived in villages, managed lands for the foraging of roots and herbs, hunted and trapped. They repelled invaders and set terms for the European traders who came onto their land. From the Tsilhqot'in perspective, the land has always been theirs.

[4] Throughout most of Canada, the Crown entered into treaties whereby the indigenous peoples gave up their claim to land in exchange for reservations and other promises, but, with minor exceptions, this did not happen in British Columbia. The Tsilhqot'in Nation is one of hundreds of indigenous groups in British Columbia with unresolved land claims.

[5] The issue of Tsilhqot'in title lay latent until 1983, when the Province granted Carrier Lumber Ltd. a forest licence to cut trees in part of the territory at issue. The Xeni Gwet'in First Nations government (one of the six bands that make up the Tsilhqot'in Nation) objected and sought a declaration prohibiting commercial logging on the land. The dispute led to the blockade of a bridge the forest company was upgrading. The blockade ceased when the Premier promised that there would be no further logging without the consent of the Xeni Gwet'in. Talks between the Ministry of Forests and the Xeni Gwet'in ensued, but reached an impasse over the Xeni Gwet'in claim to a right of first refusal to logging. In 1998, the original claim was amended to include a claim for Aboriginal title on behalf of all Tsilhqot'in people.

[6] The claim is confined to approximately five percent of what the Tsilhqot'in — a total of about

II. Le contexte historique

[3] Depuis des siècles, le peuple de la nation Tsilhqot'in — un regroupement de six bandes ayant une culture et une histoire communes — vit dans une vallée éloignée entourée de rivières et de montagnes dans le centre de la Colombie-Britannique. Les membres de cette nation ont vécu dans des villages, géré des terres pour y récolter des végétaux à racine et des herbes; ils ont chassé et piégé. Ils ont repoussé les envahisseurs et imposé des conditions aux marchands européens qui entraient sur leur territoire. De leur point de vue, le territoire leur a toujours appartenu.

[4] La Couronne a conclu presque partout au Canada des traités en vertu desquels les peuples autochtones ont renoncé à leurs revendications territoriales en échange de réserves et d'autres promesses, mais, à quelques exceptions près, ce n'est pas ce qui s'est produit en Colombie-Britannique. La nation Tsilhqot'in n'est qu'un groupe autochtone parmi des centaines en Colombie-Britannique dont les revendications territoriales ne sont pas réglées.

[5] La question du titre des Tsilhqot'in est demeurée latente jusqu'en 1983, quand la province a accordé à Carrier Lumber Ltd. un permis d'exploitation forestière l'autorisant à abattre des arbres dans une partie du territoire en question. Le gouvernement de la Première Nation Xeni Gwet'in (une des six bandes qui constituent la nation Tsilhqot'in) s'y est opposé et a sollicité un jugement déclaratoire interdisant l'exploitation forestière commerciale sur le territoire. Le litige a mené au barrage d'un pont que l'entreprise forestière voulait moderniser. Le barrage a été levé quand le premier ministre a promis qu'il n'y aurait aucune autre exploitation forestière sans le consentement des Xeni Gwet'in. Le ministère des Forêts et les Xeni Gwet'in ont négocié, mais ils n'ont pu s'entendre sur le droit de premier refus revendiqué par les Xeni Gwet'in à l'égard de l'exploitation forestière. En 1998, la revendication initiale a été modifiée de manière à inclure une revendication du titre ancestral au nom de tous les Tsilhqot'in.

[6] La revendication se limite à environ cinq pour cent de ce que les Tsilhqot'in — approximativement

3,000 people — regard as their traditional territory. The area in question is sparsely populated. About 200 Tsilhqot'in people live there, along with a handful of non-indigenous people who support the Tsilhqot'in claim to title. There are no adverse claims from other indigenous groups. The federal and provincial governments both oppose the title claim.

[7] In 2002, the trial commenced before Vickers J. of the British Columbia Supreme Court, and continued for 339 days over a span of five years. The trial judge spent time in the claim area and heard extensive evidence from elders, historians and other experts. He found that the Tsilhqot'in people were in principle entitled to a declaration of Aboriginal title to a portion of the claim area as well as to a small area outside the claim area. However, for procedural reasons which are no longer relied on by the Province, he refused to make a declaration of title (2007 BCSC 1700, [2008] 1 C.N.L.R. 112).

[8] In 2012, the British Columbia Court of Appeal held that the Tsilhqot'in claim to title had not been established, but left open the possibility that in the future, the Tsilhqot'in might be able to prove title to specific sites within the area claimed. For the rest of the claimed territory, the Tsilhqot'in were confined to Aboriginal rights to hunt, trap and harvest (2012 BCCA 285, 33 B.C.L.R. (5th) 260).

[9] The Tsilhqot'in now ask this Court for a declaration of Aboriginal title over the area designated by the trial judge, with one exception. A small portion of the area designated by the trial judge consists of either privately owned or underwater lands and no declaration of Aboriginal title over these lands is sought before this Court. With respect to those areas designated by the trial judge that are not privately owned or submerged lands, the Tsilhqot'in ask this Court to restore the trial judge's finding, affirm their title to the area he designated, and confirm that issuance of forestry licences on the

3 000 personnes — considèrent comme étant leur territoire traditionnel. Ce territoire est peu peuplé. Environ 200 membres des Tsilhqot'in y vivent, ainsi que quelques non-Autochtones qui appuient la revendication du titre des Tsilhqot'in. Aucun autre groupe autochtone n'a revendiqué un titre sur ce territoire. Les gouvernements fédéral et provincial s'opposent tous deux à la revendication du titre.

[7] Le procès a débuté en 2002 devant le juge Vickers de la Cour suprême de la Colombie-Britannique et a duré 339 jours sur une période de cinq ans. Le juge de première instance s'est rendu sur le territoire revendiqué et a entendu de nombreux témoignages des aînés, des historiens et d'autres experts. Il a conclu que les Tsilhqot'in avaient droit, en principe, à un jugement déclarant l'existence d'un titre ancestral sur une partie du territoire revendiqué ainsi que sur un petit secteur à l'extérieur de ce territoire. Cependant, pour des raisons d'ordre procédural que la province n'invoque plus, il a refusé dans son jugement de déclarer l'existence d'un titre ancestral (2007 BCSC 1700, [2008] 1 C.N.L.R. 112).

[8] En 2012, la Cour d'appel de la Colombie-Britannique a conclu que l'existence du titre revendiqué par les Tsilhqot'in n'avait pas été établie, mais n'a pas écarté la possibilité que les Tsilhqot'in puissent éventuellement établir l'existence d'un titre sur certains sites à l'intérieur du territoire revendiqué. En ce qui concerne le reste du territoire revendiqué, les Tsilhqot'in n'ont obtenu que les droits ancestraux de chasse, de piégeage et de récolte (2012 BCCA 285, 33 B.C.L.R. (5th) 260).

[9] Les Tsilhqot'in demandent maintenant à notre Cour de reconnaître l'existence du titre ancestral sur le territoire désigné par le juge de première instance, sous réserve d'une exception. Sur une petite partie du territoire désigné par le juge se trouvent des terrains privés ou des terres submergées à l'égard desquels la reconnaissance du titre ancestral n'est pas demandée devant notre Cour. Pour ce qui est des terres désignées par le juge qui ne sont pas des terrains privés ou des terres submergées, les Tsilhqot'in demandent à notre Cour de rétablir les conclusions du juge de première instance, de

land unjustifiably infringed their rights under that title.

III. The Jurisprudential Backdrop

[10] In 1973, the Supreme Court of Canada ushered in the modern era of Aboriginal land law by ruling that Aboriginal land rights survived European settlement and remain valid to the present unless extinguished by treaty or otherwise: *Calder v. Attorney-General of British Columbia*, [1973] S.C.R. 313. Although the majority in *Calder* divided on whether title had been extinguished, its affirmation of Aboriginal rights to land led the Government of Canada to begin treaty negotiations with First Nations without treaties — mainly in British Columbia — resuming a policy that had been abandoned in the 1920s: P. W. Hogg, “The Constitutional Basis of Aboriginal Rights”, in M. Morellato, ed., *Aboriginal Law Since Delgamuukw* (2009), 3.

[11] Almost a decade after *Calder*, the enactment of s. 35 of the *Constitution Act, 1982* “recognized and affirmed” existing Aboriginal rights, although it took some time for the meaning of this section to be fully fleshed out.

[12] In *Guerin v. The Queen*, [1984] 2 S.C.R. 335, this Court confirmed the potential for Aboriginal title in ancestral lands. The actual dispute concerned government conduct with respect to reserve lands. The Court held that the government had breached a fiduciary duty to the Musqueam Indian Band. In a concurring opinion, Justice Dickson (later Chief Justice) addressed the theory underlying Aboriginal title. He held that the Crown acquired radical or underlying title to all the land in British Columbia at the time of sovereignty. However, this title was burdened by the “pre-existing legal right” of

confirmer qu’ils possèdent le titre ancestral sur le secteur qu’il a désigné et de confirmer que la délivrance de permis d’exploitation forestière sur les terres a indûment porté atteinte aux droits que leur confère ce titre.

III. Le contexte jurisprudentiel

[10] En 1973, la Cour suprême du Canada a marqué le début de l’ère moderne du droit inhérent aux terres ancestrales en statuant que les droits fonciers des Autochtones avaient subsisté à l’établissement des Européens et qu’ils étaient toujours valides s’ils n’avaient pas été éteints par traité ou autrement : *Calder c. Procureur général de la Colombie-Britannique*, [1973] R.C.S. 313. Bien que les juges majoritaires dans *Calder* étaient divisés quant à savoir si le titre avait été éteint, leur confirmation des droits fonciers ancestraux a incité le gouvernement du Canada à entamer des négociations avec les Premières Nations non assujetties à des traités en vue de conclure des traités — principalement en Colombie-Britannique — reprenant ainsi une politique qui avait été abandonnée dans les années 1920 : P. W. Hogg, « The Constitutional Basis of Aboriginal Rights », dans M. Morellato, dir., *Aboriginal Law Since Delgamuukw* (2009), 3.

[11] Presque 10 ans après l’arrêt *Calder*, les droits existants des Autochtones ont été « reconnus et confirmés » avec l’adoption de l’art. 35 de la *Loi constitutionnelle de 1982*, bien qu’il ait fallu un certain temps pour bien préciser le sens de cette disposition.

[12] Dans l’arrêt *Guerin c. La Reine*, [1984] 2 R.C.S. 335, notre Cour a confirmé qu’il était possible que les Autochtones détiennent un titre sur les terres ancestrales. Le litige se rapportait à la conduite du gouvernement à l’égard de terres situées sur une réserve. La Cour a conclu que le gouvernement avait manqué à une obligation fiduciaire envers la bande indienne Musqueam. Dans une opinion concourante, le juge Dickson (plus tard Juge en chef) a examiné la théorie sous-jacente au titre ancestral. Selon lui, la Couronne a acquis un titre absolu ou sous-jacent sur toutes les terres situées

Aboriginal people based on their use and occupation of the land prior to European arrival (pp. 379-82). Dickson J. characterized this Aboriginal interest in the land as “an independent legal interest” (at p. 385), which gives rise to a *sui generis* fiduciary duty on the part of the Crown.

[13] In 1990, this Court held that s. 35 of the *Constitution Act, 1982* constitutionally protected all Aboriginal rights that had not been extinguished prior to April 17, 1982, and imposed a fiduciary duty on the Crown with respect to those rights: *R. v. Sparrow*, [1990] 1 S.C.R. 1075. The Court held that under s. 35, legislation can infringe rights protected by s. 35 only if it passes a two-step justification analysis: the legislation must further a “compelling and substantial” purpose and account for the “priority” of the infringed Aboriginal interest under the fiduciary obligation imposed on the Crown (pp. 1113-19).

[14] The principles developed in *Calder*, *Guerin* and *Sparrow* were consolidated and applied in the context of a claim for Aboriginal title in *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010. This Court confirmed the *sui generis* nature of the rights and obligations to which the Crown’s relationship with Aboriginal peoples gives rise, and stated that what makes Aboriginal title unique is that it arises from possession *before* the assertion of British sovereignty, as distinguished from other estates such as fee simple that arise *afterward*. The dual perspectives of the common law and of the Aboriginal group bear equal weight in evaluating a claim for Aboriginal title.

[15] The Court in *Delgamuukw* summarized the content of Aboriginal title by two propositions, one positive and one negative. Positively, “[A]boriginal

en Colombie-Britannique au moment de l’affirmation de la souveraineté. Cependant, ce titre était grevé du « droit, en *common law*, qui existait déjà » que détiennent les peuples autochtones du fait de leur utilisation et de leur occupation des terres avant l’arrivée des Européens (p. 379-382). Le juge Dickson a affirmé que le droit des Autochtones sur leurs terres avait « une existence juridique indépendante » (p. 385), lequel donne naissance à une obligation fiduciaire *sui generis* de la Couronne.

[13] En 1990, notre Cour a conclu que l’art. 35 de la *Loi constitutionnelle de 1982* accordait une protection constitutionnelle à tous les droits ancestraux qui n’avaient pas été éteints avant le 17 avril 1982 et imposait à la Couronne une obligation fiduciaire relativement à ces droits : *R. c. Sparrow*, [1990] 1 R.C.S. 1075. La Cour a déclaré que, sous le régime de l’art. 35, un texte de loi ne peut porter atteinte aux droits protégés par cet article que si l’atteinte résiste à une analyse de la justification en deux étapes : le texte de loi doit poursuivre un objectif « impérieux et réel » et doit reconnaître la « priorité » du droit ancestral en cause qui découle de l’obligation fiduciaire imposée à la Couronne (p. 1113-1119).

[14] Les principes établis dans les arrêts *Calder*, *Guerin* et *Sparrow* ont été réunis et appliqués dans le contexte d’une revendication du titre ancestral dans l’arrêt *Delgamuukw c. Colombie-Britannique*, [1997] 3 R.C.S. 1010. Notre Cour a confirmé le caractère *sui generis* des droits et des obligations auxquels la relation entre la Couronne et les peuples autochtones donne naissance, et elle a déclaré que ce qui rend le titre ancestral unique est le fait qu’il découle d’une possession *antérieure* à l’affirmation de la souveraineté britannique, contrairement aux autres domaines, comme le fief simple, qui ont pris naissance *par la suite*. Il faut accorder une importance égale à la common law et au point de vue des Autochtones au moment d’évaluer une revendication du titre ancestral.

[15] Dans l’arrêt *Delgamuukw*, la Cour a résumé le contenu du titre ancestral au moyen de deux énoncés, l’un positif et l’autre négatif. De façon

title encompasses the right to exclusive use and occupation of the land held pursuant to that title for a variety of purposes, which need not be aspects of those [A]boriginal practices, customs and traditions which are integral to distinctive [A]boriginal cultures” (para. 117). Negatively, the “protected uses must not be irreconcilable with the nature of the group’s attachment to that land” (*ibid.*) — that is, it is group title and cannot be alienated in a way that deprives future generations of the control and benefit of the land.

[16] The Court in *Delgamuukw* confirmed that infringements of Aboriginal title can be justified under s. 35 of the *Constitution Act, 1982* pursuant to the *Sparrow* test and described this as a “necessary part of the reconciliation of [A]boriginal societies with the broader political community of which they are part” (at para. 161), quoting *R. v. Gladstone*, [1996] 2 S.C.R. 723, at para. 73. While *Sparrow* had spoken of *priority* of Aboriginal rights infringed by regulations over non-aboriginal interests, *Delgamuukw* articulated the “different” (at para. 168) approach of involvement of Aboriginal peoples — varying depending on the severity of the infringement — in decisions taken with respect to their lands.

[17] In *Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511, the Court applied the *Delgamuukw* idea of involvement of the affected Aboriginal group in decisions about its land to the situation where development is proposed on land over which Aboriginal title is asserted but has not yet been established. The Court affirmed a spectrum of consultation. The Crown’s duty to consult and accommodate the asserted Aboriginal interest “is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed” (para. 39). Thus, the idea of proportionate balancing implicit in *Delgamuukw* reappears in *Haida*. The Court in

positive, « le titre aborigène comprend le droit d’utiliser et d’occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins qui ne doivent pas nécessairement être des aspects de coutumes, pratiques et traditions autochtones faisant partie intégrante d’une culture autochtone distinctive » (par. 117). De façon négative, ces « utilisations protégées ne doivent pas être incompatibles avec la nature de l’attachement qu’a le groupe concerné pour ces terres » (*ibid.*) — c’est-à-dire que le titre appartient au groupe et qu’il ne peut pas être aliéné d’une manière qui prive les générations futures du contrôle et du bénéfice des terres.

[16] Dans *Delgamuukw*, la Cour a confirmé que les atteintes au titre ancestral peuvent être justifiées au regard de l’art. 35 de la *Loi constitutionnelle de 1982* suivant le critère énoncé dans l’arrêt *Sparrow* et a décrit les droits ancestraux comme un « élément nécessaire de la conciliation de l’existence des sociétés autochtones avec la communauté politique plus large à laquelle ces dernières appartiennent » (par. 161), citant *R. c. Gladstone*, [1996] 2 R.C.S. 723, par. 73. Alors que dans l’arrêt *Sparrow* il était question de la *priorité* des droits ancestraux violés par des dispositions réglementaires sur les intérêts non autochtones, l’arrêt *Delgamuukw* a exposé « autrement » (au par. 168) l’approche selon laquelle les peuples autochtones participent — participation qui varie en fonction de la gravité de l’atteinte — à la prise des décisions concernant leurs terres.

[17] Dans l’arrêt *Nation haïda c. Colombie-Britannique (Ministre des Forêts)*, 2004 CSC 73, [2004] 3 R.C.S. 511, la Cour a appliqué l’idée exprimée dans l’arrêt *Delgamuukw*, soit que le groupe autochtone visé participe à la prise des décisions concernant ses terres, à un cas où il est proposé que des activités d’exploitation soient menées sur des terres sur lesquelles le titre ancestral est revendiqué mais n’est pas encore établi. La Cour a reconnu un continuum de consultation. L’obligation de la Couronne de consulter les Autochtones et de trouver des accommodements aux droits qu’ils revendiquent « dépend de l’évaluation préliminaire de la solidité de la preuve étayant l’existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le

Haida stated that the Crown had not only a moral duty, but a legal duty to negotiate in good faith to resolve land claims (para. 25). The governing ethos is not one of competing interests but of reconciliation.

[18] The jurisprudence just reviewed establishes a number of propositions that touch on the issues that arise in this case, including:

- Radical or underlying Crown title is subject to Aboriginal land interests where they are established.
- Aboriginal title gives the Aboriginal group the right to use and control the land and enjoy its benefits.
- Governments can infringe Aboriginal rights conferred by Aboriginal title but only where they can justify the infringements on the basis of a compelling and substantial purpose and establish that they are consistent with the Crown's fiduciary duty to the group.
- Resource development on claimed land to which title has not been established requires the government to consult with the claimant Aboriginal group.
- Governments are under a legal duty to negotiate in good faith to resolve claims to ancestral lands.

Against this background, I turn to the issues raised in this appeal.

IV. Pleadings in Aboriginal Land Claims Cases

[19] The Province, to its credit, no longer contends that the claim should be barred because of

titre » (par. 39). Ainsi, la notion de mise en balance proportionnée qui ressort implicitement de l'arrêt *Delgamuukw* est reprise dans *Nation haïda*. Dans ce dernier arrêt, la Cour a indiqué que la Couronne n'avait pas seulement une obligation morale, mais une obligation légale de négocier de bonne foi dans le but de régler les revendications territoriales (par. 25). Le principe directeur ne repose pas sur les intérêts opposés mais sur la conciliation.

[18] Les arrêts que nous venons d'examiner établissent un certain nombre de postulats qui touchent à des questions soulevées en l'espèce, notamment :

- Le titre absolu ou sous-jacent de la Couronne est assujéti aux droits qu'ont les Autochtones sur les terres où ils sont établis.
- Le titre ancestral confère au groupe autochtone le droit d'utiliser et de contrôler le territoire, et de bénéficier des avantages qu'il procure.
- Les gouvernements peuvent porter atteinte aux droits ancestraux que confère le titre ancestral, mais seulement dans la mesure où ils peuvent démontrer que les atteintes poursuivent un objectif impérieux et réel et qu'elles sont compatibles avec l'obligation fiduciaire qu'a la Couronne envers le groupe.
- L'exploitation des ressources sur des terres revendiquées dont le titre n'a pas été établi exige du gouvernement qu'il consulte la nation autochtone revendicatrice.
- Les gouvernements ont l'obligation légale de négocier de bonne foi dans le but de régler les revendications de terres ancestrales.

C'est dans ce contexte que j'aborde les questions soulevées dans le présent pourvoi.

IV. Les actes de procédure dans les instances relatives aux revendications territoriales des Autochtones

[19] À sa décharge, la province ne soutient plus que la revendication doive être rejetée en raison

defects in the pleadings. However, it may be useful to address how to approach pleadings in land claims, in view of their importance to future land claims.

[20] I agree with the Court of Appeal that a functional approach should be taken to pleadings in Aboriginal cases. The function of pleadings is to provide the parties and the court with an outline of the material allegations and relief sought. Where pleadings achieve this aim, minor defects should be overlooked, in the absence of clear prejudice. A number of considerations support this approach.

[21] First, in a case such as this, the legal principles may be unclear at the outset, making it difficult to frame the claim with exactitude.

[22] Second, in these cases, the evidence as to how the land was used may be uncertain at the outset. As the claim proceeds, elders will come forward and experts will be engaged. Through the course of the trial, the historic practices of the Aboriginal group in question will be expounded, tested and clarified. The Court of Appeal correctly recognized that determining whether Aboriginal title is made out over a pleaded area is not an “all or nothing” proposition (at para. 117):

The occupation of traditional territories by First Nations prior to the assertion of Crown sovereignty was not an occupation based on a Torrens system, or, indeed, on any precise boundaries. Except where impassable (or virtually impassable) natural boundaries existed, the limits of a traditional territory were typically ill-defined and fluid. . . . [Therefore] requir[ing] proof of Aboriginal title precisely mirroring the claim would be too exacting. [para. 118]

[23] Third, cases such as this require an approach that results in decisions based on the best

de vices qui entachent les actes de procédure. Cependant, il peut être utile de déterminer l’approche à adopter à l’égard des actes de procédure dans les revendications territoriales compte tenu de leur importance pour de futures revendications territoriales.

[20] Je suis d’accord avec la Cour d’appel pour dire qu’il convient d’adopter une approche fonctionnelle à l’égard des actes de procédure dans les affaires intéressant les Autochtones. Les actes de procédure visent à fournir aux parties et au tribunal un aperçu des allégations importantes et de la réparation sollicitée. Quand les actes de procédure permettent l’atteinte de cet objectif, en l’absence d’un préjudice évident, il ne faut pas tenir compte des vices mineurs. Un certain nombre de considérations étayent cette approche.

[21] Premièrement, dans un cas comme celui qui nous occupe, les principes juridiques sont parfois ambigus de prime abord, de sorte qu’il est difficile de formuler la demande avec exactitude.

[22] Deuxièmement, en de telles circonstances, la preuve quant à la façon dont le territoire était utilisé peut être incertaine au départ, mais à mesure que la demande progresse, des aînés se manifestent et les services d’experts sont retenus. Pendant le procès, les pratiques historiques du groupe autochtone en question sont exposées, vérifiées et précisées. La Cour d’appel a reconnu à juste titre que la question de savoir si le bien-fondé de la revendication d’un titre ancestral est établi sur un territoire n’est pas une affaire de [TRADUCTION] « tout ou rien » (par. 117) :

[TRADUCTION] L’occupation des territoires traditionnels par les Premières Nations avant l’affirmation de la souveraineté de la Couronne n’était pas une occupation fondée sur le régime Torrens, ni sur des limites précises. Sauf dans les cas où il existait des limites naturelles infranchissables (ou quasi infranchissables), les limites d’un territoire traditionnel étaient habituellement mal définies et variables. [. . .] [Par conséquent] il serait trop exigeant de demander une preuve du titre ancestral qui reflète précisément la revendication. [par. 118]

[23] Troisièmement, les cas comme celui-ci requièrent une approche qui permet de rendre des

evidence that emerges, not what a lawyer may have envisaged when drafting the initial claim. What is at stake is nothing less than justice for the Aboriginal group and its descendants, and the reconciliation between the group and broader society. A technical approach to pleadings would serve neither goal. It is in the broader public interest that land claims and rights issues be resolved in a way that reflects the substance of the matter. Only thus can the project of reconciliation this Court spoke of in *Delgamuukw* be achieved.

V. Is Aboriginal Title Established?

A. *The Test for Aboriginal Title*

[24] How should the courts determine whether a semi-nomadic indigenous group has title to lands? This Court has never directly answered this question. The courts below disagreed on the correct approach. We must now clarify the test.

[25] As we have seen, the *Delgamuukw* test for Aboriginal title to land is based on “occupation” prior to assertion of European sovereignty. To ground Aboriginal title this occupation must possess three characteristics. It must be *sufficient*; it must be *continuous* (where present occupation is relied on); and it must be *exclusive*.

[26] The test was set out in *Delgamuukw*, per Lamer C.J., at para. 143:

In order to make out a claim for [A]boriginal title, the [A]boriginal group asserting title must satisfy the following criteria: (i) the land must have been occupied prior to sovereignty, (ii) if present occupation is relied on as proof of occupation pre-sovereignty, there must be a continuity between present and pre-sovereignty occupation, and (iii) at sovereignty, that occupation must have been exclusive.

décisions fondées sur la meilleure preuve disponible, et non sur ce qu’un avocat a pu envisager quand il a rédigé la demande initiale. L’enjeu n’est rien de moins que la possibilité pour le groupe autochtone et ses descendants d’obtenir justice et la conciliation des intérêts du groupe et de la société en général. Le formalisme à l’égard des actes de procédure ne servirait aucun de ces objectifs. L’intérêt public général commande que les questions relatives aux revendications territoriales et aux droits soient tranchées dans le respect du fond du litige. Ce n’est qu’ainsi que peut se réaliser la conciliation dont notre Cour a fait état dans *Delgamuukw*.

V. L’existence du titre ancestral est-elle établie?

A. *Le critère applicable en matière de titre ancestral*

[24] Comment les tribunaux devraient-ils déterminer si un groupe autochtone semi-nomade détient un titre sur des terres? Notre Cour n’a jamais répondu directement à cette question. Les tribunaux d’instance inférieure ne se sont pas entendus sur l’approche qu’il convient d’adopter. Nous devons donc maintenant préciser le critère.

[25] Je le répète, le critère relatif au titre ancestral énoncé dans l’arrêt *Delgamuukw* est fondé sur l’« occupation » antérieure à l’affirmation de la souveraineté européenne. Pour fonder le titre ancestral, l’occupation doit posséder trois caractéristiques : elle doit être *suffisante*, elle doit être *continue* (si l’occupation actuelle est invoquée) et elle doit être *exclusive*.

[26] Le critère a été énoncé par le juge en chef Lamer dans l’arrêt *Delgamuukw*, par. 143 :

Pour établir le bien-fondé de la revendication d’un titre autochtone, le groupe autochtone qui revendique ce titre doit satisfaire aux exigences suivantes : (i) il doit avoir occupé le territoire avant l’affirmation de la souveraineté; (ii) si l’occupation actuelle est invoquée comme preuve de l’occupation avant l’affirmation de la souveraineté, il doit exister une continuité entre l’occupation actuelle et l’occupation antérieure à l’affirmation de la souveraineté; (iii) au moment de l’affirmation de la souveraineté, cette occupation doit avoir été exclusive.

[27] The trial judge in this case held that “occupation” was established for the purpose of proving title by showing regular and exclusive use of sites or territory. On this basis, he concluded that the Tsilhqot’in had established title not only to village sites and areas maintained for the harvesting of roots and berries, but to larger territories which their ancestors used regularly and exclusively for hunting, fishing and other activities.

[28] The Court of Appeal disagreed and applied a narrower test for Aboriginal title — site-specific occupation. It held that to prove sufficient occupation for title to land, an Aboriginal group must prove that its ancestors *intensively* used a definite tract of land with reasonably defined boundaries at the time of European sovereignty.

[29] For semi-nomadic Aboriginal groups like the Tsilhqot’in, the Court of Appeal’s approach results in small islands of title surrounded by larger territories where the group possesses only Aboriginal rights to engage in activities like hunting and trapping. By contrast, on the trial judge’s approach, the group would enjoy title to all the territory that their ancestors regularly and exclusively used at the time of assertion of European sovereignty.

[30] Against this backdrop, I return to the requirements for Aboriginal title: sufficient pre-sovereignty occupation; continuous occupation (where present occupation is relied on); and exclusive historic occupation.

[31] Should the three elements of the *Delgamuukw* test be considered independently, or as related aspects of a single concept? The High Court of Australia has expressed the view that there is little merit in considering aspects of occupancy separately. In *Western Australia v. Ward* (2002), 213 C.L.R. 1, the court stated as follows, at para 89:

[27] En l’espèce, le juge de première instance a conclu que l’« occupation » était établie dans le but de fonder le titre par la démonstration d’une utilisation régulière et exclusive de certains sites ou du territoire. De ce fait, il a estimé que les Tsilhqot’in avaient établi l’existence d’un titre non seulement sur des villages et des sites utilisés pour la récolte de végétaux à racine et de fruits, mais sur des territoires plus vastes que leurs ancêtres utilisaient régulièrement et exclusivement pour la chasse, la pêche et d’autres activités.

[28] La Cour d’appel a rejeté cette conclusion et a appliqué un critère plus restreint à l’égard du titre ancestral — celui de l’occupation d’un site spécifique. Elle a conclu que, pour faire la preuve d’une occupation suffisante établissant l’existence d’un titre, un groupe autochtone doit démontrer qu’au moment de l’affirmation de la souveraineté européenne, ses ancêtres utilisaient *intensément* une parcelle de terrain spécifique dont les limites sont raisonnablement définies.

[29] Pour des groupes autochtones semi-nomades comme les Tsilhqot’in, la démarche de la Cour d’appel lui permet de reconnaître un titre sur de petites parcelles entourées de territoires plus vastes où le groupe possède seulement le droit ancestral d’exercer certaines activités comme la chasse et le piégeage. Par contre, suivant la démarche retenue par le juge de première instance, le groupe détiendrait un titre sur l’ensemble du territoire régulièrement et exclusivement utilisé par ses ancêtres au moment de l’affirmation de la souveraineté européenne.

[30] Dans ce contexte, je reviens sur les exigences de la preuve du titre ancestral : une occupation suffisante avant l’affirmation de la souveraineté, une occupation continue (si l’occupation actuelle est invoquée) et une occupation historique exclusive.

[31] Les trois éléments du critère énoncé dans l’arrêt *Delgamuukw* devraient-ils être examinés séparément ou comme les aspects interreliés d’un concept unique? La Haute Cour d’Australie s’est dite d’avis qu’il y a peu d’intérêt à examiner séparément les aspects de l’occupation. Dans l’affaire *Western Australia c. Ward* (2002), 213 C.L.R. 1, cette cour a indiqué ce qui suit au para. 89 :

The expression “possession, occupation, use and enjoyment . . . to the exclusion of all others” is a composite expression directed to describing a particular measure of control over access to land. To break the expression into its constituent elements is apt to mislead. In particular, to speak of “possession” of the land, as distinct from possession to the exclusion of all others, invites attention to the common law content of the concept of possession and whatever notions of control over access might be thought to be attached to it, rather than to the relevant task, which is to identify how rights and interests possessed under traditional law and custom can properly find expression in common law terms.

[32] In my view, the concepts of sufficiency, continuity and exclusivity provide useful lenses through which to view the question of Aboriginal title. This said, the court must be careful not to lose or distort the Aboriginal perspective by forcing ancestral practices into the square boxes of common law concepts, thus frustrating the goal of faithfully translating pre-sovereignty Aboriginal interests into equivalent modern legal rights. Sufficiency, continuity and exclusivity are not ends in themselves, but inquiries that shed light on whether Aboriginal title is established.

1. Sufficiency of Occupation

[33] The first requirement — and the one that lies at the heart of this appeal — is that the occupation be *sufficient* to ground Aboriginal title. It is clear from *Delgamuukw* that not every passing traverse or use grounds title. What then constitutes *sufficient* occupation to ground title?

[34] The question of sufficient occupation must be approached from both the common law perspective and the Aboriginal perspective (*Delgamuukw*, at para. 147); see also *R. v. Van der Peet*, [1996] 2 S.C.R. 507.

[TRADUCTION] L'expression « possession, occupation, utilisation et jouissance [. . .] à l'exclusion de toute autre personne » est une expression composite qui vise à décrire une mesure particulière de contrôle de l'accès aux terres. Décomposer l'expression en ses éléments constitutifs risque d'induire en erreur. Plus particulièrement, parler de « possession » des terres, une possession distincte de la possession à l'exclusion de toute autre personne, attire l'attention sur le contenu de la notion de possession en common law et sur toute notion de contrôle de l'accès que l'on pourrait considérer comme y étant liée, plutôt que sur ce qu'il nous incombe de faire, à savoir déterminer comment les droits et intérêts que les Autochtones possédaient en vertu des lois ou coutumes traditionnelles peuvent trouver leur juste expression en common law.

[32] À mon avis, les concepts de suffisance, de continuité et d'exclusivité offrent un angle intéressant pour apprécier la question du titre ancestral. Cela étant dit, le tribunal doit veiller à ne pas perdre de vue la perspective autochtone, ou à ne pas la dénaturer, en assimilant les pratiques ancestrales aux concepts rigides de la common law, ce qui irait à l'encontre de l'objectif qui consiste à traduire fidèlement les droits que possédaient les Autochtones avant l'affirmation de la souveraineté en droits juridiques contemporains équivalents. La suffisance, la continuité et l'exclusivité ne sont pas des fins en soi, mais plutôt des façons de savoir si l'existence du titre ancestral est établie.

1. La suffisance de l'occupation

[33] La première exigence — et celle qui se trouve au cœur du présent pourvoi — est celle selon laquelle l'occupation doit être *suffisante* pour fonder un titre ancestral. Il ressort clairement de l'arrêt *Delgamuukw* que le titre ne peut se fonder sur la présence passagère sur un territoire ou sur son utilisation passagère. Alors, en quoi consiste une occupation *suffisante* pour fonder un titre?

[34] Il faut aborder la question de l'occupation suffisante en tenant compte à la fois de la common law et du point de vue des Autochtones (*Delgamuukw*, par. 147); voir aussi *R. c. Van der Peet*, [1996] 2 R.C.S. 507.

[35] The Aboriginal perspective focuses on laws, practices, customs and traditions of the group (*Delgamuukw*, at para. 148). In considering this perspective for the purpose of Aboriginal title, “one must take into account the group’s size, manner of life, material resources, and technological abilities, and the character of the lands claimed”: B. Slattery, “Understanding Aboriginal Rights” (1987), 66 *Can. Bar Rev.* 727, at p. 758, quoted with approval in *Delgamuukw*, at para. 149.

[36] The common law perspective imports the idea of possession and control of the lands. At common law, possession extends beyond sites that are physically occupied, like a house, to surrounding lands that are used and over which effective control is exercised.

[37] Sufficiency of occupation is a context-specific inquiry. “[O]ccupation may be established in a variety of ways, ranging from the construction of dwellings through cultivation and enclosure of fields to regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources” (*Delgamuukw*, at para. 149). The intensity and frequency of the use may vary with the characteristics of the Aboriginal group asserting title and the character of the land over which title is asserted. Here, for example, the land, while extensive, was harsh and was capable of supporting only 100 to 1,000 people. The fact that the Aboriginal group was only about 400 people must be considered in the context of the carrying capacity of the land in determining whether regular use of definite tracts of land is made out.

[38] To sufficiently occupy the land for purposes of title, the Aboriginal group in question must show that it has historically acted in a way that would communicate to third parties that it held the land for its own purposes. This standard does not demand notorious or visible use akin to proving a claim for adverse possession, but neither can the occupation be purely subjective or internal. There

[35] Le point de vue des Autochtones est axé sur les règles de droit, les pratiques, les coutumes et les traditions du groupe (*Delgamuukw*, par. 148). Dans l’examen de ce point de vue, [TRADUCTION] « il faut tenir compte de la taille, du mode de vie, des ressources matérielles et des habiletés technologiques du groupe concerné, ainsi que de la nature des terres revendiquées » : B. Slattery, « Understanding Aboriginal Rights » (1987), 66 *R. du B. can.* 727, p. 758, cité avec approbation dans *Delgamuukw*, par. 149.

[36] La common law comporte la notion de possession et de contrôle des terres. En common law, la notion de possession ne se limite pas aux sites physiquement occupés, comme une maison, mais s’étend aux terres environnantes qui sont utilisées et sur lesquelles un contrôle effectif est exercé.

[37] La suffisance de l’occupation est une question qui tient au contexte. « L’occupation [...] peut être prouvée par différents faits, allant de la construction de bâtiments à l’utilisation régulière de secteurs bien définis du territoire pour y pratiquer la chasse, la pêche ou d’autres types d’exploitation de ses ressources, en passant par la délimitation et la culture de champs » (*Delgamuukw*, par. 149). L’intensité et la fréquence de l’utilisation peuvent varier en fonction des caractéristiques du groupe autochtone qui revendique le titre et en fonction de la nature du territoire sur lequel le titre est revendiqué. En l’espèce, par exemple, le territoire, bien que vaste, était ingrat et ne pouvait assurer la subsistance que de 100 à 1 000 personnes. Le fait que le groupe autochtone ne comptait qu’environ 400 personnes doit être pris en compte dans le contexte de la capacité d’utilisation du territoire pour déterminer si l’utilisation régulière de secteurs bien définis est établie.

[38] Pour établir une occupation suffisante des terres dans le but de fonder l’existence d’un titre, le groupe autochtone en question doit démontrer qu’il a toujours agi de façon à informer les tiers qu’il détenait la terre pour ses propres besoins. Cette norme n’exige pas une preuve de l’utilisation notoire ou visible qui s’apparente à la preuve d’une revendication de possession adversative, mais

must be evidence of a strong presence on or over the land claimed, manifesting itself in acts of occupation that could reasonably be interpreted as demonstrating that the land in question belonged to, was controlled by, or was under the exclusive stewardship of the claimant group. As just discussed, the kinds of acts necessary to indicate a permanent presence and intention to hold and use the land for the group's purposes are dependent on the manner of life of the people and the nature of the land. Cultivated fields, constructed dwelling houses, invested labour, and a consistent presence on parts of the land may be sufficient, but are not essential to establish occupation. The notion of occupation must also reflect the way of life of the Aboriginal people, including those who were nomadic or semi-nomadic.

[39] In *R. v. Marshall*, 2003 NSCA 105, 218 N.S.R. (2d) 78, at paras. 135-38, Cromwell J.A. (as he then was), in reasoning I adopt, likens the sufficiency of occupation required to establish Aboriginal title to the requirements for general occupancy at common law. A general occupant at common law is a person asserting possession of land over which no one else has a present interest or with respect to which title is uncertain. Cromwell J.A. cites (at para. 136) the following extract from K. McNeil, *Common Law Aboriginal Title* (1989), at pp. 198-200:

What, then, did one have to do to acquire a title by occupancy? . . . [I]t appears . . . that . . . a casual entry, such as riding over land to hunt or hawk, or travelling across it, did not make an occupant, such acts "being only transitory and to a particular purpose, which leaves no marks of an appropriation, or of an intention to possess for the separate use of the rider". There must, therefore, have been an actual entry, and some act or acts from which an intention to occupy the land could be inferred. Significantly, the acts and intention had to relate only to the occupation — it was quite unnecessary for a potential occupant to claim, or even wish to acquire, the

l'occupation ne peut pas non plus être purement subjective ou interne. Il faut une preuve d'une forte présence des Autochtones sur les terres revendiquées, qui se manifeste par des actes d'occupation qui pourraient raisonnablement être interprétés comme une preuve que les terres en question ont appartenu au groupe revendicateur ou que ce groupe y exerçait son contrôle ou une gestion exclusive. Je le répète, les actes nécessaires pour indiquer la présence permanente d'un groupe sur des terres et son intention de conserver et d'utiliser les terres pour ses besoins dépendent de son mode de vie et de la nature des terres. Pour établir l'occupation, il suffira peut-être de montrer que des champs ont été cultivés, que des habitations ont été érigées, que des travaux ont été effectués et qu'il y a eu une présence constante sur certaines parties du territoire, mais ce n'est pas essentiel. La notion d'occupation doit aussi refléter le mode de vie des peuples autochtones, y compris ceux qui étaient nomades ou semi-nomades.

[39] Dans l'arrêt *R. c. Marshall*, 2003 NSCA 105, 218 N.S.R. (2d) 78, par. 135-138, le juge Cromwell (maintenant juge de notre Cour), pour des motifs que j'approuve, établit un parallèle entre la suffisance de l'occupation nécessaire pour établir l'existence d'un titre ancestral et les exigences de l'occupation ordinaire en common law. En common law, un occupant ordinaire est une personne qui revendique la possession d'une terre sur laquelle personne n'a un intérêt actuel ou pour laquelle l'existence du titre est incertaine. Le juge Cromwell cite (au par. 136) le passage suivant tiré de l'ouvrage de K. McNeil, *Common Law Aboriginal Title* (1989), p. 198-200 :

[TRADUCTION] Alors, que fallait-il faire pour acquérir un titre fondé sur l'occupation? [. . .] [I]l semble [. . .] [qu']une entrée occasionnelle, par exemple le fait pour une personne de sillonner un territoire pour y chasser ou y faire du commerce, ou de le parcourir d'un bout à l'autre, ne faisait pas d'elle un occupant, puisque ces actes n'« étaient que passagers et qu'ils visaient une fin particulière, qu'ils ne laissaient aucune marque d'une appropriation ou d'une intention de posséder à son usage distinct ». Il doit donc y avoir eu une entrée réelle et un ou des actes permettant de conclure à l'existence de l'intention d'occuper le territoire. Fait important, les actes et

vacant estate, for the law cast it upon him by virtue of his occupation alone. . . .

Further guidance on what constitutes occupation can be gained from cases involving land to which title is uncertain. Generally, any acts on or in relation to land that indicate an intention to hold or use it for one's own purposes are evidence of occupation. Apart from the obvious, such as enclosing, cultivating, mining, building upon, maintaining, and warning trespassers off land, any number of other acts, including cutting trees or grass, fishing in tracts of water, and even perambulation, may be relied upon. The weight given to such acts depends partly on the nature of the land, and the purposes for which it can reasonably be used. [Emphasis added.]

[40] Cromwell J.A. in *Marshall* went on to state that this standard is different from the doctrine of constructive possession. The goal is not to *attribute* possession in the absence of physical acts of occupation, but to define the quality of the physical acts of occupation that demonstrate possession at law (para. 137). He concluded:

I would adopt, in general terms, Professor McNeil's analysis that the appropriate standard of occupation, from the common law perspective, is the middle ground between the minimal occupation which would permit a person to sue a wrong-doer in trespass and the most onerous standard required to ground title by adverse possession as against a true owner. . . . Where, as here, we are dealing with a large expanse of territory which was not cultivated, acts such as continual, though changing, settlement and wide-ranging use for fishing, hunting and gathering should be given more weight than they would be if dealing with enclosed, cultivated land. Perhaps most significantly, . . . it is impossible to confine the evidence to the very precise spot on which the cutting was done: Pollock and Wright at p. 32. Instead, the question must be whether the acts of occupation in particular areas show that the whole area was occupied by the claimant. [para. 138]

[41] In summary, what is required is a culturally sensitive approach to sufficiency of occupation

l'intention devaient se rapporter seulement à l'occupation — il était pour ainsi dire inutile pour un occupant éventuel de revendiquer, ou même de souhaiter acquérir, le domaine vacant, puisque le titre lui est conféré par la loi du seul fait de son occupation. . .

D'autres indices de ce qui constitue une occupation peuvent être dégagés de certaines affaires portant sur des terres sur lesquelles le titre est incertain. En général, toute activité sur une terre ou en lien avec une terre qui laisse voir une intention de la détenir ou de l'utiliser pour ses propres fins constitue une preuve d'occupation. Outre les actes évidents, comme délimiter la terre, la cultiver, s'y livrer à des activités minières, de construction ou d'entretien, et empêcher les intrus d'y entrer, bien d'autres actes peuvent être invoqués, comme couper des arbres ou de l'herbe, pêcher dans des cours d'eau, ou même parcourir la région. L'importance accordée à ces actes dépend en partie de la nature des terres et des fins auxquelles elles peuvent raisonnablement être utilisées. [Je souligne.]

[40] Dans *Marshall*, le juge Cromwell a ensuite déclaré que cette norme est différente de la doctrine de la possession de droit. Le but n'est pas d'*attribuer* la possession en l'absence d'actes d'occupation, mais de définir la qualité des actes d'occupation qui démontrent la possession en droit (par. 137). Il a conclu comme suit :

[TRADUCTION] J'adopterais, de façon générale, l'analyse faite par le professeur McNeil selon laquelle la norme d'occupation appropriée, en common law, se trouve à mi-chemin entre la norme minimale d'occupation qui permettrait à une personne de poursuivre un intrus et la norme la plus stricte à laquelle il faut satisfaire pour établir un titre obtenu par possession adversative opposable au véritable propriétaire. [. . .] Lorsque, comme en l'espèce, il est question d'un vaste territoire qui n'a pas été cultivé, des actes tels que l'établissement constant, bien que changeant, et l'utilisation générale pour la pêche, la chasse et la cueillette devraient se voir accorder plus de poids que s'il était question d'un territoire délimité et cultivé. L'aspect sans doute le plus éloquent, [. . .] il est impossible de limiter la preuve à l'endroit bien précis où la coupe a eu lieu : Pollock et Wright, p. 32. La question est plutôt de savoir si les actes d'occupation dans certains lieux démontrent que le revendicateur occupait tout le secteur. [par. 138]

[41] En résumé, la preuve de l'occupation doit procéder d'une approche visant à déterminer le

based on the dual perspectives of the Aboriginal group in question — its laws, practices, size, technological ability and the character of the land claimed — and the common law notion of possession as a basis for title. It is not possible to list every indicia of occupation that might apply in a particular case. The common law test for possession — which requires an intention to occupy or hold land for the purposes of the occupant — must be considered alongside the perspective of the Aboriginal group which, depending on its size and manner of living, might conceive of possession of land in a somewhat different manner than did the common law.

[42] There is no suggestion in the jurisprudence or scholarship that Aboriginal title is confined to specific village sites or farms, as the Court of Appeal held. Rather, a culturally sensitive approach suggests that regular use of territories for hunting, fishing, trapping and foraging is “sufficient” use to ground Aboriginal title, provided that such use, on the facts of a particular case, evinces an intention on the part of the Aboriginal group to hold or possess the land in a manner comparable to what would be required to establish title at common law.

[43] The Province argues that this Court in *R. v. Marshall*; *R. v. Bernard*, 2005 SCC 43, [2005] 2 S.C.R. 220, rejected a territorial approach to title, relying on a comment by Professor K. McNeil that the Court there “appears to have rejected the territorial approach of the Court of Appeal” (“Aboriginal Title and the Supreme Court: What’s Happening?” (2006), 69 *Sask. L. Rev.* 281, cited in *British Columbia factum*, para. 100). In fact, this Court in *Marshall*; *Bernard* did not reject a territorial approach, but held only (at para. 72) that there must be “proof of sufficiently regular and exclusive use” of the land in question, a requirement established in *Delgamuukw*.

caractère suffisant de l’occupation qui soit adaptée aux particularités culturelles et qui repose sur les points de vue du groupe autochtone en question — ses règles de droit, ses pratiques, sa taille, son savoir-faire technologique et la nature de la terre — ainsi que sur la notion de possession qui établit l’existence d’un titre en common law. Il est impossible d’énumérer chaque indice d’occupation qui pourrait s’appliquer dans un cas déterminé. Le critère de la common law en matière de possession — lequel exige une intention d’occuper ou de conserver la terre pour les besoins de l’occupant — doit être pris en compte tout comme le point de vue du groupe autochtone qui, selon sa taille et son mode de vie, pourrait concevoir la possession de la terre d’une façon quelque peu différente de la possession en common law.

[42] La jurisprudence et la doctrine ne donnent pas à penser que le titre ancestral se limite à certains villages ou à des fermes, comme l’a conclu la Cour d’appel. Au contraire, suivant une approche qui tient compte des particularités culturelles, l’utilisation régulière des terres pour la chasse, la pêche, le piégeage et la cueillette constitue une utilisation « suffisante » pour fonder un titre ancestral dans la mesure où cette utilisation, eu égard aux faits de l’espèce, révèle une intention de la part du groupe autochtone de détenir ou de posséder les terres d’une manière comparable à celle exigée pour établir l’existence d’un titre en common law.

[43] La province plaide que dans *R. c. Marshall*; *R. c. Bernard*, 2005 CSC 43, [2005] 2 R.C.S. 220, notre Cour a rejeté une approche territoriale à l’égard du titre; elle s’appuie sur une remarque du professeur K. McNeil selon laquelle la Cour [TRADUCTION] « semble avoir rejeté l’approche territoriale de la Cour d’appel » (« Aboriginal Title and the Supreme Court : What’s Happening? » (2006), 69 *Sask. L. Rev.* 281, cité dans le mémoire de la Colombie-Britannique, par. 100). En fait, dans *Marshall*; *Bernard*, notre Cour n’a pas rejeté l’approche fondée sur le territoire, mais a seulement estimé (au par. 72) qu’il fallait « la preuve d’une utilisation suffisamment régulière et exclusive » du territoire en question, une exigence établie dans l’arrêt *Delgamuukw*.

[44] The Court in *Marshall; Bernard* confirmed that nomadic and semi-nomadic groups could establish title to land, provided they establish sufficient physical possession, which is a question of fact. While “[n]ot every nomadic passage or use will ground title to land”, the Court confirmed that *Delgamuukw* contemplates that “regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources” could suffice (para. 66). While the issue was framed in terms of whether the common law test for possession was met, the Court did not resile from the need to consider the perspective of the Aboriginal group in question; sufficient occupation is a “question of fact, depending on all the circumstances, in particular the nature of the land and the manner in which it is commonly used” (*ibid.*).

2. Continuity of Occupation

[45] Where present occupation is relied on as proof of occupation pre-sovereignty, a second requirement arises — continuity between present and pre-sovereignty occupation.

[46] The concept of continuity does not require Aboriginal groups to provide evidence of an unbroken chain of continuity between their current practices, customs and traditions, and those which existed prior to contact (*Van der Peet*, at para. 65). The same applies to Aboriginal title. Continuity simply means that for evidence of present occupation to establish an inference of pre-sovereignty occupation, the present occupation must be rooted in pre-sovereignty times. This is a question for the trier of fact in each case.

3. Exclusivity of Occupation

[47] The third requirement is *exclusive* occupation of the land at the time of sovereignty. The

[44] Dans *Marshall; Bernard*, notre Cour a confirmé que les groupes nomades et semi-nomades peuvent établir l’existence d’un titre s’ils établissent une possession physique suffisante d’un territoire, ce qui constitue une question de fait. « Le passage dans un territoire ou son utilisation dans le cadre d’un mode de vie nomade ne fondera pas nécessairement un titre sur celui-ci », mais la Cour a confirmé que, selon l’arrêt *Delgamuukw*, « l’utilisation régulière de secteurs bien définis du territoire pour y pratiquer la chasse, la pêche ou d’autres types d’exploitation de ses ressources » peut être suffisante (par. 66). Bien que la question consistait à savoir si le critère de la common law relatif à la possession avait été respecté, la Cour n’a pas nié la nécessité de tenir compte du point de vue du groupe autochtone en question; la possession suffisante est une « question de fait qui dépend de l’ensemble des circonstances, en particulier de la nature du territoire et de la façon dont il a été utilisé collectivement » (*ibid.*).

2. La continuité de l’occupation

[45] Le fait que l’occupation actuelle soit invoquée comme preuve de l’occupation antérieure à l’affirmation de la souveraineté donne lieu à une deuxième condition — la continuité entre l’occupation actuelle et l’occupation antérieure à l’affirmation de la souveraineté.

[46] Le concept de la continuité n’exige pas que les groupes autochtones fassent la preuve d’une continuité parfaite entre leurs pratiques, coutumes et traditions actuelles et celles qui existaient avant le contact avec les Européens (*Van der Peet*, par. 65). Il en va de même pour le titre ancestral. La continuité signifie simplement que, pour qu’une preuve de l’occupation actuelle permette de conclure à l’occupation antérieure à l’affirmation de la souveraineté, l’occupation actuelle doit tirer son origine de l’époque antérieure à l’affirmation de la souveraineté. Il appartient au juge des faits d’examiner cette question.

3. L’exclusivité de l’occupation

[47] La troisième exigence est l’occupation *exclusive* des terres au moment de l’affirmation de la

Aboriginal group must have had “the intention and capacity to retain exclusive control” over the lands (*Delgamuukw*, at para. 156, quoting McNeil, *Common Law Aboriginal Title*, at p. 204 (emphasis added)). Regular use without exclusivity may give rise to usufructory Aboriginal rights; for Aboriginal title, the use must have been exclusive.

[48] Exclusivity should be understood in the sense of intention and capacity to control the land. The fact that other groups or individuals were on the land does not necessarily negate exclusivity of occupation. Whether a claimant group had the intention and capacity to control the land at the time of sovereignty is a question of fact for the trial judge and depends on various factors such as the characteristics of the claimant group, the nature of other groups in the area, and the characteristics of the land in question. Exclusivity can be established by proof that others were excluded from the land, or by proof that others were only allowed access to the land with the permission of the claimant group. The fact that permission was requested and granted or refused, or that treaties were made with other groups, may show intention and capacity to control the land. Even the lack of challenges to occupancy may support an inference of an established group's intention and capacity to control.

[49] As with sufficiency of occupation, the exclusivity requirement must be approached from both the common law and Aboriginal perspectives, and must take into account the context and characteristics of the Aboriginal society. The Court in *Delgamuukw* explained as follows, at para. 157:

A consideration of the [A]boriginal perspective may also lead to the conclusion that trespass by other [A]boriginal groups does not undermine, and that presence of those groups by permission may reinforce, the exclusive occupation of the [A]boriginal group asserting title. For example, the [A]boriginal group asserting the claim to

souveraineté. Le groupe autochtone doit avoir eu « l'intention et [. . .] la capacité de garder le contrôle exclusif » des terres (*Delgamuukw*, par. 156, citant McNeil, *Common Law Aboriginal Title*, p. 204 (je souligne)). L'utilisation régulière, mais non exclusive, peut donner naissance à des droits ancestraux usufruituaires; en ce qui concerne le titre ancestral, l'utilisation doit avoir été exclusive.

[48] L'exclusivité doit s'entendre au sens de l'intention et de la capacité de contrôler le territoire. Le fait que d'autres groupes ou des particuliers se soient trouvés sur le territoire ne nie pas nécessairement l'exclusivité de l'occupation. La question de savoir si le groupe revendicateur avait l'intention et la capacité de contrôler le territoire au moment de l'affirmation de la souveraineté est une question de fait qui relève du juge de première instance et qui dépend de divers facteurs tels que les caractéristiques du groupe, la nature des autres groupes de la région et les caractéristiques du territoire en question. L'exclusivité peut être établie au moyen d'une preuve démontrant que les autres groupes ont été exclus du territoire, ou d'une preuve démontrant que certains groupes n'avaient accès au territoire qu'avec la permission du groupe revendicateur. Le fait qu'une permission était demandée, et qu'elle était accordée ou refusée, ou que des traités ont été conclus avec d'autres groupes, peut démontrer l'intention et la capacité de contrôler le territoire. Même le fait que l'occupation n'ait jamais été contestée peut permettre de conclure que le groupe avait l'intention et la capacité de contrôler le territoire.

[49] Tout comme c'était le cas de la suffisance de l'occupation, il faut aborder l'exigence de l'exclusivité en tenant compte de la common law et du point de vue des Autochtones, ainsi que du contexte et des caractéristiques de la société autochtone. Dans l'arrêt *Delgamuukw*, la Cour a expliqué ce qui suit au par. 157 :

La prise en considération du point de vue des [A]utochtones peut également amener à conclure qu'une intrusion par d'autres groupes autochtones ne fait pas obstacle à l'occupation exclusive du territoire visé par le groupe autochtone qui en revendique le titre, et que la présence autorisée de ces autres groupes peut renforcer cette

[A]boriginal title may have trespass laws which are proof of exclusive occupation, such that the presence of trespassers does not count as evidence against exclusivity. As well, [A]boriginal laws under which permission may be granted to other [A]boriginal groups to use or reside even temporarily on land would reinforce the finding of exclusive occupation. Indeed, if that permission were the subject of treaties between the [A]boriginal nations in question, those treaties would also form part of the [A]boriginal perspective.

4. Summary

[50] The claimant group bears the onus of establishing Aboriginal title. The task is to identify how pre-sovereignty rights and interests can properly find expression in modern common law terms. In asking whether Aboriginal title is established, the general requirements are: (1) “sufficient occupation” of the land claimed to establish title at the time of assertion of European sovereignty; (2) continuity of occupation where present occupation is relied on; and (3) exclusive historic occupation. In determining what constitutes sufficient occupation, one looks to the Aboriginal culture and practices, and compares them in a culturally sensitive way with what was required at common law to establish title on the basis of occupation. Occupation sufficient to ground Aboriginal title is not confined to specific sites of settlement but extends to tracts of land that were regularly used for hunting, fishing or otherwise exploiting resources and over which the group exercised effective control at the time of assertion of European sovereignty.

B. *Was Aboriginal Title Established in This Case?*

[51] The trial judge applied a test of regular and exclusive use of the land. This is consistent with

occupation exclusive. À titre d'exemple, le groupe autochtone qui revendique le titre aborigène peut avoir, en matière d'intrusion, des règles de droit qui sont des preuves de l'occupation exclusive, de sorte que la présence d'intrus n'est pas considérée comme une preuve à l'encontre de l'exclusivité. De plus, l'existence de règles de droit autochtones en vertu desquelles d'autres groupes autochtones peuvent être autorisés à utiliser les terres ou même à y résider temporairement étayerait la conclusion d'occupation exclusive. De fait, si cette permission a fait l'objet de traités entre les nations autochtones concernées, ces traités feraient également partie du point de vue des [A]utochtones.

4. Résumé

[50] Il incombe au groupe revendicateur d'établir l'existence du titre ancestral. Il faut déterminer la façon dont les droits et intérêts qui existaient avant l'affirmation de la souveraineté peuvent trouver leur juste expression en common law moderne. Dans l'examen de la question de savoir si l'existence d'un titre ancestral est établie, les conditions générales sont les suivantes : (1) une « occupation suffisante » du territoire revendiqué afin d'établir l'existence d'un titre au moment de l'affirmation de la souveraineté européenne; (2) la continuité de l'occupation lorsque l'occupation actuelle est invoquée; et (3) l'exclusivité de l'occupation historique. Pour déterminer ce qui constitue une occupation suffisante, il faut examiner la culture et les pratiques des Autochtones et les comparer, tout en tenant compte de leurs particularités culturelles, à ce qui était requis en common law pour établir l'existence d'un titre fondé sur l'occupation. L'occupation suffisante pour fonder l'existence d'un titre ancestral ne se limite pas aux lieux spécifiques d'établissement, mais s'étend aux parcelles de terre régulièrement utilisées pour y pratiquer la chasse, la pêche ou d'autres types d'exploitation des ressources et sur lesquelles le groupe exerçait un contrôle effectif au moment de l'affirmation de la souveraineté européenne.

B. *L'existence du titre ancestral a-t-elle été établie en l'espèce?*

[51] Le juge de première instance a appliqué un critère fondé sur l'utilisation régulière et exclusive

the correct legal test. This leaves the question of whether he applied it appropriately to the evidence in this case.

[52] Whether the evidence in a particular case supports Aboriginal title is a question of fact for the trial judge: *Marshall; Bernard*. The question therefore is whether the Province has shown that the trial judge made a palpable and overriding error in his factual conclusions.

[53] I approach the question through the lenses of sufficiency, continuity and exclusivity discussed above.

[54] I will not repeat my earlier comments on what is required to establish sufficiency of occupation. Regular use of the territory suffices to establish sufficiency; the concept is not confined to continuously occupied village sites. The question must be approached from the perspective of the Aboriginal group as well as the common law, bearing in mind the customs of the people and the nature of the land.

[55] The evidence in this case supports the trial judge's conclusion of sufficient occupation. While the population was small, the trial judge found evidence that the parts of the land to which he found title were regularly used by the Tsilhqot'in. The Court of Appeal did not take serious issue with these findings.

[56] Rather, the Court of Appeal based its rejection of Aboriginal title on the legal proposition that regular use of territory could not ground Aboriginal title — only the regular presence on or intensive occupation of particular tracts would suffice. That view, as discussed earlier, is not supported by the jurisprudence; on the contrary, *Delgamuukw* affirms a territorial use-based approach to Aboriginal title.

du territoire. Son critère est conforme au bon critère juridique. Reste à savoir s'il l'a correctement appliqué à la preuve dont il disposait.

[52] La question de savoir si la preuve présentée dans une affaire donnée permet de conclure à l'existence d'un titre ancestral est une question de fait que doit trancher le juge de première instance : *Marshall; Bernard*. Il s'agit donc de savoir si la province a démontré que le juge de première avait commis une erreur manifeste et dominante dans ses conclusions de fait.

[53] J'aborde la question sous les angles susmentionnés de la suffisance, de la continuité et de l'exclusivité.

[54] Je ne répéterai pas les commentaires que j'ai formulés précédemment sur ce qui est requis pour établir la suffisance de l'occupation. L'utilisation régulière du territoire suffit pour établir la suffisance; le concept ne se limite pas aux villages qui ont été occupés de façon continue. Il faut aborder la question en tenant compte du point de vue du groupe autochtone et de la common law, sans oublier les coutumes du peuple et la nature du territoire.

[55] La preuve en l'espèce appuie la conclusion du juge de première instance quant à l'occupation suffisante. Le territoire était peu peuplé, mais le juge de première instance a relevé des éléments de preuve indiquant que les parties du territoire sur lesquelles il a conclu à l'existence du titre étaient régulièrement utilisées par les Tsilhqot'in. La Cour d'appel n'a pas vraiment contesté ces conclusions.

[56] La Cour d'appel a plutôt fondé son rejet de l'existence du titre ancestral sur la proposition de droit selon laquelle l'utilisation régulière du territoire ne pouvait pas fonder le titre ancestral — seules la présence régulière sur des parcelles spécifiques ou leur occupation intensive étaient suffisantes. Cette interprétation, comme je l'ai déjà mentionné, ne trouve pas d'appui dans la jurisprudence; l'arrêt *Delgamuukw* confirme plutôt à l'égard du titre ancestral une approche fondée sur l'utilisation du territoire.

[57] This brings me to continuity. There is some reliance on present occupation for the title claim in this case, raising the question of continuity. The evidence adduced and later relied on in parts 5 to 7 of the trial judge's reasons speak of events that took place as late as 1999. The trial judge considered this direct evidence of more recent occupation alongside archeological evidence, historical evidence, and oral evidence from Aboriginal elders, all of which indicated a continuous Tsilhqot'in presence in the claim area. The geographic proximity between sites for which evidence of recent occupation was tendered, and those for which direct evidence of historic occupation existed, further supported an inference of continuous occupation. Paragraph 945 states, under the heading of "Continuity", that the "Tsilhqot'in people have continuously occupied the Claim Area before and after sovereignty assertion". I see no reason to disturb this finding.

[58] Finally, I come to exclusivity. The trial judge found that the Tsilhqot'in, prior to the assertion of sovereignty, repelled other people from their land and demanded permission from outsiders who wished to pass over it. He concluded from this that the Tsilhqot'in treated the land as exclusively theirs. There is no basis upon which to disturb that finding.

[59] The Province goes on to argue that the trial judge's conclusions on how particular parts of the land were used cannot be sustained. The Province says:

- The boundaries drawn by the trial judge are arbitrary and contradicted by some of the evidence (factum, at paras. 141-42).
- The trial judge relied on a map the validity of which the Province disputes (para. 143).

[57] Cela m'amène à la continuité. La revendication du titre présentée en l'espèce est fondée dans une certaine mesure sur l'occupation actuelle, ce qui soulève la question de la continuité. La preuve produite et acceptée ensuite dans les parties 5 à 7 des motifs du juge de première instance se rapporte aux événements qui remontent jusqu'en 1999. Le juge de première instance a pris en considération cette preuve directe d'une occupation plus récente conjointement avec la preuve archéologique, la preuve historique et les témoignages d'aînés, qui indiquaient tous une présence continue des Tsilhqot'in dans la région visée par la revendication. La proximité géographique entre les sites à l'égard desquels une preuve d'occupation récente a été produite et ceux à l'égard desquels il existait une preuve directe d'occupation passée renforçait l'inférence d'une occupation continue. Au paragraphe 945, il est indiqué, sous la rubrique [TRADUCTION] « Continuité », que « le peuple Tsilhqot'in a occupé le secteur revendiqué de façon continue avant et après l'affirmation de la souveraineté ». Je ne vois aucune raison de modifier cette conclusion.

[58] Enfin, j'en viens à l'exclusivité. Le juge de première instance a conclu que les Tsilhqot'in, avant l'affirmation de la souveraineté, ont repoussé d'autres peuples de leurs terres et ont exigé que les étrangers qui désiraient passer sur leurs terres leur demandent la permission. Il en a conclu que les Tsilhqot'in considéraient qu'ils possédaient leurs terres en exclusivité. Il n'y a aucune raison de modifier cette conclusion.

[59] La province plaide en outre que les conclusions du juge de première instance quant à la manière dont certaines parties du territoire étaient utilisées ne peuvent être retenues. La province affirme ce qui suit :

- Les limites du territoire établies par le juge de première instance sont arbitraires et contredites par certains éléments de preuve (mémoire, par. 141-142).
- Le juge de première instance s'est fondé sur une carte dont la province conteste la validité (par. 143).

- The Tsilhqot'in population, that the trial judge found to be 400 at the time of sovereignty assertion, could not have physically occupied the 1,900 sq. km of land over which title was found (para. 144).
- The trial judge failed to identify specific areas with adequate precision, instead relying on vague descriptions (para. 145).
- A close examination of the details of the inconsistent and arbitrary manner in which the trial judge defined the areas subject to Aboriginal title demonstrates the unreliability of his approach (para. 147).
- Le peuple Tsilhqot'in qui, selon le juge de première instance, comptait 400 personnes au moment de l'affirmation de la souveraineté, ne pouvait pas occuper les 1 900 km² de terres sur lesquelles l'existence d'un titre a été établie (par. 144).
- Le juge de première instance n'a pas identifié des secteurs de manière suffisamment précise; il s'est plutôt appuyé sur de vagues descriptions (par. 145).
- Un examen attentif de la façon incohérente et arbitraire dont le juge de première instance a défini les secteurs grevés d'un titre ancestral démontre le manque de fiabilité de son approche (par. 147).

[60] Most of the Province's criticisms of the trial judge's findings on the facts are rooted in its erroneous thesis that only specific, intensively occupied areas can support Aboriginal title. The concern with the small size of the Tsilhqot'in population in 1846 makes sense only if one assumes a narrow test of intensive occupation and if one ignores the character of the land in question which was mountainous and could not have sustained a much larger population. The alleged failure to identify particular areas with precision likewise only makes sense if one assumes a narrow test of intensive occupation. The other criticisms amount to pointing out conflicting evidence. It was the trial judge's task to sort out conflicting evidence and make findings of fact. The presence of conflicting evidence does not demonstrate palpable and overriding error.

[61] The Province has not established that the conclusions of the trial judge are unsupported by the evidence or otherwise in error. Nor has it established his conclusions were arbitrary or insufficiently precise. The trial judge was faced with the herculean task of drawing conclusions from a huge

[60] La plupart des critiques de la province à l'égard des conclusions de fait du juge de première instance reposent sur la thèse erronée voulant que le titre ancestral s'attache uniquement à des secteurs spécifiques occupés intensivement. La préoccupation que suscite la petite taille de la population des Tsilhqot'in en 1846 n'a de sens que si l'on adopte le critère étroit de l'occupation intensive et que l'on ne tient pas compte de la nature du territoire en question, un territoire montagneux qui n'aurait pas pu assurer la subsistance d'une population beaucoup plus importante. De même, l'allégation selon laquelle le juge de première instance aurait omis d'identifier certains secteurs avec précision n'a de sens que si l'on adopte le critère étroit de l'occupation intensive. Les autres critiques ne servent qu'à souligner le caractère contradictoire de la preuve. Il appartenait au juge de première instance de faire la part des éléments de preuve contradictoires et de tirer des conclusions de fait. La présence d'éléments de preuve contradictoires ne démontre pas l'existence d'une erreur manifeste et dominante.

[61] La province n'a pas démontré que les conclusions du juge de première instance ne sont pas étayées par la preuve ou qu'elles sont autrement erronées. Elle n'a pas non plus démontré que ses conclusions étaient arbitraires ou manquaient de précision. Le juge de première instance avait la

body of evidence produced over 339 trial days spanning a five-year period. Much of the evidence was historic evidence and therefore by its nature sometimes imprecise. The trial judge spent long periods in the claim area with witnesses, hearing evidence about how particular parts of the area were used. Absent demonstrated error, his findings should not be disturbed.

[62] This said, I have accepted the Province's invitation to review the maps and the evidence and evaluate the trial judge's conclusions as to which areas support a declaration of Aboriginal title. For ease of reference, I attach a map showing the various territories and how the trial judge treated them (Appendix; see Appellant's factum, "Appendix A"). The territorial boundaries drawn by the trial judge and his conclusions as to Aboriginal title appear to be logical and fully supported by the evidence.

[63] The trial judge divided the claim area into six regions and then considered a host of individual sites within each region. He examined expert archeological evidence, historical evidence and oral evidence from Aboriginal elders referring to these specific sites. At some of these sites, although the evidence did suggest a Tsilhqot'in presence, he found it insufficient to establish regular and exclusive occupancy. At other sites, he held that the evidence did establish regular and exclusive occupancy. By examining a large number of individual sites, the trial judge was able to infer the boundaries within which the Tsilhqot'in regularly and exclusively occupied the land. The trial judge, in proceeding this way, made no legal error.

[64] The Province also criticises the trial judge for offering his opinion on areas outside the claim area. This, the Province says, went beyond the

tâche colossale de tirer des conclusions à partir d'une quantité énorme d'éléments de preuve produits au cours d'un procès de 339 jours étalé sur une période de cinq ans. Une grande partie de la preuve était historique et donc, de par sa nature, parfois imprécise. Le juge de première instance a passé de longues périodes de temps dans le territoire revendiqué en compagnie de témoins et a entendu des témoignages sur la façon dont différents secteurs étaient utilisés. En l'absence d'une erreur manifeste, ses conclusions ne devraient pas être modifiées.

[62] Cela étant dit, j'ai accepté la proposition de la province d'examiner les cartes et les éléments de preuve et d'apprécier les conclusions du juge de première instance au sujet des secteurs auxquels devrait s'appliquer un jugement déclarant l'existence d'un titre ancestral. Par souci de clarté, je joins en annexe une carte qui montre les divers territoires et la façon dont le juge de première instance les a considérés (Annexe; voir l'annexe « A » du mémoire de l'appelant). Les limites territoriales définies par le juge de première instance et ses conclusions quant au titre ancestral semblent logiques et entièrement étayées par la preuve.

[63] Le juge de première instance a divisé le territoire revendiqué en six régions et a ensuite examiné de nombreux sites à l'intérieur de chaque région. Il a examiné des éléments de preuve archéologique et historique ainsi que les récits oraux des aînés autochtones faisant état de ces sites. À certains de ces sites, bien que la preuve donnait à penser que les Tsilhqot'in y avaient été présents, il a conclu que la preuve ne permettait pas d'établir une occupation régulière et exclusive. À d'autres sites, il a estimé que la preuve établissait une telle occupation. Après avoir examiné un grand nombre de sites, le juge de première instance a pu inférer les limites à l'intérieur desquelles les Tsilhqot'in occupaient régulièrement et exclusivement le territoire. En procédant de cette façon, le juge de première instance n'a commis aucune erreur.

[64] La province critique également le juge de première instance parce qu'il a donné son avis sur des terres qui se trouvent à l'extérieur du territoire

mandate of a trial judge who, should pronounce only on pleaded matters.

[65] In my view, this criticism is misplaced. It is clear that no declaration of title could be made over areas outside those pleaded. The trial judge offered his comments on areas outside the claim area, not as binding rulings in the case, but to provide assistance in future land claims negotiations. Having canvassed the evidence and arrived at conclusions on it, it made economic and practical sense for the trial judge to give the parties the benefit of his views. Moreover, as I noted earlier in discussing the proper approach to pleadings in cases where Aboriginal title is at issue, these cases raise special considerations. Often, the ambit of a claim cannot be drawn with precision at the commencement of proceedings. The true state of affairs unfolds only gradually as the evidence emerges over what may be a lengthy period of time. If at the end of the process the boundaries of the initial claim and the boundaries suggested by the evidence are different, the trial judge should not be faulted for pointing that out.

[66] I conclude that the trial judge was correct in his assessment that the Tsilhqot'in occupation was both sufficient and exclusive at the time of sovereignty. There was ample direct evidence of occupation at sovereignty, which was additionally buttressed by evidence of more recent continuous occupation.

VI. What Rights Does Aboriginal Title Confer?

[67] As we have seen, *Delgamuukw* establishes that Aboriginal title “encompasses the right to exclusive use and occupation of the land held pursuant to that title for a variety of purposes” (para. 117), including non-traditional purposes, provided these

revendiqué. Selon la province, cela outrepassait le mandat d'un juge de première instance, qui doit se prononcer seulement sur les questions soulevées.

[65] À mon avis, cette critique est inappropriée. Il est évident qu'aucun jugement déclarant l'existence d'un titre n'aurait pu être rendu à l'égard de terres se trouvant à l'extérieur du territoire revendiqué. Les commentaires du juge de première instance à propos de secteurs non revendiqués n'étaient pas de la nature d'une décision, mais visaient simplement à fournir des pistes pour de futures négociations relatives aux revendications territoriales. Après avoir examiné la preuve et en avoir tiré des conclusions, il était logique, sur les plans économique et pratique, que le juge de première instance donne son opinion aux parties. De plus, ainsi que je l'ai fait remarquer lorsque je me suis penchée sur l'approche qu'il convient d'adopter à l'égard des actes de procédure dans les cas où un titre ancestral est en cause, ces affaires soulèvent des considérations particulières. Souvent, la portée d'une revendication ne peut être établie avec précision au début des procédures. La situation s'éclaircit au fur et à mesure que les éléments de preuve se dégagent sur une période qui peut être longue. Si, à la fin du processus, les limites de la revendication initiale et les limites établies suivant la preuve sont différentes, il ne faudrait pas reprocher au juge de première instance de le souligner.

[66] J'estime que le juge de première instance a eu raison de conclure que l'occupation des Tsilhqot'in était suffisante et exclusive au moment de l'affirmation de la souveraineté. Il y avait amplement d'éléments de preuve démontrant une occupation antérieure à l'affirmation de la souveraineté, et cette preuve était renforcée par des éléments de preuve démontrant une occupation continue plus récente.

VI. Quels droits confère le titre ancestral?

[67] Je le rappelle, l'arrêt *Delgamuukw* établit que le titre ancestral « comprend le droit d'utiliser et d'occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins » (par. 117), y compris des fins non traditionnelles, dans la mesure

uses can be reconciled with the communal and on-going nature of the group's attachment to the land. Subject to this inherent limit, the title-holding group has the right to choose the uses to which the land is put and to enjoy its economic fruits (para. 166).

[68] I will first discuss the legal characterization of the Aboriginal title. I will then offer observations on what Aboriginal title provides to its holders and what limits it is subject to.

A. *The Legal Characterization of Aboriginal Title*

[69] The starting point in characterizing the legal nature of Aboriginal title is Dickson J.'s concurring judgment in *Guerin*, discussed earlier. At the time of assertion of European sovereignty, the Crown acquired radical or underlying title to all the land in the province. This Crown title, however, was burdened by the pre-existing legal rights of Aboriginal people who occupied and used the land prior to European arrival. The doctrine of *terra nullius* (that no one owned the land prior to European assertion of sovereignty) never applied in Canada, as confirmed by the *Royal Proclamation of 1763*. The Aboriginal interest in land that burdens the Crown's underlying title is an independent legal interest, which gives rise to a fiduciary duty on the part of the Crown.

[70] The content of the Crown's underlying title is what is left when Aboriginal title is subtracted from it: s. 109 of the *Constitution Act, 1867*; *Delgamuukw*. As we have seen, *Delgamuukw* establishes that Aboriginal title gives "the right to exclusive use and occupation of the land . . . for a variety of purposes", not confined to traditional or "distinctive" uses (para. 117). In other words, Aboriginal title is a beneficial interest in the land: *Guerin*, at p. 382. In simple terms, the title holders have the right to the benefits associated with the land — to use it, enjoy it and profit from its economic development. As such, the Crown does

où ces utilisations peuvent se concilier avec la nature collective et continue de l'attachement qu'a le groupe pour le territoire visé. Sous réserve de cette limite intrinsèque, le groupe qui détient le titre a le droit de choisir les utilisations qui sont faites de ces terres et de bénéficier des avantages économiques qu'elles procurent (par. 166).

[68] Je vais d'abord examiner la qualification juridique du titre ancestral. J'exposerai ensuite mes observations sur ce que le titre ancestral confère à ses titulaires et sur les limites auxquelles il est assujéti.

A. *La qualification juridique du titre ancestral*

[69] Le point de départ de la qualification de la nature juridique du titre ancestral est le jugement concordant du juge Dickson dans l'arrêt *Guerin*, dont il est question précédemment. Au moment de l'affirmation de la souveraineté européenne, la Couronne a acquis un titre absolu ou sous-jacent sur toutes les terres de la province. Ce titre était toutefois grevé des droits préexistants des peuples autochtones qui occupaient et utilisaient les terres avant l'arrivée des Européens. La doctrine de la *terra nullius* (selon laquelle nul ne possédait la terre avant l'affirmation de la souveraineté européenne) ne s'est jamais appliquée au Canada, comme l'a confirmé la *Proclamation royale* de 1763. Le droit des Autochtones sur les terres qui grève le titre sous-jacent de la Couronne a une existence juridique indépendante qui donne naissance à une obligation fiduciaire de la part de la Couronne.

[70] Le contenu du titre sous-jacent de la Couronne est ce qui reste après la soustraction du titre ancestral : art. 109 de la *Loi constitutionnelle de 1867*; *Delgamuukw*. Comme nous l'avons déjà vu, l'arrêt *Delgamuukw* établit que le titre ancestral accorde « le droit d'utiliser et d'occuper de façon exclusive les terres détenues en vertu de ce titre pour diverses fins », lesquelles ne se limitent pas aux utilisations traditionnelles ou « distinctives » (par. 117). Autrement dit, le titre ancestral est un intérêt bénéficiaire sur les terres : *Guerin*, p. 382. En termes simples, les titulaires du titre ont droit aux avantages associés aux terres — de les utiliser,

not retain a beneficial interest in Aboriginal title land.

[71] What remains, then, of the Crown's radical or underlying title to lands held under Aboriginal title? The authorities suggest two related elements — a fiduciary duty owed by the Crown to Aboriginal people when dealing with Aboriginal lands, and the right to encroach on Aboriginal title if the government can justify this in the broader public interest under s. 35 of the *Constitution Act, 1982*. The Court in *Delgamuukw* referred to this as a process of reconciling Aboriginal interests with the broader public interests under s. 35 of the *Constitution Act, 1982*.

[72] The characteristics of Aboriginal title flow from the special relationship between the Crown and the Aboriginal group in question. It is this relationship that makes Aboriginal title *sui generis* or unique. Aboriginal title is what it is — the unique product of the historic relationship between the Crown and the Aboriginal group in question. Analogies to other forms of property ownership — for example, fee simple — may help us to understand aspects of Aboriginal title. But they cannot dictate precisely what it is or is not. As La Forest J. put it in *Delgamuukw*, at para. 190, Aboriginal title “is not equated with fee simple ownership; nor can it be described with reference to traditional property law concepts”.

B. *The Incidents of Aboriginal Title*

[73] Aboriginal title confers ownership rights similar to those associated with fee simple, including: the right to decide how the land will be used; the right of enjoyment and occupancy of the land; the right to possess the land; the right to the economic benefits of the land; and the right to proactively use and manage the land.

d'en jouir et de profiter de leur développement économique. Par conséquent, la Couronne ne conserve pas un intérêt bénéficiaire sur les terres visées par un titre ancestral.

[71] Alors, que reste-t-il du titre absolu ou sous-jacent de la Couronne sur les terres détenues en vertu d'un titre ancestral? Il ressort de la doctrine et de la jurisprudence deux éléments connexes — une obligation fiduciaire de la Couronne envers les Autochtones à l'égard des terres ancestrales et le droit de porter atteinte au titre ancestral si le gouvernement peut démontrer que l'atteinte est justifiée dans l'intérêt général du public en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*. Dans l'arrêt *Delgamuukw*, la Cour a dit qu'il s'agissait d'un processus de conciliation des intérêts autochtones et de l'intérêt général du public en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

[72] Les caractéristiques du titre ancestral découlent de la relation particulière entre la Couronne et le groupe autochtone en question. C'est cette relation qui rend le titre ancestral *sui generis*, ou unique. Le titre ancestral est ce qu'il est — le résultat unique de la relation historique entre la Couronne et le groupe autochtone en question. Des analogies avec d'autres formes de propriété — par exemple, la propriété en fief simple — peuvent être utiles pour mieux comprendre certains aspects du titre ancestral. Cependant, elles ne peuvent pas dicter précisément en quoi il consiste ou ne consiste pas. Comme le juge La Forest l'a indiqué dans *Delgamuukw*, par. 190, le titre ancestral « n'équivaut pas à la propriété en fief simple et il ne peut pas non plus être décrit au moyen des concepts traditionnels du droit des biens ».

B. *Les attributs du titre ancestral*

[73] Le titre ancestral confère des droits de propriété semblables à ceux associés à la propriété en fief simple, y compris le droit de déterminer l'utilisation des terres, le droit de jouissance et d'occupation des terres, le droit de posséder les terres, le droit aux avantages économiques que procurent les terres et le droit d'utiliser et de gérer les terres de manière proactive.

[74] Aboriginal title, however, comes with an important restriction — it is collective title held not only for the present generation but for all succeeding generations. This means it cannot be alienated except to the Crown or encumbered in ways that would prevent future generations of the group from using and enjoying it. Nor can the land be developed or misused in a way that would substantially deprive future generations of the benefit of the land. Some changes — even permanent changes — to the land may be possible. Whether a particular use is irreconcilable with the ability of succeeding generations to benefit from the land will be a matter to be determined when the issue arises.

[75] The rights and restrictions on Aboriginal title flow from the legal interest Aboriginal title confers, which in turn flows from the fact of Aboriginal occupancy at the time of European sovereignty which attached as a burden on the underlying title asserted by the Crown at sovereignty. Aboriginal title post-sovereignty reflects the fact of Aboriginal occupancy pre-sovereignty, with all the pre-sovereignty incidents of use and enjoyment that were part of the collective title enjoyed by the ancestors of the claimant group — most notably the right to control how the land is used. However, these uses are not confined to the uses and customs of pre-sovereignty times; like other landowners, Aboriginal title holders of modern times can use their land in modern ways, if that is their choice.

[76] The right to control the land conferred by Aboriginal title means that governments and others seeking to use the land must obtain the consent of the Aboriginal title holders. If the Aboriginal group does not consent to the use, the government's only recourse is to establish that the proposed incursion on the land is justified under s. 35 of the *Constitution Act, 1982*.

[74] Cependant, le titre ancestral comporte une restriction importante — il s'agit d'un titre collectif détenu non seulement pour la génération actuelle, mais pour toutes les générations futures. Cela signifie qu'il ne peut pas être cédé, sauf à la Couronne, ni être grevé d'une façon qui empêcherait les générations futures du groupe d'utiliser les terres et d'en jouir. Les terres ne peuvent pas non plus être aménagées ou utilisées d'une façon qui priverait de façon substantielle les générations futures de leur utilisation. Il peut être possible d'apporter certaines modifications — même permanentes — aux terres. La question de savoir si une utilisation particulière est irrécilable avec la possibilité pour les générations futures de bénéficier des terres constituera une question qu'il faudra trancher lorsqu'elle se posera.

[75] Les droits et restrictions afférents au titre ancestral découlent de l'intérêt que ce titre confère, intérêt qui découle à son tour de l'occupation autochtone à l'époque de la souveraineté européenne et qui grève le titre sous-jacent revendiqué par la Couronne au moment de l'affirmation de la souveraineté. Le titre ancestral postérieur à l'affirmation de la souveraineté reflète le fait que les Autochtones occupaient le territoire avant l'affirmation de la souveraineté, avec tous les attributs que constituent les droits d'utilisation et de jouissance qui existaient avant l'affirmation de la souveraineté et qui composaient le titre collectif détenu par les ancêtres du groupe revendicateur — notamment le droit de contrôler l'utilisation des terres. Cependant, les utilisations ne se limitent pas aux utilisations et aux coutumes antérieures à l'affirmation de la souveraineté; tout comme les autres propriétaires fonciers, les titulaires du titre ancestral des temps modernes peuvent utiliser leurs terres de façon moderne, s'ils le veulent.

[76] Le droit de contrôler la terre que confère le titre ancestral signifie que les gouvernements et les autres personnes qui veulent utiliser les terres doivent obtenir le consentement des titulaires du titre ancestral. Si le groupe autochtone ne consent pas à l'utilisation, le seul recours du gouvernement consiste à établir que l'utilisation proposée est justifiée en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

C. *Justification of Infringement*

[77] To justify overriding the Aboriginal title-holding group's wishes on the basis of the broader public good, the government must show: (1) that it discharged its procedural duty to consult and accommodate; (2) that its actions were backed by a compelling and substantial objective; and (3) that the governmental action is consistent with the Crown's fiduciary obligation to the group: *Sparrow*.

[78] The duty to consult is a procedural duty that arises from the honour of the Crown prior to confirmation of title. Where the Crown has real or constructive knowledge of the potential or actual existence of Aboriginal title, and contemplates conduct that might adversely affect it, the Crown is obliged to consult with the group asserting Aboriginal title and, if appropriate, accommodate the Aboriginal right. The duty to consult must be discharged prior to carrying out the action that could adversely affect the right.

[79] The degree of consultation and accommodation required lies on a spectrum as discussed in *Haida*. In general, the level of consultation and accommodation required is proportionate to the strength of the claim and to the seriousness of the adverse impact the contemplated governmental action would have on the claimed right. "A dubious or peripheral claim may attract a mere duty of notice, while a stronger claim may attract more stringent duties" (para. 37). The required level of consultation and accommodation is greatest where title has been established. Where consultation or accommodation is found to be inadequate, the government decision can be suspended or quashed.

[80] Where Aboriginal title is unproven, the Crown owes a procedural duty imposed by the honour of the Crown to consult and, if appropriate, accommodate the unproven Aboriginal interest. By contrast,

C. *La justification de l'atteinte*

[77] Pour justifier qu'il puisse passer outre aux volontés du groupe qui détient le titre ancestral au motif que l'atteinte sert l'intérêt général du public, le gouvernement doit établir : (1) qu'il s'est acquitté de son obligation procédurale de consultation et d'accommodement; (2) que ses actes poursuivaient un objectif impérieux et réel; et (3) que la mesure gouvernementale est compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe : *Sparrow*.

[78] L'obligation de consultation est une obligation procédurale que fait naître l'honneur de la Couronne avant que l'existence du titre soit confirmée. Lorsque la Couronne a connaissance, concrètement ou par imputation, de l'existence potentielle ou réelle du titre ancestral et qu'elle envisage une mesure susceptible d'avoir un effet préjudiciable sur ce titre, elle est tenue de consulter le groupe qui revendique le titre ancestral et, s'il y a lieu, de trouver des accommodements au droit ancestral. L'obligation de consultation doit être respectée avant la prise de mesures pouvant avoir un effet préjudiciable sur le droit.

[79] L'obligation de consultation et d'accommodement se situe à l'intérieur d'un continuum, comme il en a été question dans l'arrêt *Nation haïda*. En général, le niveau de consultation et d'accommodement nécessaire est proportionnel à la solidité de la revendication et à la gravité de l'incidence négative que la mesure gouvernementale proposée aurait sur le droit revendiqué. « Une revendication douteuse ou marginale peut ne requérir qu'une simple obligation d'informer, alors qu'une revendication plus solide peut faire naître des obligations plus contraignantes » (par. 37). Le niveau de consultation et d'accommodement nécessaire est le plus élevé lorsque l'existence du titre a été établie. Lorsque la consultation ou l'accommodement est jugé insuffisant, la décision du gouvernement peut être suspendue ou annulée.

[80] Lorsque l'existence du titre ancestral n'est pas établie, l'honneur de la Couronne lui impose une obligation procédurale de consultation et, s'il y a lieu, d'accommodement de l'intérêt autochtone

where title has been established, the Crown must not only comply with its procedural duties, but must also ensure that the proposed government action is substantively consistent with the requirements of s. 35 of the *Constitution Act, 1982*. This requires both a compelling and substantial governmental objective and that the government action is consistent with the fiduciary duty owed by the Crown to the Aboriginal group.

[81] I agree with the Court of Appeal that the compelling and substantial objective of the government must be considered from the Aboriginal perspective as well as from the perspective of the broader public. As stated in *Gladstone*, at para. 72:

... the objectives which can be said to be compelling and substantial will be those directed at either the recognition of the prior occupation of North America by [A]boriginal peoples or — and at the level of justification it is this purpose which may well be most relevant — at the reconciliation of [A]boriginal prior occupation with the assertion of the sovereignty of the Crown. [Emphasis added.]

[82] As *Delgamuukw* explains, the process of reconciling Aboriginal interests with the broader interests of society as a whole is the *raison d'être* of the principle of justification. Aboriginals and non-Aboriginals are “all here to stay” and must of necessity move forward in a process of reconciliation (para. 186). To constitute a compelling and substantial objective, the broader public goal asserted by the government must further the goal of reconciliation, having regard to both the Aboriginal interest and the broader public objective.

[83] What interests are potentially capable of justifying an incursion on Aboriginal title? In *Delgamuukw*, this Court, per Lamer C.J., offered this:

In the wake of *Gladstone*, the range of legislative objectives that can justify the infringement of [A]boriginal title is fairly broad. Most of these objectives can

non encore établi. Par contre, lorsque l'existence du titre a été établie, la Couronne doit non seulement se conformer à ses obligations procédurales, mais doit aussi s'assurer que la mesure gouvernementale proposée est fondamentalement conforme aux exigences de l'art. 35 de la *Loi constitutionnelle de 1982*. Pour cela, le gouvernement doit poursuivre un objectif impérieux et réel et il doit démontrer que la mesure proposée est compatible avec l'obligation fiduciaire de la Couronne envers le groupe autochtone.

[81] Je conviens avec la Cour d'appel que l'objectif impérieux et réel du gouvernement doit être examiné du point de vue des Autochtones ainsi que du point de vue de l'intérêt général du public. Comme il est indiqué au par. 72 de l'arrêt *Gladstone* :

... sont considérés comme des objectifs impérieux et réels les objectifs visant soit la reconnaissance de l'occupation antérieure de l'Amérique du Nord par les peuples autochtones soit — et, à l'étape de la justification, ce genre d'objectifs pourrait bien être le plus pertinent — la conciliation de cette occupation avec l'affirmation par Sa Majesté de sa souveraineté sur ce territoire. [Je souligne.]

[82] Comme l'explique la Cour dans l'arrêt *Delgamuukw*, le processus de conciliation des intérêts autochtones avec l'intérêt général de la société dans son ensemble constitue la raison d'être du principe de la justification. Les Autochtones et les non-Autochtones sont « tous ici pour y rester » et doivent forcément favoriser un processus de conciliation (par. 186). Pour constituer un objectif impérieux et réel, l'objectif général du public invoqué par le gouvernement doit poursuivre l'objectif de conciliation, compte tenu des intérêts autochtones et de l'objectif général du public.

[83] Quels objectifs peuvent justifier une atteinte au titre ancestral? Dans *Delgamuukw*, le juge en chef Lamer a fait les remarques suivantes au nom de la Cour :

Depuis *Gladstone*, l'éventail d'objectifs législatifs qui peuvent justifier une atteinte au titre aborigène est assez large. La plupart de ces objectifs peuvent être rattachés

be traced to the reconciliation of the prior occupation of North America by [A]boriginal peoples with the assertion of Crown sovereignty, which entails the recognition that “distinctive [A]boriginal societies exist within, and are a part of, a broader social, political and economic community” (at para. 73). In my opinion, the development of agriculture, forestry, mining, and hydro-electric power, the general economic development of the interior of British Columbia, protection of the environment or endangered species, the building of infrastructure and the settlement of foreign populations to support those aims, are the kinds of objectives that are consistent with this purpose and, in principle, can justify the infringement of [A]boriginal title. Whether a particular measure or government act can be explained by reference to one of those objectives, however, is ultimately a question of fact that will have to be examined on a case-by-case basis. [Emphasis added; emphasis in original deleted; para. 165.]

[84] If a compelling and substantial public purpose is established, the government must go on to show that the proposed incursion on the Aboriginal right is consistent with the Crown’s fiduciary duty towards Aboriginal people.

[85] The Crown’s fiduciary duty in the context of justification merits further discussion. The Crown’s underlying title in the land is held for the benefit of the Aboriginal group and constrained by the Crown’s fiduciary or trust obligation to the group. This impacts the justification process in two ways.

[86] First, the Crown’s fiduciary duty means that the government must act in a way that respects the fact that Aboriginal title is a group interest that inheres in present and future generations. The beneficial interest in the land held by the Aboriginal group vests communally in the title-holding group. This means that incursions on Aboriginal title cannot be justified if they would substantially deprive future generations of the benefit of the land.

[87] Second, the Crown’s fiduciary duty infuses an obligation of proportionality into the justification process. Implicit in the Crown’s fiduciary duty

à la conciliation de l’occupation antérieure de l’Amérique du Nord par les peuples autochtones avec l’affirmation de la souveraineté de la Couronne, ce qui nécessite la reconnaissance du fait que les « sociétés autochtones distinctives existent au sein d’une communauté sociale, politique et économique plus large, communauté dont elles font partie » (au par. 73). À mon avis, l’extension de l’agriculture, de la foresterie, de l’exploitation minière et de l’énergie hydroélectrique, le développement économique général de l’intérieur de la Colombie-Britannique, la protection de l’environnement et des espèces menacées d’extinction, ainsi que la construction des infrastructures et l’implantation des populations requises par ces fins, sont des types d’objectifs compatibles avec cet objet et qui, en principe, peuvent justifier une atteinte à un titre aborigène. Toutefois, la question de savoir si une mesure ou un acte donné du gouvernement peut être expliqué par référence à l’un de ces objectifs est, en dernière analyse, une question de fait qui devra être examinée au cas par cas. [Je souligne; soulignement dans l’original omis; par. 165.]

[84] Si le gouvernement démontre qu’il poursuit un objectif impérieux et réel, il doit ensuite prouver que l’atteinte proposée au droit ancestral est compatible avec l’obligation fiduciaire de la Couronne envers les peuples autochtones.

[85] Dans le contexte de la justification, l’obligation fiduciaire de la Couronne mérite une analyse plus approfondie. Le titre sous-jacent de la Couronne sur les terres est détenu au profit du groupe autochtone et encadré par l’obligation fiduciaire de la Couronne envers le groupe. Cela influence le processus de justification de deux façons.

[86] Premièrement, l’obligation fiduciaire de la Couronne signifie que le gouvernement doit agir d’une manière qui respecte le fait que le titre ancestral est un droit collectif inhérent aux générations actuelles et futures. L’intérêt bénéficiaire sur les terres que détient le groupe autochtone est dévolu à l’ensemble des membres du groupe titulaire du titre. Les atteintes au titre ancestral ne peuvent donc pas être justifiées si elles priveront de façon substantielle les générations futures des avantages que procurent les terres.

[87] Deuxièmement, l’obligation fiduciaire de la Couronne insufflé une obligation de proportionnalité dans le processus de justification. Il ressort

to the Aboriginal group is the requirement that the incursion is necessary to achieve the government's goal (rational connection); that the government go no further than necessary to achieve it (minimal impairment); and that the benefits that may be expected to flow from that goal are not outweighed by adverse effects on the Aboriginal interest (proportionality of impact). The requirement of proportionality is inherent in the *Delgamuukw* process of reconciliation and was echoed in *Haida's* insistence that the Crown's duty to consult and accommodate at the claims stage "is proportionate to a preliminary assessment of the strength of the case supporting the existence of the right or title, and to the seriousness of the potentially adverse effect upon the right or title claimed" (para. 39).

[88] In summary, Aboriginal title confers on the group that holds it the exclusive right to decide how the land is used and the right to benefit from those uses, subject to one carve-out — that the uses must be consistent with the group nature of the interest and the enjoyment of the land by future generations. Government incursions not consented to by the title-holding group must be undertaken in accordance with the Crown's procedural duty to consult and must also be justified on the basis of a compelling and substantial public interest, and must be consistent with the Crown's fiduciary duty to the Aboriginal group.

D. Remedies and Transition

[89] Prior to establishment of title by court declaration or agreement, the Crown is required to consult in good faith with any Aboriginal groups asserting title to the land about proposed uses of the land and, if appropriate, accommodate the interests of such claimant groups. The level of consultation and accommodation required varies with the strength of the Aboriginal group's claim to the land and the seriousness of the potentially adverse effect upon the interest claimed. If the Crown fails

implicitement de l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone que l'atteinte doit être nécessaire pour atteindre l'objectif gouvernemental (lien rationnel), que le gouvernement ne va pas au-delà de ce qui est nécessaire pour atteindre cet objectif (atteinte minimale) et que les effets préjudiciables sur l'intérêt autochtone ne l'emportent pas sur les avantages qui devraient découler de cet objectif (proportionnalité de l'incidence). L'exigence de proportionnalité est inhérente au processus de conciliation énoncé dans l'arrêt *Delgamuukw* et elle a été reprise dans l'arrêt *Nation haïda*, où la Cour insiste sur le fait que l'obligation de la Couronne de consulter et d'accommoder à l'étape des revendications « dépend de l'évaluation préliminaire de la solidité de la preuve étayant l'existence du droit ou du titre revendiqué, et de la gravité des effets préjudiciables potentiels sur le droit ou le titre » (par. 39).

[88] En résumé, le titre ancestral confère au groupe qui le détient le droit exclusif de déterminer l'utilisation qu'il est fait des terres et le droit de bénéficier des avantages que procure cette utilisation, sous réserve d'une seule exception, soit que les utilisations respectent sa nature collective et préservent la jouissance des terres pour les générations futures. Lorsque le gouvernement porte atteinte au titre ancestral sans le consentement du groupe titulaire du titre, il doit le faire en respectant l'obligation procédurale de la Couronne de consulter le groupe. L'atteinte doit également être justifiée par la poursuite d'un objectif public impérieux et réel et elle doit être compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone.

D. Mesures de réparation et période transitoire

[89] Avant que l'existence du titre soit établie par un jugement déclaratoire ou une entente, la Couronne est tenue de consulter de bonne foi les groupes autochtones qui revendiquent le titre sur des terres au sujet de ses projets d'utilisation des terres et, s'il y a lieu, de trouver des accommodements aux intérêts de ces groupes. Le niveau de consultation et d'accommodement requis varie en fonction de la solidité de la revendication du groupe autochtone et de la gravité de l'effet

to discharge its duty to consult, various remedies are available including injunctive relief, damages, or an order that consultation or accommodation be carried out: *Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43, [2010] 2 S.C.R. 650, at para. 37.

[90] After Aboriginal title to land has been established by court declaration or agreement, the Crown must seek the consent of the title-holding Aboriginal group to developments on the land. Absent consent, development of title land cannot proceed unless the Crown has discharged its duty to consult and can justify the intrusion on title under s. 35 of the *Constitution Act, 1982*. The usual remedies that lie for breach of interests in land are available, adapted as may be necessary to reflect the special nature of Aboriginal title and the fiduciary obligation owed by the Crown to the holders of Aboriginal title.

[91] The practical result may be a spectrum of duties applicable over time in a particular case. At the claims stage, prior to establishment of Aboriginal title, the Crown owes a good faith duty to consult with the group concerned and, if appropriate, accommodate its interests. As the claim strength increases, the required level of consultation and accommodation correspondingly increases. Where a claim is particularly strong — for example, shortly before a court declaration of title — appropriate care must be taken to preserve the Aboriginal interest pending final resolution of the claim. Finally, once title is established, the Crown cannot proceed with development of title land not consented to by the title-holding group unless it has discharged its duty to consult and the development is justified pursuant to s. 35 of the *Constitution Act, 1982*.

préjudiciable éventuel sur l'intérêt revendiqué. Le manquement par la Couronne à son obligation de consultation peut donner lieu à diverses mesures de réparation, notamment une injonction, des dommages-intérêts ou une ordonnance enjoignant la tenue de consultations ou la prise de mesures d'accommodement : *Rio Tinto Alcan Inc. c. Conseil tribal Carrier Sekani*, 2010 CSC 43, [2010] 2 R.C.S. 650, par. 37.

[90] Une fois l'existence du titre ancestral sur des terres établie par un jugement déclaratoire ou une entente, le gouvernement doit demander le consentement du groupe autochtone titulaire du titre pour ses projets d'aménagement du territoire. En l'absence de consentement, les projets d'aménagement sur les terres assujetties au titre ne peuvent aller de l'avant si le gouvernement ne s'est pas acquitté de son obligation de consultation et ne peut justifier une atteinte à ce titre aux termes de l'art. 35 de la *Loi constitutionnelle de 1982*. Les mesures de réparation habituelles en cas d'atteinte à des intérêts sur des terres sont disponibles, en les adaptant au besoin en fonction de la nature particulière du titre ancestral et de l'obligation fiduciaire de la Couronne envers les titulaires du titre ancestral.

[91] Il s'ensuit d'un point de vue pratique que des obligations différentes puissent être applicables au fil du temps dans un cas donné. À l'étape de la revendication, avant que soit établie l'existence du titre ancestral, le gouvernement a une obligation de consulter de bonne foi le groupe en cause et, s'il y a lieu, d'accommoder ses intérêts. Alors que la validité de la revendication devient plus apparente, le niveau requis de consultation et d'accommodement augmente proportionnellement. Lorsqu'une revendication est particulièrement solide — par exemple, peu avant qu'un tribunal confirme l'existence du titre — il faut bien prendre soin de préserver l'intérêt autochtone en attendant le règlement définitif de la revendication. Enfin, une fois l'existence du titre établie, le gouvernement ne peut réaliser, sur les terres grevées d'un titre ancestral, un projet d'aménagement auquel le groupe titulaire du titre n'a pas consenti à moins qu'il se soit acquitté de son obligation de consultation et que le projet d'aménagement soit justifié au sens de l'art. 35 de la *Loi constitutionnelle de 1982*.

[92] Once title is established, it may be necessary for the Crown to reassess prior conduct in light of the new reality in order to faithfully discharge its fiduciary duty to the title-holding group going forward. For example, if the Crown begins a project without consent prior to Aboriginal title being established, it may be required to cancel the project upon establishment of the title if continuation of the project would be unjustifiably infringing. Similarly, if legislation was validly enacted before title was established, such legislation may be rendered inapplicable going forward to the extent that it unjustifiably infringes Aboriginal title.

E. *What Duties Were Owed by the Crown at the Time of the Government Action?*

[93] Prior to the declaration of Aboriginal title, the Province had a duty to consult and accommodate the claimed Tsilhqot'in interest in the land. As the Tsilhqot'in had a strong *prima facie* claim to the land at the time of the impugned government action and the intrusion was significant, the duty to consult owed by the Crown fell at the high end of the spectrum described in *Haida* and required significant consultation and accommodation in order to preserve the Tsilhqot'in interest.

[94] With the declaration of title, the Tsilhqot'in have now established Aboriginal title to the portion of the lands designated by the trial judge with the exception as set out in para. 9 of these reasons. This gives them the right to determine, subject to the inherent limits of group title held for future generations, the uses to which the land is put and to enjoy its economic fruits. As we have seen, this is not merely a right of first refusal with respect to Crown land management or usage plans. Rather, it is the right to proactively use and manage the land.

[92] Une fois l'existence du titre établie, il peut être nécessaire pour le gouvernement de réévaluer sa conduite passée compte tenu de cette nouvelle réalité afin de s'acquitter fidèlement par la suite de son obligation fiduciaire envers le groupe titulaire du titre. Par exemple, si, avant que le titre ancestral soit établi, le gouvernement a entrepris un projet sans le consentement du groupe autochtone, il peut être tenu de l'annuler une fois l'existence du titre établie si la poursuite du projet porte indûment atteinte aux droits des Autochtones. De même, si une loi a été valablement adoptée avant que l'existence du titre soit établie, elle pourra être déclarée inapplicable pour l'avenir dans la mesure où elle porte injustement atteinte au titre ancestral.

E. *Quelles étaient les obligations de la Couronne au moment de la prise de la mesure gouvernementale?*

[93] Avant le jugement déclarant l'existence du titre ancestral, la province était tenue de consulter les Tsilhqot'in et de trouver des accommodements aux intérêts qu'ils revendiquaient. Au moment de la prise de la mesure gouvernementale contestée, la revendication du titre sur les terres par les Tsilhqot'in était à première vue solide et l'obligation de consultation de la Couronne se situait au haut du continuum décrit dans *Nation haïda* et exigeait un niveau élevé de consultation et d'accommodement afin de préserver les intérêts des Tsilhqot'in.

[94] Maintenant qu'un jugement a reconnu l'existence du titre, le peuple Tsilhqot'in détient un titre ancestral sur la partie du territoire désignée par le juge de première instance, sous réserve de l'exception indiquée au par. 9 des présents motifs. Cela donne au peuple Tsilhqot'in, sous réserve des limites inhérentes au titre collectif détenu au bénéfice des générations futures, le droit de déterminer les utilisations des terres et de bénéficier des avantages économiques qu'elles procurent. Comme nous l'avons déjà vu, il ne s'agit pas simplement d'un droit de premier refus sur la gestion des terres de la Couronne ou sur les plans de leur utilisation. Il s'agit plutôt du droit d'utiliser et de gérer les terres de façon proactive.

VII. Breach of the Duty to Consult

[95] The alleged breach in this case arises from the issuance by the Province of licences permitting third parties to conduct forestry activity and construct related infrastructure on the land in 1983 and onwards, before title was declared. During this time, the Tsilhqot'in held an interest in the land that was not yet legally recognized. The honour of the Crown required that the Province consult them on uses of the lands and accommodate their interests. The Province did neither and breached its duty owed to the Tsilhqot'in.

[96] The Crown's duty to consult was breached when Crown officials engaged in the planning process for the removal of timber. The inclusion of timber on Aboriginal title land in a timber supply area, the approval of cut blocks on Aboriginal title land in a forest development plan, and the allocation of cutting permits all occurred without any meaningful consultation with the Tsilhqot'in.

[97] I add this. Governments and individuals proposing to use or exploit land, whether before or after a declaration of Aboriginal title, can avoid a charge of infringement or failure to adequately consult by obtaining the consent of the interested Aboriginal group.

VIII. Provincial Laws and Aboriginal Title

[98] As discussed, I have concluded that the Province breached its duty to consult and accommodate the Tsilhqot'in interest in the land. This is sufficient to dispose of the appeal.

[99] However, the parties made extensive submissions on the application of the *Forest Act* to Aboriginal title land. This issue was dealt with by the courts below and is of pressing importance to the Tsilhqot'in people and other Aboriginal groups in British Columbia and elsewhere. It is therefore appropriate that we deal with it.

VII. Le manquement à l'obligation de consultation

[95] En l'espèce, le manquement allégué découle de la délivrance, par la province, de permis permettant à des tiers de mener des activités forestières et de construire des infrastructures connexes sur les terres à compter de 1983, avant que l'existence du titre soit reconnue. Au cours de cette période, les Tsilhqot'in détenaient sur les terres un intérêt qui n'était pas encore légalement reconnu. Le principe de l'honneur de la Couronne obligeait la province à les consulter à propos des utilisations des terres et à trouver des accommodements à leurs intérêts. La province n'a fait ni l'un ni l'autre et a manqué à son obligation envers les Tsilhqot'in.

[96] La Couronne a manqué à son obligation de consultation quand ses représentants ont planifié l'enlèvement du bois. L'inclusion des terres visées par un titre ancestral dans une région d'approvisionnement en bois, l'autorisation de blocs de coupe sur les terres visées par un titre ancestral dans le cadre d'un plan d'aménagement forestier et la délivrance de permis de coupe ont eu lieu sans aucune consultation significative avec les Tsilhqot'in.

[97] J'ajoute ceci. Les gouvernements et particuliers qui proposent d'utiliser ou d'exploiter la terre, que ce soit avant ou après une déclaration de titre ancestral, peuvent éviter d'être accusés de porter atteinte aux droits ou de manquer à l'obligation de consulter adéquatement le groupe en obtenant le consentement du groupe autochtone en question.

VIII. Les lois provinciales et le titre ancestral

[98] Je le rappelle, j'ai conclu que la province a manqué à son obligation de consulter les Tsilhqot'in et de trouver des accommodements à leur intérêt sur les terres. Cela suffit à trancher le pourvoi.

[99] Cependant, les parties ont présenté des observations détaillées sur l'application de la *Forest Act* aux terres visées par un titre ancestral. Les tribunaux d'instance inférieure ont traité de cette question, laquelle prend une grande importance pour le peuple des Tsilhqot'in et pour les autres groupes autochtones de la Colombie-Britannique et d'ailleurs. Il convient donc que nous l'examinions.

[100] The following questions arise: (1) Do provincial laws of general application apply to land held under Aboriginal title and, if so, how? (2) Does the British Columbia *Forest Act* on its face apply to land held under Aboriginal title? and (3) If the *Forest Act* on its face applies, is its application ousted by the operation of the Constitution of Canada? I will discuss each of these questions in turn.

A. *Do Provincial Laws of General Application Apply to Land Held Under Aboriginal Title?*

[101] Broadly put, provincial laws of general application apply to lands held under Aboriginal title. However, as we shall see, there are important constitutional limits on this proposition.

[102] As a general proposition, provincial governments have the power to regulate land use within the province. This applies to all lands, whether held by the Crown, by private owners, or by the holders of Aboriginal title. The foundation for this power lies in s. 92(13) of the *Constitution Act, 1867*, which gives the provinces the power to legislate with respect to property and civil rights in the province.

[103] Provincial power to regulate land held under Aboriginal title is constitutionally limited in two ways. First, it is limited by s. 35 of the *Constitution Act, 1982*. Section 35 requires any abridgment of the rights flowing from Aboriginal title to be backed by a compelling and substantial governmental objective and to be consistent with the Crown's fiduciary relationship with title holders. Second, a province's power to regulate lands under Aboriginal title may in some situations also be limited by the federal power over "Indians, and Lands reserved for the Indians" under s. 91(24) of the *Constitution Act, 1867*.

[100] Les questions qui se posent sont les suivantes : (1) Les lois provinciales d'application générale s'appliquent-elles aux terres visées par un titre ancestral et, dans l'affirmative, comment s'appliquent-elles? (2) À première vue, la *Forest Act* de la Colombie-Britannique s'applique-t-elle aux terres visées par un titre ancestral? Et (3) si, à première vue, la *Forest Act* s'applique, son application est-elle écartée par l'application de la Constitution du Canada? Je vais examiner successivement chacune de ces questions.

A. *Les lois provinciales d'application générale s'appliquent-elles aux terres visées par un titre ancestral?*

[101] De façon générale, les lois provinciales d'application générale s'appliquent aux terres visées par un titre ancestral. Cependant, comme nous le verrons, cet énoncé est assorti de limites constitutionnelles importantes.

[102] En règle générale, les gouvernements provinciaux ont le pouvoir de réglementer l'utilisation des terres situées à l'intérieur de la province. Cette règle s'applique à toutes les terres, qu'elles soient détenues par le gouvernement, par des propriétaires privés ou par les titulaires d'un titre ancestral. Le fondement de ce pouvoir réside dans le par. 92(13) de la *Loi constitutionnelle de 1867*, lequel accorde à la province le pouvoir de légiférer en matière de propriété et de droits civils dans la province.

[103] Le pouvoir provincial de réglementer les terres détenues en vertu d'un titre ancestral est constitutionnellement limité de deux façons. Premièrement, il est limité par l'art. 35 de la *Loi constitutionnelle de 1982*. Aux termes de cet article, toute atteinte aux droits découlant du titre ancestral doit poursuivre un objectif gouvernemental impérieux et réel et doit être compatible avec la relation fiduciaire entre la Couronne et les titulaires du titre. Deuxièmement, le pouvoir d'une province de réglementer les terres visées par un titre ancestral peut aussi, dans certains cas, être limité par le pouvoir fédéral sur les « Indiens et les terres réservées pour les Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867*.

[104] This Court suggested in *Sparrow* that the following factors will be relevant in determining whether a law of general application results in a meaningful diminution of an Aboriginal right, giving rise to breach: (1) whether the limitation imposed by the legislation is unreasonable; (2) whether the legislation imposes undue hardship; and (3) whether the legislation denies the holders of the right their preferred means of exercising the right (p. 1112). All three factors must be considered; for example, even if laws of general application are found to be reasonable or not to cause undue hardship, this does not mean that there can be no infringement of Aboriginal title. As stated in *Gladstone*:

Simply because one of [the *Sparrow*] questions is answered in the negative will not prohibit a finding by a court that a *prima facie* infringement has taken place; it will just be one factor for a court to consider in its determination of whether there has been a *prima facie* infringement. [para. 43]

[105] It may be predicted that laws and regulations of general application aimed at protecting the environment or assuring the continued health of the forests of British Columbia will usually be reasonable, not impose an undue hardship either directly or indirectly, and not interfere with the Aboriginal group's preferred method of exercising their right. And it is to be hoped that Aboriginal groups and the provincial government will work cooperatively to sustain the natural environment so important to them both. This said, when conflicts arise, the foregoing template serves to resolve them.

[106] Subject to these constitutional constraints, provincial laws of general application apply to land held under Aboriginal title.

B. Does the Forest Act on its Face Apply to Aboriginal Title Land?

[107] Whether a statute of general application such as the *Forest Act* was intended to apply to lands subject to Aboriginal title — the question

[104] Dans l'arrêt *Sparrow*, notre Cour a laissé entendre que les facteurs suivants seront pertinents au moment de déterminer si une loi d'application générale entraîne une diminution appréciable d'un droit ancestral, ce qui donne lieu à une atteinte : (1) si la restriction imposée par la loi est déraisonnable; (2) si la loi est indûment rigoureuse; et (3) si la loi refuse aux titulaires du droit le recours à leur moyen préféré d'exercer ce droit (p. 1112). Les trois facteurs doivent être pris en compte; par exemple, même s'il est jugé que les lois d'application générale ne sont pas déraisonnables ou indûment rigoureuses, cela ne signifie pas qu'il ne peut pas y avoir d'atteinte au titre ancestral. Comme la Cour l'a affirmé dans l'arrêt *Gladstone* :

Le simple fait qu'on réponde par la négative à l'une de ces questions [formulées dans l'arrêt *Sparrow*] n'empêche pas le tribunal de conclure à l'existence d'une atteinte à première vue. Cette réponse négative n'est qu'un des facteurs que le tribunal doit prendre en considération pour déterminer s'il y a eu atteinte à première vue. [par. 43]

[105] On peut prévoir que les lois et règlements d'application générale visant à protéger l'environnement ou à assurer, à long terme, la santé des forêts de la Colombie-Britannique seront habituellement raisonnables, qu'ils ne seront pas, directement ou indirectement, indûment rigoureux et qu'ils ne refuseront pas au groupe autochtone leur moyen préféré d'exercer leur droit. Et il faut espérer que les groupes autochtones et le gouvernement provincial collaboreront pour assurer la pérennité de l'environnement naturel qui leur est si important. Cela dit, lorsque survient un conflit, l'analyse qui précède sert à le régler.

[106] Sous réserve de ces contraintes constitutionnelles, les lois provinciales d'application générale s'appliquent aux terres détenues en vertu d'un titre ancestral.

B. À première vue, la Forest Act s'applique-t-elle aux terres visées par un titre ancestral?

[107] À ce stade-ci, la question de savoir si une loi d'application générale telle la *Forest Act* était censée s'appliquer aux terres visées par un titre

at this point — is always a matter of statutory interpretation.

[108] The basic rule of statutory interpretation is that “the words of an Act are to be read in their entire context, in their grammatical and ordinary sense harmoniously with the scheme of the Act, the object of the Act, and the intention of Parliament”: R. Sullivan, *Sullivan on the Construction of Statutes* (5th ed. 2008), at p. 1.

[109] Under the *Forest Act*, the Crown can only issue timber licences with respect to “Crown timber”. “Crown timber” is defined as timber that is on “Crown land”, and “Crown land” is defined as “land, whether or not it is covered by water, or an interest in land, vested in the Crown” (s. 1). The Crown is not empowered to issue timber licences on “private land”, which is defined as anything that is not Crown land. The Act is silent on Aboriginal title land, meaning that there are three possibilities: (1) Aboriginal title land is “Crown land”; (2) Aboriginal title land is “private land”; or (3) the *Forest Act* does not apply to Aboriginal title land at all. For the purposes of this appeal, there is no practical difference between the latter two.

[110] If Aboriginal title land is “vested in the Crown”, then it falls within the definition of “Crown land” and the timber on it is “Crown timber”.

[111] What does it mean for a person or entity to be “vested” with property? In property law, an interest is vested when no condition or limitation stands in the way of enjoyment. Property can be vested in possession or in interest. Property is vested in possession where there is a present entitlement to enjoyment of the property. An example of this is a life estate. Property is vested in interest where there is a fixed right to taking possession in the future. A remainder interest is vested in interest but not

ancestral est toujours une question d’interprétation législative.

[108] Selon la règle fondamentale en matière d’interprétation législative, [TRADUCTION] « il faut interpréter les termes d’une loi dans leur contexte global en suivant le sens ordinaire et grammatical qui s’harmonise avec l’économie de la loi, son objet et l’intention du législateur » : R. Sullivan, *Sullivan on the Construction of Statutes* (5^e éd. 2008), p. 1.

[109] Aux termes de la *Forest Act*, le gouvernement ne peut délivrer des permis de coupe que pour le [TRADUCTION] « bois des terres publiques », défini comme étant le bois qui se trouve sur les « terres publiques », lesquelles sont définies comme étant les « terres dévolues à la Couronne, qu’elles soient ou non recouvertes d’eau, ou un droit sur ces terres » (art. 1). Le gouvernement n’a pas le pouvoir de délivrer des permis de coupe de bois sur les « terres privées », elles-mêmes définies comme étant toutes les terres qui ne sont pas des terres publiques. La *Forest Act* ne fait pas mention des terres visées par un titre ancestral et nous laisse devant trois possibilités : (1) les terres visées par un titre ancestral sont des « terres publiques »; (2) les terres visées par un titre ancestral sont des « terres privées »; ou (3) la *Forest Act* ne s’applique nullement aux terres visées par un titre ancestral. Pour les besoins du présent pourvoi, il n’y a pas de différence en pratique entre les deux dernières possibilités.

[110] Si les terres visées par un titre ancestral sont « dévolues à la Couronne », la définition des « terres publiques » s’y applique et le bois qui s’y trouve est du « bois des terres publiques ».

[111] Que signifie pour une personne ou une entité le fait qu’un bien lui soit « dévolu »? En droit des biens, un intérêt est dévolu lorsqu’aucune condition ou restriction n’en restreint la jouissance. Un bien peut être dévolu en possession ou en intérêt. Un bien est dévolu en possession lorsque la personne a le droit actuel de jouir du bien. Le domaine viager en est un exemple. Un bien est dévolu en intérêt lorsque le droit d’en prendre possession ultérieurement est figé. Un intérêt

in possession: B. Ziff, *Principles of Property Law* (5th ed. 2010), at p. 245; *Black's Law Dictionary* (9th ed. 2009), *sub verbo* “vested”.

[112] Aboriginal title confers a right to the land itself and the Crown is obligated to justify any incursions on title. As explained above, the content of the Crown's underlying title is limited to the fiduciary duty owed and the right to encroach subject to justification. It would be hard to say that the Crown is presently entitled to enjoyment of the lands in the way property that is vested in possession would be. Similarly, although Aboriginal title can be alienated to the Crown, this does not confer a fixed right to future enjoyment in the way property that is vested in interest would. Rather, it would seem that Aboriginal title vests the lands in question in the Aboriginal group.

[113] The second consideration in statutory construction is more equivocal. Can the legislature have intended that the vast areas of the province that are potentially subject to Aboriginal title be immune from forestry regulation? And what about the long period of time during which land claims progress and ultimate Aboriginal title remains uncertain? During this period, Aboriginal groups have no legal right to manage the forest; their only right is to be consulted, and if appropriate, accommodated with respect to the land's use: *Haida*. At this stage, the Crown may continue to manage the resource in question, but the honour of the Crown requires it to respect the potential, but yet unproven claims.

[114] It seems clear from the historical record and the record in this case that in this evolving context, the British Columbia legislature proceeded on the basis that lands under claim remain “Crown land” under the *Forest Act*, at least until Aboriginal title is recognized by a court or an agreement. To proceed otherwise would have left no one in charge of the forests that cover hundreds of thousands

résiduel est dévolu en intérêt mais non en possession : B. Ziff, *Principles of Property Law* (5^e éd. 2010), p. 245; *Black's Law Dictionary* (9^e éd. 2009), à l'article « *vested* » (dévolu).

[112] Le titre ancestral confère un droit sur les terres-mêmes, et la Couronne est tenue de justifier toute atteinte au titre. J'ai déjà expliqué que le contenu du titre sous-jacent de la Couronne se limite à l'obligation fiduciaire envers les Autochtones et au droit de porter atteinte au titre ancestral dans la mesure où l'atteinte est justifiée. On pourrait difficilement affirmer que la Couronne a le droit actuel de jouir des terres comme elle pourrait le faire dans le cas d'un bien dévolu en possession. De même, bien que le titre ancestral puisse être aliéné en faveur de la Couronne, cela ne confère pas un droit figé de jouir ultérieurement du titre comme elle pourrait le faire dans le cas d'un bien dévolu en intérêt. Il semblerait plutôt que par l'effet du titre ancestral, les terres en question sont dévolues au groupe autochtone.

[113] La deuxième considération en matière d'interprétation législative est plus équivoque. Le législateur peut-il avoir voulu que les vastes territoires de la province susceptibles d'être visés par un titre ancestral soient soustraits à la réglementation de l'exploitation forestière? Et que dire de la longue période pendant laquelle les revendications territoriales font l'objet de négociation et le titre ancestral demeure incertain? Pendant cette période, les groupes autochtones n'ont pas le droit de gérer les forêts; ils ont seulement droit qu'on les consulte et, s'il y a lieu, qu'on les accommode relativement à l'utilisation des terres : *Nation haïda*. À cette étape, le gouvernement peut continuer à gérer la ressource en question, mais l'honneur de la Couronne l'oblige à respecter la revendication non encore prouvée.

[114] Il semble ressortir clairement du dossier historique et du dossier en l'espèce que dans ce contexte évolutif, le législateur de la Colombie-Britannique s'est fondé sur le fait que les terres revendiquées demeurent des [TRADUCTION] « terres publiques » au sens de la *Forest Act*, du moins jusqu'à ce que le titre ancestral soit reconnu par un tribunal ou une entente. Autrement, personne

of hectares and represent a resource of enormous value. Looked at in this very particular historical context, it seems clear that the legislature must have intended the words “vested in the Crown” to cover at least lands to which Aboriginal title had not yet been confirmed.

[115] I conclude that the legislature intended the *Forest Act* to apply to lands under claims for Aboriginal title, *up to the time title is confirmed by agreement or court order*. To hold otherwise would be to accept that the legislature intended the forests on such lands to be wholly unregulated, and would undercut the premise on which the duty to consult affirmed in *Haida* was based. Once Aboriginal title is confirmed, however, the lands are “vested” in the Aboriginal group and the lands are no longer Crown lands.

[116] Applied to this case, this means that as a matter of statutory construction, the lands in question were “Crown land” under the *Forest Act* at the time the forestry licences were issued. Now that title has been established, however, the beneficial interest in the land vests in the Aboriginal group, not the Crown. The timber on it no longer falls within the definition of “Crown timber” and the *Forest Act* no longer applies. I add the obvious — it remains open to the legislature to amend the Act to cover lands held under Aboriginal title, provided it observes applicable constitutional restraints.

C. *Is the Forest Act Ousted by the Constitution?*

[117] The next question is whether the provincial legislature lacks the constitutional power to legislate with respect to forests on Aboriginal title land. Currently, the *Forest Act* applies to lands under claim, but not to lands over which Aboriginal title has been confirmed. However, the provincial

ne se serait occupé des forêts qui couvrent des centaines de milliers d’hectares et qui représentent une ressource d’une valeur inestimable. Compte tenu de ce contexte historique très particulier, il semble clair que le législateur doit avoir voulu que les mots « dévolues à la Couronne » s’appliquent au moins aux terres sur lesquelles l’existence du titre ancestral n’était pas encore confirmée.

[115] Je conclus que le législateur voulait que la *Forest Act* s’applique aux terres visées par une revendication de titre ancestral, *jusqu’à ce que l’existence du titre soit confirmée par une entente ou une ordonnance judiciaire*. Conclure autrement reviendrait à accepter que le législateur voulait que les forêts se trouvant sur ces terres ne soient pas du tout réglementées et minerait la prémisse sur laquelle était fondée l’obligation de consulter confirmée dans l’arrêt *Nation haïda*. Cependant, une fois que l’existence du titre ancestral est confirmée, les terres sont « dévolues » au groupe autochtone et ne sont plus des terres publiques.

[116] L’application de cette conclusion en l’espèce signifie que, selon les règles d’interprétation législative, les terres en question étaient des [TRADUCTION] « terres publiques » aux termes de la *Forest Act* au moment où les permis d’exploitation forestière ont été délivrés. Cependant, maintenant que l’existence du titre a été établie, l’intérêt bénéficiaire sur les terres est dévolu au groupe autochtone et non à la Couronne. La définition de « bois des terres publiques » ne s’applique plus au bois qui se trouve sur ces terres et la *Forest Act* ne s’y applique plus. J’aimerais préciser un point évident — le législateur peut toujours modifier la *Forest Act* afin qu’elle s’applique sur les terres visées par un titre ancestral, à la condition de respecter les contraintes constitutionnelles applicables.

C. *La Forest Act est-elle écartée par la Constitution?*

[117] La question suivante consiste à savoir si la Constitution permet au législateur provincial de légiférer sur les forêts qui se trouvent sur des terres visées par un titre ancestral. Actuellement, la *Forest Act* s’applique aux terres visées par une revendication du titre ancestral, mais pas aux terres

legislature could amend the Act so as to explicitly apply to lands over which title has been confirmed. This raises the question of whether provincial forestry legislation that on its face purports to apply to Aboriginal title lands is ousted by the Constitution.

1. Section 35 of the *Constitution Act, 1982*

[118] Section 35 of the *Constitution Act, 1982* represents “the culmination of a long and difficult struggle in both the political forum and the courts for the constitutional recognition of [A]boriginal rights” (*Sparrow*, at p. 1105). It protects Aboriginal rights against provincial and federal legislative power and provides a framework to facilitate negotiations and reconciliation of Aboriginal interests with those of the broader public.

[119] Section 35(1) states that existing Aboriginal rights are hereby “recognized and affirmed”. In *Sparrow*, this Court held that these words must be construed in a liberal and purposive manner. Recognition and affirmation of Aboriginal rights constitutionally entrenches the Crown’s fiduciary obligations towards Aboriginal peoples. While rights that are recognized and affirmed are not absolute, s. 35 requires the Crown to reconcile its power with its duty. “[T]he best way to achieve that reconciliation is to demand the justification of any government regulation that infringes upon or denies [A]boriginal rights” (*Sparrow*, at p. 1109). Dickson C.J. and La Forest J. elaborated on this purpose as follows, at p. 1110:

The constitutional recognition afforded by the provision therefore gives a measure of control over government conduct and a strong check on legislative power. While it does not promise immunity from government regulation in a society that, in the twentieth century, is increasingly more complex, interdependent and sophisticated, and where exhaustible resources need protection and management, it does hold the Crown to a substantive

sur lesquelles l’existence de ce titre a été confirmée. Cependant, le législateur provincial pourrait modifier la *Forest Act* de manière à ce qu’elle s’applique explicitement aux terres sur lesquelles l’existence du titre ancestral a été confirmée. Cela soulève la question de savoir si la Constitution écarte les lois provinciales régissant l’exploitation forestière qui, à première vue, sont censées s’appliquer aux terres visées par un titre ancestral.

1. L’article 35 de la *Loi constitutionnelle de 1982*

[118] L’article 35 de la *Loi constitutionnelle de 1982* représente « l’aboutissement d’une bataille longue et difficile à la fois dans l’arène politique et devant les tribunaux pour la reconnaissance de droits ancestraux » (*Sparrow*, p. 1105). Il protège les droits ancestraux contre l’exercice, par les provinces et le fédéral, de leur compétence législative et prévoit un cadre qui facilite les négociations et la conciliation des intérêts autochtones avec ceux du public en général.

[119] Selon le par. 35(1), les droits ancestraux existants sont « reconnus et confirmés ». Dans *Sparrow*, notre Cour a conclu que ces mots devaient être interprétés de façon libérale en fonction de l’objet qu’ils visent. La reconnaissance et la confirmation des droits ancestraux consacrent dans la Constitution les obligations fiduciaires de la Couronne envers les peuples autochtones. Bien que les droits reconnus et confirmés ne soient pas absolus, l’art. 35 oblige la Couronne à concilier son pouvoir avec son obligation. « [L]a meilleure façon d’y parvenir est d’exiger la justification de tout règlement gouvernemental qui porte atteinte à des droits ancestraux » (*Sparrow*, p. 1109). Le juge en chef Dickson et le juge La Forest ont précisé cet objectif comme suit à la p. 1110 :

La reconnaissance constitutionnelle exprimée dans la disposition en cause permet donc, dans une certaine mesure, de contrôler la conduite du gouvernement et de limiter fortement le pouvoir du législateur. Bien qu’elle ne constitue pas une promesse d’immunité contre la réglementation gouvernementale dans une société qui, au XX^e siècle, devient de plus en plus complexe et interdépendante et où il est nécessaire

promise. The government is required to bear the burden of justifying any legislation that has some negative effect on any [A]boriginal right protected under s. 35(1).

[120] Where legislation affects an Aboriginal right protected by s. 35 of the *Constitution Act, 1982*, two inquiries are required. First, does the legislation interfere with or infringe the Aboriginal right (this was referred to as *prima facie* infringement in *Sparrow*)? Second, if so, can the infringement be justified?

[121] A court must first examine the characteristics or incidents of the right at stake. In the case of Aboriginal title, three relevant incidents are: (1) the right to exclusive use and occupation of the land; (2) the right to determine the uses to which the land is put, subject to the ultimate limit that those uses cannot destroy the ability of the land to sustain future generations of Aboriginal peoples; and (3) the right to enjoy the economic fruits of the land (*Delgamuukw*, at para. 166).

[122] Next, in order to determine whether the right is infringed by legislation, a court must ask whether the legislation results in a meaningful diminution of the right: *Gladstone*. As discussed, in *Sparrow*, the Court suggested that the following three factors will aid in determining whether such an infringement has occurred: (1) whether the limitation imposed by the legislation is unreasonable; (2) whether the legislation imposes undue hardship; and (3) whether the legislation denies the holders of the right their preferred means of exercising the right (p. 1112).

[123] General regulatory legislation, such as legislation aimed at managing the forests in a way that deals with pest invasions or prevents forest fires, will often pass the *Sparrow* test as it will be reasonable, not impose undue hardship, and not deny the holders of the right their preferred means of exercising it. In such cases, no infringement will result.

de protéger et de gérer les ressources épuisables, cette reconnaissance représente un engagement important de la part de la Couronne. Le gouvernement se voit imposer l'obligation de justifier toute mesure législative qui a un effet préjudiciable sur un droit ancestral protégé par le par. 35(1).

[120] Lorsqu'une mesure législative porte atteinte à un droit ancestral protégé par l'art. 35 de la *Loi constitutionnelle de 1982*, il faut se poser deux questions. Premièrement, la mesure porte-t-elle atteinte au droit ancestral (une atteinte à première vue, dans l'arrêt *Sparrow*)? Deuxièmement, dans l'affirmative, l'atteinte peut-elle être justifiée?

[121] Le tribunal doit d'abord examiner les caractéristiques ou les attributs du droit en question. Dans le cas du titre ancestral, trois attributs sont pertinents : (1) le droit d'utiliser et d'occuper les terres de façon exclusive; (2) le droit de choisir les utilisations qui peuvent être faites des terres, sous réserve de la restriction ultime que ces usages ne sauraient détruire la capacité de ces terres d'assurer la subsistance des générations futures des peuples autochtones; (3) le droit de bénéficier des avantages économiques que procurent les terres (*Delgamuukw*, par. 166).

[122] Ensuite, pour déterminer si la mesure législative porte atteinte au droit, le tribunal doit se demander si la mesure entraîne une diminution appréciable du droit : *Gladstone*. Comme je l'ai déjà expliqué, dans *Sparrow*, la Cour a laissé entendre que les trois facteurs suivants peuvent permettre de déterminer s'il y a eu atteinte : (1) si la restriction imposée par la loi est déraisonnable; (2) si la loi est indûment rigoureuse; et (3) si la loi refuse aux titulaires du droit le recours à leur moyen préféré de l'exercer (p. 112).

[123] Une loi de nature réglementaire de portée générale, par exemple une loi visant la gestion des forêts en prévenant les infestations de ravageurs ou les feux de forêt, satisfera souvent au critère énoncé dans *Sparrow* car elle sera raisonnable, ne sera pas indûment rigoureuse et ne refusera pas aux titulaires du droit le recours à leur moyen préféré de l'exercer. Dans un tel cas, il n'y a aucune atteinte.

[124] General regulatory legislation, which may affect the manner in which the Aboriginal right can be exercised, differs from legislation that assigns Aboriginal property rights to third parties. The issuance of timber licences on Aboriginal title land for example — a direct transfer of Aboriginal property rights to a third party — will plainly be a meaningful diminution in the Aboriginal group's ownership right and will amount to an infringement that must be justified in cases where it is done without Aboriginal consent.

[125] As discussed earlier, to justify an infringement, the Crown must demonstrate that: (1) it complied with its procedural duty to consult with the right holders and accommodate the right to an appropriate extent at the stage when infringement was contemplated; (2) the infringement is backed by a compelling and substantial legislative objective in the public interest; and (3) the benefit to the public is proportionate to any adverse effect on the Aboriginal interest. This framework permits a principled reconciliation of Aboriginal rights with the interests of all Canadians.

[126] While unnecessary for the disposition of this appeal, the issue of whether British Columbia possessed a compelling and substantial legislative objective in issuing the cutting permits in this case was addressed by the courts below, and I offer the following comments for the benefit of all parties going forward. I agree with the courts below that no compelling and substantial objective existed in this case. The trial judge found the two objectives put forward by the Province — the economic benefits that would be realized as a result of logging in the claim area and the need to prevent the spread of a mountain pine beetle infestation — were not supported by the evidence. After considering the expert evidence before him, he concluded that the proposed cutting sites were not economically viable and that they were not directed at preventing the spread of the mountain pine beetle.

[124] Une loi de nature réglementaire de portée générale susceptible de modifier le mode d'exercice du droit ancestral diffère d'une loi qui a pour effet de céder à des tiers des droits de propriété des Autochtones. La délivrance de permis de coupe de bois sur des terres grevées du titre ancestral par exemple — un transfert direct à des tiers de droits de propriété des Autochtones — constituera manifestement une diminution significative du droit de propriété du groupe autochtone assimilable à une atteinte qui doit être justifiée dans les cas où les Autochtones n'y ont pas consenti.

[125] J'ai déjà expliqué que, pour justifier une atteinte, la Couronne doit démontrer : (1) qu'elle s'est acquittée de son obligation procédurale de consulter les titulaires d'un droit et de trouver des accommodements au droit, dans la mesure appropriée, à l'étape où l'atteinte était envisagée; (2) que l'atteinte poursuit un objectif législatif impérieux et réel dans l'intérêt du public; (3) que l'intérêt du public est proportionnel à tout effet négatif sur l'intérêt autochtone. Ce cadre permet une conciliation rationnelle des droits ancestraux et des intérêts de tous les Canadiens.

[126] Bien qu'il ne soit pas nécessaire de trancher cette question pour les besoins du présent pourvoi, les tribunaux d'instance inférieure ont abordé la question de savoir si la Colombie-Britannique poursuivait un objectif impérieux et réel en délivrant dans ce cas des permis de coupe, et je vais formuler les observations suivantes au bénéfice de toutes les parties éventuelles. Je conviens avec les tribunaux d'instance inférieure qu'il n'existait aucun objectif impérieux et réel en l'espèce. Le juge de première instance a conclu que les deux objectifs invoqués par la province — les avantages économiques liés à l'exploitation forestière sur les terres visées par une revendication du titre et la nécessité d'empêcher la propagation d'une infestation du dendroctone du pin ponderosa — n'étaient pas étayés par la preuve. Après avoir examiné les témoignages d'experts dont il disposait, il a conclu que les sites de coupe proposés n'étaient pas rentables et qu'ils ne visaient pas à empêcher la propagation du dendroctone du pin ponderosa.

[127] Before the Court of Appeal, the Province no longer argued that the forestry activities were undertaken to combat the mountain pine beetle, but maintained the position that the trial judge's findings on economic viability were unreasonable, because unless logging was economically viable, it would not have taken place. The Court of Appeal rejected this argument on two grounds: (1) levels of logging must sometimes be maintained for a tenure holder to keep logging rights, even if logging is not economically viable; and (2) the focus is the economic value of logging compared to the detrimental effects it would have on Tsilhqot'in Aboriginal rights, not the economic viability of logging from the sole perspective of the tenure holder. In short, the Court of Appeal found no error in the trial judge's reasoning on this point. I would agree. Granting rights to third parties to harvest timber on Tsilhqot'in land is a serious infringement that will not lightly be justified. Should the government wish to grant such harvesting rights in the future, it will be required to establish that a compelling and substantial objective is furthered by such harvesting, something that was not present in this case.

2. The Division of Powers

[128] The starting point, as noted, is that, as a general matter, the regulation of forestry within the Province falls under its power over property and civil rights under s. 92(13) of the *Constitution Act, 1867*. To put it in constitutional terms, regulation of forestry is in "pith and substance" a provincial matter. Thus, the *Forest Act* is consistent with the division of powers unless it is ousted by a competing federal power, even though it may incidentally affect matters under federal jurisdiction.

[129] "Indians, and Lands reserved for the Indians" falls under federal jurisdiction pursuant to s. 91(24) of the *Constitution Act, 1867*. As such, forestry on Aboriginal title land falls under both

[127] Devant la Cour d'appel, la province ne prétendait plus que les activités forestières visaient à combattre l'infestation du dendroctone du pin ponderosa, mais elle a continué de soutenir que les conclusions du juge de première instance sur la rentabilité étaient déraisonnables parce que, si les travaux d'exploitation forestière n'avaient pas été rentables, ils n'auraient pas été effectués. La Cour d'appel a rejeté cet argument pour deux raisons : (1) les titulaires d'une tenure forestière doivent parfois maintenir l'exploitation forestière pour conserver leurs droits, même si ce n'est pas rentable; (2) l'accent porte sur la valeur économique de l'exploitation forestière par rapport aux effets préjudiciables qu'elle aurait sur les droits ancestraux des Tsilhqot'in, et non sur la rentabilité de l'exploitation forestière uniquement du point de vue du titulaire de la tenure forestière. En bref, la Cour d'appel n'a relevé aucune erreur dans le raisonnement du juge de première instance sur ce point. Je suis d'accord. Accorder à des tiers le droit de récolter du bois sur les terres des Tsilhqot'in constitue une atteinte grave qui ne sera pas justifiée à la légère. Si le gouvernement souhaite à l'avenir accorder de tels droits de récolte, il devra établir qu'il poursuit par la récolte un objectif impérieux et réel, ce qui n'a pas été fait en l'espèce.

2. Le partage des compétences

[128] Comme je l'ai déjà indiqué, le point de départ est que, de façon générale, la réglementation de l'exploitation forestière dans la province relève du pouvoir que le par. 92(13) de la *Loi constitutionnelle de 1867* accorde à la province en matière de propriété et de droits civils. Sur le plan constitutionnel, la réglementation de l'exploitation forestière est, « de par son caractère véritable », une compétence provinciale. Ainsi, la *Forest Act* respecte le partage des compétences à moins qu'elle soit écartée par une compétence fédérale, même si elle peut, de manière incidente, toucher les matières relevant de la compétence fédérale.

[129] « Les Indiens et les terres réservées pour les Indiens » relèvent de la compétence fédérale en vertu du par. 91(24) de la *Loi constitutionnelle de 1867*. Par conséquent, les ressources forestières

the provincial power over forestry in the province and the federal power over “Indians”. Thus, for constitutional purposes, forestry on Aboriginal title land possesses a double aspect, with both levels of government enjoying concurrent jurisdiction. Normally, such concurrent legislative power creates no conflicts — federal and provincial governments cooperate productively in many areas of double aspect such as, for example, insolvency and child custody. However, in cases where jurisdictional disputes arise, two doctrines exist to resolve them.

[130] First, the doctrine of paramourcy applies where there is conflict or inconsistency between provincial and federal law, in the sense of impossibility of dual compliance or frustration of federal purpose. In the case of such conflict or inconsistency, the federal law prevails. Therefore, if the application of valid provincial legislation, such as the *Forest Act*, conflicts with valid federal legislation enacted pursuant to Parliament’s power over “Indians”, the latter would trump the former. No such inconsistency is alleged in this case.

[131] Second, the doctrine of interjurisdictional immunity applies where laws enacted by one level of government impair the protected core of jurisdiction possessed by the other level of government. Interjurisdictional immunity is premised on the idea that since federal and provincial legislative powers under ss. 91 and 92 of the *Constitution Act, 1867* are exclusive, each level of government enjoys a basic unassailable core of power on which the other level may not intrude. In considering whether provincial legislation such as the *Forest Act* is ousted pursuant to interjurisdictional immunity, the court must ask two questions. First, does the provincial legislation touch on a protected core of federal power? And second, would application of the provincial law significantly trammel or impair the federal power? (*Quebec (Attorney General) v.*

qui se trouvent sur des terres visées par un titre ancestral relèvent à la fois de la compétence provinciale en matière de ressources forestières dans la province et de la compétence fédérale sur les « Indiens ». Ainsi, sur le plan constitutionnel, les ressources forestières qui se trouvent sur les terres visées par un titre ancestral comportent un double aspect puisque les deux paliers de gouvernement exercent sur elles une compétence concurrente. Habituellement, une telle compétence concurrente ne crée pas de conflit — les gouvernements fédéral et provinciaux collaborent de manière productive dans plusieurs domaines qui comportent un double aspect, par exemple l’insolvabilité et la garde des enfants. Cependant, lorsque se présente un conflit de compétence, deux doctrines permettent de le résoudre.

[130] Premièrement, la doctrine de la prépondérance s’applique en cas de conflit ou d’incompatibilité entre une loi provinciale et une loi fédérale, en ce sens qu’il est impossible de se conformer aux deux textes de loi ou que la réalisation de l’objet d’une loi fédérale est entravée. Dans un tel cas, la loi fédérale l’emporte. Par conséquent, si l’application d’une loi provinciale valide, comme la *Forest Act*, entre en conflit avec une loi fédérale valide adoptée en vertu du pouvoir du Parlement sur les « Indiens », la seconde aurait priorité sur la première. On n’a allégué l’existence d’aucune incompatibilité de la sorte en l’espèce.

[131] Deuxièmement, la doctrine de l’exclusivité des compétences s’applique lorsque des lois adoptées par un palier de gouvernement entravent le contenu essentiel protégé d’une compétence de l’autre palier de gouvernement. Cette doctrine repose sur la prémisse que, puisque les compétences fédérales et provinciales prévues aux art. 91 et 92 de la *Loi constitutionnelle de 1867* sont exclusives, chaque palier de gouvernement exerce sa compétence sur un contenu minimum essentiel et irréductible auquel l’autre palier de gouvernement ne peut toucher. Pour déterminer si une loi provinciale comme la *Forest Act* est écartée par l’application de la doctrine de l’exclusivité des compétences, le tribunal doit se poser deux questions. Premièrement, la loi provinciale touche-t-elle un aspect du contenu essentiel protégé de la compétence fédérale? Et

Canadian Owners and Pilots Association, 2010 SCC 39, [2010] 2 S.C.R. 536).

[132] The trial judge held that interjurisdictional immunity rendered the provisions of the *Forest Act* inapplicable to land held under Aboriginal title because provisions authorizing management, acquisition, removal and sale of timber on such lands affect the core of the federal power over “Indians”. He placed considerable reliance on *R. v. Morris*, 2006 SCC 59, [2006] 2 S.C.R. 915, in which this Court held that only Parliament has the power to derogate from rights conferred by a treaty because treaty rights are within the core of the federal power over “Indians”. It follows, the trial judge reasoned, that, since Aboriginal rights are akin to treaty rights, the Province has no power to legislate with respect to forests on Aboriginal title land.

[133] The reasoning accepted by the trial judge is essentially as follows. Aboriginal rights fall at the core of federal jurisdiction under s. 91(24) of the *Constitution Act, 1867*. Interjurisdictional immunity applies to matters at the core of s. 91(24). Therefore, provincial governments are constitutionally prohibited from legislating in a way that limits Aboriginal rights. This reasoning leads to a number of difficulties.

[134] The critical aspect of this reasoning is the proposition that Aboriginal rights fall at the core of federal regulatory jurisdiction under s. 91(24) of the *Constitution Act, 1867*.

[135] The jurisprudence on whether s. 35 rights fall at the core of the federal power to legislate with respect to “Indians” under s. 91(24) is somewhat mixed. While no case has held that Aboriginal

deuxièmement, l’application de la loi provinciale pourrait-elle entraver de façon importante la compétence fédérale? (*Québec (Procureur général) c. Canadian Owners and Pilots Association*, 2010 CSC 39, [2010] 2 R.C.S. 536).

[132] Le juge de première instance a conclu que l’exclusivité des compétences rendait les dispositions de la *Forest Act* inapplicables aux terres détenues en vertu d’un titre ancestral parce que les dispositions autorisant la gestion, l’acquisition, l’enlèvement et la vente du bois sur ces terres touchent au contenu essentiel de la compétence fédérale sur les « Indiens ». Il a accordé une grande importance à l’arrêt *R. c. Morris*, 2006 CSC 59, [2006] 2 R.C.S. 915, dans lequel la Cour a conclu que seul le Parlement a le pouvoir de déroger aux droits reconnus dans un traité parce que les droits issus de traités se rattachent au contenu essentiel de la compétence fédérale sur les « Indiens ». Le juge de première instance a donc estimé que, comme les droits ancestraux s’apparentent aux droits issus de traités, la province n’a pas le pouvoir de légiférer relativement aux forêts qui se trouvent sur les terres visées par un titre ancestral.

[133] Le raisonnement adopté par le juge de première instance est essentiellement le suivant. Les droits ancestraux font partie du contenu essentiel de la compétence fédérale prévue au par. 91(24) de la *Loi constitutionnelle de 1867*. La doctrine de l’exclusivité des compétences s’applique aux matières qui font partie du contenu essentiel du par. 91(24). Par conséquent, la Constitution empêche les gouvernements provinciaux de légiférer d’une manière qui limite les droits ancestraux. Ce raisonnement suscite un certain nombre de difficultés.

[134] La proposition suivant laquelle les droits ancestraux font partie du contenu essentiel de la compétence fédérale en matière de réglementation prévue au par. 91(24) de la *Loi constitutionnelle de 1867* constitue l’aspect crucial de ce raisonnement.

[135] La jurisprudence est quelque peu ambiguë quant à savoir si les droits visés à l’art. 35 font partie du contenu essentiel du pouvoir fédéral de faire des lois relatives aux « Indiens » prévu au

rights, such as Aboriginal title to land, fall at the core of the federal power under s. 91(24), this has been stated in *obiter dicta*. However, this Court has also stated in *obiter dicta* that provincial governments are constitutionally permitted to infringe Aboriginal rights where such infringement is justified pursuant to s. 35 of the *Constitution Act, 1982* — this latter proposition being inconsistent with the reasoning accepted by the trial judge.

[136] In *R. v. Marshall*, [1999] 3 S.C.R. 533, this Court suggested that interjurisdictional immunity did not apply where provincial legislation conflicted with treaty rights. Rather, the s. 35 *Sparrow* framework was the appropriate tool with which to resolve the conflict:

... the federal and provincial governments [have the authority] within their respective legislative fields to regulate the exercise of the treaty right subject to the constitutional requirement that restraints on the exercise of the treaty right have to be justified on the basis of conservation or other compelling and substantial public objectives ... [para. 24]

[137] More recently however, in *Morris*, this Court distinguished *Marshall* on the basis that the treaty right at issue in *Marshall* was a commercial right. The Court in *Morris* went on to hold that interjurisdictional immunity prohibited any provincial infringement of the non-commercial treaty right in that case, whether or not such an infringement could be justified under s. 35 of the *Constitution Act, 1982*.

[138] Beyond this, the jurisprudence does not directly address the relationship between interjurisdictional immunity and s. 35 of the *Constitution Act, 1982*. The ambiguous state of the jurisprudence has created unpredictability. It is clear that where valid *federal* law interferes with an Aboriginal or treaty right, the s. 35 *Sparrow* framework governs the law's applicability. It is less clear, however, that

par. 91(24). Aucune décision n'a conclu que les droits ancestraux, par exemple le titre ancestral sur des terres, font partie du contenu essentiel de la compétence fédérale prévue au par. 91(24), mais on l'indique dans des remarques incidentes. Toutefois, notre Cour a également indiqué dans des remarques incidentes que la Constitution permet aux gouvernements provinciaux de porter atteinte aux droits ancestraux lorsque ces atteintes sont justifiées au sens de l'art. 35 de la *Loi constitutionnelle de 1982* — et cette proposition va à l'encontre du raisonnement que le juge de première instance a accepté.

[136] Dans l'arrêt *R. c. Marshall*, [1999] 3 R.C.S. 533, notre Cour a supposé que l'exclusivité des compétences ne s'appliquait pas en cas de conflit entre une loi provinciale et des droits issus d'un traité. Le cadre d'analyse relatif à l'art. 35 énoncé dans *Sparrow* a plutôt été retenu comme le moyen permettant de résoudre le conflit :

... les gouvernements fédéral et provinciaux [ont le pouvoir] de réglementer, dans les limites de leurs champs respectifs de compétences législatives, l'exercice du droit issu du traité, sous réserve du fait que la Constitution exige que les restrictions imposées à l'exercice de ce droit soient justifiées pour des raisons de conservation ou pour d'autres objectifs d'intérêt public réels et impérieux ... [par. 24]

[137] Plus récemment cependant, dans l'arrêt *Morris*, notre Cour a fait une distinction avec l'arrêt *Marshall* puisque le droit issu du traité en question dans *Marshall* était un droit de nature commerciale. Dans *Morris*, la Cour a conclu que l'exclusivité des compétences interdisait à la province de porter atteinte au droit issu du traité — un droit de nature non commerciale dans cette affaire — indépendamment du fait que l'atteinte puisse ou non être justifiée en vertu de l'art. 35 de la *Loi constitutionnelle de 1982*.

[138] Cela mis à part, la jurisprudence ne traite pas directement du lien entre l'exclusivité des compétences et l'art. 35 de la *Loi constitutionnelle de 1982*. L'ambiguïté de la jurisprudence a engendré l'imprévisibilité. Il est clair que lorsqu'une loi *fédérale* valide porte atteinte à un droit ancestral ou issu d'un traité, le cadre d'analyse relatif à l'art. 35 énoncé dans *Sparrow* régit l'applicabilité de la loi. Il est

it is so where valid *provincial* law interferes with an Aboriginal or treaty right. The jurisprudence leaves the following questions unanswered. Does interjurisdictional immunity prevent provincial governments from ever limiting Aboriginal rights even if a particular infringement would be justified under the *Sparrow* framework? Is provincial interference with Aboriginal rights treated differently than treaty rights? And, are commercial Aboriginal rights treated differently than non-commercial Aboriginal rights? No case has addressed these questions explicitly, as I propose to do now.

[139] As discussed, s. 35 of the *Constitution Act, 1982* imposes limits on how both the federal and provincial governments can deal with land under Aboriginal title. Neither level of government is permitted to legislate in a way that results in a meaningful diminution of an Aboriginal or treaty right, unless such an infringement is justified in the broader public interest and is consistent with the Crown's fiduciary duty owed to the Aboriginal group. The result is to protect Aboriginal and treaty rights while also allowing the reconciliation of Aboriginal interests with those of the broader society.

[140] What role then is left for the application of the doctrine of interjurisdictional immunity and the idea that Aboriginal rights are at the core of the federal power over "Indians" under s. 91(24) of the *Constitution Act, 1867*? The answer is none.

[141] The doctrine of interjurisdictional immunity is directed to ensuring that the two levels of government are able to operate without interference in their core areas of exclusive jurisdiction. This goal is not implicated in cases such as this. Aboriginal rights are a limit on both federal and provincial jurisdiction.

toutefois moins évident que ce soit le cas lorsqu'une loi *provinciale* valide porte atteinte à un droit ancestral ou issu d'un traité. La jurisprudence laisse sans réponse les questions suivantes : L'exclusivité des compétences empêche-t-elle absolument les gouvernements provinciaux de limiter les droits ancestraux même si le cadre d'analyse énoncé dans *Sparrow* permettrait de justifier l'atteinte en question? Une atteinte à un droit ancestral de la part de la province est-elle traitée différemment d'une atteinte à un droit issu d'un traité? Et les droits ancestraux de nature commerciale sont-ils traités différemment des droits ancestraux de nature non commerciale? Comme aucune décision n'a examiné explicitement ces questions, je propose de le faire maintenant.

[139] J'ai déjà indiqué que l'art. 35 de la *Loi constitutionnelle de 1982* impose des limites quant à la façon dont les gouvernements, tant fédéral que provinciaux, peuvent traiter les terres visées par un titre ancestral. Ces gouvernements ne peuvent faire des lois qui entraînent une diminution appréciable d'un droit ancestral ou issu d'un traité à moins que l'atteinte soit justifiée dans l'intérêt public général et qu'elle soit compatible avec l'obligation fiduciaire qu'a la Couronne envers le groupe autochtone. L'objectif consiste à protéger les droits ancestraux et issus d'un traité tout en permettant la conciliation des intérêts autochtones avec ceux de la société en général.

[140] Alors, à quoi peuvent encore servir l'application de la doctrine de l'exclusivité des compétences et la notion que les droits ancestraux font partie du contenu essentiel du pouvoir fédéral sur les « Indiens » prévu au par. 91(24) de la *Loi constitutionnelle de 1867*? Il faut répondre comme suit : elles ne servent à rien.

[141] La doctrine de l'exclusivité des compétences vise à faire en sorte que les deux niveaux de gouvernement soient en mesure de fonctionner sans que l'un empiète sur le contenu essentiel des domaines de compétence exclusive de l'autre. Cet objectif n'est pas en cause dans les affaires telles que celle qui nous occupe. Les droits ancestraux constituent une limite à l'exercice des compétences tant fédérales que provinciales.

[142] The guarantee of Aboriginal rights in s. 35 of the *Constitution Act, 1982*, like the *Canadian Charter of Rights and Freedoms*, operates as a limit on federal and provincial legislative powers. The *Charter* forms Part I of the *Constitution Act, 1982*, and the guarantee of Aboriginal rights forms Part II. Parts I and II are sister provisions, both operating to limit governmental powers, whether federal or provincial. Part II Aboriginal rights, like Part I *Charter* rights, are held *against* government — they operate to *prohibit* certain types of regulation which governments could otherwise impose. These limits have nothing to do with whether something lies at the core of the federal government's powers.

[143] An analogy with *Charter* jurisprudence may illustrate the point. Parliament enjoys exclusive jurisdiction over criminal law. However, its criminal law power is circumscribed by s. 11 of the *Charter* which guarantees the right to a fair criminal process. Just as Aboriginal rights are fundamental to Aboriginal law, the right to a fair criminal process is fundamental to criminal law. But we do not say that the right to a fair criminal process under s. 11 falls at the core of Parliament's criminal law jurisdiction. Rather, it is a *limit* on Parliament's criminal law jurisdiction. If s. 11 rights were held to be at the core of Parliament's criminal law jurisdiction such that interjurisdictional immunity applied, the result would be absurd: provincial breaches of s. 11 rights would be judged on a different standard than federal breaches, with only the latter capable of being saved under s. 1 of the *Charter*. This same absurdity would result if interjurisdictional immunity were applied to Aboriginal rights.

[142] Tout comme le fait la *Charte canadienne des droits et libertés*, la protection des droits ancestraux garantie à l'art. 35 de la *Loi constitutionnelle de 1982* vient limiter l'exercice des pouvoirs législatifs fédéraux et provinciaux. La *Charte* constitue la partie I de la *Loi constitutionnelle de 1982*, et la protection des droits ancestraux constitue la partie II. Les parties I et II sont apparentées et limitent toutes deux l'exercice des pouvoirs gouvernementaux, qu'ils soient fédéraux ou provinciaux. Les droits garantis à la partie II, tout comme les droits garantis par la *Charte* à la partie I, sont *opposables* au gouvernement — ils ont pour effet d'*interdire* certains types de réglementation que les gouvernements pourraient autrement imposer. Ces limites n'ont rien à voir avec la question de savoir si une activité fait partie du contenu essentiel des pouvoirs du gouvernement fédéral.

[143] Une analogie avec la jurisprudence relative à la *Charte* peut illustrer ce point. Le Parlement a une compétence exclusive en matière de droit criminel. Cependant, l'exercice de son pouvoir en droit criminel est circonscrit par l'art. 11 de la *Charte* qui garantit le droit à l'équité du processus criminel. Tout comme les droits ancestraux sont un aspect fondamental du droit autochtone, le droit à l'équité du processus criminel est un aspect fondamental du droit criminel. Mais nous ne disons pas que le droit à l'équité du processus criminel prévu à l'art. 11 fait partie du contenu essentiel de la compétence du Parlement en matière de droit criminel. Il s'agit plutôt d'une *limite* à la compétence du Parlement en matière de droit criminel. Si l'on considérait que les droits garantis à l'art. 11 font partie du contenu essentiel de la compétence du Parlement en matière de droit criminel de sorte que l'exclusivité des compétences s'applique, on aboutirait à un résultat absurde : les violations, par les provinces, des droits garantis à l'art. 11 seraient jugées suivant une norme différente de celle applicable aux violations par le gouvernement fédéral, et seules ces dernières seraient susceptibles d'être sauvegardées en vertu de l'article premier de la *Charte*. L'application de l'exclusivité des compétences aux droits ancestraux aboutirait au même résultat absurde.

[144] The doctrine of interjurisdictional immunity is designed to deal with conflicts between provincial powers and federal powers; it does so by carving out areas of exclusive jurisdiction for each level of government. But the problem in cases such as this is not competing provincial and federal powers, but rather tension between the right of the Aboriginal title holders to use their land as they choose and the province which seeks to regulate it, like all other land in the province.

[145] Moreover, application of interjurisdictional immunity in this area would create serious practical difficulties.

[146] First, application of interjurisdictional immunity would result in two different tests for assessing the constitutionality of provincial legislation affecting Aboriginal rights. Pursuant to *Sparrow*, provincial regulation is unconstitutional if it results in a meaningful diminution of an Aboriginal right that cannot be justified pursuant to s. 35 of the *Constitution Act, 1982*. Pursuant to interjurisdictional immunity, provincial regulation would be unconstitutional if it impaired an Aboriginal right, whether or not such limitation was reasonable or justifiable. The result would be dueling tests directed at answering the same question: How far can provincial governments go in regulating the exercise of s. 35 Aboriginal rights?

[147] Second, in this case, applying the doctrine of interjurisdictional immunity to exclude provincial regulation of forests on Aboriginal title lands would produce uneven, undesirable results and may lead to legislative vacuums. The result would be patchwork regulation of forests — some areas of the province regulated under provincial legislation, and other areas under federal legislation or no legislation at all. This might make it difficult, if not impossible, to deal effectively with problems such as

[144] La doctrine de l'exclusivité des compétences vise à régler les conflits entre les compétences provinciales et les compétences fédérales; elle y parvient en créant des domaines de compétence exclusive pour chaque palier de gouvernement. Cependant, le problème dans des cas comme celui-ci ne résulte pas d'une confrontation entre le pouvoir des provinces et ceux du gouvernement fédéral mais plutôt d'une tension entre le droit des titulaires du titre ancestral d'utiliser leurs terres comme ils l'entendent et la volonté de la province de réglementer ces terres au même titre que toutes les autres terres dans la province.

[145] En outre, l'application de la doctrine de l'exclusivité des compétences dans ce domaine créerait de sérieuses difficultés d'ordre pratique.

[146] Premièrement, l'application de l'exclusivité des compétences aurait pour effet d'établir deux critères différents pour l'appréciation de la constitutionnalité d'une loi provinciale touchant aux droits ancestraux. Suivant l'arrêt *Sparrow*, la réglementation provinciale est inconstitutionnelle si elle entraîne une diminution appréciable d'un droit ancestral qui ne saurait être justifiée au regard de l'art. 35 de la *Loi constitutionnelle de 1982*. Suivant la doctrine de l'exclusivité des compétences, la réglementation provinciale serait inconstitutionnelle si elle portait atteinte à un droit ancestral, peu importe que l'atteinte soit raisonnable ou justifiable. Il y aurait donc deux critères contradictoires censés répondre à la même question : Jusqu'où les gouvernements provinciaux peuvent-ils aller dans la réglementation de l'exercice des droits ancestraux protégés par l'art. 35?

[147] Deuxièmement, en l'espèce, appliquer la doctrine de l'exclusivité des compétences dans le but d'exclure la réglementation provinciale des forêts se trouvant sur les terres visées par un titre ancestral entraînerait des résultats inégaux et indésirables et pourrait créer des vides législatifs. Il en résulterait une réglementation morcelée en matière de ressources forestières — certaines régions de la province seraient assujetties aux lois provinciales et d'autres régions seraient réglementées par les lois

pests and fires, a situation desired by neither level of government.

[148] Interjurisdictional immunity — premised on a notion that regulatory environments can be divided into watertight jurisdictional compartments — is often at odds with modern reality. Increasingly, as our society becomes more complex, effective regulation requires cooperation between interlocking federal and provincial schemes. The two levels of government possess differing tools, capacities, and expertise, and the more flexible double aspect and paramountcy doctrines are alive to this reality: under these doctrines, jurisdictional cooperation is encouraged up until the point when actual conflict arises and must be resolved. Interjurisdictional immunity, by contrast, may thwart such productive cooperation. In the case of forests on Aboriginal title land, courts would have to scrutinize provincial forestry legislation to ensure that it did not impair the core of federal jurisdiction over “Indians” and would also have to scrutinize any federal legislation to ensure that it did not impair the core of the province’s power to manage the forests. It would be no answer that, as in this case, both levels of government agree that the laws at issue should remain in force.

[149] This Court has recently stressed the limits of interjurisdictional immunity. “[C]onstitutional doctrine must facilitate, not undermine what this Court has called ‘co-operative federalism’” and as such “a court should favour, where possible, the ordinary operation of statutes enacted by both levels of government” (*Canadian Western Bank v. Alberta*, 2007 SCC 22, [2007] 2 S.C.R. 3, at paras. 24 and 37 (emphasis deleted)). Because of this, interjurisdictional immunity is of “limited application” and should be applied “with restraint”

fédérales ou ne seraient pas réglementées du tout. Cela pourrait rendre difficile, voire impossible, la résolution efficace de problèmes comme les ravageurs ou le feu : une situation souhaitée par ni l’un ni l’autre des paliers de gouvernement.

[148] La doctrine de l’exclusivité des compétences — fondée sur l’idée que les contextes réglementaires peuvent être divisés en compartiments étanches — va souvent à l’encontre de la réalité moderne. Notre société devient plus complexe, et pour être efficace, la réglementation exige de plus en plus la coopération des régimes fédéral et provincial interreliés. Les deux paliers de gouvernement possèdent des outils, compétences et expertises différents, et les doctrines plus souples du double aspect et de la prépondérance fédérale sont sensibles à cette réalité : suivant ces doctrines, on encourage la coopération intergouvernementale jusqu’au moment où survient un conflit qu’il faut régler. Par contre, la doctrine de l’exclusivité des compétences peut contrecarrer une telle coopération. Dans le cas des forêts qui se trouvent sur les terres visées par un titre ancestral, les tribunaux devraient examiner la loi provinciale sur les ressources forestières afin de s’assurer qu’elle ne porte pas atteinte au contenu essentiel de la compétence fédérale sur les « Indiens » et devraient également examiner la loi fédérale afin de s’assurer qu’elle ne porte pas atteinte au contenu essentiel du pouvoir provincial de gérer les forêts. Suggérer, comme en l’espèce, que les deux paliers de gouvernement conviennent que les lois en question devraient rester en vigueur ne règle pas la question.

[149] Notre Cour a récemment souligné les limites de l’exclusivité des compétences. Les doctrines constitutionnelles « doivent faciliter et non miner ce que notre Cour a appelé un “fédéralisme coopératif” » et, par conséquent, « les tribunaux privilégient, dans la mesure du possible, l’application régulière des lois édictées par les deux ordres de gouvernement » (*Banque canadienne de l’Ouest c. Alberta*, 2007 CSC 22, [2007] 2 R.C.S. 3, par. 24 et 37 (italiques dans l’original omis)). Pour cette raison, la doctrine de l’exclusivité des compétences

(paras. 67 and 77). These propositions have been confirmed in more recent decisions: *Marine Services International Ltd. v. Ryan Estate*, 2013 SCC 44, [2013] 3 S.C.R. 53; *Canada (Attorney General) v. PHS Community Services Society*, 2011 SCC 44, [2011] 3 S.C.R. 134.

[150] *Morris*, on which the trial judge relied, was decided prior to this Court's articulation of the modern approach to interjurisdictional immunity in *Canadian Western Bank* and *Canadian Owners and Pilots Association*, and so is of limited precedential value on this subject as a result (see *Marine Services*, at para. 64). To the extent that *Morris* stands for the proposition that provincial governments are categorically barred from regulating the exercise of Aboriginal rights, it should no longer be followed. I find that, consistent with the statements in *Sparrow* and *Delgamuukw*, provincial regulation of general application will apply to exercises of Aboriginal rights, including Aboriginal title land, subject to the s. 35 infringement and justification framework. This carefully calibrated test attempts to reconcile general legislation with Aboriginal rights in a sensitive way as required by s. 35 of the *Constitution Act, 1982* and is fairer and more practical from a policy perspective than the blanket inapplicability imposed by the doctrine of interjurisdictional immunity.

[151] For these reasons, I conclude that the doctrine of interjurisdictional immunity should not be applied in cases where lands are held under Aboriginal title. Rather, the s. 35 *Sparrow* approach should govern. Provincial laws of general application, including the *Forest Act*, should apply unless they are unreasonable, impose a hardship or deny the title holders their preferred means of exercising their rights, and such restrictions cannot be justified pursuant to the justification framework outlined above. The result is a balance that preserves

est d'une « application restreinte » et elle devrait être appliquée « avec retenue » (par. 67 et 77). Ces principes ont été confirmés dans des arrêts plus récents : *Marine Services International Ltd. c. Ryan (Succession)*, 2013 CSC 44, [2013] 3 R.C.S. 53; *Canada (Procureur général) c. PHS Community Services Society*, 2011 CSC 44, [2011] 3 R.C.S. 134.

[150] L'arrêt *Morris*, sur lequel le juge de première instance s'est appuyé, a été rendu avant que la Cour formule une approche moderne de l'application de la doctrine de l'exclusivité des compétences dans les arrêts *Banque canadienne de l'Ouest* et *Canadian Owners and Pilots Association* et, par conséquent, il confère peu de valeur jurisprudentielle sur ce sujet (voir *Marine Services*, par. 64). Dans la mesure où l'arrêt *Morris* appuie la proposition voulant qu'il soit catégoriquement interdit aux gouvernements provinciaux de réglementer l'exercice des droits ancestraux, il ne devrait plus être suivi. J'estime que, conformément aux commentaires formulés dans les arrêts *Sparrow* et *Delgamuukw*, la réglementation provinciale d'application générale s'appliquera à l'exercice des droits ancestraux, notamment au titre ancestral sur des terres, sous réserve de l'application du cadre d'analyse relatif à l'art. 35 qui permet de justifier une atteinte. Ce critère soigneusement conçu vise à concilier la loi d'application générale et les droits ancestraux avec la délicatesse qu'exige l'art. 35 de la *Loi constitutionnelle de 1982*, et il est plus équitable et pratique du point de vue de la politique générale que l'inapplicabilité générale qu'impose la doctrine de l'exclusivité des compétences.

[151] Pour ces raisons, je conclus que la doctrine de l'exclusivité des compétences ne devrait pas être appliquée dans les cas où les terres sont détenues en vertu du titre ancestral. C'est plutôt la démarche axée sur le critère fondé sur l'art. 35, énoncée dans *Sparrow*, qui devrait être retenue. Les lois provinciales d'application générale, y compris la *Forest Act*, devraient s'appliquer à moins qu'elles soient déraisonnables ou indûment rigoureuses ou qu'elles refusent aux titulaires du titre le recours à leur moyen préféré d'exercer leurs droits et

the Aboriginal right while permitting effective regulation of forests by the province, as required by s. 35 of the *Constitution Act, 1982*.

[152] The s. 35 framework applies to exercises of both provincial and federal power: *Sparrow*; *Delgamuukw*. As such, it provides a complete and rational way of confining provincial legislation affecting Aboriginal title land within appropriate constitutional bounds. The issue in cases such as this is not at base one of conflict between the federal and provincial levels of government — an issue appropriately dealt with by the doctrines of paramountcy and interjurisdictional immunity where precedent supports this — but rather how far the provincial government can go in regulating land that is subject to Aboriginal title or claims for Aboriginal title. The appropriate constitutional lens through which to view the matter is s. 35 of the *Constitution Act, 1982*, which directly addresses the requirement that these interests must be respected by the government, unless the government can justify incursion on them for a compelling purpose and in conformity with its fiduciary duty to affected Aboriginal groups.

IX. Conclusion

[153] I would allow the appeal and grant a declaration of Aboriginal title over the area at issue, as requested by the Tsilhqot'in. I further declare that British Columbia breached its duty to consult owed to the Tsilhqot'in through its land use planning and forestry authorizations.

que ces restrictions ne puissent pas être justifiées conformément au cadre d'analyse de la justification décrit précédemment. Il en résulte un équilibre qui préserve le droit ancestral tout en assurant une réglementation efficace des forêts par la province, comme l'exige l'art. 35 de la *Loi constitutionnelle de 1982*.

[152] Le cadre d'analyse relatif à l'art. 35 s'applique à l'exercice des compétences tant provinciales que fédérales : *Sparrow*; *Delgamuukw*. Par conséquent, il offre un moyen exhaustif et rationnel de circonscrire les lois provinciales touchant les terres visées par un titre ancestral dans les limites fixées par la Constitution. La question qui se pose dans des cas comme celui-ci ne porte pas, à la base, sur le conflit entre les paliers fédéral et provincial de gouvernement — les doctrines de la prépondérance fédérale et de l'exclusivité des compétences permettent de traiter cette question selon que l'indique la jurisprudence — il s'agit plutôt de savoir dans quelle mesure le gouvernement provincial peut réglementer des terres visées par un titre ancestral ou faisant l'objet d'une revendication du titre ancestral. L'article 35 de la *Loi constitutionnelle de 1982* constitue le cadre approprié à l'intérieur duquel doit être considérée une telle question puisqu'il oblige directement le gouvernement à respecter ces droits ou à démontrer que l'atteinte se rapporte à la poursuite d'un objectif impérieux et réel et qu'elle est compatible avec son obligation fiduciaire envers les groupes autochtones.

IX. Conclusion

[153] Je suis d'avis d'accueillir le pourvoi et de rendre un jugement déclarant l'existence d'un titre ancestral sur la région en question, comme l'ont demandé les Tsilhqot'in. Je déclare également que la Colombie-Britannique a manqué à l'obligation de consultation qu'elle avait envers les Tsilhqot'in en raison du plan d'aménagement du territoire qu'elle a établi et des autorisations d'exploitation forestière qu'elle a accordées.

COURT OF APPEAL FOR BRITISH COLUMBIA

Citation: *William v. British Columbia*,
2012 BCCA 285

Date: 20120627
No.: CA035617; CA035618; CA035620

Docket: CA035617

Between:

**Roger William, on his own behalf and on behalf of all
other members of the Xeni Gwet'in First Nations Government
and on behalf of all other members of the Tsilhqot'in Nation**

Respondent
(Plaintiff)

And

**Her Majesty the Queen in Right of the Province of British Columbia
and the Regional Manager of the Cariboo Forest Region**

Appellants
(Defendants)

And

The Attorney General of Canada

Respondent
(Defendant)

And

**B.C. Wildlife Federation and B.C. Seafood Alliance,
Treaty 8 First Nations, Chief Wilson and Chief Jules,
First Nations Summit and Te'mexw Treaty Association**

Intervenors

Docket: CA035618

Before: The Honourable Madam Justice Levine
 The Honourable Mr. Justice Tysoe
 The Honourable Mr. Justice Groberman

On Appeal from the Supreme Court of British Columbia, November 20, 2007
(*Tsilhqot'in Nation v. British Columbia*, 2007 BCSC 1700,
Victoria Registry No. 90-0913)

Counsel for the Plaintiffs:	D.M. Rosenberg, Q.C. P.S. Rosenberg J.C. Nelson E.J. Woodward, Q.C. P.M. Hutchings
Counsel for the British Columbia Defendants:	P.G. Foy, Q.C. K.J. Tyler
Counsel for the Attorney General of Canada:	B.A. McLaughlin J. Chow
Counsel for the B.C. Wildlife Federation and B.C. Seafood Alliance:	J.K. Lowes
Counsel for Treaty 8 First Nations:	C.G. Devlin J.W. Gailus T.H. Thielmann
Counsel for Chief Wilson and Chief Jules:	M.L. Mandell, QC A.A. Walkem C.Y. Sharvit
Counsel for the First Nations Summit:	A.C. Pape J. Teillet R.B. Salter J. Copeland M.A. Louie
Counsel for Te'mexw Treaty Association :	R.J.M. Janes K. Brooks
Place and Date of Hearing:	Vancouver, British Columbia November 15-19 and 22, 2010
Place and Date of Judgment:	Vancouver, British Columbia June 27, 2012

Written Reasons by:

The Honourable Mr. Justice Groberman

Concurred in by:

The Honourable Madam Justice Levine

The Honourable Mr. Justice Tysoe

Reasons for Judgment of the Honourable Mr. Justice Groberman:

[1] These appeals concern the Aboriginal rights, including Aboriginal title, of the Xeni Gwet'in and the Tsilhqot'in First Nation in an area comprising approximately 438,000 ha. (4,380 km²) in the Chilcotin region of the west central interior of British Columbia.

I. The Plaintiff and the Claim Area

[2] Roger William, the plaintiff, is the former chief of the Xeni Gwet'in First Nations Government (formerly known as the Nemiah Valley Indian Band), a band recognized under the *Indian Act*, R.S.C. 1985, c. I-5. The Band has approximately 400 members, about half of whom live in the area that is the subject of this litigation. Of that number, almost all live on reserves.

[3] The Xeni Gwet'in is part of the Tsilhqot'in Nation. The Nation is made up of indigenous people who share a common culture and history and who speak the same proto-Athapaskan language (Tsilhqot'in). In addition to the Xeni Gwet'in, there are five other Tsilhqot'in bands: the Tl'etinqox-t'in Government Office (formerly the Anaham Band), the ?Esdilagh First Nation (formerly the Alexandria Band), the Stone Indian Band (also known as the Yunesit'in), the Alexis Creek Indian Band (also known as the Tsi Del Del or Redstone), and the Toosey Indian Band (also known as the Tl'esqox). In addition, some members of the Ulkatcho First Nation are Tsilhqot'in, though the majority of that band are Dakelh (Carrier). There are approximately 3,000 Tsilhqot'in people in total.

[4] The Tsilhqot'in consider their traditional territory to include a vast tract of the west central interior of British Columbia extending west from the portion of the Fraser River lying between Lillooet and Quesnel across the Chilcotin plateau to the Coast Mountain Range. The land is regarded by the Tsilhqot'in as belonging to the entire Nation. In the modern political structure of the Tsilhqot'in Nation, the Xeni Gwet'in are the caretakers of a portion of the territory lying in the southwest corner of the traditional territory, including the land that is in issue in this litigation.

[5] As much of the evidence referred to various landmarks by their Tsilhqot'in descriptions, and as the trial judge used those names in his reasons, I will, for the most part, follow that practice, providing the common name for the landmark, as well, when it is first mentioned.

[6] This litigation concerns Aboriginal title and rights in two areas (together, the "Claim Area"), described as Tachelach'ed (the Brittany Triangle) and the "Trapline Territory", excluding those parts of the areas that are currently Indian reserves. The Claim Area comprises only about five percent of what the Tsilhqot'in regard as their traditional territory.

[7] Tachelach'ed is a roughly triangular tract of land comprising 141,769 ha. It is bounded on the east by the Dasiqox (Taseko River) and on the west by the Tsilhqox (Chilko River) and the eastern shore of Tsilhqox Biny (Chilko Lake). The southern boundary of Tachelach'ed runs along the Nemiah Valley Road from the point where it crosses the Dasiqox at Davidson Bridge west to Xeni Biny (Konni Lake), then along the southern shore of Xeni Biny to Xeni Yeqox (Nemiah Creek), and along Xeni Yeqox to the point where it flows into Tsilhqox Biny.

[8] The Trapline Territory is defined as the area within Trapline Licence #0504T003 issued by British Columbia to the Xeni Gwet'in. It consists of two discontinuous tracts of land. The western portion of the Trapline Territory borders upon (and, to some extent, overlaps) Tachelach'ed, extending to the south and west of it, encompassing lands that surround Tsilhqox Biny. The smaller eastern portion of the Trapline Territory includes lands on the east side of nearby Dasiqox Biny (Taseko Lake). Maps 2 and 3 in Appendix A to the trial judge's reasons show the boundaries of Tachelach'ed and of the Trapline Territory.

[9] The Claim Area is located in a remote part of the Chilcotin and is mostly made up of undeveloped land. Ts'il?os (sometimes spelled "Ts'il-os") Provincial Park covers 233,000 ha. (39%) of the Claim Area. The smaller Nuntsi Provincial Park covers a further 20,570 ha. (3%) of the Claim Area.

II. Background to the Litigation

[10] This litigation was precipitated by proposed forestry activities in both Tachelach'ed and the Trapline Territory. Both areas are located in the Williams Lake Timber Supply Area within the Cariboo Forest Region.

[11] In 1983, the provincial Crown granted Carrier Lumber Ltd. a forest licence giving it rights to conduct logging activities within the Trapline Territory. The granting of a forest licence did not, itself, give Carrier Lumber a right to remove specific timber, but did assign rights to the company in accordance with the provisions of the *Forest Act* (now R.S.B.C. 1996, c. 157). In 1989, Carrier Lumber submitted a Forest Development Plan that proposed logging within the Trapline Territory. The Crown approved the plan and granted the company a cutting permit in respect of cut blocks in the Trapline Territory.

[12] The granting of cutting permits infuriated many members of the Xeni Gwet'in. As the trial judge found at para. 25:

Tsilhqot'in people were frustrated and angry. What they considered "their wood" was leaving the community without any economic benefit to Tsilhqot'in people. Over 40 families were on the Xeni Gwet'in housing wait list. The wait for housing was upwards to 25 years on Tsilhqot'in Reserves. There was also high unemployment. Forestry provided very few jobs for Tsilhqot'in people and the profits from harvesting the wood did not flow to their communities.

[13] In response to the proposed logging, the Xeni Gwet'in issued a declaration on August 23, 1989 covering an area that included the Claim Area. The declaration included the following provisions:

- a) There shall be no commercial logging. Only local cutting of trees for our own needs i.e., firewood, housing, fencing, native uses, etc.
- b) There shall be no mining or mining explorations.
- c) There shall be no commercial road building
- d) All-terrain vehicles and skidoos shall only be permitted for trapping purposes.
- e) There shall be no flooding or dam construction on Chilko, Taseko, and Tatlayoko lakes.
- f) This is the spiritual and economic homeland of our people. We will continue in perpetuity:

- i. To have and exercise our traditional rights of hunting, fishing, trapping, gathering, and natural resources.
 - ii. To carry on our traditional ranching way of life.
 - iii. To practice our traditional native medicine, religion, sacred, and spiritual ways.
- g) That we are prepared to share our Nemiah Aboriginal Wilderness Preserve with non-natives in the following ways:
 - i. With our permission visitors may come and view and photograph our beautiful land.
 - ii. We will issue permits, subject to our conservation rules, for hunting and fishing within our Preserve.
 - iii. The respectful use of our Preserve by canoeists, hikers, light campers, and other visitors is encouraged, subject to our system of permits.
- h) We are prepared to enforce and defend our Aboriginal rights in any way we are able.

[14] In December 1989, the Nemiah Valley Indian Band (as the Xeni Gwet'in First Nations Government was then known) commenced an action to stop the threat of logging within the Trapline Territory. That litigation was discontinued and replaced by another action (the "Trapline Territory Action") a few months later. In that action, the Band claimed Aboriginal trapping rights and sought to enjoin logging within the Trapline Territory.

[15] The immediate threat of logging in the Trapline Territory was resolved through consent orders in the Trapline Territory Action. The orders prohibited logging in the Trapline Territory (and activities in preparation for logging) pending the trial of the action.

[16] After the injunction was granted, forest companies turned their attention to the possibility of logging within Tachelach'ed. In order to access the area, they needed to upgrade a bridge across the Tsilhqox north of Tsilhqox Biny at a place known as "Henry's Crossing".

[17] On May 7, 1992, members of the Tsilhqot'in Nation established a blockade to prevent work on the bridge at Henry's Crossing. This led to a promise by the then-

premier of the province that there would be no further logging without the consent of the Xeni Gwet'in.

[18] In 1994, Ts'il'os Provincial Park was established over a large part of the Claim Area. While the Ministry of Forests and the Xeni Gwet'in continued to engage in discussions concerning logging elsewhere in Tachelach'ed, the talks reached an impasse. The main sticking point was control of forestry activities. The Xeni Gwet'in wished to have a right of first refusal on any logging that took place, while Ministry officials considered that they did not have jurisdiction to grant such a right.

[19] On June 25, 1998, the Band amended the claim in the Trapline Territory Action to include claims for Aboriginal title on behalf of the Tsilhqot'in Nation, damages for infringement of Aboriginal rights and title, compensation for breach of fiduciary duty, declarations concerning the issuance and use of certain forest licences, and injunctions restraining the provincial Crown from issuing cutting permits.

[20] On December 18, 1998, in response to proposed logging in Tachelach'ed, the Band commenced a separate action against the provincial Crown and others, seeking declarations similar to those sought in the Trapline Territory Action.

[21] In November 1999, Vickers J., sitting as a case management judge, made an order substituting the current plaintiff for the Band in both actions.

[22] In 2000, the Attorney General of Canada was added as a defendant in both actions. On November 27, 2001, the Supreme Court of British Columbia made an advance costs order requiring Canada and British Columbia to pay the plaintiff's costs of the litigation in both actions on an interim basis and in any event of the cause (2001 BCSC 1641). This Court dismissed an appeal from that order (2002 BCCA 434). The Supreme Court of Canada granted leave to appeal ([2002] S.C.C.A. No. 295), but remanded the case back to the trial court to be dealt with in accordance with its judgment in *British Columbia (Minister of Forests) v. Okanagan Indian Band*, 2003 SCC 71, [2003] 3 S.C.R. 371. The trial judge, on reconsidering

the matter, affirmed his original order (2004 BCSC 610). The costs order has ensured that the plaintiff has had the necessary resources to advance this difficult and expensive litigation.

[23] The two actions were consolidated into the present proceeding by consent. There were several amendments to the statement of claim along the way and the claims against the various forest companies were discontinued or dismissed.

[24] The trial of the action commenced in November 2002 and occupied 339 court days over a span of nearly five years. Twenty-four Tsilhqot'in witnesses testified and five additional Tsilhqot'in witnesses provided evidence by affidavit. The parties adduced expert evidence from a wide range of disciplines including anthropology, archeology, cartography and biology. A very large number of historical documents were entered as exhibits.

[25] Before turning to a more detailed discussion of the reasons for judgment, I would like to say a few words about the trial and the trial judge.

[26] This was very complex and difficult litigation. A great deal was at stake, and the parties were conscious of the fact that this case might set important precedents for Aboriginal title and rights claims. The funding order made by the case management judge meant that the opportunity existed for a very complete record to be constructed.

[27] The trial was a massive undertaking for the parties, their counsel, and for the trial judge. Mr. Justice Vickers was the presiding judge. He retired after giving the judgment, and, sadly, passed away shortly thereafter. One is struck, in reading the transcript of the proceedings, by the incredible patience and conscientiousness shown by the trial judge. His judgment is organized and comprehensive. While it extends to 458 pages, it is neither verbose nor tedious. It is a tribute to Vickers J.'s diligence and intellect that this case presents a suitable opportunity for this Court to address complex issues that go to the heart of Aboriginal rights and title. Mr. Justice

Vickers hoped that his judgment would assist the parties to settle their disputes without further litigation. In the final paragraph of his judgment, he said:

[1382] Reconciliation is a process. It is in the interests of all Canadians that we begin to engage in this process at the earliest possible date so that an honourable settlement with Tsilhqot'in people can be achieved.

[28] The parties attempted to reach a settlement following the trial, but ultimately found it necessary to proceed with the appeal (see *William v. British Columbia* (HMTQ), 2009 BCCA 83).

[29] Neither the fact that the parties were unable to resolve this matter short of appeal nor the fact that this Court differs from him on certain issues of law should be seen as diminishing Vickers J.'s achievements in this matter. That the parties do not take issue with any significant findings of fact made by the trial judge is a tribute to his thorough understanding and careful analysis of the evidence.

III. The Tsilhqot'in Nation

[30] The trial judge reviewed a great deal of ethnographic and historical evidence. He noted evidence that the Tsilhqot'in displaced Salish people in the Claim Area by about the middle of the 17th century, and accepted that the transition of the area from Salish to Tsilhqot'in territory was complete well before the first contact with European peoples. He concluded that the Tsilhqot'in have been present in the Claim Area for more than 250 years. This was, of course, before Captain George Vancouver stepped ashore and claimed all of the land that would later become British Columbia on behalf of the Crown in June 1792.

[31] It is not certain when the first European explorer met the Tsilhqot'in, but it is quite possible that it was in June 1808, when Simon Fraser met with some members of the Tsilhqot'in Nation (who were on horseback). On his return through the area the following month, he wrote that the Tsilhqot'in had not seen a white man before. The Tsilhqot'in traded with coastal Aboriginal groups, and it is apparent that European goods reached them before they encountered European explorers.

[32] The Tsilhqot'in continued to occupy their traditional territory (including the Claim Area) in 1846, when the Oregon Treaty put an end to American claims to what is now British Columbia. That date has, in cases such as *Calder v. Attorney-General of B.C.*, [1973] S.C.R. 313, and *Delgamuukw v. British Columbia*, [1997] 3 S.C.R. 1010, been taken to be a significant one for the establishment of Aboriginal title, on the basis that it represents a recognition of Crown sovereignty as a matter of international law. The trial judge analyzed the matter and accepted, at para. 601, that the date the treaty was entered into should be treated as the crystallization date for a claim to Aboriginal title. While it is curious that a treaty that had no practical impact on relations between the Crown and the Tsilhqot'in can be seen as the defining moment for a claim of Aboriginal title, the parties do not, in this Court, challenge the determination to that effect, and the determination is in accordance with earlier case law.

[33] The trial judge had the benefit of historical evidence concerning Tsilhqot'in occupation of the territory from the time period immediately prior to 1846. The Hudson's Bay Company operated a trading post at Fort Chilcotin (about 15 km east of the northern boundary of the Claim Area) in 1829 and from 1831-1843 (though its detailed records only survive from the years 1837 to 1840, with most of the 1838 journals also missing). As well, Father Giovanni Nobili, a Jesuit Priest, journeyed through Tsilhqot'in territory and into the Claim Area in 1845. His journals confirm the presence of Tsilhqot'in people in the area at that time, and describe hunting, trapping and fishing activities and the presence of structures including lodges and bridges.

[34] The historical, ethnographic and archeological evidence depicts the Tsilhqot'in as a loosely-organized semi-nomadic group. The trial judge reviewed the evidence in great detail, and his findings are not challenged. In terms of a general overview, I reproduce the trial judge's summary of the socio-political structure of the Tsilhqot'in from paras. 356-363 of his judgment:

[356] Tsilhqot'in groups are less stratified and more egalitarian than many neighbouring First Nations. This may have been partly a result of the mobility

of Tsilhqot'in groups, which made both accumulation of wealth and rigid organizational structures unwieldy.

[357] Traditionally, no one leader of all Tsilhqot'in speakers was recognized. The enforcement of conformity to behavioural norms – to the extent that it occurred at all – occurred at the family or encampment level rather than at the level of band or nation. Prior to contact, as [anthropologist Robert] Lane wrote in his 1981 article ["Chilcotin", in Volume VI of the *Handbook of North American Indians* (Washington: Smithsonian Institution, 1981)] at p. 408:

Individuals had a high degree of autonomy. In theory, beyond the confines of the family, no one could force anyone else to do anything.

[358] Lane also discussed the social political structure of Tsilhqot'in people in [his unpublished thesis entitled *Cultural Relations of the Chilcotin Indians of West Central British Columbia* (Ph.D. Thesis, University of Washington, 1953)] at p. 166 as follows:

The Chilcotin had various subdivisions. The band was a loosely associated group of families who wintered in the vicinity of a certain lake or group of lakes. The band was usually named for the lake with which it was most intimately associated. There was a degree of mobility between neighbouring bands [...]

[359] He continued at pp. 170-171, as follows:

Within the band there were unnamed local groups, which can be called encampments. Each consisted of several families who usually, particularly in the winter time, camped together; and who often acted as the main cooperating group. Such groups were united by kinship, friendship or by economic dependence.

Several brothers and their families might form such a group; or parents and their families, and their children and their families. Several friends might form such a group and through intermarriage between the friends' families, the unity of the group would be perpetuated.

...

In these encampments there was a great deal of mobility. A family might remain in such an association for a season or a lifetime. Probably most families had constituted parts of several different local groups in the course of their existence.

Such a group had no definitely outlined territorial rights. However, it was recognized that the families in such a group had rights to certain winter camping sites, providing that they occupied them every season. However, when the usual occupants of such a site failed to use it for one or more winters, someone else could move in and claim it.

In much the same way, fish trap sites were regarded as belonging to the person who habitually used them. When the habitual user neglected to use them, someone else was free to do so. Band members tended to utilize for hunting and fishing purposes the suitable territories nearest to their wintering sites. However, there

were no explicitly defined band territories. In theory and to a lesser degree in fact, any family utilized any part of Chilcotin territory.

[360] I pause at this point to note that the latter observation concerning fish trap sites and the use of Tsilhqot'in territory was confirmed by the evidence at trial. Tsilhqot'in elders testified about family fish sites but at the same time were clear that all Tsilhqot'in people were entitled to utilize the entire Tsilhqot'in territory.

[361] Lane continued his observations at pp. 171-173 of this thesis:

At mid-winter all of a band might be concentrated in certain parts of the band territory, hunting around and fishing at various lakes. However, not all of the band would be at any particular lake. In the spring individual families scattered to hunt by themselves. Later in the season groups of families gathered at streams and lakes to fish the various runs of trout, whitefish, suckers and other small fish. In the summer when the salmon were running, large groups gathered at the river fishing sites but they were not necessarily members of the same band. Other large groups hunted and dug roots at certain places in the mountains but again all of the people in one area were not from one band. After the salmon fishing season, families again went off by themselves, to hunt or fish or gather until winter.

The band was a functioning unit only upon a few special occasions such as feasts and celebrations. It never gathered at one place for economic purposes. For about three months of the year, the encampment appears to have been the basic unit, above the family level. For about four months, the individual family lived nomadically and more or less by itself. During the two months or so of the spring fish runs, people gathered in greater numbers at specific sites on lakes. These people were usually from the same band. I call this grouping a "semi-band" because almost everybody at one such site was from the same band; but the entire band rarely gathered at one site.

During three months in the summer, the largest groups of people were together in the mountains and at salmon fishing sites in "mixed bands," composed of families from one or several bands.

... the Chilcotin had very vague concepts of ownership of territory. All Chilcotin had right to use all the Chilcotin territory. Bands occupied vaguely defined geographic areas. They did not "own" such areas. Hunting territories were also used rather than "owned" by members of certain bands Fishing sites involved somewhat more of a feeling of ownership. But such ownership also depended upon use.

[362] Lane noted at p. 174 of his dissertation that "among none of the Chilcotin's immediate neighbours do we find such a loose and flexible group organization". This description accords with socio-political structure described to me by Tsilhqot'in elders in the course of the trial.

[363] Tsilhqot'in people living in bands had a chief. The presence of several bands meant there was more than one chief. They met together as a group for feasts, celebrations or annual gatherings and there was no single person

who was the chief of the entire Tsilhqot'in people. Given their semi-nomadic nature, there was frequent movement for hunting, gathering and making the tools and clothing needed for survival. Thus, there appeared to be little time for art, in the way that was pursued by coastal Aboriginal people. There were no totems. There was no evidence of a crest system such as that described in *Delgamuukw*. There was no evidence of named ceremonial groups and no evidence of any honorific ranking system such as is found amongst some Aboriginal people. The oral traditions, stories and legends told from generation to generation provide the binding social fabric for Tsilhqot'in people.

[35] It should not be thought, however, that the Tsilhqot'in lacked a sense of the land belonging to the Nation. On this issue, the trial judge said, at para. 429:

I ... am satisfied that an examination of the historical records leads to a conclusion that Tsilhqot'in people did consider the land to be their land. They also had a concept of territory and boundaries, although this appears to have been enlarged following the movements of the mid-nineteenth century.

[36] The trial judge included in his historical summary several incidents in which the Tsilhqot'in prevented members of other nations from coming into their territory, as well as some in which Hudson's Bay Company personnel were excluded. In 1864, a road-building crew was killed while attempting to construct a road through Tsilhqot'in territory, an event which touched off what is known as the Tsilhqot'in War – a sad low point in relations between the Crown and the Tsilhqot'in Nation that culminated in several Tsilhqot'in Chiefs being executed. While the precise causes of the dispute are not clear, there is at least some indication that the Crown's use of land without seeking the permission of the Tsilhqot'in Nation was a factor.

IV. The Issues at Trial

[37] In June 2003 (during the trial), the parties filed their final amended pleadings. In the amended statement of claim, the plaintiff sought:

- a declaration that the Tsilhqot'in Nation has Aboriginal title to the Claim Area;
- a declaration that the Xenigwet'in has Aboriginal rights to hunt and trap in the Claim Area;

- a declaration that British Columbia does not have jurisdiction to authorize forestry activities within the Claim Area;
- declarations that British Columbia's authorization of forestry activities within the Claim Area unjustifiably infringed the Aboriginal title of the Tsilhqot'in Nation and the Aboriginal rights of the Xeni Gwet'in;
- injunctive relief restraining British Columbia from authorizing forestry activities in the Claim Area in the future;
- damages for unjustifiable infringement of the Aboriginal title of the Tsilhqot'in Nation and Aboriginal rights of the Xeni Gwet'in; and
- damages for breach of fiduciary duty.

[38] At para. 101 of the judgment, the trial judge summarized the issues in the proceeding as follows:

- a) Are the Tsilhqot'in people entitled to a declaration of Aboriginal title to all or part of the Claim Area?
- b) Are the Tsilhqot'in people entitled to a declaration of Aboriginal rights to hunt and trap birds and animals throughout all or part of the Claim Area for the purposes of securing food, clothing, shelter, mats, blankets and crafts, as well as for spiritual, ceremonial, and cultural uses, inclusive of a right to capture and use horses for transportation and work?
- c) Are the Tsilhqot'in people entitled to a declaration of an Aboriginal right to trade in the furs, pelts and other animal products obtained from all or part of the Claim Area as a means of securing a moderate livelihood?
- d) Does the *Forest Act* apply to Aboriginal title lands?
- e) Does the issuing of forest licences, the granting of authorizations and any forest development activity unjustifiably infringe Aboriginal rights in the Claim Area?
- f) Are Tsilhqot'in people entitled to damages?
- g) Are any claims advanced statute barred or otherwise affected by the doctrines of Crown immunity or *laches*?

[39] He (1) dismissed the plaintiff's claims for declarations of Aboriginal title without prejudice to the Tsilhqot'in's ability to make new claims to Aboriginal title within the Claim Area; (2) dismissed the plaintiff's claims for damages without

prejudice to the Tsilhqot'in's right to make new damages claims in respect of Aboriginal title land; (3) declared that the Tsilhqot'in Nation has Aboriginal rights to trap and hunt birds and animals for specified purposes, and to trade in skins and pelts taken from the Claim Area "as a means of securing a moderate livelihood", as well as to capture and use horses; and (4) declared that forestry activities in the Claim Area unjustifiably infringed Tsilhqot'in Aboriginal rights.

V. The Issues on Appeal

[40] Three appeals have been taken from the trial judgment – one by the plaintiff, one by Canada and one by British Columbia. The appeals by the plaintiff and by Canada are concerned with Aboriginal title, while the British Columbia appeal is concerned with a number of issues surrounding Aboriginal rights claims.

[41] The plaintiff contends that the trial judge erred by failing to find that the Tsilhqot'in exclusively occupied the entire Claim Area at the date of assertion of sovereignty. He says that the trial judge should have declared the entire Claim Area to be subject to Tsilhqot'in Aboriginal title. In the alternative, the plaintiff argues that the trial judge erred in treating the title claim as an "all or nothing claim", such that he considered himself without jurisdiction to make an order finding a part of the Claim Area to be subject to Aboriginal title.

[42] Canada, in its appeal, argues that the judge was right to find the claim to be an "all or nothing claim" and was right to dismiss the Aboriginal title claim. It says, however, that the dismissal ought to have been final, and that the judge erred in dismissing the claim without prejudice to the plaintiff's ability to pursue geographically smaller claims within the Claim Area.

[43] British Columbia's appeal raises a number of issues concerning Aboriginal rights. First, it contends that the trial judge erred in identifying the Tsilhqot'in Nation as the holder of Aboriginal rights, and says that the judge ought to have confined himself to determining whether or not the Xeni Gwet'in held such rights.

[44] Second, it argues that the judge mischaracterized the extent of Aboriginal hunting and trapping rights by finding these to include a right to a harvestable surplus of all wildlife species. Such a ruling, British Columbia says, amounts to a finding of a right to a resource rather than a right to engage in a traditional activity.

[45] Third, it says that the trial judge failed to apply the appropriate burden of proof on the issue of infringement of Aboriginal rights. It contends that he effectively required the government to demonstrate that the logging activities would not interfere with Aboriginal hunting and trapping rights rather than placing the onus on the plaintiff to demonstrate interference.

[46] Fourth, it says that the trial judge erred in finding the province's consultations with the Tsilhqot'in to be insufficient; in particular, it says that the trial judge wrongly imposed a prerequisite to proper consultation, being the acknowledgement by the province of Tsilhqot'in Aboriginal rights.

[47] Fifth, it contends that the judge erred in considering whether the Tsilhqot'in possessed a right to trade skins and pelts to the extent of earning "a moderate livelihood" through hunting and trapping. It says that this claim was not pleaded, and the test for establishing rights to trade was not, in any event, made out on the evidence.

[48] Finally, British Columbia contends that the judge erred in considering whether the Tsilhqot'in have a right to capture horses for transportation and work purposes, as the claim was not properly pleaded. In any event, it says that the judge erred in finding the relevant practices to have existed pre-contact or, alternatively, in treating the right as a "contemporary extension" of pre-contact practices.

VI. The Reasons for Judgment of the Trial Judge

A. An "All or Nothing Claim"

[49] The first major issue addressed by the trial judge was a pleadings issue. In the statement of claim, the plaintiff sought two declarations of Aboriginal title – one in respect of Tachelach'ed (described in the prayer for relief as "the Brittany") and one

in respect of the Trapline Territory. The statement of claim did not explicitly seek declarations of Aboriginal title over portions of those territories in the event that the court was not persuaded that it existed throughout the Claim Area. In final argument, however, the plaintiff argued that a declaration could be made in respect of whatever parts of the Claim Area the court found to be subject to Aboriginal title.

[50] The judge considered whether, given those pleadings, the court could make a declaration of Aboriginal title in respect of a part of the Claim Area. He held that he could not. He described the pleadings as making an “all or nothing claim”, and found that it would be “prejudicial to the defendants” for the court to make a declaration in respect of a part of the Claim Area only.

B. The Proper Rights Holder

[51] The second issue considered by the trial judge was the identity of the holder of Aboriginal rights or title. While Aboriginal rights are communal rights held by a collective, it can be difficult to identify the extent of that collective. As the trial judge noted at para. 446, there are numerous different overlapping Aboriginal collectives:

In both historical and contemporary times, an individual can simultaneously be a member of a family, a clan or descent group, a hunting party, a band, and a nation.

[52] While the amended statement of claim sought a declaration of Aboriginal title on behalf of the Tsilhqot'in Nation and a declaration of Aboriginal rights on behalf of the Xeni Gwet'in First Nations Government, in his final argument the plaintiff sought declarations of both title and rights in the name of the Tsilhqot'in Nation.

[53] British Columbia argued that the collective rights in issue were held, if at all, at the level of the band, and that if Aboriginal rights or title were established, the proper rights holder would be the Xeni Gwet'in. This argument was based on historical and ethnographic evidence that established that decision-making typically took place at the encampment or band level, and that while there were local chiefs, the Tsilhqot'in did not have a national chief or political organization.

[54] The trial judge was not satisfied that the Xeni Gwet'in was a homogenous group that could be traced back to any single subgroup of the Tsilhqot'in Nation. He referred to evidence arising from the reserve allocation process to support his conclusion:

[465] The laying aside of ... reserves [for the "Nemaiah Valley Indians"] appears to have followed a request made by Hewitt Bostock, M.P. to James A. Smart, Deputy Superintendent General of Indian Affairs, in a letter dated July 27, 1899. ... Bostock referred to the people living in Xeni as "a number of Indians who have belonged to different tribes in that part of the country but who for one reason or another have left their own reservation or tribe and have gone to live in this valley". I conclude that the people from "different tribes" were all Tsilhqot'in people who are the ancestors of the modern day Xeni Gwet'in.

[55] Thus, if Aboriginal rights or title were properly held at the level of the band, tribe, or encampment, it would be difficult or impossible to find that the Xeni Gwet'in First Nations Government was the modern representative of that group. The judge found, however, that rights were held on a national level by the Tsilhqot'in. He noted that while the Tsilhqot'in did not, either historically or today, have any pan-national political structure, it did represent a distinct cultural group that recognized itself as holding collective entitlements:

[459] Tsilhqot'in people make no distinction amongst themselves at the band level as to their individual right to harvest resources. The evidence is that, as between Tsilhqot'in people, any person in the group can hunt or fish anywhere inside Tsilhqot'in territory. The right to harvest resides in the collective Tsilhqot'in community. Individual community members identify as Tsilhqot'in people first, rather than as band members.

...

[468] In the modern Tsilhqot'in political structure, Xeni Gwet'in people are viewed amongst Tsilhqot'in people as the caretakers of the lands in and about Xeni, including Tachelach'ed. Other bands are considered to be the caretakers of the lands that surround their reserves. Still, the caretakers have no more rights to the land or the resources than any other Tsilhqot'in person.

[56] In British Columbia today, the combined effect of the reserve creation process and the *Indian Act* has tended to magnify the importance of bands. The judge discounted the idea that rights should be seen as being held at the level of the band:

[469] The setting aside of reserves and the establishment of bands was a convenience to government at both levels. The creation of bands did not alter

the true identity of the people. Their true identity lies in their Tsilhqot'in lineage, their shared language, customs, traditions and historical experiences. While band level organization may have meaning to a Canadian federal bureaucracy, it is without any meaning in the resolution of Aboriginal title and rights for Tsilhqot'in people.

[57] He concluded that the proper rights holder was the Tsilhqot'in Nation rather than the Xení Gwet'in First Nations Government:

[470] I conclude that the proper rights holder, whether for Aboriginal title or Aboriginal rights, is the community of Tsilhqot'in people. Tsilhqot'in people were the historic community of people sharing language, customs, traditions, historical experience, territory and resources at the time of first contact and at sovereignty assertion. The Aboriginal rights of individual Tsilhqot'in people or any other subgroup within the Tsilhqot'in Nation are derived from the collective actions, shared language, traditions and shared historical experiences of the members of the Tsilhqot'in Nation.

C. Aboriginal Title

[58] Having found the proper claimant to be the Tsilhqot'in Nation, the trial judge turned to the issue of whether the plaintiff's claim to Aboriginal title was made out. Citing *Delgamuukw*, he set out the test for Aboriginal title as requiring proof of exclusive occupation of the claimed lands by the Aboriginal group at the time of the assertion of Crown sovereignty. Referring to *R. v. Marshall*; *R. v. Bernard*, 2005 SCC 43, [2005] 2 S.C.R. 220, he noted at para. 554 that Aboriginal title is not co-extensive with an Aboriginal group's traditional territory, and at para. 583 that occasional entry and use of land would not be sufficient to found a claim to title.

[59] The judge summarized a considerable body of evidence pointing to continuous occupation of the Claim Area by the Tsilhqot'in over a period of several hundred years. Dr. Richard G. Matson, an archeologist, provided an opinion to the effect that the Tsilhqot'in moved into Tachelach'ed by about 1645-1660, and into the Trapline Territory at about the same time or a little later. They had come from an area northwest of the Claim Area.

[60] The judge also reviewed the oral traditions of the Tsilhqot'in, including legends that were tied to landmarks within the Claim Area. While he acknowledged that many of the legends had analogs among other Aboriginal groups, he concluded,

at para. 665, that the names of geographic locations had been adapted to the circumstances of the Tsilhqot'in, and that "the references to lakes, rivers and other landmarks [within the Claim Area] formed a part of these legends for Tsilhqot'in people at the time of sovereignty assertion".

[61] The judge then turned to evidence with respect to the adoption of Tsilhqot'in place names in the Claim Area by European fur traders and settlers. The judge noted and accepted the opinions of archaeologist Morley Eldridge and anthropologist Dr. David Dinwoodie to the effect that the adoption of Tsilhqot'in names suggests that, by the time of European contact, the Tsilhqot'in had been in the area for a very lengthy period. Similarly, he accepted the evidence of Dr. Nancy J. Turner, an ethno-botanist and ethno-ecologist, to the effect that the presence in the Tsilhqot'in language of words to describe plants in the Claim Area, as well as the uses made of the plants by the Tsilhqot'in, suggest a presence in that area of more than 250 years.

[62] The evidence of Dr. Kenneth Brealey, a cartologist and historical geographer, was to the effect that a network of Tsilhqot'in trails in the Claim Area predated contact with Europeans. The judge accepted that opinion, and noted that John Dewhirst, a cultural anthropologist, was also of the view that the trail network was in existence prior to the date of the Oregon Treaty.

[63] In short, the judge had no difficulty accepting that the Tsilhqot'in were present in the Claim Area prior to 1846 and continued to be present at the time of the Oregon Treaty. He then turned to the question of the nature and extent of the occupation. He noted that there was no evidence of village sites that were occupied year round, only evidence of relatively small groupings of winter dwellings. There was also no evidence of cultivated fields, though the evidence did establish that the Tsilhqot'in harvested and, to some extent, managed naturally-occurring berries and root plants on mountain slopes.

[64] The judge characterized the positions of the parties with respect to Aboriginal title as follows:

[608] Both Canada and the Province argue that the evidence might support a declaration of Aboriginal title to smaller sites where specific Aboriginal activities or practices took place. For example, the Province says that hunting is a practice that will not ordinarily lead to utilization of the same area year after year. Most species of game animals roam the landscape and are taken by hunters on an opportunistic basis wherever they happen to be found. There may be certain exceptions where features of the natural landscape such as a salt lick or a narrow defile between mountains or cliffs attract animals and their hunters to the same place year after year, but these would seem to be the exception.

[609] Canada's approach to Aboriginal title is similar. For example, it says that salmon fishing might make it possible for a definite tract of land to be used on a regular basis if, for example, it could be shown that fishers would use a particular rock or promontory each year to spear or net spawning salmon. Canada says it was unable to locate any evidence in the transcripts with this level of specificity. It says that lake fishing would seem even less likely to satisfy the criteria since fish would be distributed throughout the lake, and fishers would be less likely to use any particular spots to fish for them. Once again, Canada was unable to locate any evidence in the transcripts that would satisfy these criteria.

[610] The plaintiff characterizes the foregoing arguments of the defendants as a postage stamp approach to Aboriginal title. I think that is a fair description. There is no evidence to support a conclusion that Aboriginal people ever lived this kind of postage stamp existence. Tsilhqot'in people were semi-nomadic and moved with the seasons over various tracts of land within their vast territory. It was government policy that caused them to alter their traditional lifestyle and live on reserves.

[65] The judge, in the result, rejected what was pejoratively described as the "postage stamp approach" of searching for evidence with respect to specific tracts of land. Instead, he appears to have adopted a broad-brush approach to occupation. While he reviewed the evidence in respect of many individual sites, his conclusions relate, instead, to broad geographical areas, which he considered to be more in keeping with the semi-nomadic traditions of the Tsilhqot'in. The judge analyzed the evidence with respect to sites in five broad regions – the Tsilhqox Corridor (effectively the western boundary of Tachelach'ed), the Xeni (the Nemiah Valley – effectively the southern boundary area of Tachelach'ed), Tachelach'ed (other than the Tsilhqox Corridor and the Xeni), the Western Trapline Territory, and the Eastern Trapline Territory.

[66] I do not intend, in this judgment, to review the judge's analysis with respect to each individual site. A reader interested in that level of detail should consult the trial

judgment at paras. 688-911. In order to give a flavour of the approach taken, however, I will describe the analysis undertaken with respect to the Tsilhqox Corridor, which the judge described at para. 707 as providing “the best evidence of residential sites that might qualify as village sites especially during the fall and winter months”.

[67] The judge undertook an extensive review of the evidence as it related to numerous specific sites, both inside and outside the Claim Area. His review included historical records, *viva voce* evidence, archaeological evidence, and evidence of place names. The nature of the evidence, however, made the trial judge’s task difficult. Historical documentation from the period of the Oregon Treaty was limited. *Viva voce* evidence related to a more recent period than the time of the assertion of Crown sovereignty. The archaeological evidence was generally unable to show occupation at a specific point in time – many of the pit dwellings in the area long predated the relevant period. The evidence established that, in addition to being semi-nomadic, the Tsilhqot’in migrated over time, so determining whether a specific site was occupied in or around 1846 generally involved a degree of speculation. Evidence of place names might establish some sort of presence in the general geographic area, but was of limited use in determining the nature of occupation.

[68] In respect of sites within the Claim Area, the judge found three specific sites along the Tsilhqox Corridor that were used by the Tsilhqot’in as dwelling places at or around the time of the Oregon Treaty.

[69] Tl’egwated is a site roughly parallel to the north end of Lhuy Nachasgwengulin (Little Eagle Lake). While most of the 15 or more pit houses found at the site were outside the Claim Area, some were within it. With respect to the site, the judge said:

[721] Some 169 pit features have been mapped on or near the site, including numerous pit houses of a very large size. The site, also known as Kigli Holes, is generally regarded as non-Athapaskan (Plateau Pithouse Tradition) in origin, but appears to have been partly occupied by Tsilhqot’in people prior to and at the time of sovereignty assertion. Both Dewhirst and Eldridge believe Tl’egwated to be the home of the “Tlo quot tock” Indians recorded as attached to Fort Chilcotin in the Hudson’s Bay Company census

of 1838. It may also mark the site where Father Nobili visited a relatively large concentration of Tsilhqot'in people in the winter of 1845

[722] On the evidence, I conclude that Tl'egwated can be identified with archeological site EIRw-4, and represents the site known to the Hudson's Bay Company as Tlo quot tock as well as the pit house village visited by Nobili

[70] A second site discussed by the judge is known as Nusay Bighinlin, near the point where Natasewed Yeqox (Brittany Creek) enters the Tsilhqox. He noted that there is a single pit house in the area, which appears to have pre-dated Tsilhqot'in entry into the Claim Area. However, a site approximately one kilometre south, dating to 500 years ago, was consistent with Tsilhqot'in occupation. The judge said:

[732] This would locate a presence of Tsilhqot'in people well before sovereignty assertion making it ... reasonable to infer, as I do, that there were Tsilhqot'in people one kilometre away, at the Nusay Bighinlin site, well before the assertion of sovereignty.

[71] The third site is Sul Gunlin, near the outlet of Tsilhqox Biny on its eastern shore. There was some evidence of Tsilhqot'in occupation of the site, but none that directly showed occupation around the time of the Oregon Treaty. The judge said:

[762] ...No archaeological or historical records were cited that would confirm Tsilhqot'in residence at this site *circa* 1846, but given its proximity to Biny Gwechugh [a site that was mostly outside the Claim Area, and was partly occupied in 1846], it is logical to infer, as I do, that this was a site used and occupied by Tsilhqot'in people at the time of sovereignty assertion.

[72] The judge's findings with respect to these specific sites, combined with his review of evidence relating to sites outside the Claim Area, led him to find that the entire Tsilhqox Corridor was occupied by the Tsilhqot'in in 1846:

[712] British Columbia says that as a result of the previous occupation of the Tsilhqox corridor by non-Tsilhqot'in people, and because the later reoccupation by Tsilhqot'in people did not extend to all sites or to all features in a given site, the presence of archaeological remains cannot, in itself, indicate a Tsilhqot'in dwelling site or even a Tsilhqot'in presence in an area. This would be true if one were to ignore the presence of Tsilhqot'in people at various locations as recorded in the historical documents. When [Hudson's Bay Company employees] and Father Nobili travelled the Tsilhqox corridor they recorded the fact that Tsilhqot'in people were in occupation of these winter dwellings. Thus, the logical inference to draw from the whole of the evidence is that during these times it was Tsilhqot'in people who occupied the

entire Tsilhqox corridor. There is no historical evidence of occupation by others during this critical historical period.

[73] The judge's conclusions with respect to specific sites in the areas other than the Tsilhqox Corridor were generally less categorical, though he did refer in considerable detail to a number of such sites.

[74] The judge found that the entirety of the Xeni was occupied by the Tsilhqot'in in 1846 in a manner sufficient to support a claim for Aboriginal title. The historical documentation with respect to the Xeni, however, was much less helpful than it was with respect to the Tsilhqox Corridor. At para. 764, the judge noted that "the Xeni sites do not appear in the historical documents until the turn of the last century". While he reviewed the evidence concerning a number of specific sites, it is not clear that he reached a conclusion regarding occupation in 1846 in respect of any of them. His conclusions with respect to Xeni as a whole were as follows:

[783] Much of the evidence concerning the use and occupation of the various places in Xeni relate to twentieth century activities. Oral history evidence provides an understanding of use and occupation in the nineteenth century. That evidence records use and occupation by the ?Esggidam [Tsilhqot'in ancestors], living in and about the valley, using the old trails, hunting, fishing and harvesting root and medicinal plants. There is also evidence of house pit depressions. I infer that these were the remains of pit houses in which Tsilhqot'in people lived. This entire area is also in close proximity to the head of Tsilhqox Biny where the evidence clearly shows Tsilhqot'in occupation pre-sovereignty.

[75] With respect to the rest of Tachelach'ed, the judge found that the requisite degree of Tsilhqot'in occupation was established only to the southern part of the area:

[792] As semi-nomadic people, there is no doubt that Tsilhqot'in people have derived subsistence from every quarter of Tachelach'ed. They have hunted, fished and moved about this area since before first contact with Europeans. It is a central part of their oral traditions, providing strength and continuity to their lives as Tsilhqot'in people. However, the entire area of [Tachelach'ed] does not qualify for a declaration of Tsilhqot'in Aboriginal title due to the absence of evidence with respect to the northern and central portions of the triangle. I later discuss those portions of Tachelach'ed that do warrant a finding of [Aboriginal] title.

[793] In reaching this conclusion, I have taken the following factors into account:

- Tachelach'ed is a vast area comprising almost 142,000 hectares.
- At the time of sovereignty assertion, the population of Tsilhqot'in people in this immediate area was approximately 300. That population could mainly be found along the Tsilhqox corridor, at the outlet area of Tsilhqox Biny and southward into Xenl. It is not possible to recreate today an accurate census for that period.
- Occupation of a more permanent nature during the winter season was confined to the lakes and rivers at the southern end of Tachelach'ed and towards the Tsilhqox.
- Other than the presence of [Hudson's Bay Company] traders, there is no evidence of occupation by others at the significant historical point of sovereignty assertion.
- Oral history evidence may be traced to the late nineteenth century and the twentieth century. It is extremely difficult to find oral history evidence to accurately connect to a period over 150 years ago.
- The oral history evidence does not demonstrate the same degree of use throughout the entire area. There appears to have been a much wider use at the southern end of the triangle and over towards the Tsilhqox than in other areas of Tachelach'ed.
- There is an absence of historical evidence concerning the interior of Tachelach'ed at the critical historical point.
- There is evidence of the remains of traditional housing in the interior of Tachelach'ed but no archaeological or anthropological evidence to tie these remains to Tsilhqot'in use at the time of sovereignty assertion. If the age of some of these remains were known, it might be easier to connect them to Tsilhqot'in use. Notwithstanding this absence of evidence, I am prepared to draw the inference and acknowledge the use of this housing by Tsilhqot'in people on a balance of probabilities but, once again, the time and extent of use is not known.

[794] In summary, there are areas within Tachelach'ed where I consider the use and occupation by Tsilhqot'in people at the time of sovereignty assertion to be sufficient to warrant a finding of Aboriginal title. The evidence does not lead to a finding of sufficient use and occupation throughout Tachelach'ed.

[76] With respect to the fourth area, the Western Trapline Territory, the trial judge again found Tsilhqot'in occupation in 1846 to have been insufficient to establish title over the entire area:

[825] ... The entire area of the Western Trapline does not qualify for a declaration of Tsilhqot'in Aboriginal title. While there is no doubt that there was a Tsilhqot'in presence in the entire area at the time of sovereignty assertion, much of the area was not occupied to the extent required to ground a declaration of Tsilhqot'in Aboriginal title. Once again, in considering the invitation of counsel to express an opinion on where Tsilhqot'in Aboriginal title

might lie, it is convenient to consider discrete smaller portions of the Western Trapline Territory.

[77] Finally, with respect to the Eastern Trapline Territory, the trial judge similarly concluded that Tsilhqot'in occupation in 1846 was insufficient to found Aboriginal title:

[893] I am satisfied Tsilhqot'in people were present in the Eastern Trapline Territory at the time of first contact. The area has been used by Tsilhqot'in people since that time for hunting, trapping, fishing and gathering of roots and berries. I am not able to find that any portion of the Eastern Trapline Territory was occupied at the time of sovereignty assertion to the extent necessary to ground a finding of Tsilhqot'in Aboriginal title....

[78] Based on these various findings, and on his preliminary conclusion that the claim was an "all or nothing claim", the trial judge declined to grant a declaration of Aboriginal title. He did, however, provide an opinion as to what areas he would have declared to have been subject to Aboriginal title had the case been pleaded in a manner that allowed a partial declaration to be granted. The "Opinion Area" encompassed the Tsilhqox Corridor, the Xeni, the rest of the southern portion of Tachelach'ed, and a part of the Western Trapline Territory. It included both land inside and outside the Claim Area, and encompassed roughly 40% of the Claim Area:

[959] The entire body of evidence in this case reveals village sites occupied for portions of each year. In addition, there were cultivated fields. These fields were not cultivated in the manner expected by European settlers. Viewed from the perspective of Tsilhqot'in people the gathering of medicinal and root plants and the harvesting of berries was accomplished in a manner that managed these resources to insure their return for future generations. These cultivated fields were tied to village sites, hunting grounds and fishing sites by a network of foot trails, horse trails and watercourses that defined the seasonal rounds. These sites and their interconnecting links set out definite tracts of land in regular use by Tsilhqot'in people at the time of sovereignty assertion to an extent sufficient to warrant a finding of Aboriginal title as follows:

- The Tsilhqox (Chilko River) Corridor from its outlet at Tsilhqox Biny (Chilko Lake) including a corridor of at least 1 kilometre on both sides of the river and inclusive of the river up to Gwetsilh (Siwash Bridge);
- Xeni, inclusive of the entire north slope of Ts'il?os. This slope of Ts'il?os provides the southern boundary, while the eastern shore of Tsilhqox Biny marks the western boundary. Gweqez Dzelh [Mt. Nemiah] and Xeni

Dwelh [Konni Mountain] combine to provide the northern boundary, while Tsiyi (Tsi ?Ezish Dzelh or Cardiff Mountain) marks the eastern boundary.

- North from Xenii into Tachelach'ed to a line drawn east to west from the points where Elkin Creek joins the Dasiqox (Taseko River) over to Nu Natase?ex [Mountain House] on the Tsilhqox. Elkin Creek is that water course draining Nabi Tsi Biny (Elkin Lake), flowing northeast to the Dasiqox;
- On the west, from Xenii across Tsilhqox Biny to Ch'a Biny [Big Lagoon] and then over to the point on Talhiqox Biny (Tatlayoko Lake) where the Western Trapline boundary touches the lake at the southeast shore, then following the boundary of the Western Trapline so as to include Gwedzin Biny (Cochin Lake);
- On the east from Xenii following the Dasiqox north to where it is joined by Elkin Creek; and
- With a northern boundary from Gwedzin Biny in a straight line to include the area north of Naghatalhchoz Biny (Big Eagle Lake or Chelquoit Lake) to Nu Natase?ex on the Tsilhqox where it joins the northern boundary of Tachelach'ed over to the Dasiqox at Elkin Creek.

D. The “Exclusivity” Requirement for Aboriginal Title

[79] In reaching his conclusion that the Tsilhqot'in Nation had demonstrated an entitlement to Aboriginal title over the Opinion Area, the judge was required to consider what had to be proven in order to show that the Nation had “exclusive” possession of the land in 1846. The question of what it means to “exclusively” occupy territory was a primary issue at trial.

[80] The trial judge summarized the plaintiff's position on exclusivity as follows:

[915] The plaintiff argues that Tsilhqot'in people had the capacity to control their territory and in fact did exercise such control. It is submitted that the evidence supports a conclusion that Tsilhqot'in people entered into treaties or bonds of peace from time to time, exercised control over the movements of non-Tsilhqot'in people in their territory, and enjoyed a reputation amongst their neighbours as a people who fiercely defended their land.

[916] Tsilhqot'in witnesses testified to their ancestors' use of scouts and runners to check for intruders and warn their communities. There is also some historical evidence of this practice, including the journals of Simon Fraser. On July 26, 1808 Simon Fraser recorded that “Chilkoetins ... had the information of our return from the lower parts of the river by messages across the Country”: *Letters and Journals of Simon Fraser*, pp. 124-125.

[917] Professor [Hamar] Foster, a legal historian, wrote in his report at p. 23 that the archival records show that “[t]o be safe” in Tsilhqot'in country, “one

had to be accompanied by Tsilhqot'in, paying what in effect was a 'toll' to enter and 'rent' if you wanted to stay and settle down".

...

[920] Military practices were also used to instil fear of Tsilhqot'in warriors. One such military practice was a policy of killing as many opponents as possible but at the same time, deliberately allowing one or two badly wounded opponents the opportunity to escape death. Upon their return, these badly wounded individuals would present the best evidence possible of the fierceness of Tsilhqot'in warriors. This worked to instill fear of Tsilhqot'in people in all those who might venture into Tsilhqot'in territory.

[81] The judge then went on to summarize and reject Canada's position on exclusivity:

[922] Canada is critical of the plaintiff's approach to this issue and says that a propensity for violence does not establish Tsilhqot'in exclusivity in the Claim Area. In the submission of Canada, the sparse Tsilhqot'in population would make it impossible for Tsilhqot'in people to maintain exclusive control over their traditional territory. Canada says it is more likely that after Tsilhqot'in people moved on from one location to another ... the land [was left] available for others to move in and exploit. Canada also argues that an abandonment of the Claim Area on a failure of a salmon run would make it impossible to maintain exclusive control, at least during such a period.

[923] There is nothing to indicate that Tsilhqot'in populations at any given time were small compared to their neighbours. In fact, early records of the [Hudson's Bay Company] appear to record a marginally larger number of Tsilhqot'in men trading at Fort Alexandria than the numbers of Dakelh (Carrier) men. I acknowledge the population was small given the size of the area, but it is fair to infer there were no large numbers of invaders on the edges of Tsilhqot'in territory.

[924] It is also important to place events in context. If an area was used to hunt, fish, and gather berries, root plants and medicines, the area would not be available for resource exploitation for at least another year. It would be highly unlikely that a neighbouring Aboriginal group would follow into an area that had already been exploited. Similarly, if the salmon run failed in any given area, there would be no possibility that any other group would move into such a distressful situation.

[82] Finally, the judge described the position put forth by British Columbia, which tied the concept of exclusivity to what it contended was the site-specific nature of Aboriginal title:

[925] British Columbia says the fundamental problem lies in the plaintiff's approach to proving Aboriginal title. According to this argument, the plaintiff failed to identify and establish pre-sovereignty occupation of any definite tracts of land within the Claim Area. British Columbia also says that the

plaintiff has approached the question of exclusivity from a territorial, rather than a site-specific, perspective.

[926] In his reply, the plaintiff argues that exclusivity does not require site-specific evidence of control directed at “each marsh meadow and berry patch”. What is required is effective control over the land in question.

[927] It is fair to say that the argument made by the plaintiff was directed towards a conclusion that Tsilhqot’in people had vigorously defended their territory and had closely monitored and controlled its use by others. British Columbia’s position is consistent with the view that site-specific definite tracts are required in the proof of Aboriginal title and thus proof of site-specific exclusivity is also required.

[83] While accepting that there was some merit in the approach suggested by British Columbia, the judge adopted a test for exclusivity that was, effectively, that suggested by the plaintiff:

[929] The question is: does the evidence [show] that Tsilhqot’in people at the time of sovereignty assertion exercised effective control of this land? Or, can a reasonable inference be drawn that Tsilhqot’in people could have excluded others had they chosen to do so? ...

[84] Applying that standard of exclusivity, the judge found that the Tsilhqot’in exclusively occupied all of the lands in the Opinion Area.

E. The Forest Act

[85] Having dealt with the claim to Aboriginal title, the judge next considered the applicability of the *Forest Act* to the Opinion Area. While the judge was not prepared to grant a declaration of title, he did find that the existence of Aboriginal title over the Opinion Area prevented the *Forest Act* from applying to it.

[86] He found that the timber on land that is subject to Aboriginal title is not “Crown timber” as defined in the *Forest Act*, because it is not “timber on Crown land”. The *Forest Act* adopts (subject to an exception which is not relevant to this case) the definition of “Crown land” set out in the *Land Act*, R.S.B.C. 1996, c. 245: “land vested in the government”. As a matter of statutory interpretation, the judge found that land subject to Aboriginal title is not vested in the government.

[87] He further held that, in any event, British Columbia did not have constitutional competence to regulate forestry on land subject to Aboriginal title. While the regulation of forestry is generally within the competence of the provincial government under s. 92A of the *Constitution Act, 1867*, he found that the doctrine of interjurisdictional immunity prevented provincial forestry legislation from applying on Aboriginal title lands. The regulation of forestry on such lands would go to the “core of Indianness”, and impermissibly affect the core of federal jurisdiction under s. 91(24) of the *Constitution Act, 1867*.

[88] The judge went on to consider whether, assuming the *Forest Act* did apply to lands in the Opinion Area, the Crown had administered it in a way that unjustifiably interfered with Aboriginal title. He found that it had.

[89] He held that any claim to justification must fail for a number of reasons. First, he found that British Columbia could not show a compelling and substantial objective in authorizing logging in the Claim Area. He commented that the exclusive focus of the *Forest Act* on timber values, to the exclusion of ecosystem management, resulted in a failure to properly balance the interests of the Tsilhqot’in against economic interests of the larger society. Further, he found that the province had failed to demonstrate that logging in the Claim Area was necessary or even economically viable.

[90] The judge was also critical of consultation efforts made on behalf of the Crown with respect to timber harvesting, saying at para. 1141 that “the failure of the Province to recognize and accommodate the claims being advanced for Aboriginal title and rights leads me to conclude that the Province has failed in its obligation to consult with the Tsilhqot’in people”.

[91] Accordingly, the judge found that the Crown had, in administering the *Forest Act*, unjustifiably infringed the plaintiff’s Aboriginal title in the Claim Area.

F. Aboriginal Rights (other than Title)

[92] The judge next turned to issues of Aboriginal rights other than title. British Columbia and Canada admitted the Xeni Gwet'in held Aboriginal rights "to hunt and trap birds and animals throughout the Claim Area for the purposes of securing food, clothing, shelter, mats, blankets and crafts, as well as for spiritual, ceremonial and cultural uses". At issue before the trial judge (in addition to the question of the proper rights holder, which I have already discussed) was whether the Tsilhqot'in also held rights to trade in skins and pelts and to capture horses for transportation and work purposes. The judge was also required to consider whether any Tsilhqot'in Aboriginal rights had been unjustifiably infringed.

[93] The date for the crystallization of Aboriginal rights is the date of European contact. The judge considered various possible dates, and concluded that a single date should apply throughout British Columbia. He noted that 1793 was significant in terms of European exploration of what later became British Columbia. In that year, Alexander Mackenzie completed his journey following the Peace, Fraser and Blackwater (West Road) Rivers and reached the shores of Dean Channel, near the present site of Bella Coola. Captain George Vancouver completed his survey of the coast of what is now British Columbia in the same year.

[94] The judge acknowledged that there is no clear evidence that Mackenzie encountered any Tsilhqot'in people during his expedition, and that it is very improbable that Vancouver met any on his voyages. The first documented contact between a European and the Tsilhqot'in was Simon Fraser's 1808 expedition. Still, the judge found that the extensive European exploration of what they called "New Caledonia" in 1793 should be taken to be the date of European contact with all First Nations in mainland British Columbia. The judge acknowledged, in any event, that the precise date of first contact was of minimal importance, as the evidence did not suggest any substantial changes in the practices of the Tsilhqot'in people in the years following 1793.

[95] With respect to the plaintiff's claim of a right to capture wild horses, the judge noted that wild horses (perhaps numbering up to 100) live in Tachelach'ed. While the judge took judicial notice that horses are not native to North America, and that they had been introduced by Europeans, he also noted the evidence that the Tsilhqot'in encountered by Simon Fraser in 1808 were already using horses for transportation. He drew the inference that wild horses had migrated into the Claim Area prior to 1793, and that the Tsilhqot'in were capturing and using horses for transportation and work before contact. In any event, the judge found that even if horses arrived in the area after contact, their capture and use was simply an extension of the Tsilhqot'in tradition of using plants and hunting and trapping animals in the Claim Area for their subsistence and livelihood.

[96] The judge found that the use of horses for work and transportation was integral to the Tsilhqot'in culture, and that it constituted an Aboriginal right.

[97] With respect to the right to trade in pelts and skins, the judge considered that at the time of contact, the Tsilhqot'in traded skins and pelts with neighbouring indigenous groups. He found that trade to have been a "way of life" integral to the Tsilhqot'in culture, not simply opportunistic or incidental. At para. 1263, he commented that Tsilhqot'in trade in skins and pelts was for the purpose of securing the necessities of life rather than to accumulate wealth. He found that trade in pelts and skins taken from the Claim Area was established as an Aboriginal right. At para. 1265, he characterized the right as one of trade as a means of securing a "moderate livelihood".

[98] The judge further held that the *Forest Act* applied to Crown lands over which Aboriginal rights (other than title) exist, and found that the statute could constitutionally apply to such lands. The province was required, however, to justify any infringements of Aboriginal rights resulting from the administration of the *Act*.

[99] The judge found that the administration of the *Forest Act* infringed Tsilhqot'in Aboriginal rights because both harvesting activities and silviculture practices reduce the diversity and abundance of wildlife:

[1288] Forest harvesting activities would injuriously affect the Tsilhqot'in right to hunt and trap in the Claim Area. The repercussions with respect to wildlife diversity and destruction of habitat are an unreasonable limitation on that right. For these reasons, I conclude that forest harvesting activities are a *prima facie* infringement on Tsilhqot'in hunting and trapping rights and thus demand justification.

[100] With respect to justification, the judge characterized, at para. 1286, the Crown's objective in administering the *Forest Act* and related legislation as being to "maximize the economic return from provincial forests". He found that "the protection and preservation of wildlife for the continued well-being of Aboriginal people is very low on the scale of priorities". He concluded that the infringement of Aboriginal rights was not justified:

[1294] ... A management scheme that manages solely for maximizing timber values is no longer viable where it has the potential to severely and unnecessarily impact Tsilhqot'in Aboriginal rights. To justify harvesting activities in the Claim Area, including silviculture activities, British Columbia must have sufficient credible information to allow a proper assessment of the impact on the wildlife in the area. In the absence of such information, forestry activities are an unjustified infringement of Tsilhqot'in Aboriginal rights in the Claim Area. As I mentioned earlier, the Province did engage in consultation with the Tsilhqot'in people. However, this consultation did not acknowledge Tsilhqot'in Aboriginal rights. Therefore, it could not and did not justify the infringements of those rights.

[101] Towards the end of his judgment, the judge also dealt with certain issues that are not raised on these appeals – issues of limitation periods, *laches*, and Crown immunity.

[102] I will turn, now, to the issues on this appeal, which I will deal with in the same order as they were dealt with in the trial judgment.

VII. The "All or Nothing Claim"

[103] The first issue is the judge's determination that the claim for Aboriginal title was an "all or nothing claim".

A. Did the Amended Statement of Claim make an “All or Nothing Claim”?

[104] The issue arises from the amended statement of claim, a very concise document given the breadth of the claims advanced. The prayer for relief sought only the following declarations of Aboriginal title:

- a) A declaration that the Tsilhqot'in has existing aboriginal title to the Brittany;
[and]
- b) A declaration that the Tsilhqot'in has existing aboriginal title to the Trapline Territory.

[105] As the trial judge noted at para. 120, the amended statement of claim did not explicitly seek a declaration of Aboriginal title for portions of the Claim Area in the event that the court did not find the full claims to be made out. Interestingly, however, the statement of defence of British Columbia included the following pleading:

12. ... [T]he Provincial Defendants:

...

c.) say ... that if the Aboriginal activities that may have been practised by the Ancestral Tsilhqot'in Groups constituted occupation establishing Aboriginal title to any portions of the Brittany or the Trapline Territory, such occupation did not extend to the whole of the Brittany or the Trapline Territory, but only to limited portions thereof and put the Plaintiff to the strict proof of the location and extent of such limited portions

[106] The courts of this province have generally taken a functional approach to pleadings. Pleadings are designed to provide the parties and the court with an outline of the material allegations and the relief sought. Where they succeed in fulfilling that function, minor defects are generally overlooked, unless other parties are prejudiced by them.

[107] The trial judge did express the view, at para. 129, that “[t]o allow the plaintiff to now seek declarations over portions of the Claim Area would be prejudicial to the defendants”, but did not give any indication of why that would be so. Given that he felt the evidence was capable of fairly defining the Opinion Area, and that he used that area to find a violation of Aboriginal title, it is difficult to believe that the trial

judge had serious concerns with respect to trial fairness. He did not express specific concerns, nor, except as I will discuss below, have the defendants postulated any plausible ones on this appeal.

[108] In accepting that the amended statement of claim adopted an “all or nothing” approach, the trial judge placed a great deal of weight on the decision of the English Court of Appeal in *Biss v. Smallburgh Rural District Council*, [1965] Ch. 335 (C.A.). In that case, the plaintiffs sought a declaration that use of a 35-acre piece of land for caravan sites constituted a lawful non-conforming use under a regulatory statute. The trial judge found that only about nine acres of the parcel had been used as a caravan site before the enactment of the regulatory statute, and granted a declaration that the plaintiffs were entitled to a caravan licence in respect of that area only. On appeal, the Court found that the evidence did not support the granting of a declaration, either in respect of the 35-acre parcel or the 9-acre portion of it. The plaintiffs asked, however, that the Court make a declaration in respect of such smaller portion of the parcel as it was found to have been used as a caravan site at the relevant period.

[109] It is evident that Harman L.J. found the plaintiffs’ approach to the case to be a frustrating one. At 360-62, he said:

It seems to me perfectly hopeless on such evidence as there was to try to persuade the court that the whole 35 acres was a caravan site in March, 1960. Indeed, in this court that contention was after a time abandoned and it was no longer sought to obtain a declaration covering the whole 35 acres.

From then on the cross-appeal was conducted after the manner of a Dutch auction where the auctioneer starts at the top price and comes gradually down till he finds a bidder. So here various lines of demarcation were suggested, coming down at last to about three acres round the house, and we were treated to a minute review of the evidence in order to show that in particular there was considerable evidence of the stationing of caravans (a) on the area immediately to the south of the farmhouse, (b) between it and the sea, and (c) round about the first pylon carrying the electric power line to the house.

For myself I do not think that this is a legitimate way of conducting an action such as this. No suggestion was made of any amendment of the pleadings, which be it remembered dealt only with the 72 acres or the 35 acres as a whole, and I do not think that the remedy by declaration can properly be used

in this way. It is a useful method, but I think that he who seeks a declaration must make up his mind and set out in his pleading what that declaration is.

...

In my judgment a plaintiff ought not to be allowed to ask the court to make a declaration covering whatever area the court shall after the inquiry conclude ought to be counted as within the Act. This might be a legitimate method of conducting an inquiry before an inspector appointed by the Minister after service of an enforcement notice, but I think that it is not legitimate here.

Assuming, however, that I am wrong about that, have the plaintiffs proved to my satisfaction that any defined area ought to be treated as a caravan site?

...

A review of the evidence has satisfied me that the judge was right in his conclusion as to the whole 35 acres. He did not consider, because he was not asked to do so, the smaller areas to which our attention has been specially called. It seems to me, however, that he would have reached the like conclusions as to them and I think that he would have been right.

[110] The other two members of the Court agreed that the evidence did not establish any part of the land as a caravan site. Davies L.J., however, appears to have disagreed with Harman L.J. on the pleadings issue. At 369, he said:

Had the evidence proved that the plaintiffs were entitled to something less than their full claim, it would, I think, have been unfortunate if their failure to make, either originally or by amendment, the appropriate alternative claim should have deprived them of their right to a declaration; but this question does not in the event arise.

[111] The third member of the Court, Russell L.J., did not address the pleadings issue.

[112] The idea that a claim for a declaration must be pleaded with precision and that a court cannot grant a declaration that differs from the one sought is not supportable in law. As the plaintiff points out, in *Harrison-Broadley v. Smith*, [1964] 1 All E.R. 867 (C.A.), heard about two weeks before *Biss*, Harman L.J. himself agreed that a declaration could be granted notwithstanding that it had not been specifically sought in the statement of claim.

[113] The plaintiff also cites the discussion of *Biss* in *Lau Wing Hong & Others v. Wong Wor Hung & Another*, [2006] 4 HKLRD 671 (H.C.):

[144] It is apparent that the astringent comments of Harman LJ were *obiter* as the Court found no relief in terms of the proposed Declaration was available

[145] ... The fact that a Declaration is not specifically sought in the prayer for relief does not prevent one being granted [citations omitted]. It cannot be overlooked that, in an adverse possession case, the pleaded factual issues may permit of several possible variations and permutations as to the edges or boundaries of the disputed land at the material time. It would be unnecessarily demanding to require the party to plead in the prayer every precise possible variation of the underlying factual dispute that could be ultimately found to be proved. It would be like pleading all the results of the peeling of an onion – in which every single layer generates a slightly different and smaller variation of the one before it. The real test is whether there is genuine prejudice caused by this ambulatory approach. Here there was none. It will always be a matter of degree; but the Court should not indulge pedantry as being the same thing as prejudice.

...

[147] In *Zamir & Woolf: The Declaratory Judgment* (3rd ed., 2002), p. 284, the authors conclude that the *obiter* remarks of Harman LJ in *Biss* should not now be regarded as of general application. I agree as the emphasis in *Biss* was too austere. ... The authors also state:

In practice it frequently happens that it is only after the court has determined the facts that it will be possible to decide in what terms a declaration should be granted. As long as the parties are given an opportunity to address the court on any proposed declaration it is highly desirable that it should retain as wide a discretion as possible as to the precise terms in which a declaration is granted.

[148] These pragmatic considerations correctly represent the proper approach in Hong Kong. The position under Australian law, [PW] Young, *Declaratory Orders*, (2nd ed., 1984) pp. 54, 188; Canadian law, Lazar Sarna, *The Law of Declaratory Judgments* (2nd ed., 1988) p. 84 and New Zealand law, is to the same effect: *Manga v Attorney-General* [2000] 2 NZLR 65 at p. 84.

[114] As counsel for Canada points out, this case is not binding on this Court, but of course, the same can be said of *Biss* itself. In my view, the discussion in *Lau Wing Hong* is entirely persuasive. There is no general rule of pleading that either requires declarations to be pleaded precisely or that precludes a court from granting a declaration that is less sweeping than the one sought by the plaintiff. The issue in every case is whether the parties are prejudiced by the manner in which the case has proceeded.

[115] In *Native Women's Assn. of Canada v. Canada*, [1994] 3 S.C.R. 627, the Court granted a declaration, though none had been specifically sought in the pleadings. The Court accepted, at 647, that a “basket clause” in the prayer for relief was sufficient to permit a court to exercise its discretion to grant a declaration. The Court noted that the appellant had not been taken by surprise or prejudiced by the court’s decision to grant a declaration.

[116] The pleadings in the case before us also include a “basket clause” in the prayer for relief, which seeks “such further, other, equitable, and related relief, ... as to this Honourable Court may seem meet and just”. While I doubt that resort need be had to that clause in this case, *Native Women’s Assn.* clearly establishes that such a clause can be sufficient to cover a claim for a declaration.

[117] It follows that I do not agree with the trial judge’s ruling that the plaintiff’s claim was an “all or nothing claim”. The claim was sufficiently pleaded to allow the court to find that Aboriginal title had been proven in respect of only part of the Claim Area.

[118] As the plaintiff points out, flexibility in the granting of a declaration is particularly important in a case where Aboriginal title is claimed. The occupation of traditional territories by First Nations prior to the assertion of Crown sovereignty was not an occupation based on a Torrens system, or, indeed, on any precise boundaries. Except where impassable (or virtually impassable) natural boundaries existed, the limits of a traditional territory were typically ill-defined and fluid. This was particularly the case with groups such as the Tsilhqot’in, who were semi-nomadic. To require proof of Aboriginal title precisely mirroring the claim would be too exacting. Indeed, the trial judge recognized this, and discussed the difficulty of defining boundaries at paras. 641-649 of his judgment:

[641] On several occasions during the course of the trial I remarked that the boundaries of Tachelach’ed and the Trapline Territories were entirely artificial. Tachelach’ed is bounded east and west by two rivers, the Tsilhqox and the Dasiqox, and on the south by a boundary characterized by a difference of opinion even amongst the people who live there. No one would suggest that the resource harvesting activities of Tsilhqot’in people ever stopped at the rivers. ...

[645] As the evidence unfolded it became apparent that in order to assert his claim, the plaintiff had to conform to the Eurocentric need to define boundaries. Traditional boundaries, surveyed with proper metes and bounds were not a possibility; some boundaries simply had to be found. The Trapline Territories provided convenient boundaries, even if they had little historical or anthropological relevance. They are, at least, relevant to the survival of a twentieth century Tsilhqot'in person. Tachelach'ed, on the eastern and western edges, provides natural geographic boundaries, rooted in oral traditions.

...

[647] Tsilhqot'in society, as described to me by several elder witnesses, displayed a high degree of territorial mobility and, until the twentieth century, appeared to place little or no reliance on European style cultivation. The fixing of reserves and the pressure to raise cattle brought such a "cultivation" component to Tsilhqot'in nomadism. Tsilhqot'in nomadism, characterized by Dr. Brealey as "relatively nomadic" or "semi nomadic" was centralized within Tsilhqot'in traditional territory. Tsilhqot'in people tended to follow the same seasonal patterns in ways that accommodated their kinship based society. They were semi-nomadic in the sense that there was a collective regrouping in one location each year as a respite from the dark and cold of winter. Tsilhqot'in nomadism also allowed people to move at short notice in the case of a periodic failure of the salmon run. In these circumstances large numbers moved to the west to winter with their neighbours the Nuxalk people.

[648] In Tsilhqot'in semi-nomadic society there were no boundaries in the sense that a boundary is currently understood with reference to set metes and bounds.

...

[649] In hindsight, I fully understand the need to postulate artificial boundaries. There is a contemporary societal demand for limits, even if those limits, measured against the whole, are entirely arbitrary. Boundary construction in Tsilhqot'in society was a social exercise. Their boundaries were and continue to be "recognized, understood and validated not by maps and plans, but from 'inside the collective'".

[119] The Opinion Area defined by the trial judge contained artificial boundaries based on a process of approximation. Although he found, for example, that the southern part of Tachelach'ed was occupied more intensively in 1846 by the Tsilhqot'in than the northern part, the precise placement of the boundary between the Opinion Area and other parts of the Claim Area was, in the end, arbitrary. It would have been miraculous if the plaintiff, in pleading his case, had fixed upon precisely the same boundary as the trial judge ultimately selected.

[120] In its argument, however, British Columbia raises an issue that is, in my view, of considerable importance. Where a trial has proceeded on a certain theory of Aboriginal title, it would be prejudicial to the defendants if the plaintiff were given the right to assert a completely different theory in argument.

[121] The difficulty is well-illustrated by *Delgamuukw*. In that case, the plaintiffs asserted that 51 Gitksan and Wet'suwet'en houses each had individual claims to particular territories. Among the difficulties with the assertion was that claims of individual houses conflicted with one another, making it impossible for the court to conclude that a particular house had exclusive possession of its claimed territory. On appeal, the plaintiffs attempted to eliminate the problem by amalgamating the claims of the Gitksan houses and amalgamating the claims of the Wet'suwet'en houses. The Supreme Court of Canada held that to allow such a change in the theory of the case at the appeal stage would be unfair:

[76] ... The appellants argue that the respondents did not experience prejudice since the collective and individual claims are related to the extent that the territory claimed by each nation is merely the sum of the individual claims of each House; the external boundaries of the collective claims therefore represent the outer boundaries of the outer territories. Although that argument carries considerable weight, it does not address the basic point that the collective claims were simply not in issue at trial. To frame the case in a different manner on appeal would retroactively deny the respondents the opportunity to know the appellants' case.

[122] In the case before us, the plaintiff's case was based on a territorial theory of Aboriginal title. He postulated that "occupation", for the purpose of an Aboriginal title claim, could be established by showing that the Tsilhqot'in moved through the territory in various patterns at and around the date of the assertion of sovereignty. He further asserted that the anecdotal evidence of attempts by the Tsilhqot'in to repel others who sought to use the land was sufficient evidence of "exclusivity" to found title.

[123] British Columbia and Canada rejected the territorial theory of Aboriginal title, instead taking the view that Aboriginal title could only be demonstrated over smaller tracts of land (like village sites, cultivated fields, and specific trapping or fishing sites)

that were occupied by a First Nation intensively and, if not continuously, at least regularly. This theory of Aboriginal title was not the theory upon which the plaintiff presented his case, and it would not have been fair to any of the parties for the trial judge to attempt to identify particular areas of land within the Claim Area that qualified as candidates for Aboriginal title on the theory espoused by the defendants. Indeed, on this appeal, the plaintiff agrees that if Aboriginal title cannot be proven through a broad territorial claim, then the judge was right to dismiss the claim.

[124] The Supreme Court of Canada's decision in *Lax Kw'alaams Indian Band v. Canada (Attorney General)*, 2011 SCC 56, [2011] 3 S.C.R. 535, was released after the oral hearing of the appeal in this case, and, accordingly, we have not had the benefit of submissions with respect to it. It seems to me, however, that it supports the idea that a court should address the question of whether lesser rights than were claimed have been proven when the lesser rights are of the same nature as those claimed, are capable of clear definition, and can be considered without prejudicing the defendants. In accordance with those principles, the trial judge was entitled to consider whether a lesser territorial entitlement than was claimed had been proven. On the other hand, if he had considered site-specific title claims on a theory different than the one advanced at trial, he would have been in contravention of those principles.

[125] In my view, the trial judge, in discussing the Opinion Area, was not adopting the theory of Aboriginal title advanced by the defendants. Rather, he appears to have accepted that Aboriginal title could be claimed on a territorial basis, and did not demand proof of intensive occupation of particular sites. While he found that the degree of occupation proven by the plaintiff sufficed to found a claim of title in only part of the Claim Area, he did so on the basis of the territorial theory on which the case was presented.

[126] It follows that if the territorial theory is the correct basis on which to assess Aboriginal title, the judge could properly have granted a declaration covering a more limited territory than the one claimed by the plaintiff, and should have done so. On

the other hand, if Aboriginal title must be established on the basis of more intensive physical occupation of specific sites, the current litigation did not provide a proper basis for such a finding. I will address this issue further in my discussion of the nature of proof of Aboriginal title.

B. Does dismissal of the title claim found a cause of action estoppel?

[127] Canada argues that the judge was wrong to dismiss the Aboriginal title claim on a “without prejudice” basis. It contends that any claim to title within the Claim Area must be *res judicata* based on the doctrine of cause of action estoppel deriving from *Henderson v. Henderson* (1843), 3 Hare 100. In that case, at 115, the Vice-Chancellor described the rule as follows:

[W]here a given matter becomes the subject of litigation in, and of adjudication by, a Court of competent jurisdiction, the Court requires the parties to that litigation to bring forward their whole case, and will not (except under special circumstances) permit the same parties to open the same subject of litigation in respect of matter which might have been brought forward as part of the subject in contest, but which was not brought forward, only because they have, from negligence, inadvertence, or even accident, omitted part of their case. The plea of *res judicata* applies, except in special cases, not only to points upon which the Court was actually required by the parties to form an opinion and pronounce a judgment, but to every point which properly belonged to the subject of litigation, and which the parties, exercising reasonable diligence, might have brought forward at the time.

[128] I would reject Canada’s contention. The claim before the court was a claim for Aboriginal title based on a territorial theory. The case was one of the most complex ever adjudicated in this country. To suggest that the plaintiff ought to have been compelled to bring other, site-specific claims within the same litigation lacks reality. Such claims did not “belong to the subject of litigation” in this case. They would have raised much different factual issues, and would have required a much longer and more unwieldy trial. It would not have been in the interests of justice to have such claims adjudicated in this proceeding.

[129] The doctrine of *res judicata*, including cause of action estoppel, is concerned with abuse of process (see the comment of Lord Keith of Kinkel in *Arnold v. National Westminster Bank Plc.*, [1991] 2 A.C. 93 at 110 (H.L.)). I do not think that it can

possibly be argued, in the context of the present case, that the plaintiff's decision to proceed with a territorial claim rather than a narrower site-specific claim was an abuse of process. As I will discuss, Aboriginal title has been a bit of a moving target in Canadian law, and it would be unfair to fault a person in the position of the plaintiff for choosing to pursue one theory of title rather than another.

[130] I recognize that the doctrine of cause of action estoppel normally requires a plaintiff to bring all related claims together in a single action, and I do not wish to cast any doubt on that proposition. In the unique circumstances of this case, however, it would have been completely impractical for site-specific title claims to be joined with the territorial claim that was advanced. For that reason, further site-specific claims to Aboriginal title in the territory would not constitute abuses of process, and are not barred by the doctrine of *res judicata*.

[131] There are, in the result, only two possible conclusions with respect to the judge's dismissal of the title claim. If the plaintiff was correct in asserting a territorial claim, the judge ought to have granted a declaration with respect to a more limited territory than the entire Claim Area. On the other hand, if a territorial claim is not a tenable basis for asserting Aboriginal title, the dismissal of the territorial claim cannot form the basis of cause of action estoppel so as to bar any future site-specific claim based on a different theory of title.

VIII. The Proper Rights Holder

[132] The second issue that arises on this appeal is whether the trial judge erred in finding that the proper rights holder was the Tsilhqot'in Nation. The plaintiff's claim was brought on behalf of both the Xeni Gwet'in and the Tsilhqot'in, but the relief sought in respect of the two entities was different: the plaintiff sought a declaration of Aboriginal title on behalf of the Tsilhqot'in, and a declaration of other Aboriginal rights on behalf of the Xeni Gwet'in. In closing argument, he sought to advance claims for declarations of Aboriginal rights on behalf of the Tsilhqot'in as well as the Xeni Gwet'in. The trial judge allowed the plaintiff to proceed in that manner and ultimately found that the Tsilhqot'in Nation was the proper rights holder.

[133] British Columbia contended that it was prejudiced in its defence by the plaintiff's decision to modify his claim in the course of final argument. It said that if it had known that claims for Aboriginal rights were being advanced on behalf of the Tsilhqot'in Nation, it could have concentrated effort on exposing conflicting interests of different subgroups within the Tsilhqot'in Nation, with a view to demonstrating that particular Aboriginal rights are not held collectively by all Tsilhqot'in people.

[134] The trial judge rejected the assertion that British Columbia had suffered procedural or evidentiary prejudice:

[1220] ... The evidence in this case leads to one conclusion: all Tsilhqot'in people were entitled to utilize the entire Tsilhqot'in territory in the course of their seasonal rounds. The Xení Gwet'in people are Tsilhqot'in people, distinguished only by their nascent group and the fact of their location at the time reserves were set aside.

[1221] This fact comes as no surprise and it cannot be prejudicial to British Columbia to acknowledge that it was Tsilhqot'in people who hunted, trapped and traded throughout the Claim Area and beyond before the arrival of European people.

[135] On appeal, British Columbia renews the argument that the plaintiff's late change of position caused it prejudice. I am not persuaded that this argument can succeed. The question of how members of the Tsilhqot'in Nation shared land-based rights was fully canvassed at trial, albeit with an emphasis on Aboriginal title rather than other Aboriginal rights. In the circumstances, it is difficult to accept that British Columbia was prejudiced by the late change in the plaintiff's position. In any event, it seems to me that the judge was in an ideal position to assess British Columbia's contention that it might have approached the case differently had the Aboriginal rights claims been advanced, from the outset, on behalf of the Tsilhqot'in.

[136] While the plaintiff did not formally apply to amend the statement of claim to assert his claim to Aboriginal rights on behalf of the Tsilhqot'in Nation, that was, effectively, what he was seeking and what the judge tacitly allowed. It was within the judge's discretion to allow such an amendment. Absent a demonstrated error in the manner in which the judge exercised his discretion, this Court should not interfere with his decision. In my view, no error has been demonstrated. In particular, British

Columbia has not shown that the judge was wrong in finding that it suffered no prejudice as a result of the late change in the relief sought.

[137] While I would uphold the judge's determination that British Columbia suffered no evidentiary or procedural prejudice as a result of the plaintiff being allowed to argue that Aboriginal rights are held by the Tsilhqot'in Nation rather than by the Xeni Gwet'in, that is not the end of the matter. British Columbia argues that, as a matter of law, the Tsilhqot'in Nation cannot properly be described as the rights holder.

[138] British Columbia points to serious practical problems that it will face as a result of a finding that rights are held at the level of the Tsilhqot'in Nation rather than at the level of the Xeni Gwet'in. It notes, for example, that it has granted exclusive commercial trapping rights to the Xeni Gwet'in in the Trapline Territory. It says that it has done so on the understanding that the Xeni Gwet'in are the holders of Aboriginal rights to trap in that area.

[139] More importantly, British Columbia says that a finding that Aboriginal rights are held on behalf of the Tsilhqot'in Nation will wrongly assign rights to an entity that has no governing or decision-making body, and which has no established power structure by which it can designate people who are authorized to speak on behalf of the collective. Indeed, it contends that the judge's conclusions on the evidence "would not support a finding that there existed one Tsilhqot'in Nation".

[140] British Columbia's position that the Tsilhqot'in Nation lacks political structure is supported by the findings of the trial judge. He found that there was, traditionally, no pan-Tsilhqot'in governing body. While five Tsilhqot'in bands have, in recent years, incorporated an organization known as the Tsilhqot'in National Government under the *Canada Corporations Act*, R.S.C. 1970, c. C-32, it does not represent all Tsilhqot'in people. The Tl'esqox (or Toosey Indian Band) is not a member, nor is the Ulkatcho First Nation which, though predominately Carrier, also includes many Tsilhqot'in people. Further, it would appear that there are Tsilhqot'in people who are not members of any of those bands (see *Nemaiah Valley Indian Band v. Riverside Forest Products Ltd.* (1999), 37 C.P.C. (4th) 101 at para. 3 (B.C.S.C.)).

[141] On the other hand, the Xeni Gwet'in, as a band under the *Indian Act*, has well-defined membership and a clear political structure. That makes it possible to definitively identify individuals entitled to exercise Aboriginal rights, and allows governments to engage in proper consultation when rights are threatened.

[142] I have considerable sympathy for the position of British Columbia. The courts have established that governments must respect Aboriginal rights. Where governments infringe such rights, they must justify the infringement; one component of the justification analysis is the question of whether or not there has been consultation with the group that holds the Aboriginal right (*R. v. Sparrow*, [1990] 1 S.C.R. 1075 at 1119). Even where Aboriginal rights are unproven, governments must engage in consultations with groups asserting rights at a level commensurate with the strength of the claim (*Haida Nation v. British Columbia (Minister of Forests)*, 2004 SCC 73, [2004] 3 S.C.R. 511). Where there is no body with authority to speak for the collective (or worse, where there are competing bodies contending that they have such authority), consultation may be stymied.

[143] Consultation and negotiation are, without doubt, the preferred routes to reconciliation of Aboriginal rights with the needs of British Columbians as a whole. Practical barriers to consultation and negotiation are, therefore, more than mere inconveniences.

[144] British Columbia asserts that these practical considerations demonstrate the necessity for any rights-holding group to have a political structure capable of decision-making. It goes further, however, and says that the requirement is supportable not merely on practical grounds, but also on jurisprudential ones.

[145] Aboriginal rights are communal rights. British Columbia suggests that in order for a collective to be considered a proper rights holder, it must have traditionally exercised decision-making authority with respect to the exploitation and allocation of such rights within the collective. British Columbia contends that the absence of any traditional pan-Tsilhqot'in governance structure is fatal to any claim on behalf of the Tsilhqot'in Nation.

[146] If the law adopted such a position, it might well be devastating to claims by groups such as the Tsilhqot'in. The judge found that Tsilhqot'in decision-making and governance traditionally took place on a localized level, typically within family or encampment groupings, depending on the season. Because of the fluidity of the group structure and the limits of available evidence, however, it would be impossible to trace those localized collectives into modern counterparts. If Aboriginal rights devolve only upon collectives that can show that they are the modern successors of groups that had a clear decision-making structure, no one would be able to claim Aboriginal rights on behalf of the Tsilhqot'in.

[147] Even if it were possible to trace modern counterparts to the traditional family, encampment, and sub-band groupings of the Tsilhqot'in, recognizing those collectives as the holders of Aboriginal rights would not reflect the judge's findings with respect to the traditional allocation of rights. He found that the Tsilhqot'in people recognized that they collectively had rights throughout their traditional territories, regardless of which sub-groups they belonged to.

[148] British Columbia argues that bands under the *Indian Act* will typically be the proper claimants in Aboriginal rights cases. It points to a number of cases in which claims have been brought by or on behalf of such entities. Rights will not, however, always be allocated along band lines. This fact was recently recognized by this Court in *Kwicksutaineuk/Ah-Kwa-Mish First Nation v. Canada (Attorney General)*, 2012 BCCA 193. While the Court found that the "Aboriginal collectives" identified by the chambers judge were not juridical persons entitled to make a claim in a class proceeding, the majority did not doubt that rights could be held on a collective basis that was not based on band membership:

[77] ... [T]he chambers judge designated the class members as "Aboriginal collectives" because of his recognition of the fact that Band membership does not necessarily establish the requisite ancestral connection to assert an Aboriginal right. I agree with the chambers judge in this regard. This is so because in some cases, an Aboriginal collective may self-identify along traditional lines independent of *Indian Act* designation as a Band. A Band is not necessarily the proper entity to assert an Aboriginal right.

[149] In my view, the position taken by British Columbia does not take adequate account of the Aboriginal perspective with respect to this matter. I agree with the trial judge's conclusion that the definition of the proper rights holder is a matter to be determined primarily from the viewpoint of the Aboriginal collective itself. In that regard, at para. 471, the judge cited with approval a passage from Professor Brian Slattery, "Understanding Aboriginal Rights" (1987) 66 Can. Bar Rev. 727 at 745:

What role, then, does native custom play in this scheme? The answer lies in the fact that, while the doctrine of aboriginal land rights governs the title of a native group considered as a collective unit, it does not regulate the rights of group members among themselves. Subject, always, to valid legislation, the latter are governed by rules peculiar to the group, as laid down by custom or internal governmental organs.

Thus, the doctrine of aboriginal land rights attributes to native groups a collective title with certain general features. The character of this collective title is not governed by traditional notions or practices, and so does not vary from group to group. However, the rights of individuals and other entities within the group are determined *inter se*, not by the doctrine of aboriginal title, but by internal rules founded on custom. These rules dictate the extent to which any individual, family, lineage, or other sub-group has rights to possess and use lands and resources vested in the entire group. The rules have a customary base, but they are not for that reason necessarily static. Except to the extent they may be otherwise regulated by statute, they are open to both formal and informal change, in accordance with shifting group attitudes, needs, and practices.

[Footnotes omitted; see also Slattery, "The Metamorphosis of Aboriginal Title" (2006) 85 Can. Bar Rev. 255.]

[150] In the case before us, the evidence clearly established that the holders of Aboriginal rights within the Claim Area have traditionally defined themselves as being the collective of all Tsilhqot'in people. The Tsilhqot'in Nation, therefore, is the proper rights holder.

[151] It will, undoubtedly, be necessary for First Nations, governments, and the courts to wrestle with the problem of who properly represents rights holders in particular cases, and how those representatives will engage with governments. I do not underestimate the challenges in resolving those issues, and recognize that the law in the area is in its infancy. I do not, however, see that these practical difficulties can be allowed to preclude recognition of Aboriginal rights that are otherwise proven.

[152] Fortunately, the record in this case resolves the question of who speaks for the Tsilhqot'in Nation. Once again, I refer to what the trial judge described as the "modern political structure" of the Tsilhqot'in Nation:

[468] In the modern Tsilhqot'in political structure, Xení Gwet'in people are viewed amongst Tsilhqot'in people as the caretakers of the lands in and about Xení, including Tachelach'ed. Other bands are considered to be the caretakers of the lands that surround their reserves. Still, the caretakers have no more rights to the land or the resources than any other Tsilhqot'in person.

[153] While the judge did not specifically refer to the Trapline Territory in this paragraph, it was clearly his intention to include it. There was a great deal of evidence establishing that the lands over which the Xení Gwet'in was the "caretaker" included all of the Claim Area.

[154] I read this paragraph as a recognition that the Xení Gwet'in is the custodian of land-based Aboriginal rights within the Claim Area – indeed, several witnesses used the word "custodian" to describe the relationship between the Xení Gwet'in and the Claim Area. Thus, though the rights are held on behalf of the entire Tsilhqot'in Nation, it is the Xení Gwet'in that administers and protects those rights.

[155] In saying this, I do not ignore the fact that the judge also said, in the paragraph immediately following the one I have quoted, that "band level organization ... is without any meaning in the resolution of Aboriginal title and rights for Tsilhqot'in people". As I read the context of that statement, the judge's point was only that the organization of the Tsilhqot'in into bands as a result of the reserve allocation process and the *Indian Act* does not affect the identity of the Nation as the holder of rights. To the extent that the statement goes further than that, and suggests that band councils have no role to play in the administration of rights or in discussions with government, it is, in my view, not a correct assessment of the situation.

[156] In the result, I am not persuaded that the judge made any error in finding that the Tsilhqot'in Nation is the proper rights holder. The Xení Gwet'in, as modern "caretaker" or custodian of the Tsilhqot'in rights in the Claim Area, has a special role

to play in asserting those rights and in engaging with governments in attempts to reconcile them with broader public interests.

[157] Before leaving the issue of the proper rights holder, I think it appropriate to refer to the judge's view that the tests in *R. v. Powley*, 2003 SCC 43, [2003] 2 S.C.R. 207, can be used to determine membership in the Tsilhqot'in Nation. I note that *Powley* dealt with the difficult issue of who qualifies as Métis for the purposes of s. 35 of the *Constitution Act, 1982*. The Métis have a unique history and mix of traditions, and have not, historically, been given the same recognition as a distinct group as have those who are described in s. 35(2) as "the Indian ... peoples of Canada". While it may well be that the *Powley* tests, or some variation of them, serve to identify those individuals who are entitled to the benefit of Aboriginal rights in the cases of all First Nations, I prefer not to express any opinion on that matter in this case.

IX. Aboriginal Title

A. Introduction

[158] Before addressing the substance of the Aboriginal title claim, I wish to comment on the difficulties that First Nations and governments face in attempting to settle cases such as the present one.

[159] In accordance with the common law tradition, the courts have proceeded to develop the law relating to Aboriginal title incrementally on a case-by-case basis. It is a particularly daunting task because the issues involved are unique. In developing rules for the proof of rights and title, the courts have had to develop, as well, an entire philosophical and jurisprudential framework for the recognition of traditional rights that came into being before the reception of the common law.

[160] Even, however, taking into account the difficulties inherent in this area of the law, jurisprudential development has been slow. While several full-scale claims for title to large areas of land have been advanced to the level of the Supreme Court of Canada, none has succeeded, and considerable areas of uncertainty subsist.

[161] To some degree, the apparent reluctance of the courts to go beyond what is needed to resolve the specific cases is understandable. I have already noted that that is the traditional manner in which the common law has developed. Further, the stakes in Aboriginal title claims have been high – cases such as *Calder*, *Delgamuukw*, and *Marshall; Bernard* involved vast areas of land. The resolution of such claims can be critical to the future of both the First Nation involved and the broader Canadian population.

[162] The technical difficulty of this area of law has exacerbated the problem, and has led to considerable frustration. The efforts of the Nisga'a in *Calder*, the Gitksan and Wet'suwet'en in *Delgamuukw*, and the Tsilhqot'in in this case (to this point) all consumed enormous amounts of resources, only to have the cases end inconclusively due to problems with the way they were commenced or pleaded.

[163] The courts have frequently emphasized the need for resolution of Aboriginal rights and title issues through negotiated agreements where possible. The trial judge in this case went beyond the ordinary role of the court in attempting to set the stage for a negotiated resolution. Negotiated resolution of issues, however, is not facilitated by uncertainty in the law.

[164] It is apparent that all sides have attempted to resolve the issues in this case, but without success. That is not surprising, given that the theories of Aboriginal title espoused by the plaintiff, on the one hand, and the defendants, on the other, are as far apart as they are. The trial judge's decision to provide a non-binding opinion as to the title area did not, in the end, assist the parties in finding common ground.

[165] The present case has been an extraordinary one, both in terms of the resources mustered by the parties to present their cases and in terms of the court resources that have been devoted to it. It is in many respects a test case on the issue of Aboriginal title. It presents a suitable vehicle for development of the law.

B. The Basis for Aboriginal Title and Rights

[166] The basic concepts underlying claims of Aboriginal title and Aboriginal rights are straightforward. First Nations occupied the land that became Canada long before the arrival of Europeans. As the trial judge noted at para. 592, “Aboriginal nations were not recognized as nation states by the European nations colonizing North America”. European explorers considered that by virtue of the “principle of discovery” they were at liberty to claim territory in North America on behalf of their sovereigns (see *Guerin v. The Queen*, [1984] 2 S.C.R. 335 at 378). While it is difficult to rationalize that view from a modern perspective, the history is clear. As was said in *Sparrow* at 1103:

[W]hile British policy towards the native population was based on respect for their right to occupy their traditional lands, ... there was from the outset never any doubt that sovereignty and legislative power, and indeed the underlying title, to such lands vested in the Crown. [Citations omitted.]

[167] The assertion of Crown sovereignty did not, as a matter of common law, serve to extinguish the pre-existing traditional rights of First Nations, and those rights survived. Aboriginal rights, then, are recognized rather than created by the common law.

[168] The general notion that Aboriginal rights survived the assertion of Crown sovereignty in common law jurisdictions is beyond doubt. The manner in which different common law jurisdictions deal with Aboriginal rights, however, varies. (See the discussion in *R. v. Van der Peet*, [1996] 2 S.C.R. 507 at paras. 36-42).

[169] This variation is not surprising. While the basic concept of Aboriginal rights is easily understood, the recognition of such rights in a common law system is a complex matter. Three major questions must be answered in order to elaborate a workable framework of Aboriginal rights: What types of rights are recognized? How is their existence to be determined? What protection is to be afforded those rights? Compendiously, the answers to those questions have been described as representing a reconciliation of Aboriginal rights with Crown (or national) sovereignty.

[170] There are extreme positions which attempt to “reconcile” Aboriginal rights with Crown sovereignty by giving one or the other absolute primacy, and these extreme positions have, from time to time, been advanced in the courts. For example, in *Calder*, the Attorney General of British Columbia argued that Aboriginal title (and, by extension, other Aboriginal rights) had been completely extinguished in British Columbia. At the other extreme, the plaintiffs in *Delgamuukw* originally claimed absolute ownership of their traditional territory, as well as a paramount right to govern it (see *Delgamuukw v. British Columbia* (1991), 79 D.L.R. (4th) 185 at 193-4 (B.C.S.C.)). While these positions were not, *per se*, inconsistent with a basic theory of Aboriginal rights, they failed to provide a basis for genuine reconciliation of Aboriginal rights with Crown sovereignty. Such reconciliation demands not only a framework that is jurisprudentially defensible, but also one that presents a practical compromise and encourages consensual settlement of differences. As Lamer C.J.C. put it at the end of his judgment in *Delgamuukw*:

[186] ... Ultimately, it is through negotiated settlements, with good faith and give and take on all sides, reinforced by the judgments of this Court, that we will achieve what I stated in *Van der Peet*, *supra*, at para. 31, to be a basic purpose of s. 35(1) – “the reconciliation of the pre-existence of aboriginal societies with the sovereignty of the Crown”. Let us face it, we are all here to stay.

[171] One fundamental aspect of Aboriginal rights that must be kept in mind is that they are intimately connected with traditional Aboriginal culture and practices, adapted, as they may be, to modern conditions. Respect for Aboriginal rights safeguards the unique cultures of Aboriginal groups, and preserves their abilities to continue to live according to their traditions: see *R. v. Sappier*; *R. v. Gray*, 2006 SCC 54, [2006] 2 S.C.R. 686 at paras. 26 and 33. Such respect is the proper focus of an Aboriginal rights analysis.

[172] As I will indicate, this fundamental aspect of Aboriginal rights must be kept in mind in defining the extent of Aboriginal title. The law must recognize and protect Aboriginal title where exclusive occupation of the land is critical to the traditional culture and identity of an Aboriginal group. This will usually be the case where the traditional use of a tract of land was intensive and regular.

[173] Where traditional use and occupation of a tract of land was less intensive or regular, however, recognition of Aboriginal rights other than title may be sufficient to fully preserve the ability of members of a First Nation to continue their traditional activities and lifestyles and may fully preserve Aboriginal culture. In such cases, the recognition of those other rights may be more commensurate with the reconciliation of Aboriginal rights with Crown sovereignty than would a broader recognition of Aboriginal title.

C. Canadian Law of Aboriginal Title

[174] The rights of First Nations to lands that they traditionally occupied has been a concern of colonial and Canadian law from the earliest times. The history of protection of those rights, has, however, been embarrassingly weak. As the Supreme Court of Canada remarked in *Sparrow* at 1103:

[T]here can be no doubt that over the years the rights of the Indians were often honoured in the breach.... As MacDonald J. stated in *Pasco v. Canadian National Railway Co.*, [1986] 1 C.N.L.R. 35 (B.C.S.C.), at p. 37: "We cannot recount with much pride the treatment accorded to the native people of this country."

[175] In most of Canada, the Crown entered into treaties with First Nations in an attempt to resolve many of the concerns. Even where such treaties exist, however, there continue to be many issues that arise. The Crown did not enter into treaties in respect of most of the territory in what is now British Columbia, and, accordingly, Aboriginal title issues arise in this province in a very stark way.

[176] Despite the lengthy period in which reconciliation of Aboriginal interests with those of the broader population has been required, it is only comparatively recently that the law has begun to develop a robust theory of Aboriginal rights, including Aboriginal title.

[177] While early Canadian law recognized "Indian tenure" in land, the scope and nature of that tenure was uncertain. In *St. Catherine's Milling and Lumber Co. v. The Queen* (1888), 14 App. Cas. 46 at 56 (J.C.P.C.), the tenure was described as being "a personal and usufructuary right, dependent on the goodwill of the Sovereign".

[178] The description of Aboriginal title as being “personal and usufructuary” was subject to criticism in later cases. In *Calder* at 328, Judson J. said that he found the description unhelpful, a sentiment that would later be echoed in *Delgamuukw* at para. 112. A discussion of various criticisms of the use of the phrase “personal and usufructuary” can be found in *Guerin* at 380-382. In *Guerin*, Aboriginal title was described, at 382, as being a *sui generis* interest. The majority said:

The nature of the Indians' interest is ... best characterized by its general inalienability, coupled with the fact that the Crown is under an obligation to deal with the land on the Indians' behalf when the interest is surrendered. Any description of Indian title which goes beyond these two features is both unnecessary and potentially misleading.

[179] Most of the criticisms of the phrase used in *St. Catherine's Milling* were focused on the question of whether Aboriginal title should be considered to be more akin to a real or a personal interest in land. They were not directed, so much, at the idea that the interest was of a usufructuary character.

[180] Until relatively recently, Aboriginal rights were often considered to be incidents of Aboriginal title. This was in keeping with the idea that Aboriginal title itself was a sort of usufructuary right. Thus, in *Baker Lake (Hamlet) v. Canada (Minister of Indian Affairs and Northern Development)*, [1980] 1 F.C. 518, an important case in the development of Canadian Aboriginal law, the judge granted a declaration at 579 that “the lands [in issue] are subject to the aboriginal right and title of the Inuit to hunt and fish thereon”.

[181] Even as Aboriginal rights were recognized to exist separately from Aboriginal title, the relationship between title and rights remained in a state of flux. In her dissenting judgment in *Van der Peet*, for instance, L'Heureux-Dubé J. expressed the view that common law recognition of Aboriginal title depended on proof of a large “bundle” of Aboriginal rights in a particular area:

[119] ... Aboriginal title ... is founded on the common law and strict conditions must be fulfilled for such title to be recognized. In fact, aboriginal title exists when the bundle of aboriginal rights is large enough to command the recognition of a *sui generis* proprietary interest to occupy and use the land. [Citations omitted.]

[182] The decision of the majority in *Van der Peet* marks the beginning of the Supreme Court of Canada's construction of a modern comprehensive framework dealing with Aboriginal rights and Aboriginal title. It defined the basic requirements for recognition of an Aboriginal right. The construction of the framework was further advanced in *R. v. Adams*, [1996] 3 S.C.R. 101, and *R. v. Côté*, [1996] 3 S.C.R. 139, which considered whether land-based Aboriginal rights could exist in places where claims to Aboriginal title could not be made out. The Court affirmed that they could. In *Adams*, Lamer C.J.C., speaking for the majority, said:

[26] What [the test for identification of Aboriginal rights set out in *Van der Peet*], along with the conceptual basis which underlies it, indicates, is that while claims to aboriginal title fall within the conceptual framework of aboriginal rights, aboriginal rights do not exist solely where a claim to aboriginal title has been made out. Where an aboriginal group has shown that a particular practice, custom or tradition taking place on the land was integral to the distinctive culture of that group then, even if they have not shown that their occupation and use of the land was sufficient to support a claim of title to the land, they will have demonstrated that they have an aboriginal right to engage in that practice, custom or tradition. The *Van der Peet* test protects activities which were integral to the distinctive culture of the aboriginal group claiming the right; it does not require that that group satisfy the further hurdle of demonstrating that their connection with the piece of land on which the activity was taking place was of a central significance to their distinctive culture sufficient to make out a claim to aboriginal title to the land. *Van der Peet* establishes that s. 35 recognizes and affirms the rights of those peoples who occupied North America prior to the arrival of the Europeans; that recognition and affirmation is not limited to those circumstances where an aboriginal group's relationship with the land is of a kind sufficient to establish title to the land.

[Emphasis in original.]

[183] The majority of the Court, then, seems to have considered that Aboriginal title could only be established by a particular (unstated) level of occupation or use. Further, in order to found a claim to Aboriginal title, it would have to be shown that the land on which the activity took place was of "central significance" to the distinctive culture.

[184] Lamer C.J.C. continued by referring specifically to the situation of nomadic groups:

[27] To understand why aboriginal rights cannot be inexorably linked to aboriginal title it is only necessary to recall that some aboriginal peoples were nomadic, varying the location of their settlements with the season and changing circumstances. That this was the case does not alter the fact that nomadic peoples survived through reliance on the land prior to contact with Europeans and, further, that many of the practices, customs and traditions of nomadic peoples that took place on the land were integral to their distinctive cultures. The aboriginal rights recognized and affirmed by s. 35(1) should not be understood or defined in a manner which excludes some of those the provision was intended to protect.

[185] He noted that levels of occupation and use of land that were insufficient to found a claim to Aboriginal title might, nonetheless, found a claim to specific Aboriginal rights:

[30] The recognition that aboriginal title is simply one manifestation of the doctrine of aboriginal rights should not, however, create the impression that the fact that some aboriginal rights are linked to land use or occupation is unimportant. Even where an aboriginal right exists on a tract of land to which the aboriginal people in question do not have title, that right may well be site specific, with the result that it can be exercised only upon that specific tract of land. For example, if an aboriginal people demonstrates that hunting on a specific tract of land was an integral part of their distinctive culture then, even if the right exists apart from title to that tract of land, the aboriginal right to hunt is nonetheless defined as, and limited to, the right to hunt on the specific tract of land. A site-specific hunting or fishing right does not, simply because it is independent of aboriginal title to the land on which it took place, become an abstract fishing or hunting right exercisable anywhere; it continues to be a right to hunt or fish on the tract of land in question.

[Emphasis in original.]

[186] *Adams* stands for the proposition that traditional use of land will not necessarily found a claim to Aboriginal title – it may, instead, found an Aboriginal right to continue to use the land for specific activities or purposes. As the law recognized that usufructuary rights could be divorced from title, the rationale for describing Aboriginal title as being “usufructuary” in nature ceased to exist. I agree with the trial judge’s conclusion, at para. 478, that it is no longer correct to describe Aboriginal title in this way.

[187] The Supreme Court of Canada first attempted a comprehensive discussion of Aboriginal title in *Delgamuukw*. Lamer C.J.C., speaking for the majority, described Aboriginal title as follows:

[111] ... Aboriginal title is a right in land and, as such, is more than the right to engage in specific activities which may be themselves aboriginal rights. Rather, it confers the right to use land for a variety of activities, not all of which need be aspects of practices, customs and traditions which are integral to the distinctive cultures of aboriginal societies. Those activities do not constitute the right *per se*; rather, they are parasitic on the underlying title. However, that range of uses is subject to the limitation that they must not be irreconcilable with the nature of the attachment to the land which forms the basis of the particular group's aboriginal title. This inherent limit ... flows from the definition of aboriginal title as a *sui generis* interest in land, and is one way in which aboriginal title is distinct from a fee simple.

[188] Referring back to *Adams*, he considered the relationship between Aboriginal rights and Aboriginal title:

[137] ... [A]lthough aboriginal title is a species of aboriginal right recognized and affirmed by s. 35(1), it is distinct from other aboriginal rights because it arises where the connection of a group with a piece of land "was of a central significance to their distinctive culture" [citing para. 26 of *Adams*].

[138] The picture which emerges from *Adams* is that the aboriginal rights which are recognized and affirmed by s. 35(1) fall along a spectrum with respect to their degree of connection with the land. At the one end, there are those aboriginal rights which are practices, customs and traditions that are integral to the distinctive aboriginal culture of the group claiming the right. However, the "occupation and use of the land" where the activity is taking place is not "sufficient to support a claim of title to the land" [citing para. 26 of *Adams*; emphasis is from *Adams*]. Nevertheless, those activities receive constitutional protection. In the middle, there are activities which, out of necessity, take place on land and indeed, might be intimately related to a particular piece of land. Although an aboriginal group may not be able to demonstrate title to the land, it may nevertheless have a site-specific right to engage in a particular activity....

[Emphasis in original.]

[189] He emphasized that traditional use of land will not necessarily found claims to Aboriginal title, even when it establishes an Aboriginal right:

[139] Because aboriginal rights can vary with respect to their degree of connection with the land, some aboriginal groups may be unable to make out a claim to title, but will nevertheless possess aboriginal rights that are recognized and affirmed by s. 35(1), including site-specific rights to engage in particular activities. As I explained in *Adams*, this may occur in the case of nomadic peoples who varied "the location of their settlements with the season and changing circumstances" (at para. 27)....

[190] Lamer C.J.C. set out specific requirements for the establishment of Aboriginal title in para. 143:

[143] In order to make out a claim for aboriginal title, the aboriginal group asserting title must satisfy the following criteria: (i) the land must have been occupied prior to sovereignty, (ii) if present occupation is relied on as proof of occupation pre-sovereignty, there must be a continuity between present and pre-sovereignty occupation, and (iii) at sovereignty, that occupation must have been exclusive.

[191] For the purposes of the present case, the question is what degree of occupation suffices to found a claim for Aboriginal title. There is some discussion of this question in *Delgamuukw* beginning at para. 149:

[149] ... Physical occupation may be established in a variety of ways, ranging from the construction of dwellings through cultivation and enclosure of fields to regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources: see McNeil, *Common Law Aboriginal Title*, at pp. 201-2. In considering whether occupation sufficient to ground title is established, "one must take into account the group's size, manner of life, material resources, and technological abilities, and the character of the lands claimed": Brian Slattery, "Understanding Aboriginal Rights", at p. 758.

[150] In *Van der Peet*, I drew a distinction between those practices, customs and traditions of aboriginal peoples which were "an aspect of, or took place in" the society of the aboriginal group asserting the claim and those which were "a central and significant part of the society's distinctive culture" (at para. 55). The latter stood apart because they "made the culture of the society distinctive . . . it was one of the things that truly made the society what it was" (at para. 55, emphasis in original). The same requirement operates in the determination of the proof of aboriginal title. As I said in *Adams*, a claim to title is made out when a group can demonstrate "that their connection with the piece of land ... was of a central significance to their distinctive culture" (at para. 26).

[151] Although this remains a crucial part of the test for aboriginal rights, given the occupancy requirement in the test for aboriginal title, I cannot imagine a situation where this requirement would actually serve to limit or preclude a title claim. The requirement exists for rights short of title because it is necessary to distinguish between those practices which were central to the culture of claimants and those which were more incidental. However, in the case of title, it would seem clear that any land that was occupied pre-sovereignty, and which the parties have maintained a substantial connection with since then, is sufficiently important to be of central significance to the culture of the claimants. As a result, I do not think it is necessary to include explicitly this element as part of the test for aboriginal title.

[192] After discussing the requirement that occupancy be exclusive, the majority judgment concluded by noting that non-exclusive occupation can found rights other than Aboriginal title:

[159] I should also reiterate that if aboriginals can show that they occupied a particular piece of land, but did not do so exclusively, it will always be possible to establish aboriginal rights short of title. These rights will likely be intimately tied to the land and may permit a number of possible uses. However, unlike title, they are not a right to the land itself. Rather, as I have suggested, they are a right to do certain things in connection with that land. If, for example, it were established that the lands near those subject to a title claim were used for hunting by a number of bands, those shared lands would not be subject to a claim for aboriginal title, as they lack the crucial element of exclusivity. However, they may be subject to site-specific aboriginal rights by all of the bands who used it. This does not entitle anyone to the land itself, but it may entitle all of the bands who hunted on the land to hunting rights.

[193] The Supreme Court further considered the issue of Aboriginal title in its judgment in *Marshall; Bernard*. The judgment arose out of two separate appeals. In *Marshall*, thirty-five Mi'kmaq Indians were charged under Nova Scotia legislation with cutting timber on Crown land without authorization. In *Bernard*, a Mi'kmaq Indian was charged with unlawful possession of logs under New Brunswick legislation. The logs had been cut by another Mi'kmaq Indian on Crown lands. In both cases, the accused argued that the land from which the timber was cut was subject to Mi'kmaq Aboriginal title, and that provincial authorization for logging by the Mi'kmaq was therefore unnecessary. Technically, the title issue in each case only concerned the tract of land from which the logs had been cut. In asserting title, however, the defendants in each case contended that the relevant tract of land was, in fact, part of a large territory over which the Mi'kmaq held title.

[194] The accused were convicted at trial in both *Marshall* and *Bernard*. In both cases, the trial judges found that Mi'kmaq occupation of the cutting sites at the time of Crown sovereignty was insufficient to support a claim to Aboriginal title. They both interpreted the test for title as requiring regular and exclusive occupancy of the area. In both cases, summary conviction appeal judges upheld the convictions.

[195] In *Marshall*, the Nova Scotia Court of Appeal held that the trial judge had applied too stringent a test for occupation, particularly given that the Mi'kmaq were a semi-nomadic group. Instead, the court considered that occupation could be made out by demonstrating entry into an area, combined with an intention to occupy. In a passage quoted at para. 42 of the Supreme Court of Canada's decision, the Court of Appeal held that "cutting trees or grass, fishing in tracts of water, and even perambulation" could be relied upon to show occupation sufficient to found a title claim. The Court of Appeal ordered a new trial.

[196] In *Bernard*, the New Brunswick Court of Appeal held that it was unnecessary to show occupation or regular use of the specific area from which logs were taken. Instead, it held, occupation of a nearby area was sufficient to show "that the cutting site would have been within the range of seasonal use and occupation by the Mi'kmaq" (quoted at para. 43 of the Supreme Court of Canada's decision). The Court of Appeal substituted an acquittal for the conviction that had been entered at trial.

[197] The Supreme Court of Canada heard the two cases together. In both, it reinstated the convictions entered by the trial courts. McLachlin C.J.C., writing for the majority, began her discussion of the issue of common law Aboriginal title by referring to *Delgamuukw*. At para. 40 she noted that while *Delgamuukw* had established general principles governing proof of Aboriginal title, it had left many of the details to be developed in subsequent cases, including what level of occupation was necessary to found a claim to title.

[198] At para. 54, she held that in order to establish Aboriginal title, the claimant must demonstrate "possession similar to that associated with title at common law". She noted that that level of possession depends on all of the circumstances, including "the nature of the land and the manner in which the land is commonly enjoyed" as well as the actual nature of the occupation.

[199] In respect of the nature of occupation, she said:

[56] “Occupation” means “physical occupation”. This “may be established in a variety of ways, ranging from the construction of dwellings through cultivation and enclosure of fields to regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources”: *Delgamuukw*, per Lamer C.J., at para. 149.

...

[58] It follows from the requirement of exclusive occupation that exploiting the land, rivers or seaside for hunting, fishing or other resources may translate into aboriginal title to the land if the activity was sufficiently regular and exclusive to comport with title at common law. However, more typically, seasonal hunting and fishing rights exercised in a particular area will translate to a hunting or fishing right. This is plain from this Court's decisions in *Van der Peet*, *Nikal* [*R. v. Nikal*, [1996] 1 S.C.R. 1013], *Adams* and *Côté*. In those cases, aboriginal peoples asserted and proved ancestral utilization of particular sites for fishing and harvesting the products of the sea. Their forebears had come back to the same place to fish or harvest each year since time immemorial. However, the season over, they left, and the land could be traversed and used by anyone. These facts gave rise not to aboriginal title, but to aboriginal hunting and fishing rights.

...

[62] Aboriginal societies were not strangers to the notions of exclusive physical possession equivalent to common law notions of title: *Delgamuukw*, at para. 156. They often exercised such control over their village sites and larger areas of land which they exploited for agriculture, hunting, fishing or gathering. The question is whether the evidence here establishes this sort of possession.

[200] She also considered the specific question of whether a semi-nomadic group could successfully make a claim of Aboriginal title:

[66] The second sub-issue is whether nomadic and semi-nomadic peoples can ever claim title to aboriginal land, as distinguished from rights to use the land in traditional ways. The answer is that it depends on the evidence. As noted above, possession at common law is a contextual, nuanced concept. Whether a nomadic people enjoyed sufficient “physical possession” to give them title to the land, is a question of fact, depending on all the circumstances, in particular the nature of the land and the manner in which it is commonly used. Not every nomadic passage or use will ground title to land; thus this Court in *Adams* asserts that one of the reasons that aboriginal rights cannot be dependent on aboriginal title is that this would deny any aboriginal rights to nomadic peoples (para. 27). On the other hand, *Delgamuukw* contemplates that “physical occupation” sufficient to ground title to land may be established by “regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources” (para. 149). In each case, the question is whether a degree of physical occupation or use equivalent to common law title has been made out.

[201] McLachlin C.J.C. summarized her legal conclusions at para. 70:

[70] In summary, exclusive possession in the sense of intention and capacity to control is required to establish aboriginal title. Typically, this is established by showing regular occupancy or use of definite tracts of land for hunting, fishing or exploiting resources: *Delgamuukw*, at para. 149. Less intensive uses may give rise to different rights. The requirement of physical occupation must be generously interpreted taking into account both the aboriginal perspective and the perspective of the common law: *Delgamuukw*, at para. 156. These principles apply to nomadic and semi-nomadic aboriginal groups; the right in each case depends on what the evidence establishes. Continuity is required, in the sense of showing the group's descent from the pre-sovereignty group whose practices are relied on for the right. On all these matters, evidence of oral history is admissible, provided it meets the requisite standards of usefulness and reasonable reliability. The ultimate goal is to translate the pre-sovereignty aboriginal right to a modern common law right. This must be approached with sensitivity to the aboriginal perspective as well as fidelity to the common law concepts involved.

[202] She found that, in each case, the trial judge had applied the correct test of Aboriginal title. While the trial decision in *Bernard* had turned in large measure on the question of whether occupation had been exclusive, the decision in *Marshall* had not. In his reasons for judgment in *R. v. Marshall*, 2001 NSPC 2, 191 N.S.R. (2d) 323, Curran P.C.J. specifically indicated that to the extent there was occupation, it was exclusive:

[137] The question of exclusiveness really does not arise in this case. There was no other aboriginal group in Nova Scotia in 1713 or 1763. On the mainland in 1713 there were a few Acadian enclaves and one small British outpost. In Cape Breton between the fall of Louisbourg and 1763 there was one small French community and some scattered French settlers. There is no reason to believe there was any European on any of the cutting sites, or for that matter on most of the mainland or in most of Cape Breton, at the relevant times. That leaves the question of occupancy.

[203] His analysis of the issue of sufficiency of occupation was as follows:

[139] The problem for the defendant is that mere occupancy of land does not necessarily establish aboriginal title: (See *Delgamuukw*, *supra*, at paragraph 138, where Lamer C.J. commented on *R. v. Adams*, [1996] 3 S.C.R. 101). If an aboriginal group has used lands only for certain limited activities and not intensively, the group might have an aboriginal right to carry on those activities, but it doesn't have title.

[140] The Supreme Court considered the question of sufficient occupancy for aboriginal title in *R. v. Côté*, *supra*. In paragraph 60 Lamer C.J. said, for the majority, that the superior court judge who heard the first appeal in the

case had “made a finding of fact which was directed at the proper question before the court.” The question was whether the ancestors of the appellants, the Algonquins, had “exercised sufficient occupancy” to prove aboriginal title. According to the evidence, the Algonquins were “a moderately nomadic people who settled only temporarily and moved frequently within the area of the Ottawa River basin.” Their habits were the result of “the presence and movements of their sources of sustenance,...governed by the changes of the seasons.” Although the judge had found that the Algonquins frequented the territory at the relevant time, he decided that “in light of the itinerant hunting patterns and the thin population of the Algonquins” they had not “exercised real and exclusive possession” of the territory.

[141] In paragraph 149 of *Delgamuukw*, *supra et sequitur*, while quoting with favour from Brian Slattery’s Canadian Bar Review article *Understanding Aboriginal Rights*, the Chief Justice wrote:

In considering whether occupation sufficient to ground title is established, “one must take into account the group’s size, manner of life, material resources, and technological abilities, and the character of the lands claimed”.

The problem is to have a clear way of differentiating between sufficient and insufficient occupancy for title. *Delgamuukw* offers some help. Paragraph 139 begins as follows:

Because aboriginal rights can vary with respect to their degree of connection with the land, some aboriginal groups may be unable to make out a claim to title, but will nevertheless possess aboriginal rights that are recognized and affirmed by s. 35(1), including site-specific rights to engage in particular activities. As I explained in *Adams*, this may occur in the case of nomadic peoples who varied “the location of their settlements with the season and changing circumstances”.

In paragraph 149 the Chief Justice referred to the book Common Law Aboriginal Title by Professor Kent McNeil and said:

Professor McNeil has convincingly argued that at common law, the fact of physical occupation is proof of possession at law, which in turn will ground title to the land ... Physical occupation may be established in a variety of ways, ranging from the construction of dwellings through cultivation and enclosures of fields to regular use of definite tracts of land for hunting, fishing or otherwise exploiting its resources...

The line separating sufficient and insufficient occupancy for title seems to be between nomadic and irregular use of undefined lands on the one hand and regular use of defined lands on the other. Settlements constitute regular use of defined lands, but they are only one instance of it. There is no persuasive evidence that the Mi’kmaq used the cutting sites at all, let alone regularly.

[204] At paras. 73 and 75 of her reasons, McLachlin C.J.C. accepted this analysis as being correct in law, and quoted from it with approval.

D. Analysis

[205] The parties come to this Court with very different conceptions of what is needed to make out a claim to Aboriginal title. The plaintiff places great weight on what was said at para. 143 of *Delgamuukw*, which I repeat for convenience:

[143] In order to make out a claim for aboriginal title, the aboriginal group asserting title must satisfy the following criteria: (i) the land must have been occupied prior to sovereignty, (ii) if present occupation is relied on as proof of occupation pre-sovereignty, there must be a continuity between present and pre-sovereignty occupation, and (iii) at sovereignty, that occupation must have been exclusive.

[206] In his argument, the plaintiff often treats the concept of “occupation” as if it is synonymous with “presence in the territory”. He rejects the idea that proof of title depends on showing any intensive or regular use of specific plots of land. Rather, he says that proof that the Tsilhqot’in were present in the region and that there was a degree of exclusivity to that presence suffices to found a title claim. He points to the defendants’ concession that the Tsilhqot’in were present in Tachelach’ed and the Trapline Territory in 1846, and to the judge’s findings of fact to the effect that the Tsilhqot’in did, in fact, enjoy effective exclusive occupancy.

[207] To buttress his contention that the key criterion for a title claim is exclusivity of occupation, the plaintiff points to para. 159 of *Delgamuukw*, quoted above, arguing that only a lack of exclusivity will prevent a claim to land-based Aboriginal rights from being a claim to Aboriginal title.

[208] The plaintiff says that the judge’s findings that the Tsilhqot’in occupied the Opinion Area in 1846 and did so exclusively are findings of fact, which must be treated by this Court as binding.

[209] The plaintiff rejects the defendants’ characterization of his claim as a “territorial” one. He points out that the Claim Area represents only a fraction of the traditional territory of the Tsilhqot’in. He also notes that the Claim Area is significantly smaller than the areas over which title was asserted in *Marshall* and *Bernard*.

[210] As at trial, the plaintiff emphasizes the semi-nomadic traditions of the Tsilhqot'in, and argues that requiring such a group to demonstrate intensive regular use of well-defined areas of land is to take a "postage stamp" approach to title. Such an approach, he contends, fails to give effect to the Aboriginal perspective from which the Tsilhqot'in claim arises.

[211] The defendants say that a claim to Aboriginal title can only be made out where definite boundaries can be established, and where there has been intensive occupation of a particular area. They emphasize Lamer C.J.C.'s comments in *Adams* and *Delgamuukw* doubting the ability of nomadic groups to prove title. They also place considerable weight on the examples of title land given at para. 149 of *Delgamuukw*: dwellings, cultivated areas, enclosed fields, and definite tracts of land used for hunting, fishing, or other resource exploitation.

[212] The defendants also refer to passages from *Marshall; Bernard* that speak of a correspondence between the nature of the occupancy necessary to found an Aboriginal title claim and the common law requirements for title by virtue of possession.

[213] Canada, in particular, argues that this case is materially identical to *Marshall; Bernard*, noting that the claim is one to a large region rather than to a definite tract of land, and arguing that, as in *Marshall; Bernard*, there is no evidence of a regular physical Tsilhqot'in presence except at a few places in the Claim Area.

[214] As I indicated when discussing the question of whether the claim in this case is an "all or nothing claim", I accept the defendants' characterization of the claim as being a "territorial" one. The plaintiff does not suggest that the Tsilhqot'in physically occupied the entire Claim Area, either at all times or seasonally. Rather, he says that they lived in various encampments in the Claim Area at different times, some of which have been identified. They hunted, trapped and fished at various places, some of which are in the Claim Area. On a seasonal basis, groups would transit over trails covering most regions of the Claim Area. He says that this type of presence in

the Claim Area amounts to “occupation” for the purpose of claiming title, and allows a claim to title over the territory.

[215] Except in respect of a few specific sites, the evidence did not establish regular presence on or intensive occupation of particular tracts of land within the Claim Area. There were no permanent village sites, though there was evidence of encampments and wintering sites, including groupings of pit houses. Even among these, the evidence did not strongly point to occupation of particular sites in the period around 1846 except in three or four cases.

[216] The Tsilhqot’in did not cultivate or enclose fields. While they did hunt and fish in many parts of the Claim Area, there are only a few sites (primarily fishing sites) that can be said to be specifically delineated in the evidence. Only a few locations were referred to which may have been used intensively. As the defendants contend, the evidence and findings suggest that hunting, trapping and fishing occurred at many places in the Claim Area, more or less on an opportunistic basis. Gathering activities also appear to have been widespread, although the findings of fact suggest that some localized spots may exist where natural plants were harvested and, to a limited extent, managed.

[217] As I see it, the claim can only be described as being a “territorial” one rather than a site-specific claim to title. The fact that the territory being claimed, large as it is, is a fraction of the total area alleged to be the traditional territory of the Tsilhqot’in does not prevent the claim from being characterized in this way.

[218] Indeed, the plaintiff’s often repeated statement that the Tsilhqot’in did not lead a “postage stamp” existence underlines the territorial nature of the claim – with a few exceptions, there are no definite tracts of land that were habitually occupied by the Tsilhqot’in at and around 1846.

[219] I also agree with the defendants that a territorial claim for Aboriginal title does not meet the tests in *Delgamuukw* and in *Marshall; Bernard*. Further, as I will attempt to explain, I do not see a broad territorial claim as fitting within the purposes behind

s. 35 of the *Constitution Act, 1982* or the rationale for the common law's recognition of Aboriginal title. Finally, I see broad territorial claims to title as antithetical to the goal of reconciliation, which demands that, so far as possible, the traditional rights of First Nations be fully respected without placing unnecessary limitations on the sovereignty of the Crown or on the aspirations of all Canadians, Aboriginal and non-Aboriginal.

[220] As I read *Delgamuukw*, Aboriginal title cannot generally be proven on a territorial basis, even if there is some evidence showing that the claimant was the only group in a region or that it attempted to exclude outsiders from what it considered to be its traditional territory. I acknowledge that *Delgamuukw* did not fully address the quality of occupancy that was necessary to support a title claim, apart from indicating that the occupancy must have been exclusive. That said, several passages in *Delgamuukw* strongly suggest that an intensive presence at a particular site was what the Court had in mind.

[221] In particular, I note that the examples of title lands given at para. 149 of *Delgamuukw* are well-defined, intensively used areas. The reference to hunting, fishing and other resource extraction activities is coupled with a specific description of the lands so used as “definite” tracts of land. I agree with British Columbia’s assertion that what was contemplated were specific sites on which hunting, fishing, or resource extraction activities took place on a regular and intensive basis. Examples might include salt licks, narrow defiles between mountains and cliffs, particular rocks or promontories used for netting salmon, or, in other areas of the country, buffalo jumps.

[222] The Court’s specific references to the difficulty that nomadic peoples might face in proving title is also telling. While, as the Court pointed out in *Marshall; Bernard*, there is no reason that semi-nomadic or nomadic groups would be disqualified from proving title, their traditional use of land will often have included large regions in which they did not have an adequate regular presence to support a

title claim. That is not to say, of course, that such groups will be unable to prove title to specific sites within their traditional territories.

[223] Finally, with respect to *Delgamuukw*, I note Lamer C.J.C.'s comments at paras. 150 and 151 dealing with the need for a group to demonstrate that a piece of land was of central significance to their distinctive culture. He considered this to be a "crucial" part of the test for Aboriginal title, but found that it was unnecessary to treat it as a specific element of the proof of title, because any land that met the other criteria for Aboriginal title would, of necessity, be of central significance to the culture. That position is a sensible one if the occupation needed to found a claim for title is site-specific; it is not, however, if undifferentiated land within a large territory is to be included in a title claim.

[224] *Marshall; Bernard*, as I read it, is even stronger in showing that Aboriginal title must be demonstrated on a site-specific rather than territorial basis. The majority expressly dealt with the question of whether hunting or fishing or the taking of other resources from land could found a title claim. At para. 58, it agreed that such activities could, where they were sufficiently regular and exclusive, be a basis for title. It also cautioned, however, that more typically, such activities will found only claims to specific Aboriginal rights.

[225] The majority's equation of sufficient occupancy for Aboriginal title with the common law requirements to show title by virtue of possession is also important. It supports the views that title must be claimed on a site-specific basis, and that a certain regularity and intensity of presence is needed before it will count as "occupancy".

[226] I further agree with Canada's contention that this case is, on its facts, materially similar to *Marshall; Bernard*, and particularly to *Marshall*. I acknowledge the plaintiff's arguments that there was more evidence presented in this case, that the trial was longer, and that the size of the claimed area was smaller. None of these facts, however, make this case materially different from *Marshall*. I also acknowledge that the traditions of the Tsilhqot'in were and are very different from

those of the Mi'kmaq, as were the traditional seasonal migration patterns. Again, however, those differences are not material to the legal analysis of the case. In *Marshall*, there was no evidence to support occupation of the specific site from which logs were taken. Similarly, in the case before us, there is no evidence to support occupation of most sites within the Claim Area.

[227] I acknowledge the plaintiff's argument that the question of occupation is ultimately a question of fact, on which the findings of a trial judge must prevail. While the question of whether land was occupied is, in large part, a question of fact, the question of whether a particular presence in a territory meets the standard of occupation necessary to found a claim to title is a question of mixed fact and law.

[228] In the case before us, it is not clear what precise test the judge applied in determining whether Tsilhqot'in occupancy of the Claim Area was sufficient to found title. While he divided the Claim Area into regions where there was sufficient occupation and regions where there was not, he did not describe the threshold for differentiating between the two.

[229] While the judge did not articulate any clear test for sufficiency of occupation, it is evident that he considered that occupation could be determined on a regional or territorial basis. The question of whether it is appropriate to determine title issues on a territorial rather than site-specific basis is an extricable issue of law. The standard of review on that question, is, therefore, one of correctness: *Housen v. Nikolaisen*, 2002 SCC 33, [2002] 2 S.C.R. 235 at paras. 36-37.

[230] As I have discussed, the case law does not support the idea that title can be proven based on a limited presence in a broad territory. Rather, as I read the jurisprudence, Aboriginal title must be proven on a site-specific basis. A title site may be defined by a particular occupancy of the land (e.g., village sites, enclosed or cultivated fields) or on the basis that definite tracts of land were the subject of intensive use (specific hunting, fishing, gathering, or spiritual sites). In all cases, however, Aboriginal title can only be proven over a definite tract of land the boundaries of which are reasonably capable of definition.

[231] The limitation of Aboriginal title to definite tracts of land is fully in keeping with the purpose of s. 35 of the *Constitution Act, 1982* and the rationale for common law recognition of Aboriginal rights and title. In order for an Aboriginal group to preserve its culture and allow members of the group to pursue a traditional lifestyle, it is necessary for the group to have exclusive possession of those places that it traditionally occupied on a regular and intensive basis. The group must be given the opportunity to live where it lived traditionally, and to continue to use the land that it cultivated or intensively took resources from.

[232] I do not doubt that the culture and traditions of a semi-nomadic group, like the Tsilhqot'in, depend on rights to use lands that extend well beyond the definite tracts that may be found to be subject to Aboriginal title. The Tsilhqot'in must be able to continue hunting and fishing throughout their traditional territory, and to have the right to pass and re-pass over the trails that they have used for hundreds of years. There will be other specific rights that must be recognized in order to preserve the rich traditions of the Tsilhqot'in people. It is not at all clear to me, however, that Tsilhqot'in culture and traditions cannot be fully respected without recognizing Aboriginal title over all of the land on which they roamed.

[233] In considering Aboriginal title and Aboriginal rights, the Court must take into account Aboriginal perspective as well as that of the common law. The connection of the Tsilhqot'in Nation to its traditional territory has both spiritual and temporal aspects that are difficult to convey in the dry words of a judgment. This deep connection must, however, remain foremost in the Court's mind in considering issues of Aboriginal title and Aboriginal rights. I am not convinced that the relationship of the Tsilhqot'in people to the land requires recognition of title on a territorial basis; it does, however, require the Court to affirm the existence of Aboriginal rights that respect the Tsilhqot'in perspective on its own culture and values. The recognition of such rights will serve to prevent incompatible uses of the land.

[234] The fallacy in the plaintiff's characterization of the defendants' positions as representing a "postage stamp" view of Aboriginal title is that it ignores the importance of Aboriginal rights other than title in protecting traditional culture and lifestyles. The "postage stamp" characterization was accepted by the judge:

[610] The plaintiff characterizes the ... arguments of the defendants as a postage stamp approach to Aboriginal title. I think that is a fair description. There is no evidence to support a conclusion that Aboriginal people ever lived this kind of postage stamp existence. Tsilhqot'in people were semi-nomadic and moved with the seasons over various tracts of land within their vast territory. It was government policy that caused them to alter their traditional lifestyle and live on reserves.

...

[1376] What is clear to me is that the impoverished view of Aboriginal title advanced by Canada and British Columbia, characterized by the plaintiff as a "postage stamp" approach to title, cannot be allowed to pervade and inhibit genuine negotiations. A tract of land is not just a hunting blind or a favourite fishing hole. Individual sites such as hunting blinds and fishing holes are but a part of the land that has provided "cultural security and continuity" to Tsilhqot'in people for better than two centuries.

[1377] A tract of land is intended to describe land over which Indigenous people roamed on a regular basis; land that ultimately defined and sustained them as a people. The recognition of the long-standing presence of Tsilhqot'in people in the Claim Area is a simple, straightforward acknowledgement of an historical fact.

[235] It seems to me that the plaintiff's approach to Aboriginal title does not account for the fact that title is not the only tool available to provide cultural security to the Tsilhqot'in.

[236] Aboriginal rights of various sorts protect cultural security and safeguard the ability of First Nations to continue to engage in traditional lifestyles. Indeed, as British Columbia points out, the phrase "cultural security and continuity" was originally used in *Sappier; Gray* to describe the function of Aboriginal rights in general, not merely Aboriginal title.

[237] Aboriginal title, while forming part of the picture, is not the only – or even necessarily the dominant – part. Canadian law provides a robust framework for recognition of Aboriginal rights. The cultural security and continuity of First Nations

can be preserved by recognizing their title to particular “definite tracts of land”, and by acknowledging that they hold other Aboriginal rights in much more extensive territories.

[238] The result for semi-nomadic First Nations like the Tsilhqot’in is not a patchwork of unconnected “postage stamp” areas of title, but rather a network of specific sites over which title can be proven, connected by broad areas in which various identifiable Aboriginal rights can be exercised. This is entirely consistent with their traditional culture and with the objectives of s. 35.

[239] It seems to me that this view of Aboriginal title and Aboriginal rights is fully consistent with the case law. It is also consistent with broader goals of reconciliation. There is a need to search out a practical compromise that can protect Aboriginal traditions without unnecessarily interfering with Crown sovereignty and with the well-being of all Canadians. As I see it, an overly-broad recognition of Aboriginal title is not conducive to these goals. Lamer C.J.C.’s caution in *Delgamuukw* that “we are all here to stay” was not a mere glib observation to encourage negotiations. Rather, it was a recognition that, in the end, the reconciliation of Aboriginal rights with Crown sovereignty should minimize the damage to either of those principles.

[240] In the result, while I do not agree with the trial judge’s analysis of the Aboriginal title issue, I would uphold his order. The claim to Aboriginal title, as it was advanced, was not sustainable.

[241] I do not doubt that there are specific sites within the Claim Area that may be of particular significance to the Tsilhqot’in and on which they traditionally had a regular presence. As I have already indicated, this litigation was not structured so as to identify such specific sites as candidates for Aboriginal title. The Tsilhqot’in should be entitled to pursue title claims to specific sites notwithstanding that the plaintiff’s territorial claim has been dismissed. Accordingly, I would also uphold the trial judge’s declaration that his dismissal of the title claim does not preclude new claims asserting title to lands within Tachelach’ed and the Trapline Territory.

X. Does the *Forest Act* Apply to Title Lands?

[242] As I have noted, Vickers J. presented a detailed analysis of the proper scope of the phrase “Crown timber” in the *Forest Act* and concluded that it did not apply to forests on Aboriginal title lands. He also considered that the doctrine of interjurisdictional immunity prevented provincial legislation from regulating resource use on Aboriginal title lands.

[243] The judge’s reasons were cogent and comprehensive, and I anticipate that they will engender further debate on these issues. Given my conclusion that the claim to Aboriginal title is not made out, however, it is unnecessary for me to come to any final determination as to whether he was correct in finding that the *Forest Act* was inapplicable to title lands. Accordingly, I will refrain from further comment on the issue.

XI. Aboriginal Rights**A. The Relief in Issue**

[244] The amended statement of claim included the following claim of Aboriginal rights on behalf of the Xeni Gwet’in:

14. Before and at the time of European contact, the Xeni Gwet’in trapped (trapping includes hunting) animals for their own use and for trading in skins and pelts (collectively “Trapping Activities”) in the Brittany and the Trapline Territory. These Trapping Activities included the trapping of [there follows a list of animals, which does not include wild horses] and all other fur bearing animals. These Trapping Activities were practices which were integral to the distinctive culture of the Xeni Gwet’in prior to the time of contact with Europeans and continue to be integral to the distinctive culture of the Xeni Gwet’in.

[245] In the paragraphs that followed, the plaintiff alleged that British Columbia issued licences and permits that allowed private companies to engage in forestry activities in the Brittany (Tachelach’ed) and the Trapline Territories. It said that:

23. [These forestry activities] ... will, or are likely to, adversely affect the ability of the Xeni Gwet’in to exercise their right to carry out Trapping Activities by reducing the number of animals available and the number of species available to the Xeni Gwet’in; by compromising the ecological, cultural and spiritual integrity of the Brittany and the Trapline Territory; and by

reducing the wildlife refuge potential, and available wildlife habitat of the Brittany and the Trapline Territory.

[246] The relief sought by the plaintiff included declarations of Aboriginal rights to carry on trapping activities in Tachelach'ed and the Trapline Territory, and declarations that those rights had been violated by British Columbia in issuing licences and permits for forestry activities.

[247] As I have discussed, the trial judge allowed the plaintiff to modify the claims late in the trial, so that they were made on behalf of the Tsilhqot'in rather than the Xeni Gwet'in. My opinion, stated earlier in these reasons, is that the change in the claims was, in effect, an amendment of the pleadings, and that the judge acted within his discretion in allowing it.

[248] British Columbia admitted that the Xeni Gwet'in hold Aboriginal rights to "hunt and trap birds and animals throughout the Claim Area for the purposes of securing food, clothing, shelter, mats, blankets and crafts, as well as for spiritual, ceremonial, and cultural uses" but denied that those rights extended to the capture of horses for transportation and work, or to trade in skins and pelts.

[249] British Columbia also admitted that it had granted forest tenures in areas that included the Claim Area and that it had issued certain authorizations. It accepted that the tenures and authorizations allowed private companies to undertake certain forestry activities and to apply for further authorizations to undertake other activities. It denied that the tenures and authorizations infringed any Aboriginal rights, and contended that if rights were infringed, the infringement was justified.

[250] The trial judge's order included the following declarations with regard to Aboriginal rights:

4. The Tsilhqot'in people have an Aboriginal right to hunt and trap birds and animals throughout the Claim Area for the purposes of securing animals for work and transportation, food, clothing, shelter, mats, blankets and crafts, as well as for spiritual, ceremonial and cultural uses. This right is inclusive of a right to capture and use horses for transportation and work;

5. The Tsilhqot'in people have an Aboriginal right to trade in skins and pelts taken from the Claim Area as a means of securing a moderate livelihood; [and]
6. Forestry activities, which include logging and all other silvicultural practices, have unjustifiably infringed the Aboriginal rights in the Claim Area.

[251] British Columbia says that the judge erred in finding a right to capture and use horses and a right to trade in skins and pelts. It also says that he erred in finding that forestry activities have infringed the Tsilhqot'in Aboriginal rights. In the alternative, it argues that if the judge was correct in finding an infringement, he erred in finding the infringement to have been unjustified.

B. The Right to Capture Horses

[252] British Columbia objects to the declaration as it pertains to horses on both procedural and substantive grounds.

[253] The first procedural objection concerns the breadth of para. 14 of the amended statement of claim. British Columbia says that it does not encompass the right to capture wild horses for transportation and work.

[254] While it might, at first, be questioned whether the capture of wild horses is within the ambit of that paragraph, the procedural history of this matter resolves any doubt. In March 2003, British Columbia sought particulars in respect of para. 14, and the plaintiff responded to the demands. The demands and responses included the following:

Demand: The Plaintiff says that the Xeni Gwet'in trapped animals for their own use. What uses does he say were included within the term "their own use"?

Response: food, clothing, shelter, mats, blankets, crafts, spiritual, ceremonial and cultural uses. In addition, the Plaintiff includes trapping for safety reasons and *the use of horses for transportation and work*.

Demand: The Plaintiff says that the Xeni Gwet'in Trapping Activities included the trapping of certain enumerated and "other fur bearing animals". What species of animals, if any, other than those specifically enumerated, does he include within the term "all other fur bearing animals"?

Response: [A further list of species of fur-bearing animals is provided] ... [I]n addition ... to fur bearing animals ... the Plaintiff includes the following

species of animals that were and are trapped by the Xeni Gwet'in for their own use: ..., *wild horses*

[Emphasis added.]

[255] While it might have been open to British Columbia to argue that the second response included material that was not responsive to the demand, it did not immediately do so. In a document entitled "Identification of Deficiencies in Plaintiff's Reply to Demand for Particulars", British Columbia listed the various demands that had been made, the responses received, and the deficiencies that it alleged in the responses. In respect of each of the responses listed above, it stated that "[t]he British Columbia Defendants do not object to this response".

[256] During the trial, approximately three years after receiving the particulars, British Columbia brought an application to strike the one that added the reference to "wild horses" on the basis that it answered a question that had not been asked. The judge rejected the application in reasons indexed as 2006 BCSC 399. He said:

[16] The opening words of [para. 14] in the statement of claim make reference to "animals" generally. Animals include, but are not limited to, fur bearing animals. The answer to the demand for particulars was not confined to the specific demand but went on to list animals generally, placing the defendants on notice as to the types of animals relied upon for use and trade by the Xeni Gwet'in.

...

[18] For the past three years the defendants have known that the plaintiff included in the definition of "animals", certain non fur bearing animals....

[19] I am unable to find the words complained of in the March 14, 2003 Reply to Demand for Particulars to be frivolous and vexatious within the meaning given to those words in *Lang Michener Lash Johnston v. Fabian* (1987), 59 O.R. (2d) 353 at 358-359 (H.C.). On the contrary, those words have placed the defendants on notice for the past three years and there cannot now be an assertion that they are taken by surprise as to what animals (and birds) the plaintiff says were used and traded by the Xeni Gwet'in. The allegations set forth in this paragraph of the statement of claim as amplified by the particulars does not raise any new allegations, assertions or prayers for relief against either defendant. That portion of both motions is dismissed.

[257] In light of the background facts and the judge's ruling, I would not accede to British Columbia's argument with respect to the pleading.

[258] A second procedural argument brought by British Columbia contends that no declaration ought to have been granted because the judge did not specifically determine that any forestry activity has interfered, or will interfere, with the capture and use of wild horses. In making this argument, it relies on *Cheslatta Carrier Nation v. British Columbia*, 2000 BCCA 539. In that case, this Court upheld a chambers judge's decision to strike a claim for a declaration of Aboriginal rights to fish on the basis that there was no live controversy that would require the issuance of a declaration.

[259] I note that the Supreme Court of Canada has, since the hearing of the appeal in this matter, reached a similar conclusion in *Lax Kw'alaams* in which it upheld the trial judge's refusal of a declaration:

[14] ... [T]he Lax Kw'alaams brought to the forefront a claim to an Aboriginal right to a fishery for food, social and ceremonial purposes. The Lax Kw'alaams presently hold federal fisheries licences for these purposes. Their entitlement seems not to be a contentious issue. It was therefore not an issue of significance in the present litigation. Courts generally do not make declarations in relation to matters not in dispute between the parties to the litigation and it was certainly within the discretion of the trial judge to refuse to do so here.

[260] In my view, neither *Cheslatta* nor *Lax Kw'alaams* assists British Columbia's argument. It is well-established that declaratory relief is discretionary, and that one ground for refusal of such relief (and, indeed, for refusal to consider an application for it) is that the matter is not of immediate or practical importance. That discretion was exercised by the chambers judge in *Cheslatta* and by the trial judge in *Lax Kw'alaams*. In the case before us, however, the trial judge exercised his discretion in favour of granting a declaration. It has not been shown that he erred in principle in doing so.

[261] The issue of the right to capture horses for personal use appears to be a contentious issue between the parties, and does appear to have been the subject of evidence and full argument. In these circumstances, the judge was well within the ambit of his discretion in deciding to issue a declaration.

[262] The more interesting argument brought by British Columbia concerns the requirement that the Aboriginal rights protected by s. 35 of the *Constitution Act, 1982* must be based on traditional practices, customs or traditions that pre-dated European contact (see *Van der Peet* at paras. 60-61). As I have mentioned, the judge fixed 1793 as the date of European contact. No appeal is taken from that finding. In respect of horses, he said:

[1225] The origins of these animals have not been determined. The Court takes judicial notice of the fact that horses are not native to North America. They were introduced by Europeans, very likely by the Spanish in what is now Mexico. Thereafter, there was a gradual movement of horses across the continent. For my purposes, the route of their travels is unimportant. When Tsilhqot'in people met with Simon Fraser in June of 1808, horses had already arrived on the Chilcotin Plateau and were being used by Tsilhqot'in people. I find this evidence is sufficient to raise a fair inference of Tsilhqot'in use of horses in pre-contact times.

...

[1235] The historical record refers to Tsilhqot'in people's use of horses. The absence of the word "wild" cannot be of any consequence. Nor does the absence of oral tradition evidence persuade me that there were no wild horses in pre-contact times. Given their use in 1808, I believe it is logical to infer they were used in pre-contact times. I also infer that Tsilhqot'in people obtained horses from the wild stock of horses that is now said to have roamed the Chilcotin plateau over the past 200 years....

[263] It was open to the trial judge to use evidence that post-dated contact to draw inferences as to pre-contact practices. The issue was commented upon in *Van der Peet*:

[62] ... It would be entirely contrary to the spirit and intent of s. 35(1) to define aboriginal rights in such a fashion so as to preclude in practice any successful claim for the existence of such a right. The evidence relied upon by the applicant and the courts may relate to aboriginal practices, customs and traditions post-contact; it simply needs to be directed at demonstrating which aspects of the aboriginal community and society have their origins pre-contact. It is those practices, customs and traditions that can be rooted in the pre-contact societies of the aboriginal community in question that will constitute aboriginal rights.

[264] "Traditional" practices, in order to qualify as Aboriginal rights, must have existed pre-contact. As indicated in *Van der Peet*, practices that arose only as a result of European influence cannot form the basis for Aboriginal rights:

[73] The fact that Europeans in North America engaged in the same practices, customs or traditions as those under which an aboriginal right is claimed will only be relevant to the aboriginal claim if the practice, custom or tradition in question can only be said to exist because of the influence of European culture. If the practice, custom or tradition was an integral part of the aboriginal community's culture prior to contact with Europeans, the fact that that practice, custom or tradition continued after the arrival of Europeans, and adapted in response to their arrival, is not relevant to determination of the claim; European arrival and influence cannot be used to deprive an aboriginal group of an otherwise valid claim to an aboriginal right. On the other hand, where the practice, custom or tradition arose solely as a response to European influences then that practice, custom or tradition will not meet the standard for recognition of an aboriginal right.

[265] While I acknowledge that there is room for debate on the issue, it is my view that the Tsilhqot'in practice of capturing and using horses for work and transportation does qualify as an Aboriginal right, notwithstanding that horses were introduced (or, more precisely, reintroduced) to North America by Europeans.

[266] Horses reached North America more than 250 years before the date of contact fixed by the trial judge. If wild horses derived from European stock reached Tachelach'ed well before European explorers, I do not think it can be said that the Tsilhqot'in tradition of capturing and using the animals was a result of "European influences". The mere fact that the ancestors of the horses captured and used by the Tsilhqot'in came from Europe does not constitute European influence. There is also no indication that the Tsilhqot'in learned to capture or use horses either from Europeans or from people who had learned those practices from Europeans. It was open to the trial judge to infer, as he did, that they developed the practice independently when wild horses first appeared in their traditional territory.

[267] As the trial judge made no palpable and overriding error in finding that the Tsilhqot'in tradition of horsemanship pre-dated European contact, and as it is undoubtedly central to Tsilhqot'in culture, I would not interfere with the judge's findings with respect to Aboriginal rights to capture and use horses.

[268] In the result, it is not necessary to address the trial judge's alternative basis for finding an Aboriginal right to capture and use horses, i.e., that those activities constituted contemporary extensions of pre-contact practices.

C. Trading Rights

[269] The trial judge held that the Tsilhqot'in have an Aboriginal right to trade in skins and pelts taken from the Claim Area as a means of securing a moderate livelihood. British Columbia says the trial judge erred by using the "moderate livelihood" standard, and, more generally, in concluding that Tsilhqot'in pre-contact trade was integral to their distinctive culture. Finally, it argues that the judge erred in failing to confine the right to specific species of animals.

[270] In *Lax Kw'alaams*, the Supreme Court of Canada affirmed that in determining whether an Aboriginal right exists, a court must begin by characterizing the right that is claimed. At the characterization stage, "the focus is on ascertaining the true nature of the claim, not assessing the merits of this claim or the evidence offered in its support": *Mitchell v. M.N.R.*, 2001 SCC 33, [2001] 1 S.C.R. 911 at para. 14.

[271] In *Lax Kw'alaams*, the claim began as one to an Aboriginal right to fish for commercial purposes on a "large scale". Late in the day, without seeking an amendment of the pleadings, the plaintiff argued, instead, for an ill-defined lesser right to fish for trading purposes. The trial judge refused to allow the claim to be re-characterized in that way. The Supreme Court of Canada found that the judge made no error in proceeding as she did, and made the following comments about characterizing a claim for Aboriginal rights:

[45] To the extent the *Lax Kw'alaams* are saying that, in Aboriginal and treaty rights litigation, rigidity of form should not triumph over substance, I agree with them. However, the necessary flexibility can be achieved within the ordinary rules of practice. Amendments to pleadings are regularly made in civil actions to conform with the evidence on terms that are fair to all parties. The trial judge adopted the proposition that "he who seeks a declaration must make up his mind and set out in his pleading what that declaration is", but this otherwise sensible rule should not be applied rigidly in long and complex litigation such as we have here. A case may look very different to *all* parties after a month of evidence than it did at the outset. If necessary, amendments to the pleadings (claim or defence) should be sought at trial. There is ample jurisprudence governing both the procedure and outcome of such applications. However, at the end of the day, a defendant must be left in no doubt about precisely what is claimed. No relevant amendments were sought to the prayer for relief at trial in this case.

[46] With these considerations in mind, and acknowledging that the public interest in the resolution of Aboriginal claims calls for a measure of flexibility not always present in ordinary commercial litigation, a court dealing with a s. 35(1) claim would appropriately proceed as follows:

1. First, at the characterization stage, identify the precise nature of the First Nation's claim to an Aboriginal right based on the pleadings. If necessary, in light of the evidence, refine the characterization of the right claimed on terms that are fair to all parties.

...

[Emphasis in original.]

[272] In the case before us, the statement of claim simply alleged an Aboriginal right to trade in skins and pelts. In argument, the plaintiff used the words “moderate livelihood” to characterize the scale of trade that he claimed was traditionally undertaken by the Tsilhqot’in.

[273] The use of the words “moderate livelihood” to describe Aboriginal trading rights has a curious history. In *R. v. Van der Peet*, (1993) 80 B.C.L.R. (2d) 75 (C.A.), Lambert J.A., dissenting, considered that the social significance of salmon in Sto:lo tradition could be translated into a right to trade in fish to the extent needed to provide a “moderate livelihood”. The phrase “moderate livelihood” was adopted from American jurisprudence, particularly from *State of Washington v. Washington State Commercial, Passenger, and Fishing Vessel Association*, 443 U.S. 658 (1979). Wallace J.A., in a judgment concurring with the majority, was critical of that standard, arguing that it was tied into American standards for allocation of fisheries resources, was inherently subjective, and would be impossible to police.

[274] In the Supreme Court of Canada's decision in *Van der Peet*, Lamer C.J.C., for the majority, rejected the basis on which Lambert J.A. had found an Aboriginal right to sell fish:

[79] ... [A] claim to an aboriginal right cannot be based on the significance of an aboriginal practice, custom or tradition to the aboriginal community in question. The definition of aboriginal rights is determined through the process of determining whether a particular practice, custom or tradition is integral to the distinctive culture of the aboriginal group. The significance of the practice, custom or tradition is relevant to the determination of whether that practice, custom or tradition is integral, but cannot itself constitute the claim to an aboriginal right. As such, the appellant's claim cannot be characterized as

based on an assertion that the Sto:lo's use of the fishery, and the practices, customs and traditions surrounding that use, had the significance of providing the Sto:lo with a moderate livelihood. It must instead be based on the actual practices, customs and traditions related to the fishery, here the custom of exchanging fish for money or other goods.

[Emphasis in original.]

[275] He held that the issue to be determined was not the significance of salmon to the Sto:lo but rather whether the First Nation had a pre-contact tradition of trading in salmon. Based on the trial judge's findings that the exchange of fish for money or other goods was irregular, incidental and not integral to the Sto:lo culture, he found no Aboriginal right to sell salmon.

[276] In *R. v. Marshall*, [1999] 3 S.C.R. 456, the Supreme Court of Canada interpreted a trade clause in a Mi'kmaq treaty to confer a right to trade the products of hunting and fishing activities to secure "necessaries". The majority considered this standard to be equivalent to that of a "moderate livelihood", and referred to Lambert J.A.'s dissenting judgment in *Van der Peet*:

[59] The concept of "necessaries" is today equivalent to the concept of what Lambert J.A., in *R. v. Van der Peet* (1993), 80 B.C.L.R. (2d) 75, at p. 126, described as a "moderate livelihood". Bare subsistence has thankfully receded over the last couple of centuries as an appropriate standard of life for aboriginals and non-aboriginals alike. A moderate livelihood includes such basics as "food, clothing and housing, supplemented by a few amenities", but not the accumulation of wealth ([*R. v. Gladstone*, [1996] 2 S.C.R. 723], at para. 165). It addresses day-to-day needs. This was the common intention in 1760. It is fair that it be given this interpretation today.

[277] British Columbia argues that the judge erred in accepting the "moderate livelihood" standard in this case because it is a standard that applies to treaty rights, not traditional Aboriginal rights. It says the standard was rejected for traditional Aboriginal rights in *Van der Peet*. Further, it says that the right to a "moderate livelihood" standard was not pleaded.

[278] In my view, these objections cannot prevail. While *Marshall* was a case interpreting a treaty, the "moderate livelihood" standard was not described in the treaty itself. Rather, it was the Court's characterization of a standard somewhat

higher than mere subsistence, but not so high as to allow for the accumulation of wealth. There is nothing in *Marshall* to suggest that the standard can only apply within the context of a treaty.

[279] Further, it cannot be said that the Supreme Court of Canada rejected the “moderate livelihood” standard in *Van der Peet*. Rather, it rejected the idea that traditional subsistence through the consumption of salmon could be translated into a modern right to gain a moderate livelihood through the sale of salmon.

[280] It will normally be necessary, in characterizing an Aboriginal right to trade in a commodity, to describe the scale of such trading. That scale must be consistent with the traditional role of trade in the particular Aboriginal culture under consideration. In *Van der Peet*, the claim was for a right to exchange fish for money or other goods. In contrast, in *Gladstone*, the claim was for a right to sell herring spawn on kelp on a “commercial” scale. *R. v. N.T.C. Smokehouse Ltd.*, [1996] 2 S.C.R. 672, makes clear, at paras. 17 and 18, that an Aboriginal right to trade a commodity should be described according to the scale of traditional trading.

[281] In this case, the trial judge found that trade in skins and pelts was integral to the Tsilhqot’in culture, and that the trade was at a level consistent with earning a moderate livelihood. I see nothing in *Van der Peet* or other cases that makes this an inappropriate assessment. Indeed, the “moderate livelihood” standard, having been more fully described in *Marshall*, would seem to furnish a proper benchmark for defining a relatively low level of commercial activity. The judicial consideration of the standard in *Marshall* eliminates many of the concerns expressed by Wallace J.A. in this Court in *Van der Peet*.

[282] I am also not convinced that the failure of the plaintiff to include the “moderate livelihood” language in the statement of claim precluded the court from making a declaration using that language. The claim made it clear that the right to trade in skins and pelts was in issue, and there is no suggestion that British Columbia was misled as to the scale of trade that was being argued for by the plaintiff. If British

Columbia needed greater detail as to the type of trading right that was being sought, it should have sought particulars.

[283] In my view, therefore, there was nothing in principle that prevented the judge from making a declaration that the Tsilhqot'in have a right to trade in skins and pelts as a means of securing a moderate livelihood. I turn, then, to his specific findings:

[1247] Tsilhqot'in people traded animal skins and pelts with their Aboriginal neighbours who were willing to trade with them. These trading relationships were important to the Tsilhqot'in people as a means of obtaining salmon resources, particularly during the years when the salmon fishery failed. Trade was not restricted to years of poor salmon runs. Trading with neighbours was an element of the traditional Tsilhqot'in pattern of survival.

[1248] The practice of trade for salmon and accommodations was an integral part of Tsilhqot'in society that cannot be ignored. This type of survival was intermittent but it was regular in the sense that there were always cycles produced by nature which forced changes in the preferred pattern of living off and staying on the land within the Claim Area.

[1249] In *Sappier; Gray*, the issue arose as to whether a survival practice could be considered sufficiently integral to require protection as an Aboriginal right. The Court concluded that a practice undertaken for survival purposes is sufficient to meet the integral to a distinctive culture test. A Court must seek to understand how the particular pre-contact practice relied upon relates to the Aboriginal group's way of life.

...

[1263] Tsilhqot'in people moved about their territory harvesting what the land had to offer, according to their needs and the seasons. Fish, game, root plants, and berries provided the staples for their diets. Salmon were a critical component. When salmon failed, the Tsilhqot'in way of life included a trade of furs, root plants, and berries for salmon. I am satisfied that trade was not just opportunistic or incidental and was not limited to times of need. It was a way of life, accelerated in times of need. Trade was always undertaken for the necessities of life; it was not trade to accumulate wealth. In my view, the trading practice of the Tsilhqot'in people, at the time of first contact and continuing well into the twentieth century, was more than sufficient to meet the tests of cultural integrality set out by the Supreme Court of Canada.

[284] After citing *Marshall*, the judge concluded:

[1265] The right may be properly characterized as a Tsilhqot'in Aboriginal right to trade in skins and pelts as a means of securing a moderate livelihood. The evidence shows that the Tsilhqot'in ancestors engaged in that right and that it was integral to their distinctive culture.

[285] British Columbia contends that the judge's findings were not consistent with the evidence. In my view, there was evidence on which the judge was entitled to make the findings that he did. It is, of course, not this Court's role to re-weigh the evidence.

[286] British Columbia also contends that the trial judge's reference to *Sappier; Gray* is an error, because *Sappier; Gray* involved subsistence harvesting of resources, not trading. While it is true that *Sappier; Gray* involved harvesting for personal use rather than trading, I do not see that the nature of the case affects the basic proposition for which it was cited by the trial judge.

[287] Finally, British Columbia argues that trading rights must be species-specific, citing *Gladstone*, wherein a right to trade was in "herring spawn on kelp". I do not read *Gladstone* as standing for the proposition that a right to trade must always be species-specific. In my view, the characterization of the right will be dependent on the pleadings and the evidence. For example, in *Ahousaht Indian Band and Nation v. Canada (Attorney General)*, 2011 BCCA 237 (remanded by the Supreme Court of Canada for reconsideration, [2011] S.C.C.A. No. 353), this Court upheld a finding of a right to "fish and to sell fish", except insofar as it related to geoducks. Similarly, in *Powley* the trial judge characterized the accused's right as a right to hunt for food. The Supreme Court of Canada agreed, affirming at para. 16 that "[t]he relevant right is not to hunt moose but to hunt for food in the designated territory" (emphasis in original).

[288] In this case, the judge's finding of a general right to trade in skins and pelts taken from the Claim Area was supported by evidence. I would not interfere with his declaration.

D. *Prima facie* Infringement

[289] I now turn to the question of whether the judge erred in finding that the Aboriginal rights of the Tsilhqot'in were infringed by British Columbia's conduct in respect of forestry management in the Claim Area.

[290] The first step in the infringement analysis is that of characterizing the Aboriginal right at issue (see *Van der Peet* and *Lax Kw'alaams*). The trial judge characterized the rights at para. 1041 of his judgment:

- a) a Tsilhqot'in Aboriginal right to hunt and trap birds and animals throughout the Claim Area for the purposes of securing animals for work and transportation, food, clothing, shelter, mats, blankets and crafts, as well as for spiritual, ceremonial, and cultural uses; and
- b) a Tsilhqot'in Aboriginal right to trade in skins and pelts as a means of securing a moderate livelihood.

[291] Once the right has been characterized, the court must determine whether the claimant has demonstrated a *prima facie* infringement of the right. In *Sparrow*, at 1111, the Court equated a *prima facie* infringement with “interference” with an Aboriginal right. At 1112-1113, it elaborated on the concept of *prima facie* infringement in the context of the fishing rights at issue in the case:

To determine whether the fishing rights have been interfered with such as to constitute a *prima facie* infringement of s. 35(1), certain questions must be asked. First, is the limitation unreasonable? Second, does the regulation impose undue hardship? Third, does the regulation deny to the holders of the right their preferred means of exercising that right? The onus of proving a *prima facie* infringement lies on the individual or group challenging the legislation. In relation to the facts of this appeal, the regulation would be found to be a *prima facie* interference if it were found to be an adverse restriction on the Musqueam exercise of their right to fish for food. We wish to note here that the issue does not merely require looking at whether the fish catch has been reduced below that needed for the reasonable food and ceremonial needs of the Musqueam Indians. Rather the test involves asking whether either the purpose or the effect of the restriction on net length unnecessarily infringes the interests protected by the fishing right. If, for example, the Musqueam were forced to spend undue time and money per fish caught or if the net length reduction resulted in a hardship to the Musqueam in catching fish, then the first branch of the s. 35(1) analysis would be met.

[292] In *Gladstone* at para. 43, the Court explained a seeming contradiction in the discussion in *Sparrow*:

[43] The *Sparrow* test for infringement might seem, at first glance, to be internally contradictory. On the one hand, the test states that the appellants need simply show that there has been a *prima facie* interference with their rights in order to demonstrate that those rights have been infringed, suggesting thereby that any meaningful diminution of the appellants' rights will constitute an infringement for the purpose of this analysis. On the other

hand, the questions the test directs courts to answer in determining whether an infringement has taken place incorporate ideas such as unreasonableness and “undue” hardship, ideas which suggest that something more than meaningful diminution is required to demonstrate infringement. This internal contradiction is, however, more apparent than real. The questions asked by the Court in *Sparrow* do not define the concept of *prima facie* infringement; they only point to factors which will indicate that such an infringement has taken place. Simply because one of those questions is answered in the negative will not prohibit a finding by a court that a *prima facie* infringement has taken place; it will just be one factor for a court to consider in its determination of whether there has been a *prima facie* infringement.

[293] The idea that the onus of showing interference is not an onerous one was confirmed in *R. v. Morris*, 2006 SCC 59, [2006] 2 S.C.R. 915. In that case, the Court considered the application of the *Sparrow* test in the context of a treaty right to hunt. After quoting para. 43 from *Gladstone*, the majority said:

[53] Essentially, therefore, a *prima facie* infringement requires a “meaningful diminution” of a treaty right. This includes anything but an insignificant interference with that right.

[294] The issues in the case before us are much broader than those that were considered in *Sparrow*, *Gladstone*, and *Morris*. Each of those cases concerned a single regulation or set of regulations, and a specific prosecution for its violation. In contrast, this case concerns a broad Aboriginal right to hunt and trap over a large area, and a complex matrix of primary and secondary forestry legislation, government policies, grants of forest tenure, and issuance of licences and permits. Nonetheless, the basic framework for analysis established in *Sparrow* and *Gladstone* is applicable. The Tsilhqot’in are able to establish a *prima facie* infringement of their rights to hunt and trap simply by showing that government action has interfered with these rights in more than an insignificant or trivial way.

[295] This low threshold is entirely appropriate. If, as I have suggested, Aboriginal rights short of title are the primary means by which the traditional cultures and activities of First Nations (and particularly those that are nomadic or semi-nomadic) are protected, it is essential that those rights be taken seriously. Any interference with those rights (apart from trivial ones) demands legal protection. Such infringements must be justified.

[296] The judge commenced his discussion of infringement with an outline of the plaintiff's position:

[1269] The plaintiff says that forest harvesting activities negatively impact a number of different species, affecting wildlife diversity as well as populations of individual species.

[1270] In addition, the plaintiff says forest harvesting leads to the destruction of habitat. In the plaintiff's submission, habitat must be preserved to ensure a harvestable surplus of all species, sufficient to meet the needs of Tsilhqot'in people over time. He says Crown activities are an infringement of Tsilhqot'in rights if they are likely to reduce the habitat available for any particular species to below the level where the necessary harvestable surplus is available.

[297] He began his application of the *Sparrow* test with the following paragraph outlining his findings:

[1276] On the whole of the evidence, I conclude that forest harvesting activities, which include logging and all other silviculture practices, reduce the number of different wildlife species (diversity) and the number of individuals within each species (abundance) in a landscape. Forest harvesting depletes species diversity and abundance through: 1) direct mortality; 2) the imposition of roads; and, 3) the destruction of habitat.

[298] British Columbia contends that the trial judge, in outlining the plaintiff's position and in his analysis at para. 1276, effectively changed the nature of the Aboriginal rights in issue. In its factum, it says:

Rather than focus on any alleged specific and discrete interference with hunting activities, or unmet hunting needs, Vickers J. instead transformed the claimed activity right into a right to an undiminished diversity and number of each species of wildlife whether actively hunted or not.

[299] I do not agree with that contention. The judge fully understood that the Aboriginal right to hunt at issue in this case was not a property right to a resource. He said:

[1162] In *Sappier; Gray* the [Supreme Court of Canada] emphasized that a claim for an Aboriginal right must be founded upon an actual practice, custom or tradition of the particular group claiming the right. The right cannot be characterized as a right to a particular resource: see *Sappier; Gray*, at para. 21.

[300] Further, he made it clear that he understood the *Sparrow* test, and that that was the test he was applying in determining whether Aboriginal rights had been infringed:

[1274] This case differs from *Sparrow* in that it does not involve a regulatory restriction on a harvesting right. Here, the issue is whether forest harvesting activities and forest silviculture activities are or might be an infringement of Tsilhqot'in Aboriginal hunting and trapping rights in the Claim Area.

[1275] Thus, in this case, the language in *Sparrow* leads to an inquiry as to whether such activities would impose an undue hardship on Tsilhqot'in people and whether the activities would deprive them of their preferred means or way of exercising their rights to hunt, trap and trade.

[301] The judge went on to outline his findings that forestry activities that were proposed for the Claim Area would result in a loss of habitat and reduce the number of species and their abundance. At paras. 1277-1287, the judge discusses the negative impacts of various forest practices on wildlife diversity: road construction; thinning and other silviculture practices; and removal of coarse, woody debris on the forest floor. He also discussed the effects of forestry activities on the land, including soil compaction, changes to hydrology, and the resulting slow regeneration of forests. At para. 1288, he concluded:

[1288] Forest harvesting activities would injuriously affect the Tsilhqot'in right to hunt and trap in the Claim Area. The repercussions with respect to wildlife diversity and destruction of habitat are an unreasonable limitation on that right. For these reasons, I conclude that forest harvesting activities are a *prima facie* infringement on Tsilhqot'in hunting and trapping rights and thus demand justification.

[302] British Columbia says that the trial judge ignored certain evidence showing that forestry activities may actually result in an increase in ungulate populations, and notes that current Tsilhqot'in hunting practices focus on ungulates rather than on fur-bearing animals due to the depressed market for furs.

[303] The weighing of evidence was a matter for the trial judge. His conclusion that the overall effects of forestry on hunting would be negative was, in my view, open to him on the evidence.

[304] I acknowledge British Columbia's contention that the judge failed to focus attention on specific and discrete interference with hunting activities. The judge's approach was to examine proposed forestry activities in the Claim Area at a fairly high level, and to consider whether that activity would have large-scale effects on hunting and trapping rights.

[305] The judge's order stated that "[f]orestry activities, which include logging and all other silvicultural practices" unjustifiably infringed Aboriginal rights. I do not read this declaration as an indication that the judge's concern was specific to logging or to silvicultural practices. Rather, the order was meant to be inclusive – it was the totality of forest management that infringed rights, not specific activities or practices.

[306] The declaration granted by the trial judge is not one that provides detailed guidance as to the particular conduct of British Columbia that was improper, nor does it state the specific manners in which Tsilhqot'in hunting and trapping rights have been infringed.

[307] As I have already indicated in my discussion of *Cheslatta*, declaratory relief is discretionary, and whether or not it should be granted is ordinarily a matter for the trial judge. I doubt that the trial judge's high-level approach to the infringement in this case should be the norm in future. I do think, however, that there was good reason for him to adopt that approach in this case, and I would not interfere with his decision.

[308] As was noted at para. 39 of *Lax Kw'alaams*, the Supreme Court of Canada has developed the law of Aboriginal rights in a series of regulatory prosecutions: *Sparrow*; *Van der Peet*; *Gladstone*; *N.T.C. Smokehouse*; and *Marshall*; *Bernard*. Such cases facilitated the infringement analysis, because they focused on particular regulatory provisions, or on limited sets of provisions comprising a regulatory scheme.

[309] The Supreme Court of Canada has recognized, however, that the procedural limitations of regulatory prosecutions make such prosecutions awkward vehicles for

the determination of Aboriginal rights. Civil actions seeking declarations are to be preferred, because they allow for the assembly of a comprehensive evidentiary record (see *Lax Kw'alaams* at para. 11). While regulatory prosecutions examine Aboriginal rights in the context of a narrow factual inquiry, civil actions for declarations are able to examine the bigger picture. They eliminate the need for a piecemeal analysis of rights that is dictated by regulatory prosecutions.

[310] Nonetheless, actions for declarations present their own challenges. They are expensive and can be unwieldy. They can take years to be resolved.

[311] The granting of injunctive relief early in this litigation, and the vast changes in forestry regulation and practices and in the economics of forestry over the long period during which the case has been before the courts has made concentration on specific details of infringement of little import.

[312] This was very much a test case. In addition to being an effort to resolve particular issues for the Tsilhqot'in and Xeni Gwet'in, it was an attempt to clarify the law of Aboriginal title and Aboriginal rights in British Columbia. The trial judge's declaration is a recognition of this fact. The unique circumstances of this case justified the judge's exercise of discretion in favour of granting a declaration that may not have immediate, specific, and concrete application on the ground.

[313] In terms of the judge's analysis, I am not persuaded that he erred in finding a *prima facie* infringement. As the plaintiff points out, extensive and substantial clear-cut harvesting through the Claim Area was an inevitable result of the various tenures and permits that were granted and the administration of forestry in the area. The judge had ample evidence for his conclusion that extensive habitat damage was the inevitable result of the province's administration of the forest in Tachelach'ed and the Trapline Territory. For example, the plaintiff points to evidence that 90% of the Brittany Triangle Special Resource Development Zone lies within the Claim Area, and that 86% of the productive area of the Zone would have to be cut in order to meet targets. While British Columbia points out that the cutting would occur over the

course of many years, the fact remains that, on the judge's findings, such cutting would have had a serious detrimental effect on wildlife population and diversity.

[314] The judge found that the diminution in wildlife population and diversity would affect the hunting rights of the Tsilhqot'in. British Columbia is critical of his analysis because it failed to quantitatively relate the projected diminution to the actual hunting activities of the Tsilhqot'in. It says that the judge failed to find any specific detrimental impact on hunting.

[315] In view of the judge's findings with respect to habitat destruction and its effects on wildlife, it was open to him to make the general finding that these hunting rights would be detrimentally affected. Indeed, given the fairly high level of planning that had taken place, it would not have been possible to make definitive findings about specific locations or specific species. It was enough, in my view, for the judge to come to a finding that detrimental effects on hunting rights would inevitably result from the forestry activities authorized and planned by British Columbia.

[316] In saying this, I recognize that very little logging actually took place in the Claim Area. As a result of the litigation, most activities were stopped. I do not think this fact precludes a finding that the Aboriginal rights of the Tsilhqot'in were infringed. The plaintiff did not have to wait until the traditional territory of the Tsilhqot'in was negatively impacted before seeking a declaration. The very acts of planning and authorizing logging infringed the Aboriginal rights of the Tsilhqot'in, since the planning and authorization were incompatible with those rights.

[317] I have already noted that this case was, in many respects, a test case, and that the trial judge's high-level approach to the issue of infringement is unlikely to be an appropriate template for analysis in future cases. Outside of the test case scenario, I would think that courts will be reticent to grant declarations of the sort issued here; it is more likely that Aboriginal rights declarations will be granted when there is a practical aspect to them, either in vindicating specific Aboriginal practices, or in invalidating particular exercises of governmental authority.

[318] I note, as well, that the judge's declaration in this case was founded on a comprehensive evidentiary record that allowed him to consider high-level effects of forest practices on the rights of the Tsilhqot'in. The case should not be seen as authority for the proposition that any industrial activity that affects the diversity of species or abundance of wildlife will necessarily be inimical to an Aboriginal right to hunt or trap. Each case must be analyzed in terms of the nature and scope of the Aboriginal right and of the conduct that allegedly infringes it.

[319] One final issue that should be mentioned is British Columbia's contention that the judge wrongly placed upon it the burden of proving that its actions would not infringe Aboriginal rights. British Columbia points to the following statement by the trial judge:

[1103] What is clear from the evidence of Dr. [Hamish] Kimmins [a professional forester and expert in forest ecology called as a witness for British Columbia] is that "sustainability is multifaceted, involving a complex of physical, biological, social, economic, institutional and cultural dimensions: Kimmins report at p. 41. Given the findings of Tsilhqot'in Aboriginal rights resulting from these proceedings, there will be a need for British Columbia to develop a new model of sustainability in the Claim Area. The burden is on British Columbia to prove that any future harvesting of timber will not infringe Tsilhqot'in Aboriginal rights. That burden will require close consultation with Tsilhqot'in people, taking into account all of the factors that bear on their Aboriginal rights, as well as the interests of the broader British Columbia community.

[320] I do not read para. 1103 as reversing the onus. The judge clearly articulated the correct approach to Aboriginal rights earlier in his judgment:

[1058] A person claiming an Aboriginal right bears the onus of establishing that the government's conduct amounts to a *prima facie* infringement or denial of that right. Once this onus is discharged, the burden then shifts to the Crown to demonstrate that its conduct was justified. Proof of infringement of an Aboriginal right protected by s. 35(1) triggers the Crown's burden to justify its conduct.

[321] In my view, the judge, in using the word "infringe" in para. 1103 was referring to an "unjustified infringement" rather than to a "*prima facie* infringement". His concern was with the justification analysis rather than the *prima facie* infringement analysis.

[322] In summary, the judge understood and applied the *Sparrow* test for *prima facie* infringement of Aboriginal rights. The test is satisfied when government action interferes with a proven Aboriginal right in more than a trivial way. Here, government policy and high-level planning, combined with the specific forest tenures, permits and licences granted by British Columbia, led the trial judge to the conclusion that there would be an inevitable detrimental effect on habitat and wildlife populations in the Claim Area. He further found that this detrimental effect would interfere with proven Tsilhqot'in Aboriginal rights to hunt and trap. These findings were open to the trial judge, and this Court cannot interfere with them. Further, the declaration granted by the trial judge, while broad and of limited immediate practical utility, was justifiable given the unique nature of the case before him.

E. Justification

[323] The final issue to be addressed is whether the judge erred in finding that the *prima facie* infringement of Aboriginal rights was not justified by British Columbia.

[324] The test for justification was enunciated in *Sparrow*. A convenient summary of the test was provided in *Gladstone*:

[54] In *Sparrow*, Dickson C.J. and La Forest J. articulated a two-part test for determining whether government actions infringing aboriginal rights can be justified. First, the government must demonstrate that it was acting pursuant to a valid legislative objective

Second, the government must demonstrate that its actions are consistent with the fiduciary duty of the government towards aboriginal peoples....

[55] Dickson C.J. and La Forest J. also held at p. 1119 that the Crown's fiduciary duty to aboriginal peoples would require the Court to ask, at the justification stage, such further questions as:

... whether there has been as little infringement as possible in order to effect the desired result; whether, in a situation of expropriation, fair compensation is available; and, whether the aboriginal group in question has been consulted with respect to the conservation measures being implemented....

We would not wish to set out an exhaustive list of the factors to be considered in the assessment of justification. Suffice it to say that recognition and affirmation requires sensitivity to and respect for the rights of aboriginal peoples on behalf of the government, courts and indeed all Canadians.

[325] The trial judge in this case recognized that economic activities, including forestry, could, in appropriate circumstances, constitute valid legislative objectives:

[1085] There is a range of legislative objectives that may justify infringement of Aboriginal title. These objectives arise from the need to reconcile the fact that Aboriginal societies exist within and are part of a broader social, political and economic community: *Delgamuukw* (S.C.C.), at para. 161; *Gladstone*, at para. 73. The development of agriculture, forestry, mining and hydro-electric power, the general economic development of the interior of British Columbia, protection of the environment or endangered species, the building of infrastructure and the settlement of foreign populations to support these aims, are the kinds of objectives that may justify the infringement of Aboriginal title. Whether a particular measure or government act can be explained by reference to one of those objectives is ultimately a question of fact that must be examined on a case-by-case basis: *Delgamuukw* (S.C.C.), at para. 165.

[326] While the quoted passage was part of the judge's analysis of justification for infringement of Aboriginal title rather than Aboriginal hunting and trapping rights, the same considerations were, on my reading of his judgment, incorporated into his later analysis in relation to those rights.

[327] The judge continued, indicating that the justification analysis should be carried out not on a general basis, but on an examination of the specific infringements under consideration:

[1089] There can be no doubt that forestry falls within the range of government activities that might justify infringement of Aboriginal title. Generally speaking, the development of forest resources, and the protection of the environment and wildlife are all valid government objectives that may justify infringement of Aboriginal title and other Aboriginal rights.

[1090] However, the analysis cannot end there. In this case I am concerned not with the general, but the specific. Can the Province justify its forestry activities in the Claim Area where such activities infringe Tsilhqot'in Aboriginal title? British Columbia must prove that it has a compelling and substantial legislative objective for the forestry practices, not just generally in British Columbia, but in the Claim Area in particular.

[328] British Columbia takes issue with the judge's approach, arguing that "[t]he question is not whether each and every infringing action meets the compelling and substantial test, but whether the objective of the legislative scheme that authorizes the action is compelling and substantial".

[329] I agree with the approach taken by the trial judge, and not that advocated for by British Columbia. The justification analysis must, in my view, depend on the nature of the infringement alleged.

[330] Where it is alleged that a legislative provision infringes Aboriginal rights, the subject of justification must be the legislative provision. In such cases, the first part of the *Sparrow* test for justification is concerned with whether there is a “valid legislative objective”. That was the issue in cases like *Sparrow*, *Van der Peet*, and *Gladstone*. Where the alleged infringement is governmental conduct other than legislation, however, the question becomes one of whether the *governmental* objective underlying the infringement is a justifiable one.

[331] In this case, the judge found that there was no valid governmental objective for logging in the Claim Area. The judge identified the objectives postulated as justifying the authorization of logging as follows:

[1101] British Columbia appears to argue that the compelling and substantial objectives behind the alleged infringements include the economic benefits that can be realized from logging in the Claim Area, and a need to salvage forests affected by mountain pine beetle for sound silviculture reasons.

[332] He found that neither of these objectives was made out in respect of forestry activities in the Claim Area:

[1107] I conclude that British Columbia has failed to establish that it has a compelling and substantial legislative objective for forestry activities in the Claim Area for two reasons. First, as was the case with sports fishing in *Adams*, there is no evidence that logging in the Claim Area is economically viable. The Claim Area has been excluded from the timber harvesting land base for an extended period of time. Even the Chief Forester acknowledged its more recent inclusion was questionable. The impact of forestry activities on the plaintiff's Aboriginal title is disproportionate to the economic benefits that would accrue to British Columbia or Canadian society generally.

[1108] Second, I conclude there is no compelling evidence that it is or was necessary to log the Claim Area to deter the spread of the 1980's mountain pine beetle infestation. Rather, the evidence shows that none of the proposed harvesting is directed at stopping or limiting the mountain pine beetle outbreak.

[333] On this appeal, British Columbia denies that battling the pine beetle or salvaging pine beetle ravaged forests was put forward as a justification in this case. If British Columbia is correct in that regard, then the judge's rejection of that basis of justification was unnecessary, but would not disclose an error in his analysis.

[334] The judge's analysis of the economic viability of forestry in the Claim Area would seem to be dispositive of any justification argument. British Columbia argues that the judge's conclusions with respect to economic viability are unreasonable, because the Crown only authorized private companies to undertake logging. It says that "[i]f logging within the Claim Area is not economically viable then there is no reason to fear that any logging will occur".

[335] I am not sure it is true that logging that is not economically viable will not be undertaken. Some provisions of provincial forest legislation and tenures require specific levels of logging to be undertaken in order for a tenure holder to retain its rights. Quite apart from this, however, it seems to me that the judge's determination did not depend on logging actually being unprofitable. Rather, his conclusion was based on the economic value of logging compared to the detrimental effects that it would have on Tsilhqot'in Aboriginal rights. The judge's comments at paras. 1290 and 1291 of the judgment underline the nature of his assessment:

[1290] I have already noted that a legislative scheme that manages solely for timber with all other values as a constraint on that objective can be expected to raise severe challenges when called upon to strike a balance between Aboriginal rights and the economic interests of the larger society.

[1291] Recognizing Aboriginal rights to hunt and trap over an area means wildlife and habitat must be managed to ensure a continuation of those rights. Section 35(1) of the *Constitution Act, 1982* demands that the protection of those rights is a paramount objective. The declaration of Aboriginal rights is not intended to be hollow or short lived. Tsilhqot'in Aboriginal rights grew out of the pre-contact society of Tsilhqot'in people. This historical right is intended to survive for the benefit of future generations of Tsilhqot'in people.

[336] I am not persuaded that the judge erred in his analysis of the importance of the governmental objective in this case. Accordingly, the judge's finding that the infringement of Tsilhqot'in hunting and trapping rights was not justified must stand.

[337] It is not, in the circumstances, necessary to engage in any detailed analysis of whether the impugned governmental conduct was consistent with fiduciary obligations or with the honour of the Crown. Given the potential for certain statements in the trial judgment to be misconstrued, however, I will address the issue of consultation briefly.

[338] The judge concluded his discussion of justification as follows:

[1294] ... As I mentioned earlier, the Province did engage in consultation with the Tsilhqot'in people. However, this consultation did not acknowledge Tsilhqot'in Aboriginal rights. Therefore, it could not and did not justify the infringements of those rights.

[339] British Columbia argues that the trial judge was in error in suggesting that the Crown must acknowledge unproven Aboriginal rights as a prerequisite to meaningful consultation.

[340] It is clear that the Crown need not accept the validity of asserted, but unproven, claims to Aboriginal rights as a prerequisite to meaningful consultation. Indeed, it is the uncertainty surrounding such rights that forms the basis for the duty to consult that was established in *Haida Nation*. Read in context, however, I do not think that the judge meant that the Crown is required to accept the validity of unproven rights claims as a condition precedent to meaningful consultation. Rather, as the plaintiff argues, all that is required is that the Crown treat the claim seriously by making a preliminary evaluation of its strength, and entering into consultations commensurate with that evaluation.

[341] The judge's criticism in this case was not that the government failed to accept the validity of Tsilhqot'in claims prior to consultation, but rather that it failed to gather important information before choosing its course of conduct.

[342] Given the judge's finding that the governmental objective in this case did not justify the Crown's authorization of forestry development in the Claim Area, it is not necessary to evaluate the judge's conclusion that the government's position in consultations was inconsistent with the honour of the Crown. There is little to be

gained from such an analysis, given that the law and practice surrounding consultation has advanced significantly since the consultations undertaken in this case.

[343] The judge determined that there was no governmental objective that was sufficiently weighty to justify the infringement of Tsilhqot'in Aboriginal rights. I would not interfere with that determination.

XII. Conclusion

[344] In the result, I would come to the following conclusions with respect to the various issues brought forward in these appeals:

1. The plaintiff is correct in his assertion that the claim for Aboriginal title was not an "all or nothing claim" to the Claim Area.
2. The plaintiff's claim was a "territorial" one rather than a claim to a definite tract of land that was actually occupied by the Tsilhqot'in at the time of assertion of sovereignty.
3. The "territorial" basis for the claim did not form a viable foundation for a title claim. Accordingly, the claim for title was not made out.
4. This case was not about Aboriginal title to definite tracts of land within the Claim Area. Given the state of the law and the nature of this test case, the plaintiff cannot be faulted for failing to include site-specific claims in this litigation. Accordingly, the dismissal of the Aboriginal title claim cannot prejudice future claims by the Tsilhqot'in to title to specific areas within the Claim Area on the basis that they constitute definite tracts of land which were actually occupied by the Tsilhqot'in at the time Crown sovereignty was asserted.
5. The judge made no error in allowing the plaintiff to claim Aboriginal rights on behalf of the Tsilhqot'in rather than on behalf of the Xeni Gwet'in.

6. The judge made no error in finding that Aboriginal rights resided with the Tsilhqot'in Nation rather than the Xeni Gwet'in First Nations Government.

7. The judge made no error in finding a Tsilhqot'in right to capture and use wild horses in the Claim Area.

8. The judge made no error in allowing the plaintiff to assert that Tsilhqot'in hunting and trapping rights extended to the earning of a moderate livelihood, nor did he err in finding those rights to have been proven.

9. The judge did not hold that the Tsilhqot'in have a right to a harvestable surplus of all wildlife species in the Claim Area. Rather, he found that they have hunting and trapping rights in the Claim Area, and that the Crown had, in its management of forestry in the Claim Area, infringed those rights.

10. The judge, in considering whether there had been a *prima facie* infringement of the Aboriginal rights of the Tsilhqot'in, properly placed the burden of proof on the plaintiff. He did not, as alleged by British Columbia, "reverse the burden of proof".

11. The judge did not hold that the Crown must accept Aboriginal rights claims as valid in order to properly engage in consultation. Rather, his reasons should be interpreted as requiring such claims to be treated seriously in accordance with the Supreme Court of Canada's ruling in *Haida Nation*.

[345] In the result, while I would analyze certain aspects of this case differently than did the trial judge, I would uphold his order in its entirety, and would dismiss all three appeals.

[346] This has been a very complex appeal, and I would like to express my thanks to all of the counsel who participated in it, including counsel for the various intervenors. They succeeded in presenting a very complex case in a comprehensible and comprehensive fashion.

INTRODUCTION

Context

The Canadian Environmental Assessment Act, 2012 (CEAA 2012) aims to protect components of the environment that are within federal legislative authority from significant adverse environmental effects caused by a project, including cumulative environmental effects.

In addition, CEAA 2012 ensures that a project is considered in a careful and precautionary manner to avoid significant adverse environmental effects, when the exercise of a power or performance of a duty or function by a federal authority under any Act of Parliament is required for the project to be carried out.

Throughout this guidance, the term “environmental effects” refers to environmental effects in areas of federal jurisdiction as described in section 5 of CEAA 2012, which are:

- effects on fish and fish habitat, shellfish and their habitat, crustaceans and their habitat, marine animals and their habitat, marine plants, and migratory birds;
- effects on federal lands;
- effects that cross provincial or international boundaries;
- effects of any changes to the environment that affect Aboriginal peoples, such as their use of lands and resources for traditional purposes; and
- changes to the environment that might result from federal decisions as well as any associated effects on health, socio-economic conditions, matters of historical, archaeological, paleontological or architectural interest, or other matters of physical or cultural heritage.

Please refer to Basics of Environmental Assessment and the Practitioners Glossary for Environmental Assessment of Designated Projects under the Canadian Environmental Assessment Act, 2012 for additional information on the environmental assessment (EA) process and key terms under CEAA 2012.

Purpose

This technical guidance provides methodological options and considerations to support the implementation of CEAA 2012 and the approach outlined in the Operational Policy Statement on Determining Whether a Designated Project is Likely to Cause Significant Adverse Environmental Effects under CEAA 2012 (OPS), in a way that achieves high quality EA.

The OPS provides core guidance on CEAA 2012 requirements related to the determination of significance for a designated project to ensure that these requirements are met in all project EAs.

This document informs the preparation of Canadian Environmental Assessment Agency (the Agency) documents such as the Environmental Impact Statement (EIS) Guidelines and the EA report. It is intended to support proponents of designated projects in the preparation of an EIS, in conjunction with other Agency policy and guidance instruments. It also provides guidance to Agency employees throughout the EA of a designated project in their interactions with those

engaged in federal EAs, such as proponents, review panel members, federal authorities, other jurisdictions, Indigenous groups and the public.

This Technical Guidance is based on a collection of examples from past EAs; it is not exhaustive. This document will be reviewed periodically to integrate updated information on the best available approaches to determination of significance.

Application

This technical guidance is intended for use in the EA of a designated project when the Agency is the responsible authority or supports an EA conducted by a review panel. It should be used in conjunction with other Agency policy and guidance instruments. For an EA by a review panel, additional guidance and direction may be provided in the Terms of Reference and/or Joint Review Panel Agreement.

When the National Energy Board is the responsible authority, direction and guidance can be found in their filing manual. Applicants seeking guidance on nuclear projects should refer to the Canadian Nuclear Safety Commission's regulatory framework.

The term "project" refers to designated projects under CEAA 2012 for which the Agency is the responsible authority, and "project EA" refers to the EA of designated projects conducted under CEAA 2012 for which the Agency is the responsible authority. Environmental effects refer to those identified in section 5 of CEAA 2012, including cumulative environmental effects.

This guidance replaces the Agency's 1994 *Reference Guide: Determining Whether a Project is Likely to Cause Significant Adverse Environmental Effects* and is for application under CEAA 2012. The 1994 reference guide will continue to apply for project EAs initiated under the former *Canadian Environmental Assessment Act* and are being completed under the transitional provisions of CEAA 2012.

For further guidance on the assessment of cumulative environmental effects, please see the Agency's *Operational Policy Statement Assessing Cumulative Environmental Effects under the Canadian Environmental Assessment Act, 2012* and *Technical Guidance on Assessing Cumulative Environmental Effects under the Canadian Environmental Assessment Act, 2012*.

SUMMARY OF THE CORE GUIDANCE

Determining whether a project is likely to cause significant adverse environmental effects is central to the concept and practice of EA under CEAA 2012. Whatever adverse environmental effects are predicted and whatever methods are used to assess them, the focus of an EA under CEAA 2012 is always whether the project is likely to cause significant adverse environmental effects, after taking into account the implementation of mitigation measures.

The approach for determining significance is nested within the EA framework (see Annex 1 of the OPS).

The OPS provides the following approach for determining whether a project is **likely** to cause **significant adverse** environmental effects:

- Stage 1: Determining whether the environmental effects are adverse
- Stage 2: Determining whether the adverse environmental effects are significant
- Stage 3: Determining whether the significant adverse environmental effects are likely

The OPS provides core guidance on the three stages as well as on information requirements, documentation, and decision-making. Notably, conclusions on the significance and likelihood of environmental effects by the Agency or the review panel are presented in the EA report (or review panel report).

The OPS describes the following key criteria to be used for stage 2: determining if a residual adverse environmental effect is significant:

- Ecological and Social Context,
 - This criterion should be taken into account when considering the key criteria below in relation to a particular valued component (VC), as the context may help better characterize whether adverse effects are significant (see Technical Concepts and Considerations section);
- Magnitude;
- Geographic Extent;
- Timing;
- Frequency;
- Duration; and
- Reversibility.

Example 1: Ecological and Social Context

A proposed project would affect a burial site and a cremation site identified by an Indigenous group. The sites would be buried under mine tailings. The Indigenous group has stated that the site is of great cultural and historical importance to them. The effects are therefore deemed to be of high magnitude and permanent.

TECHNICAL CONCEPTS AND CONSIDERATIONS

The following key concepts inform the determination of significance under CEAA 2012:

- Valued components (VCs) refer to environmental features that may be affected by a project and that have been identified to be of concern by the proponent, government agencies, Indigenous peoples or the public. The value of a component not only relates to its role in the ecosystem, but also to the value people place on it. For example, it may have been identified as having scientific, social, cultural, economic, historical, archaeological or aesthetic importance. For the purposes of CEAA 2012, VCs are selected in relation to section 5 of CEAA 2012 and taking into account direction provided by the responsible authority, or in the case of an EA by review panel, by the Agency or the Minister of the Environment (the Minister).
- Mitigation measures are for the elimination, reduction or control of the adverse environmental effects of a project, and include restitution for any damage to the environment caused by those effects through replacement, restoration, compensation or any other means. Under CEAA 2012, these measures must also be technically and economically feasible.
- A residual environmental effect is an environmental effect of a project that remains, or is predicted to remain, after mitigation measures have been implemented. The determination of whether a project is likely to cause significant adverse environmental effects relates to the residual environmental effects.

Key technical considerations in determining significance include the following:

- Information and documentation;
- Addressing cumulative effects;
- Using benchmarks;
- Addressing likelihood; and
- Addressing uncertainty.

1. Information and Documentation

The Agency issues EIS Guidelines to proponents, which specify the nature, scope and extent of the information required for the preparation of the EIS. Following the review of the EIS, the Agency, the review panel or the Minister may also issue information requests to a proponent seeking additional clarification and information if necessary.

A proponent, the Agency or a review panel may make a determination of significance in the course of a project EA. Such determinations are separate from, but may inform, the decisions made by the Minister under subsection 52(1) of *CEAA 2012*.

Community knowledge and Aboriginal traditional knowledge can contribute to the determination of significance. The public and Indigenous groups can provide new information, offer a different interpretation of the facts or question the conclusions put forward by the proponent or the Agency.

The EIS will identify and define the criteria used to assign significance ratings to any predicted adverse effects and justify the methods selected to determine significance. It will contain clear and sufficient information to enable the Agency, technical and regulatory agencies, Indigenous

groups and the public to review the proponent's analysis of the significance of effects. If any deficiencies are identified by the Agency, the proponent will be directed to address them.

The degree of uncertainty in outcomes of the EA should be described in the documents produced throughout the project EA as appropriate. The sources and nature of uncertainty should be clearly described to provide the basis for the stated level of confidence as well as how any identified uncertainty may affect the steps in the methodologies discussed in this document.

Example 2: Information from Indigenous Groups

Construction of a proposed project would eliminate access to sites used by a nearby Indigenous group to gather medicinal plants for traditional purposes. The plants are present at other sites within the Regional Study Area. During the EA, members of the Indigenous group noted that alternative plant sites would not be suitable because the community elders could not easily access them. The original sites were important for maintaining the practice of plant gathering for medicine and for the cultural transmission of knowledge of these sites and plants to younger members of the Indigenous group. Through the EA process, the consideration of significance was greatly informed by engagement with the affected Indigenous group.

2. Addressing cumulative effects

Determinations of significance must be made for both project-specific effects, and for any cumulative environmental effects. Both determinations of significance, documented in the EA report, will be taken into account in the Minister's decisions under subsection 52(1) of CEEA 2012.

The assessment of both project-specific and cumulative environmental effects includes the consideration of the implementation of mitigation measures. This is done prior to determining the significance of the environmental effects. Any uncertainty regarding the predicted effectiveness of proposed mitigation measures should be considered in the assessment.

The cumulative environmental effects assessment should consider all VCs for which residual environmental effects are predicted, regardless of whether those residual environmental effects are predicted to be significant.

3. Using benchmarks

Benchmarks help define what would be considered a significant adverse environmental effect on a VC. In some cases, it may be possible to identify established or generally accepted benchmarks. These may be in the form of standards, guidelines, targets, or objectives. Benchmarks are used to:

- aid in understanding whether and how much a VC's state (health, status, or condition) is affected by specific or multiple activities and stressors (Stage 1);
- provide information on potential effects levels for a VC (i.e. thresholds for negative consequences of a stressor on a VC), which can assist in the application of the criteria set for significance (Stage 2); and

- provide an indication of which VCs are of regional concern (i.e. if a benchmark for a VC has been established at a regional level), which may assist with all stages.

4. Addressing likelihood

Likelihood is defined as the probability that an event or incident, such as a significant adverse environmental effect, will occur as a result of a project. The likelihood of the predicted significant adverse environmental effects should be supported with sufficient detail, using an appropriate quantitative or qualitative approach, to understand and substantiate how conclusions were reached.

Different methodologies, such as professional judgment, reasoned argumentation, collaboration and risk assessment, (see Methodologies section) may be used to determine the likelihood of a predicted significant adverse environmental effect. The selection of the methodology used for assessing likelihood is linked, among other things, to measurability of the effect, which in turn is influenced by the nature of the VC and the nature of the environmental effect.

Where possible, practitioners should use a quantitative assessment to characterize the likelihood of occurrence. Any assumptions and limitations should be described and be transparent.

Where quantitative assessment is not possible, the probability of occurrence is often determined based on a qualitative approach using terms such as “low”, “moderate” and “high” probability or “unlikely”, “probable” and “very likely”.

It is important that qualitative terms be defined (e.g. using a defined percentage), applied in a transparent manner and supported by explanation and discussion to avoid variability in different interpretation by reviewers.

Uncertainty often influences the prediction of the likelihood of a significant adverse environmental effect.

Example 3: Likelihood and Uncertainty

Stage 3: Determining whether the significant adverse environmental effects are likely

A proposed project could affect a herd of woodland caribou. An Indigenous group has stated that this herd is critically important to them as a source of food and for a variety of products such as snowshoe panels (current use of lands and resources for traditional purposes).

Uncertainties exist in the conclusions related to:

- the critical ecological pathways to the effects on current use;
- the effectiveness of proposed mitigation measures; and
- the interaction of various effects.

Given these scientific uncertainties and the importance placed on the availability of woodland caribou by the affected Indigenous group, a conservative approach is used. It is assumed to be 100% likely that the hunting success rate of caribou by the Indigenous groups will be significantly affected. Therefore a significant adverse effect to the current use of lands and resources for traditional purposes by the Indigenous group is likely.

5. Addressing uncertainty

Scientific uncertainty associated with information and methods may be introduced at many points in the EA process, including, for example, in the evaluation of the accuracy and availability of baseline information, accuracy of environmental effects predictions, and the expected level of effectiveness of mitigation measures.

All project EAs involve some level of uncertainty and observed results can be expected to deviate, to some degree, from predictions made in the EA. The confidence limits, confidence interval or the confidence level provides information about the range in which the true value lies within a stated degree of probability. This information can be assessed with a quantitative or qualitative approach by qualified professionals.

When data are generated, the application of statistical methods may allow for quantitative determination of confidence limits. When statistical methods are used, the nature and quality of the data used, the scientific validity of the hypotheses, and “statistical significance”, have to be taken into account. Statistical significance is characterized by a low probability of error and a high confidence level. (Note that statistical significance is a different concept from that of significance of adverse environmental effects under CEAA 2012.)

As an alternate to statistical methods, professional judgment (see Methodologies section) is often applied to characterize the level of confidence of each prediction of significance and likelihood with qualitative terms such as “low”, “medium” and “high”. The criteria for determination of the level of confidence should be defined and documented to enable consistent interpretations by reviewers.

It may be appropriate to perform an additional risk analysis to characterize potential risks, particularly if:

- there is a high level of uncertainty in the prediction of the environmental effect;

- a significant environmental effect is possible among the range of potential effects; or
- specific adaptive management commitments would not adequately mitigate the uncertainty or potential for significant environmental effects.

The risk assessment would allow for the description of the range of likely, plausible, and possible outcomes with respect to both potential significance and likelihood.

Regardless of the approach taken to consider uncertainty (quantitative or qualitative), the sources and nature of uncertainty should be clearly described to provide the basis for the stated level of confidence as well as how any identified uncertainty may affect any of the steps in the methodologies discussed in the document.

Adaptive management may be used to address uncertainty. Adaptive management provides flexibility to identify and implement new mitigation measures or to modify existing ones during the life of a project. However, a commitment to implementing adaptive management measures does not eliminate the need for sufficient information regarding the environmental effects of the project, the significance of those environmental effects and the appropriate mitigation measures required to eliminate, reduce or control those environmental effects. Adaptive management requires appropriate predictions, monitoring and triggers for when action will be taken. For further information on adaptive management, please see the Agency's Operational Policy Statement: Adaptive Management Measures under the *Canadian Environmental Assessment Act* or any future updates of this document.

METHODOLOGIES

Several methodologies that can be used to determine whether an adverse environmental effect is significant are described in this section. A methodology generally frames the implementation of various methods.

The methodologies described below are often interrelated and can be used in combination, as appropriate, to determine whether a project is likely to cause significant adverse environmental effects. For example, professional judgment and reasoned argumentation may be used to adapt broad standards, guidelines and objectives to establish a definition or limit of significance for a specific environmental effect. Collaboration can support and inform a variety of methods.

1. Collaboration

Collaborative interactions among experts and other stakeholders can inform the consideration of significance and the scaling or defining of the key criteria. Collaboration generally involves identification of stakeholder representatives who can participate in forums that may require multiple sessions and an investment of time. These forums are typically distinct from general public participation opportunities provided by the proponent, the Agency or a review panel.

Considerations for applying this methodology include the following:

- the objectives of interactions with stakeholders (e.g., seek advice, achieve consensus) should be clear to all participants;
- the reasoning for the determination of significance must be clear for all participants to enable clear conclusions in the EIS;
- this methodology is conducive to the integration of scientific, Aboriginal and community knowledge, mutual learning, creative interpretations and problem solving; and
- this methodology is highly dependent on effective participation methods.

Consideration should be given to using multiple forms of participation (e.g., public meetings, site tours, focus groups), considering the needs and characteristics of the collaborating parties, making use of specialists with the appropriate background and experience, as well as specialists with facilitation and mediation skills.

Example 4: Collaboration

Stage 2: Determining whether the adverse environmental effects are significant

A proposed project may affect the current use of lands and resources for traditional purposes by an Indigenous group. Due to the importance of Indigenous perspectives in the understanding and interpretation of effects on this VC, a collaborative method is used to inform the consideration of significance.

Traditional knowledge holders and leaders from the potentially affected Indigenous group, as well as the proponent's technical experts in biology and archaeology, participated in a three-day workshop to discuss the evaluation of significance of adverse environmental effects. The objectives of the workshop were clearly defined:

- share and understand the rationale behind the residual adverse environmental effects identified;
- define and discuss the key criteria (i.e., ecological and social context, magnitude, geographic extent, timing and duration, frequency, and reversibility) that are typically used to determine the significance of residual adverse environmental effects; and
- achieve consensus on the key criteria to be considered for this VC and the process that will be used to apply these key criteria.

Concerns raised at the workshop were used to inform the design of the project and application of mitigation measures. Questionnaires and interviews with members of the Indigenous group resulted in additional baseline information and greater understanding of their ranking of issues related to current use of lands and resources for traditional purposes.

2. Risk Assessment

Significance can be determined on the basis of an “acceptable level” of a specified risk, using quantitative or qualitative ecological or human health risk assessment. This methodology considers a combination of likelihood and the consequences of the adverse environmental effect.

Risk assessment may also be used to describe the range of likely, plausible, and possible outcomes with respect to both potential significance and likelihood. This may be a useful aid for addressing uncertainty.

Considerations for applying this methodology include the following:

- quantitative risk assessment is often used to determine the significance of the risks to human or ecological health from, for example, carcinogenic chemicals. Its use is restricted to agents that have predictable dose-response or exposure-effect relationships. The response, effect, or risk is often measured in terms of increased incidence of a particular health outcome per million people exposed. By using the dose-response relationship, it can be determined whether or not the dose or exposure would result in an unacceptable level of risk;
- ecological risk assessments are used to assess risks to ecosystem processes, habitats and biotic resources;

- information on who has set the risk levels and how acceptable risk levels are determined should be presented. The views of Indigenous groups should be considered regarding acceptable risk levels for environmental effects that may affect them; and
- risk assessments may use generally available and tested models, models that have been adapted to better address the circumstances of the project or models developed specifically for the project.

Example 5: Quantitative Risk Assessment

Stage 1: Determining whether the environmental effects are adverse,

Stage 2: Determining whether the adverse environmental effects are significant, and

Stage 3: Determining whether the significant adverse environmental effects are likely

The health of an Indigenous group could be affected by air emissions from a proposed project.

A quantitative risk assessment method is appropriate due to the availability of a risk assessment framework and guidance endorsed by federal regulatory agencies.

Future concentrations of air contaminants are modelled and compared to available site-specific and/or published background levels, as well as health-based environmental guidelines set by regulatory agencies.

The risks to the health of Indigenous peoples are evaluated using professional judgement and by comparison to risk levels that consider both the probability of occurrence and the consequences of an adverse environmental effect.

3. Aggregation

Qualitative or quantitative aggregation methods involve attributing a scale ranking to each key criterion and applying a decision rule to inform the determination of significance. Examples of this methodology include multi-criteria analysis and decision trees.

The influence of the key criteria on a determination of significance will vary between VCs. In most cases, reliance on a standardized ranking system or standardized decision rules across all VCs will not give adequate consideration to VC-specific circumstances. It is important to explain rankings and give a clear rationale for the determination of significance on a VC-specific basis.

Example 6: Qualitative Aggregation

Stage 2: Determining whether the adverse environmental effects are significant

A proposed project may affect air quality on a nearby national park (federal lands) and also across a provincial boundary. A method based on qualitative aggregation and professional judgement is appropriate in this case, because the most relevant key criteria for measuring air quality are magnitude, geographic extent and frequency.

Thresholds for magnitude of air quality effects, available as established standards, are best understood in relation to the geographic extent and frequency criteria. Established air quality criteria are developed to apply in the environment, which means beyond the geographic extent of the project itself. The geographic extent of the effect can be tied to the predicted magnitude. For an effect on air quality on federal lands or in another jurisdiction (i.e. transboundary) to be significant, the predicted air quality would need to exceed the relevant criteria and would need to exceed the criteria more frequently than under baseline conditions.

The definitions of the most relevant criteria are as follows:

- **Magnitude:** degree of the change in concentration of indicator compounds (airborne particulate matter, combustion by-products; and airborne metals) relative to applicable standards
- **Geographic extent:** the spatial area over which the effect occurs, categorized by comparison to the established study areas for the VC (e.g., Local Study Area, Regional Study Area, beyond the Regional Study Area); and,
- **Frequency:** how often the residual adverse environmental effect occurs within a given time period.

The decision making process for this example is outlined in Figure 1 below.

Figure 1. Example Decision Tree for Determination of Significance

Note: This diagram provides a decision tree for determination of significance (not significant or significant) based on the sequential interaction between the magnitude, geographic extent, and frequency criteria for effects (defined as low, medium or high).

Example 7: Quantitative Aggregation

Stage 2: Determining whether the adverse environmental effects are significant

A proposed project may affect fish and fish habitat as defined in the *Fisheries Act*. A quantitative aggregation method is appropriate due to the considerable variation in the importance of the key criteria to the determination of significance. Each of the key criteria is assigned effects-level definitions and related scores (see Classification and Score columns in Table 1 below) based on degree of adverse effect, e.g.:

Magnitude and Geographic Extent

- Low (Score 0): Under 20% alteration of important fish habitat in the Local Study Area
- Medium (Score 5): 20% to 40% alteration of important fish habitat in the Local Study Area
- High (Score 10): Greater than 40% alteration of important fish habitat in the Local Study Area

Magnitude and geographic extent, timing and reversibility are given greater weight in the scoring system to reflect their relative importance, i.e. any effects to these criteria could cause fundamental changes to the current state of fish populations.

In Table 1 below, the predicted effects of the project are compared to the significance key criteria using the corresponding scores. The key criteria scores are then aggregated to provide an overall determination of significance as follows:

- Negligible (not significant): 0-5
- Low (not significant): 6-10
- Moderate (not significant): 11-15
- High (significant): 16 or greater

The aggregated score of the effects is 10 corresponding to low, not significant, effects. Therefore, no significant adverse environmental effects on fish and fish habitat are anticipated as a result of the project.

Table 1. Application of Key Criteria

Note: This table illustrates the determination of significance by using quantitative aggregation, based on a comparison among the predicted effect of the project and the corresponding scores for each key criteria.

Key Criteria	Application of Key Criteria	Classification	Score
Ecological and Social Context	Species not identified as commercially or recreationally important or important to Indigenous groups.	Low	0
Magnitude and Geographic Extent	Approximately 25% of important fish habitat is likely to be altered in the Local Study Area.	Medium	5
Timing	The effect extends to sensitive periods (e.g. spawning).	Sensitive	3
Duration	The effect extends from the Construction Phase through the Closure Phase.	Long-term	2
Frequency	Conditions or phenomena causing the effect are anticipated to occur once.	Low	0
Reversibility	The effects are anticipated to be reversible following Project closure.	Reversible	0
Aggregated Score:			10 (Low)

4. Reasoned Argumentation

Reasoned argumentation involves presenting a clear, well-reasoned, substantiated and organized argument in support of a conclusion. A reasoned argument allows a wide audience to reasonably draw the same conclusions as the author. The argument should fully utilize relevant information, be based on a comparison of the predicted effect to a benchmark, where appropriate, and consider the most relevant key criteria.

Example 8: Reasoned Argumentation

Stage 2: Determining whether the adverse environmental effects are significant

A proposed project could affect habitat quality and quantity for a migratory bird species on federal lands, and disrupt breeding and nesting periods. Professional judgment and reasoned argumentation are used to identify benchmarks to determine what would be a significant effect for this VC. Scientific literature, species life history traits, predicted changes in measurement indicators and experience from past EAs, monitoring programs and regional studies informed this work.

A significant adverse environmental effect to this VC could be when one or more of the following population outcomes are reached:

- habitat loss or reduced habitat quality causes permanent adverse changes to survival or reproduction at the population level;
- habitat loss and fragmentation that reduces population connectivity to the point that it disrupts demographic rescue between source and sink habitats (or areas); or
- effects on abundance and distribution would be measurable at the population level and likely to decrease resilience and increase the risk to maintaining self-sustaining and ecologically effective populations.

5. Professional Judgment

Professional judgement involves developing interpretations informed by an understanding of project characteristics, predicted environmental effects, and general EA and sustainability principles, to establish a rational basis for a conclusion. The factors and logic leading to the conclusion must be clearly presented. Professional judgment should be applied by individuals that have the appropriate background and experience to make the judgment. Professional judgement is often used in combination with other methodologies (see Aggregation and Reasoned Argumentation sections above).

Considerations for applying professional judgment as the main or single methodology when determining significance include the following:

- a variety of factors should be taken into account, such as the status, size and range of a population unit, broad-scale habitat conditions, established thresholds or standards for closely related species, area-specific policies for land use and species management;
- information from a variety of sources including scientific analysis, community knowledge and Aboriginal traditional knowledge of environmental effects and their significance; and
- comparison to a benchmark should be used, where possible.

Example 9: Professional Judgement

Stage 1: Determining whether the environmental effects are adverse

After the implementation of mitigation measures, it is predicted that a project will result in the direct loss and fragmentation of migratory bird habitat on federal lands due to clearing and grubbing, watercourse alterations, and development of site access roads. Changes in habitat quality from noise, lights, people and vibrations from the project also have the potential to alter the movement and behaviour of individual birds and decrease occupancy of habitat near the project. Since no further mitigation measures are proposed, these effects are deemed residual adverse environmental effects and are advanced for consideration of significance.

Example 10: Professional Judgement

Stage 3: Determining whether the significant adverse environmental effects are likely

The migratory behaviour of marine mammals could be affected by the cumulative effects on habitat quality from a proposed project in combination with the environmental effects of other physical activities that have been or will be carried out. However, the likelihood is considered low given the distances over which the various physical activities are taking place, as well as the localized nature of potential project effects.

Introduction and disposition

This introduction contains the National Energy Board's (Board or NEB) overall conclusions and recommendations with respect to the Trans Mountain Expansion Project (Project). It also sets the context for how the Board approached the Reconsideration it was directed to undertake by the Governor in Council (GIC), and contains remarks on some of the multifaceted considerations that informed the Board's conclusions. This includes details regarding the holistic, systemic and precautionary approach that the Board took to examining and addressing effects likely to be caused by the Project on the Salish Sea and its complex and interconnected ecosystem. This introduction should be read together with – and not in isolation from – the detailed reasons that follow in the subsequent chapters of this report.

Disposition

After completing the Reconsideration hearing and having regard to all relevant considerations, the Board is of the view that the Project is and will be required by the present and future public convenience and necessity, and is in the Canadian public interest. Pursuant to the *National Energy Board Act* (NEB Act), the Board confirms the recommendation, and replaces certain conditions, that it provided to the GIC in its OH-001-2014 Report. The Board recommends that the GIC approve the Project by directing the issuance of a certificate of public convenience and necessity (CPCN) to Trans Mountain Pipeline ULC (Trans Mountain), subject to 156 conditions.

Pursuant to the *Canadian Environmental Assessment Act, 2012* (CEAA 2012) the Board is of the view that the designated Project is likely to cause significant adverse environmental effects. Specifically, Project-related marine shipping is likely to cause significant adverse environmental effects on the Southern resident killer whale, and on Indigenous cultural use associated with the Southern resident killer whale. This is despite the fact that effects from Project-related marine shipping will be a small fraction of the total cumulative effects, and the level of marine traffic is expected to increase regardless of whether the Project is approved. The Board also finds that greenhouse gas (or GHG) emissions from Project-related marine vessels would result in measureable increases and, taking a precautionary approach, are likely to be significant. While a credible worst-case spill from the Project or a Project-related vessel is not likely, if it were to occur, the environmental effects would be significant. While these effects weighed heavily in the Board's reconsideration of Project-related marine shipping, the Board recommends that, in light of the considerable benefits of the Project and measures to mitigate the effects, the GIC find that they can be justified in the circumstances. The Board has identified a recommended follow-up program to be implemented with respect to the designated Project.

Pursuant to the *Species at Risk Act* (SARA), the Board has identified the adverse effects of the Project and its related marine shipping on each SARA-listed wildlife species and its critical habitat, and has imposed (through conditions) and recommended (to the GIC) measures to avoid or lessen those effects and to monitor them.

Reconsideration background and process

If approved, the Project would expand the existing Trans Mountain Pipeline system between Edmonton, Alberta and Burnaby, British Columbia (B.C.), nearly tripling its capacity to ship oil from 300,000 to 890,000 barrels per day. Almost 90 per cent of the Project route parallels existing disturbance, including the right-of-way for the existing pipeline. The Project includes approximately 987 kilometres of new pipeline, new and modified facilities such as pump stations and tanks, and the reactivation of 193 kilometres of existing pipeline. The Westridge Marine Terminal (WMT) would also be expanded. Oil would be loaded onto tankers at the WMT for transit to Washington State, California, and Asia.

In May 2016, after an approximately two-year regulatory review (the OH-001-2014 hearing), the Board issued its OH-001-2014 Report recommending that the GIC approve the Project. Project-related marine shipping was considered as part of that review and report, but only under the NEB Act – not under the CEAA 2012. On 29 November 2016, the GIC approved the Project, issuing Order in Council (OIC) P.C. 2016-1069. Accordingly, on 1 December 2016, the Board issued CPCN OC-064 to Trans Mountain, along with amendments to other existing CPCNs. Additional related instruments in respect of the Project also came into effect at that time. These regulatory instruments authorized the construction and operation of the Project, subject to 157 conditions.

On 30 August 2018, the Federal Court of Appeal in *Tsleil-Waututh Nation v. Canada (Attorney General)*¹ set aside OIC P.C. 2016-1069, in part because, in the Court's view, the Board unjustifiably excluded Project-related marine shipping from the scope of the "designated project" reviewed under the CEAA 2012.

On 20 September 2018, the GIC issued OIC P.C. 2018-1177, directing the Board to conduct a Reconsideration taking into account the environmental effects of Project-related marine shipping in view of the requirements of the CEAA 2012, and the adverse effects of Project-related marine shipping on species at risk in view of any requirements of section 79 of the SARA. The OIC instructed the Board to complete the Reconsideration within 155 days.

In carrying out the Reconsideration, the Board held a public hearing (the MH-052-2018 hearing) and has prepared this MH-052-2018 Report as a result. As directed by the OIC and as reflected in the Board's List of Issues (see Appendix 1), this Reconsideration is focused on Project-related marine shipping – a comparatively narrow scope to the OH-001-2014 hearing. The Board's focus was on any necessary changes or additions to its OH-001-2014 Report in light of the inclusion of Project-related marine shipping in the designated Project being assessed under the CEAA 2012.

At the end of this introduction and disposition, there is a roadmap to this MH-052-2018 Report, which explains how it is laid out to incorporate both new information received through the MH-052-2018 hearing, and information received during the OH-001-2014 hearing. The Board has structured this MH-052-2018 Report in this manner to ensure that all pertinent information about the Project and its related marine shipping is captured in a single, consolidated report to the GIC.

Considering the evidence and submissions

While the Reconsideration was a focused hearing, the evidentiary record was nevertheless substantial, and included additional investigative and scientific studies that have been completed since the close of the OH-001-2014 hearing record. The level of participation was also substantial, with a total of 118 intervenors that included 52 Indigenous intervenors, and 8 federal government department intervenors. Any member of the public was able to file a letter of comment, and many took the opportunity to do so.

Prior to issuing a Hearing Order, the Board sought public comments on the scope of the environmental assessment and List of Issues, and the design of the hearing process. Intervenors provided evidence and argument, and were given an opportunity to question the evidence of other intervenors and Trans Mountain. A total of \$4,981,760 in participant funding was offered to 69 recipients, 82 per cent of which was offered to Indigenous intervenors.

Much of the evidence and submissions presented was relevant, informative, and helpful to the Board. The Board appreciates the efforts and diligence of the Parties in preparing their evidence and submissions, including the Indigenous oral traditional evidence that the Board heard over approximately three weeks in Calgary, Alberta, and in Victoria and Nanaimo, B.C.

However, the Board observes that, regrettably, not all Parties and commenters adhered to the Hearing Order and many filed evidence or offered comments on issues canvassed in the OH-001-2014 hearing or that were not within the scope of this

¹ 2018 FCA 153

Reconsideration, adding unnecessarily to the complexity of the hearing process. The Board did not consider evidence or revisit issues that were outside of the scope of the Reconsideration.

In making their submissions, some Parties implored the Board to not only listen, but to hear what they were saying. Elder George Harris from Stz'uminus First Nation said it this way:

You know, in our culture and traditional ways of our people, when we go into our longhouse, my speaker, when he says, "Listen, listen," that's a big part of our culture. We listen. I'm hoping that you, the Panel, are going to listen. I'm hoping our words are heard beyond this room.

The Board has endeavored to do this – to listen, hear, and share the evidence and views of the Parties with the GIC and Canadians.

The Board has carefully considered all of the relevant evidence and submissions it received. The Board is of the view that the MH-052-2018 hearing offered a fair and meaningful opportunity for Parties to participate and to fully present their case and represent their diverse points of view.

The Board's MH-052-2018 hearing also forms part of the overall consultation process with Indigenous peoples with respect to their constitutionally protected rights. In this regard, the GIC has indicated that it will rely on the NEB's process, to the extent possible, to discharge the duty to consult. The Board's MH-052-2018 Report may also inform the additional "Phase III" consultations being carried out separately by the Government of Canada with respect to the Project. Although the GIC has the responsibility of ultimately ensuring that the duty to consult has been fulfilled before a decision is made on the Project, the Board has considered those aspects of consultation which are relevant to the Reconsideration and for which evidence was filed on the record.

Weighing the public interest

The Board has undertaken this Reconsideration in accordance with the requirements of the NEB Act, the CEAA 2012, and the SARA, and with the Canadian public interest as a guide.

Weighing the public interest, as required by the NEB Act, is not a rigid or mechanical task. It is a complex, flexible, and multifaceted inquiry that requires the Board to conduct a thorough and scientific examination of evidence relating to economic, environmental, and social factors; to consider the impacts of the Project on Indigenous rights; to weigh and balance the overall benefits and burdens of the Project; and to draw conclusions. This consideration of benefits and burdens also informs the Board's recommendation under the CEAA 2012 regarding whether any significant adverse environmental effects can be justified in the circumstances. The various factors that the Board considers in this inquiry cannot be understood in isolation from one another, or divorced from the specific context and circumstances surrounding this Project.

In the Board's view, the benefits of the Project are considerable, including increased access to diverse markets for Canadian oil; jobs created across Canada; the development of capacity of local and Indigenous individuals, communities, and businesses; direct spending on pipeline materials in Canada; and considerable revenues to various levels of government.

However, the Board is also of the view that the Project and its related marine shipping carries risks. Its burdens include the significant adverse effects that are likely to be caused by Project-related marine shipping on the Southern resident killer whale and Indigenous cultural use associated with the Southern resident killer whale.

Further, the benefits and burdens of the Project and its related marine shipping are not distributed evenly across the country.

In light of these circumstances, reasonable people can and will disagree on what the best balance and outcome is for Canadians. Sometimes, Parties disagree on the evidence and facts, while other times, Parties agree on the facts but differ in their opinions, perspectives, or values. In carrying out the Reconsideration, the Board has listened carefully and taken into account diverse views. The Board has remained cognizant that the public interest is not regionally based, but is inclusive of all Canadians. It must also be responsive to Canadians' interests and values as they change over time.

It is through this holistic and contextual lens that the Board has carried out its environmental assessment, including the justification analysis; considered and weighed the Project's benefits and burdens; and determined that the Project is in the Canadian public interest.

Taking a precautionary approach

Many Parties in the MH-052-2018 hearing emphasized the application of the precautionary principle, despite the fact that there were different interpretations expressed as to exactly what the principle requires.

The Board recognizes the important role of the precautionary principle under the CEAA 2012. The precautionary principle requires that environmental measures must anticipate and prevent environmental harm. A lack of full scientific certainty should not be used as a reason for not implementing measures to prevent environmental harm. Adaptive management can, in certain circumstances, be an important part of a follow-up program for a project to allow for uncertainties in the environmental assessment process. The Board is of the view that certain activities may be permitted despite a lack of full scientific certainty regarding their effects, provided the activity and its effects can be effectively monitored and adaptively managed. This involves an exercise in balancing interests and weighing risks.

The Board has applied the precautionary principle to its environmental assessment in this case. As examples, the Board has applied the precautionary principle to its significance determinations, and to its consideration of measures to mitigate impacts through design, planning, follow-up, and monitoring. The Board has required that effects or consequences be minimized, even if they are only anticipated or possible and not certain.

The importance of taking a precautionary approach is evident when faced with the Salish Sea and its complex and not necessarily well-understood ecosystem. An approximately 18,000-square-kilometre body of water that includes the Straits of Juan de Fuca and Georgia as well as Puget Sound, the Salish Sea is home to diverse marine life. This includes a number of endangered and threatened species, some of which are of particular importance to Indigenous peoples and intrinsic to Indigenous cultural and spiritual practices.

Over 6.5 million people live on or in close proximity to the Salish Sea, and it is home to a population of over 35 types of mammals, 170 species of bird, 240 kinds of fish, and 3,000 species of invertebrates. Not surprisingly, the health of the Salish Sea is of significant importance to all who live in the area.

The evidence in the MH-052-2018 hearing is clear that the Salish Sea is not the healthy environment it once was. It is subject to a number of stressors, including vessel traffic and resulting noise, environmental contaminants, and a decline in salmon. The causes for the current state of the Salish Sea are numerous and diverse, and these effects have accumulated over time. There appears to be no serious controversy among the Parties with regard to these points, nor does there appear to be any serious controversy that Project-related marine shipping is likely to cause significant adverse environmental effects. This is despite the fact that Project-related marine shipping would comprise a relatively small increase in the total vessel traffic in the Salish Sea, and that increased pressure on the Salish Sea and its marine life can be anticipated regardless of whether the Project proceeds.

Taking an holistic approach

Given the cultural, environmental, and commercial importance of the Salish Sea, the Board has adopted an holistic approach to its consideration of the designated Project and how it fits into the wider context of the many current stressors on that body of water, the marine animals and fishes within it, and the people who derive cultural use, livelihood, or pleasure from it. The Board concludes that, while Project-related marine shipping's incremental addition to cumulative effects on the Salish Sea will not be large, it will add to already significant effects.

Addressing effects, and cumulative effects in particular, on the Salish Sea requires a broad, systemic, and multi-faceted approach. To understand the effects of Project-related marine shipping and how best to mitigate those effects, one needs to understand the complex and interconnected system that it would operate within. In order to be most effective in mitigating environmental harm to the Salish Sea and its ecosystem that is likely to be caused by the Project, a broader approach is required; one which extends beyond the NEB's regulatory authorities and one which will benefit the broader system. The Board has conducted its environmental assessment, set Project conditions, and made its broader recommendations to the GIC with this in mind. This includes making recommendations that use an offset-based approach. It is the Board's view that, should the GIC make changes to the operation of all marine traffic, including Project-related traffic, and take action to relieve other stressors within the broader system, it will offset the incremental effects of the designated Project and make material improvements to the health of the Salish Sea.

The Board is also supportive of the role of the Indigenous Advisory and Monitoring Committee (IAMC) for the Project. In the Board's view, the IAMC is well placed to help facilitate effective and ongoing Indigenous consultation and participation in Project-related Salish Sea monitoring and follow-up measures.

While the Board recognizes that scientific work to better understand the Salish Sea is continuing, it has heard a great deal of evidence, including from a variety of experts. The Board is satisfied that the evidence before it is sufficient for it to make the conclusions and recommendations it has reached in this MH-052-2018 Report.

Project conditions and recommendations to the GIC

The Board will impose 156 conditions on the Project if it is approved. It has also made 16 recommendations to the GIC. The conditions and recommendations are made in a manner consistent with the NEB Act, the CEAA 2012, the SARA, and they apply the precautionary principle.

The conditions cover a wide range of matters, including emergency preparedness and response, protection of the environment, consultation with affected Indigenous communities, socio-economic matters, pipeline safety and integrity, commercial support for the Project prior to construction, and financial responsibility on the part of Trans Mountain.

The Board's recommendations to the GIC relate to Project-related marine shipping, including cumulative effects management for the Salish Sea, measures to offset increased underwater noise and increased strike risk posed to SARA-listed marine mammal and fish species, marine oil spill response, marine shipping and small vessel safety, reduction of greenhouse gas emissions from marine vessels, and the IAMC.

In making its recommendations to the GIC, the Board drew guidance from the Federal Court of Appeal's decision in *Tsleil-Waututh Nation*. The Court indicated that the Board should identify mitigation measures within the authority of the federal government, despite the fact that the Board does not regulate marine shipping. The Board is also not limited to identifying measures that are within Trans Mountain's control to implement. With the addition of recommendations about matters beyond the Board's authority but within that of the GIC, the GIC will possess the requisite breadth of information to make the informed decisions required of it with respect to the Project.

Both the conditions and recommendations made by the Board are intended to mitigate, avoid, or lessen potential effects associated with the Project and its related marine shipping. The conditions are regulatory requirements imposed on Trans Mountain, which the Board would oversee and enforce as part of its regulatory mandate. In comparison, the recommendations to the GIC fall outside of the Board's regulatory mandate and are generally beyond the control of Trans Mountain. While the recommendations are sufficiently specific and are evidence-based, they are comparatively less prescriptive than the conditions. This provides a measure of flexibility for the GIC to determine the details of how best to implement them, and the resources required, should it decide to do so. This is appropriate given that the optimization of these mitigation measures may need to be based on a multitude of factors, including the GIC's overall approach for managing cumulative effects in the Salish Sea, multi- and cross-jurisdictional considerations, and the need to employ ongoing adaptive management in light of the complexities and uncertainties of the Salish Sea.

Although the Board's recommendations to the GIC are directly related to its environmental assessment of Project-related marine shipping, the Board is of the view that, if implemented, they may assist in mitigating effects of all marine traffic in the area. This would be a positive outcome that would extend beyond mitigating or offsetting the impacts of the Project and its related marine shipping. The Board encourages the Government of Canada in the direction it has already taken to both deepen the scientific understanding of the Salish Sea and its resident marine life, and to continue to put in place procedures, programs, equipment, and funding to safeguard this important Canadian marine resource.

Roadmap to the MH-052-2018 Report

Given that the Reconsideration focused on Project-related marine shipping, much of the OH-001-2014 Report is outside the scope of the MH-052-2018 hearing. However, the GIC must be informed about all aspects of the Project to make the decisions required of it. It is also important to be clear about what changed from the OH-001-2014 Report as a result of the MH-052-2018 hearing.

For this reason, this MH-052-2018 Report contains the sections that were reconsidered by the Board, as well as sections from the OH-001-2014 Report that were beyond the scope of the Reconsideration. This ensures that all pertinent information is captured in a single consolidated report to the GIC.

This MH-052-2018 Report contains the same chapter numbers and titles of the OH-001-2014 Report. Although sections of the OH-001-2014 Report are included in this MH-052-2018 Report, this does not mean that they were within the scope of the Reconsideration or reconsidered by the Board. The beginning of each chapter contains an explanation of what, if anything, was changed from the OH-001-2014 Report.

Most chapters in this MH-052-2018 Report were reproduced from the OH-001-2014 Report and include the views of the original Panel that undertook the OH-001-2014 hearing. These views remain valid and unchanged, and are labelled as **"Views of the Board."** Some chapters have undergone substantive changes as a result of the MH-052-2018 hearing and include the views of the Panel that carried out the Reconsideration. These are labelled as **"Views of the Reconsideration Panel."**

For issues that fall within the scope of the MH-052-2018 hearing, the Reconsideration Panel included views of the Parties from the OH-001-2014 hearing where they were still applicable. These are then followed by new or updated evidence raised by the Parties in the MH-052-2018 hearing. The views of the Reconsideration Panel contain Board views from the OH-001-2014 Report that were found to remain applicable after considering relevant evidence from both the OH-001-2014 and MH-052-2018 hearings. The views of the Reconsideration Panel include additional views to address the new or updated evidence and to explain if it confirms or modifies the Board's previous findings from the OH-001-2014 hearing.

The majority of the issues relevant to the MH-052-2018 hearing are covered in Chapters 5 and 14. An overview of what was considered by the Reconsideration Panel and changed from the OH-001-2014 Report is outlined below. The appendices from the OH-001-2014 Report have been reproduced, with updates to reflect the circumstances and factual underpinnings of the Reconsideration. Appendices 14 and 15 are new to this MH-052-2018 Report.

Chapter	Update
Introduction and disposition	New
Chapter 1 – The Board's review	Updated to reflect both hearing processes
Chapter 2 – Benefits, burdens, and recommendations	Updated to reflect the conclusions arising from the Reconsideration
Chapter 3 – Regulating through the Project lifecycle	Unchanged
Chapter 4 – Public consultation	Unchanged
Chapter 5 – Indigenous matters	Section 5.2 includes new or updated evidence and views with respect to Indigenous matters
Chapter 6 – Pipeline and facility integrity	Unchanged
Chapter 7 – Construction and operations	Unchanged
Chapter 8 – Environmental behavior of spilled oil	Section 8.2 includes new or updated evidence and views with respect to the environmental behavior of spilled oil
Chapter 9 – Emergency prevention, preparedness, and response	Unchanged
Chapter 10 – Environmental assessment	Mostly unchanged except for references about the scope of the environmental assessment completed under the CEAA 2012, and Project-related marine shipping
Chapter 11 – People, communities, and lands	Unchanged
Chapter 12 – Need for the Project and economic feasibility	Unchanged
Chapter 13 – Financial matters	Unchanged
Chapter 14 – Project-related increase in shipping activities	Revised significantly; covers the majority of the issues relevant to the Reconsideration

Conclusion

The Reconsideration has comprised a comprehensive, evidence-based, fair, and meaningful review of Project-related marine shipping. The Reconsideration process and this resulting report discharge the relevant requirements of the Board under the NEB Act, the CEAA 2012, and the SARA. The Board finds, in conclusion, that the Trans Mountain Expansion Project is in the Canadian public interest and recommends to the GIC that it be approved.

The Board thanks the Parties in the MH-052-2018 hearing for their thoughtful and thorough participation, which has resulted in better information, well-informed conclusions, and more effective conditions and recommendations that serve all Canadians.

Should the Project be approved, the NEB will regulate it throughout its full lifecycle. The NEB will oversee Project construction and operation, and will hold Trans Mountain accountable for meeting its commitments and applicable regulatory requirements, keeping its pipelines and facilities safe and secure, and protecting people, property, and the environment.

The Board's review of the Trans Mountain Expansion Project

The content of this chapter has been updated since the Board's May 2016 OH-001-2014 Report to reflect the Reconsideration. The Reconsideration Panel has added information regarding the MH-052-2018 hearing process and its views on various issues raised in argument.

Section 1.6 contains the views of the Board from the OH-001-2014 Report (formerly Chapter 1.3), but has been included as it provides helpful background information.

Section 1.7 contains the views of the Board from the OH-001-2014 Report (formerly Chapter 1.4). The Reconsideration Panel adopts this approach to assessing risks from spills and has revised the conclusions related to spills from Project-related marine shipping.

In May 2016, after an approximately two-year regulatory review (the OH-001-2014 hearing), the Board issued its OH-001-2014 Report recommending that the GIC approve the Project. Project-related marine shipping was considered as part of that review and report, but only under the NEB Act – not under the CEAA 2012. On 29 November 2016, the GIC approved the Project, issuing Order in Council (OIC) P.C. 2016-1069. Accordingly, on 1 December 2016, the Board issued CPCN OC-064 to Trans Mountain, along with amendments to other existing CPCNs. Additional related instruments in respect of the Project also came into effect at that time. These regulatory instruments authorized the construction and operation of the Project, subject to 157 conditions.

On 30 August 2018, the Federal Court of Appeal in *Tsleil-Waututh Nation v. Canada (Attorney General)*² set aside OIC P.C. 2016-1069, in part because, in the Court's view, the Board unjustifiably excluded Project-related marine shipping from the scope of the "designated project" reviewed under the CEAA 2012.

On 20 September 2018, the GIC issued OIC P.C. 2018-1177, directing the Board to conduct a Reconsideration taking into account the environmental effects of Project-related marine shipping in view of the requirements of the CEAA 2012, and the adverse effects of Project-related marine shipping on species at risk in view of any requirements of section 79 of the SARA. The OIC instructed the Board to complete the Reconsideration within 155 days.

² 2018 FCA 153

In carrying out the Reconsideration, the Board held a public hearing (the MH-052-2018 hearing) and has prepared this MH-052-2018 Report as a result. As directed by the OIC and, as reflected in the Board's List of Issues (see Appendix 1), this Reconsideration is focused on Project-related marine shipping – a comparatively narrow scope to the OH-001-2014 hearing. The Board's focus was on any necessary changes or additions to its OH-001-2014 Report in light of the inclusion of Project-related marine shipping in the designated Project being assessed under the CEAA 2012.

1.1 The Project

On 16 December 2013, Trans Mountain Pipeline ULC (Trans Mountain) submitted an application (Application) to the National Energy Board (NEB or Board) for a Certificate of Public Convenience and Necessity (CPCN) and other requested relief to construct and operate the Trans Mountain Expansion Project (Project).

In its Application, Trans Mountain said that it had received many requests from its shippers over the past few years to increase the capacity of the existing Trans Mountain Pipeline (TMPL) system. This pipeline is currently the only major pipeline route for Western Canadian producers who want to ship oil to the west coast of Canada. The pipeline ships oil from Edmonton, Alberta to Burnaby, B.C. At that point, oil is loaded onto tankers at the Westridge Marine Terminal (WMT) for Pacific Rim destinations, such as Washington State, California, and Asia.

The Project would result in the looping (or twinning) of the existing 1 147 km TMPL system between Edmonton and Burnaby with about 987 km of new buried pipeline. Most of the existing pipeline, along with two reactivated pipeline segments, would become Line 1. The proposed new pipeline segments, along with active pipeline segments, would become Line 2, as shown below in Figure 1.

The Project would increase the capacity of the existing TMPL system from 47 690 m³/d (300,000 bbl/d) to 141 500 m³/d (890,000 bbl/d) of crude petroleum and refined products.

Currently, Panamax tankers (less than 75,000 metric tonnes deadweight tonnage (DWT)) and Aframax tankers (75,000 to 120,000 metric tonnes DWT) call at the WMT. The existing WMT typically loads five tankers per month. The proposed expanded system associated with the Project would increase the WMT's loads to approximately 34 Aframax class vessels per month, with actual demand driven by market conditions.

Additional technical details about the Project can be found in Appendix 4.

Figure 1: Project map

1.2 Definitions of the Project, Project-related marine shipping, and the designated Project

The Project, as defined by Trans Mountain, includes only the facilities described above, which are between Edmonton and the WMT. Following the direction from the GIC in OIC P.C. 2018-1177, the Board concluded that Project-related marine shipping between the WMT and 12-nautical-mile territorial sea limit is “incidental” to the Project and therefore part of the “designated project,” as those terms are defined in the CEAA 2012.

In this MH-052-2018 Report, the Board uses the term “Project” to describe those facilities between Edmonton and the WMT. Project-related marine shipping is identified separately. This terminology enables the Board to clearly distinguish what applies to the pipeline component and WMT and what applies to Project-related marine shipping. Defining “Project” in this way also maintains consistency with the sections from the OH-001-2014 Report that were included as part of this MH-052-2018 Report.

The term “designated Project” is used to describe the entirety of the Project and the Project-related marine shipping.

1.3 OH-001-2014 hearing

1.3.1 The hearing process

Public hearing processes are designed individually and independently by the Board based on the specific circumstances of the application. Each process is designed to provide for a fair hearing. Through the *National Energy Board Rules of Practice and*

Procedure, 1995 and the Filing Manual, the Board provides specific details about what information is required to be filed in regard to any application to build and operate a new pipeline.³ The List of Issues (Appendix 1) provides an outline of the issues that would be considered by the Board during the hearing.

For the Board's review of the Application, the hearing had significant written processes as well as oral components. With the exception of oral traditional evidence described below, evidence was presented in writing, and testing of that evidence was carried out through written questions, known as information requests (IRs). Intervenors submitted over 15,000 questions to Trans Mountain over two major rounds of IRs. Hundreds of other questions were asked in six additional rounds of IRs on specific evidence. If an intervenor believed that Trans Mountain provided inadequate responses to its questions, it could ask the Board to compel Trans Mountain to provide a more complete response. Trans Mountain could do the same in respect of IRs it posed to intervenors on their evidence. There was also written questioning on various additional evidence, including supplemental, replacement, late and Trans Mountain's reply evidence.

The Board decided, in its discretion in determining its hearing procedure, to allow testing of evidence by IRs and determined that there would not be cross-examination in this hearing. The Board decided that, in the circumstances of this hearing where there were 400 intervenors and a legislated time limit, and taking into consideration the technical nature of the information to be examined, it was appropriate to test the evidence through written processes. In the final analysis, the written evidence submitted was subjected to extensive written questioning by up to 400 participants and the Board.⁴ The Board is satisfied that the evidence was appropriately tested in its written process and that its hearing was fair for all parties and met natural justice requirements. Comments about process provided in this hearing will be passed on for the consideration of future Board panels.

With the participation of approximately 400 intervenors and 1,250 commenters, the Board received evidence from those with first-hand knowledge and understanding about the specific circumstances along the corridor. This is why holding the public hearing was so valuable to the Board.

Over 1,600 participants in the hearing, including Indigenous people, businesses, communities, landowners, individuals and non-government and government organizations, had the opportunity to provide evidence about specific considerations that the Board took into account when coming to its recommendation. While not all those who were granted participation status participated in the hearing, many did participate in some or all hearing steps.

The Board's recommendation is founded upon the entire evidentiary record built through the oral and written parts of the hearing that formed the basis for the Board's deliberations.

1.3.2 Public participation

Participation by those members of the public who are either directly affected or have relevant information or expertise is one means of identifying potential and real impacts of a project. The Board required Trans Mountain to contact anyone who lives, works or uses land and resources along the proposed pipeline route. The Board also took a number of steps, beginning before the Application was received, to ensure that those who could be potentially affected by the Project were aware of it and knew how they could get involved in the review (see Appendix 5). Full details of the application to participate notification are contained in the Board's letter to Trans Mountain, dated 31 December 2013.

It is not unusual for hearing participants to be unfamiliar with how the NEB carries out its reviews. For a major project such as this one, the Board assigns a Process Advisory Team to help participants understand the hearing process and decide how best to participate.

The *National Energy Board Act* (NEB Act), section 55.2 states:

On an application for a certificate, the Board shall consider the representations of any person who, in the Board's opinion, is directly affected by the granting or refusing of the application, and it may consider the representations of any person who, in its opinion, has relevant information or expertise.

The Board decides for each hearing whether to grant participation rights to any person and, if granted, the appropriate method of participation. In addition, if it is the Board's opinion that a person has relevant information or expertise about the environmental assessment required under the *Canadian Environmental Assessment Act, 2012* (CEAA 2012), the Board must provide that person with an opportunity to participate. Full details of the Board's ruling on participation are found in the Board's ruling of 2 April 2014.

³ The term "pipeline" is defined in section 2 of the NEB Act.

⁴ Ruling No. 14 dealt with a notice of motion to include oral cross-examination of witnesses. (Appendix 7 provides an overview of the notices of motions that were filed.)

The Board recognizes that good decisions and recommendations consider the thoughts, views and opinions of directly affected people and those with a broad range of relevant information or expertise. Participants for this Project's hearing could apply to:

- write a letter of comment (commenter); or
- become an intervenor.

A letter of comment gives the writer an opportunity to express his/her knowledge, views or concerns about a project. These letters are considered evidence in the proceeding. People who wrote letters of comment in this hearing could not ask questions about other participants' evidence or make final argument, nor were they asked questions about their letters.

Intervenors could file evidence, submit notices of motion, and ask questions of Trans Mountain and other intervenors. They also had the opportunity to provide final written and oral argument. The Board, Trans Mountain and other intervenors could also ask them questions about their evidence.

Full details about participation in the hearing are set out in the Board's OH-001-2014 Hearing Order, dated 2 April 2014. Additional rules regarding hearing participation are contained in *National Energy Board Rules of Practice and Procedure, 1995*.

More details about the process and participation are provided in the hearing timeline in Appendix 5.

1.3.3 Participant funding

Public participation is an important element of an open and balanced regulatory process. To facilitate public involvement, the NEB is responsible for a Participant Funding Program (PFP), a transfer payment program independent from the regulatory review process. The objective of the PFP is to provide funding to facilitate the participation of Indigenous groups, landowners, individuals and groups, associations and not-for-profit organizations.

On 22 July 2013, the NEB announced it would make \$1.5 million available to eligible intervenors to participate in the Trans Mountain Expansion Project hearing. Some intervenors raised concerns that the PFP process took too long and, given the large number of intervenors requesting funding, the level of funding was not sufficient. While the decisions on who received participant funding, how much, and the timing of those decisions were entirely separate from the regulatory hearing process, the Board notes the funding envelope was increased to \$3 million on 16 July 2014. There was also special participant funding offered in September 2015 for up to \$10,000 per applicant to cover eligible replacement evidence. In total, the PFP offered funding valued at \$3,085,370 to 72 eligible intervenors; 79 per cent of this funding was offered to Indigenous groups.

Awards are announced in the Participant Funding Report on the NEB website. For more information about the PFP or to see the Participant Funding Report, go to <http://www.neb-one.gc.ca/pfp>.

1.3.4 Gathering oral Indigenous traditional evidence

Indigenous people in the Project area have a long relationship and connection with the land, water and resources. The Board recognizes that Indigenous traditional knowledge can help provide relevant information, including historical information, which may otherwise be unavailable. This information can also help identify potential environmental effects, strengthen mitigation measures, and lead to better-informed decision-making.

The Board wants to provide opportunities for Indigenous people to share their traditional knowledge in a way that is both meaningful to them and valuable for the Board's deliberations. The Board recognizes that Indigenous people have an oral tradition for sharing stories, lessons and knowledge from generation to generation. This information cannot always be shared adequately in writing.

In this hearing, the Board asked participating Indigenous groups to let the Board know if they wanted to present oral traditional evidence. The Board received notices of intent from 49 groups and individuals. Originally, the Board intended to hear this oral evidence in August and September 2014. The Board later amended its hearing schedule in response to the input received from a number of Indigenous groups who expressed concerns that the proposed schedule would interfere with the sockeye salmon harvest. As a result, the Board held sessions in Edmonton, Alberta, in September; Chilliwack, B.C., in October; Kamloops and Victoria, B.C., in November 2014; and Calgary, Alberta, in January 2015.

Indigenous intervenors were able to file written evidence in addition to their oral traditional evidence. Other intervenors, Trans Mountain or the Board could ask questions about the oral traditional evidence. Each Indigenous group could then decide whether they would respond to any questions orally, in writing, or both.

1.3.5 Board rulings

As part of the hearing process, the Board provided participants with guidance on how they could ask the Board to do something, such as change or modify a particular deadline. This is known as filing a notice of motion. Depending on the nature of the request and the circumstances surrounding it, the Board had the option of providing an opportunity for Trans Mountain and intervenors to comment on a notice of motion. The Board issued rulings on approximately 291 motions and review applications. The motions focused on, among other things:

- requests to extend deadlines and/or the statutory time limits;
- the release of emergency response plans;
- allegations of apprehension of bias of Panel Members;
- requests to file late evidence;
- calls to include oral cross-examination in the hearing process;
- constitutional questions; and
- challenges to the limitations on public access during the oral hearing.

In the case of each of these notices of motion, the Board provided rulings, including reasons. Appendix 7 provides an overview of the notices of motions throughout the hearing.

As part of closing argument, a number of intervenors made requests for relief other than requests that specifically addressed the intervenors' positions on the recommendation that the Board ought to make to the Governor in Council (GIC).

In some cases, these requests were presented as alternative requests to the intervenor's primary request that the Board recommend denial of the Project application. In other cases, the relief was advanced as the intervenor's primary position. Trans Mountain also made a request for other relief in its reply evidence and in its closing argument.

The Board has addressed other relief requested in Appendix 7.

1.3.6 Modifying the hearing schedule

The NEB Act, subsection 52(4) sets a 15-month time limit starting when the Board decides an application is complete to when the Board submits its report to the GIC. This may be extended under particular circumstances specified in the Act. On 2 April 2014, the Board found the Trans Mountain Expansion Project application complete and issued the OH-001-2014 Hearing Order.

In June 2014, Trans Mountain advised that its preferred corridor for the delivery lines to the WMT would run through Burnaby Mountain instead of around it as described in the original Application.

The new proposed pipeline corridor included two possible construction options through Burnaby Mountain; a horizontal directional drill and a tunnel. Trans Mountain retained the original route around the mountain as an alternative corridor.

In order for the Board and hearing participants to assess the new preferred pipeline corridor, the Board needed more information from the company, and this required more time. The Board, with the approval of the NEB Chair, announced an excluded period that ran from 11 July 2014 until 3 February 2015. The excluded period was not counted in the 15-month time limit that the Board had to make its recommendation to the GIC.

This excluded period provided time for hearing participants and the Board to review the new evidence, once filed, and test it through IRs. The time limit for the Board to issue its Report to the GIC was revised to 25 January 2016, more than six months later than the original date of 2 July 2015.

As Trans Mountain's preferred pipeline corridor through Burnaby had now changed, the Board opened a second "application to participate" process for those who might have been directly affected by, or might have had relevant information or expertise on, the new preferred corridor. This process ran from 8 to 24 September 2014 (as illustrated in the hearing timeline at Appendix 5).

On 21 August 2015, the Board announced, on its own volition, that it was striking Trans Mountain's filed evidence that was prepared by or under the direction of Mr. Steven J. Kelly. This action was taken to ensure the integrity of the hearing. The stricken evidence addressed, among other things, the issue of oil market supply and demand.

On 18 September 2015, the Board, with the approval of the NEB Chair, announced a second excluded period so that it could acquire information from Trans Mountain and intervenors in relation to the issues previously addressed by the stricken

evidence. As a result of this second excluded period, the legislated time limit for the Board to issue its Report to the GIC was extended to 20 May 2016.

The updated hearing timeline is provided in Appendix 5.

1.4 MH-052-2018 hearing

1.4.1 Tsleil-Waututh Nation and OIC P.C. 2018-1177

On May 2016, after an approximately two-year regulatory review (the OH-001-2014 hearing), the Board issued its OH-001-2014 Report recommending that the GIC approve the Project. Project-related marine shipping was considered as part of that review and report, but only under the NEB Act – not under the CEAA 2012. On 29 November 2016, the GIC approved the Project, issuing Order in Council (OIC) P.C. 2016-1069. Accordingly, on 1 December 2016, the Board issued CPCN OC-064 to Trans Mountain, along with amendments to other existing CPCNs. Additional related instruments in respect of the Project also came into effect at that time. These regulatory instruments authorized the construction and operation of the Project, subject to 157 conditions.

On 30 August 2018, the Federal Court of Appeal in *Tsleil-Waututh Nation v. Canada (Attorney General)*⁵ set aside OIC P.C. 2016-1069, in part because, in the Court's view, the Board unjustifiably excluded Project-related marine shipping from the scope of the "designated project" reviewed under the CEAA 2012. The Court noted that this exclusion permitted the Board to conclude that section 79 of the *Species at Risk Act* (SARA) did not apply to its consideration of the effects of Project-related marine shipping.⁶ However, the Court noted that the Board had considered Project-related marine shipping under the NEB Act, and that the report was adequate for the purpose of informing the GIC about the effects of Project-related marine shipping on the Southern resident killer whales and their use by Indigenous groups.⁷

The Court stated that the issue of Project approval should be remitted to the GIC for redetermination, and the GIC must refer the Board's recommendations and its terms and conditions back to the Board for reconsideration.⁸ At paragraph 770 of its judgment, the Court stated:

Specifically, the Board ought to reconsider on a principled basis whether Project-related shipping is incidental to the Project, the application of section 79 of the [SARA] to Project-related shipping, the Board's environmental assessment of the Project in the light of the Project's definition, the Board's recommendation under subsection 29(1) of the [CEAA 2012] and any other matter the [GIC] should consider appropriate.

In OIC P.C. 2018-1177 dated 20 September 2018, the GIC, on the recommendation of the Minister of Natural Resources, pursuant to section 53 of the NEB Act and section 30 of the CEAA 2012:

- a) refers back to the National Energy Board for reconsideration the recommendations and all terms or conditions set out in its May 19, 2016 report entitled *Trans Mountain Expansion Project OH-001-2014* that are relevant to addressing the issues specified by the Federal Court of Appeal in paragraph 770 of *Tsleil-Waututh Nation v. Canada (Attorney General)* (2018 FCA 153), including Conditions 91, 131 to 134, 144 and 151;
- b) directs that the Board conduct the reconsideration taking into account the following factors:
 - i. the environmental effects of Project-related marine shipping in view of the requirements of the *Canadian Environmental Assessment Act, 2012*, and
 - ii. the adverse effects of Project-related maritime shipping on species at risk, including the Northeast Pacific southern resident killer whale population, and their critical habitat, in view of any requirements of section 79 of the *Species at Risk Act* that may apply to the Project; and
- c) directs that the Board complete its reconsideration within 155 calendar days after the day on which this Order is made.

⁵ 2018 FCA 153

⁶ *Ibid* at para 469 & 765.

⁷ *Ibid* at para 439.

⁸ *Ibid* at para 768-769.

The Chair of the Board assigned a panel of three Board members (Lyne Mercier – presiding, Alison Scott, and Murray Lytle) to conduct the Reconsideration (the Reconsideration Panel). In carrying out the Reconsideration, the Board held a public hearing (the MH-052-2018 hearing) and has prepared this MH-052-2018 Report as a result.

1.4.2 The hearing process

Prior to issuing a Hearing Order and deciding on the scope of the Board's Reconsideration, on 26 September 2018, the Board sought public comments on:

- 1) whether, "on a principled basis,"⁹ Project-related marine shipping should be included in the "designated project" to be assessed under the CEAA 2012;
- 2) the draft Amended Factors and Scope of the Factors for the Environmental Assessment pursuant to the CEAA 2012 (Amended Factors Document), and a draft List of Issues to be considered in the MH-052-2018 hearing;
- 3) the design of the hearing process to be used for the Reconsideration; and
- 4) which government departments or bodies the Board should require information from during the hearing.

On 5 October 2018, the Board sought additional, focused comments from the Parties on the following limited issue:

Assuming Project-related marine shipping is included in the "designated project" to be assessed under the CEAA 2012, should the designated project be defined as including:

- a) Project-related marine shipping between the WMT and the territorial sea limit; or
- b) Project-related marine shipping between the WMT and the outer boundary of Canada's exclusive economic zone?

The comments received are found on the Board's online public registry. These comments were considered by the Board in reaching the various decisions it communicated in a series of documents on 12 October 2018, which included:

- Hearing Order MH-052-2018, to which the List of Issues and the Amended Factors Document were attached;
- a letter requesting specialist or expert information or knowledge in the possession of each of Fisheries and Oceans Canada, Environment and Climate Change Canada, Transport Canada, Vancouver Fraser Port Authority, Pacific Pilotage Authority, Health Canada, Parks Canada, and Natural Resources Canada (collectively, the Federal Authorities),¹⁰ pursuant to paragraph 20(a) of the CEAA 2012; and
- filing requirements for Trans Mountain.

The Board released reasons for these decisions on 29 October 2018.

The Board's Hearing Order set out the steps and deadlines to guide all participants in the MH-052-2018 hearing. Via subsequent procedural updates and rulings, the Board revised or introduced certain steps and deadlines.

As described in the Hearing Order, the List of Issues, the Amended Factors Document, and the Reasons issued on 29 October 2018, the scope of the Reconsideration was limited. The Reconsideration Panel carried out an environmental assessment of Project-related marine shipping pursuant to the CEAA 2012. In carrying out this assessment, it considered relevant evidence filed in the OH-001-2014 hearing and the new or updated evidence submitted through the MH-052-2018 hearing. The Reconsideration Panel made its recommendations pursuant to the CEAA 2012, as detailed in this Report, then considered whether the submissions made in the Reconsideration process led to a confirmation or modification of the overall recommendation made in the OH-001-2014 Report.

The time limit set out in OIC P.C. 2018-1177 required the Board to complete the Reconsideration process and issue its Reconsideration Report no later than 22 February 2019. Despite the expedited hearing process, the MH-052-2018 hearing had many steps that were similar to the OH-001-2014 hearing. With the exception of oral traditional evidence described below, evidence was presented in writing and testing of that evidence was carried out through written IRs. Parties had the

⁹ *Supra* note 6 at para 770.

¹⁰ The Board gave all of the Federal Authorities intervenor status, regardless of whether a particular Federal Authority registered for that role or not, meaning that they were required to answer any information requests asked of them by the Board or other Parties regarding the information or knowledge they filed in response to the Board's letter, or any other evidence they filed.

opportunity to ask the Board to compel other Parties to provide more complete responses to IRs and also to file final argument.

1.4.3 Public participation

Between 26 September and 3 October 2018, the Board held a process through which individuals and groups could apply or register to participate in the MH-052-2018 hearing. Information about the Board's application to participate process was contained in the Board's letter to all Parties to the OH-001-2014 hearing and all Indigenous groups on the Crown list, which was also posted on the Board's website and circulated to the media.

Intervenors in the OH-001-2014 hearing at the time that the Board issued its OH-001-2014 Report were guaranteed intervenor status in the MH-052-2018 hearing, if they chose to participate and register. Any other member of the public was able to apply to participate as an intervenor. For those that were not intervenors in the OH-001-2014 hearing, the Board indicated the following:

Intervenor status will be granted to those who, in the Board's opinion, are directly affected or have relevant information or expertise. Applicants must demonstrate how they meet this criteria as they relate to the draft List of Issues for the MH-052-2018 hearing.

Anyone not granted intervenor status, as well as any other member of the public, was able to file a letter of comment on the hearing record by 20 November 2018. The Board received various letters after this deadline that did not include justification for lateness. These were not considered as part of the record.

In the Board's 5 October 2018 Ruling No. 1, it announced the List of Parties,¹¹ based on the applications to participate received by the deadline. The Board's reasons for its participation decisions were issued separately on 11 October 2018.

Throughout the hearing, the Board received and ruled on additional late applications to participate as intervenors. Some intervenors also withdrew from the hearing. At the time that the Board finalized its MH-052-2018 Report, there were 118 intervenors, the majority of which were intervenors during the OH-001-2014 hearing. The list of intervenors is found in Appendix 6.

1.4.4 Participant funding

On 26 September 2018, the Participant Funding Program announced a simplified funding process for this hearing to reduce administrative burden. Eligible groups could request up to \$80,000, and individuals up to \$12,000, to participate in the MH-052-2018 hearing. The Participant Funding Program offered a total of \$4,981,760 to 69 recipients; of which 82 per cent was offered to Indigenous intervenors. The Participant Funding Program is a reimbursement-based program, therefore actual payments to groups and individuals depended on eligible costs claimed by recipients and approved for payment by the NEB.

1.4.5 Gathering oral Indigenous traditional evidence

The Board heard comments that Indigenous intervenors wanted the opportunity to provide traditional evidence orally for the MH-052-2018 hearing. The Board was honoured that Elders, Chiefs and community members chose to share their ceremonies, songs, prayers and stories. Throughout this MH-052-2018 Report the Board includes evidence heard through oral traditional evidence. This evidence was valuable to the Board as it undertook its deliberations.

Between 20 November and 6 December 2018, the Board heard oral traditional evidence from 25 Indigenous intervenors. Oral traditional evidence sessions were held in:

- Calgary, Alberta from 20-22 November;
- Victoria, B.C. from 26-29 November; and
- Nanaimo, B.C. from 3-6 December.

The Board described the process it would use to hear oral traditional evidence in Procedural Direction No. 1 and Procedural Direction No. 2.

The Board offered to hear oral traditional evidence in person at any of the announced locations, or remotely while it sat in Calgary. Two Indigenous intervenors that could not appear before the Panel provided their oral traditional evidence

¹¹ The Parties included Trans Mountain and all intervenors.

remotely by teleconference, one of which took place while the Board was in Nanaimo. Indigenous intervenors could also supplement their oral traditional evidence presentation – for example, if they felt they required more time – with an audio or video recording. Some indigenous intervenors provided the Board with a video recording of oral traditional evidence presentations.

Parties had an opportunity to respectfully ask questions about oral traditional evidence. The Board also asked questions of clarification. Indigenous groups could decide to answer questions orally, in writing, or both.

The Board broadcasted live audio of each day's oral traditional evidence presentations, made media files available for download, and produced written daily transcripts that can be found on the online public registry. The exception to this involved a portion of Tsleil-Waututh Nation's presentation, which, through Ruling No. 17, the Board decided to hear confidentially.

1.4.6 Board rulings

The Board received several process-related requests and notices of motion throughout the MH-052-2018 hearing. In response to these, the Board issued 30 rulings, some of which resulted in process changes, including to deadlines.

Following the issuance of the Hearing Order and Appendices, the Board issued its Reasons for the rulings contained in those documents, by letter dated 29 October 2018. The letter attached two appendices: Appendix 1 provided the reasons for including Project-related marine shipping between the WMT and the 12-nautical-mile territorial sea limit in the "designated project;" Appendix 2 provided the reasons for the remainder of the decisions made in relation to the Hearing Order and its attachments. Those reasons are referred to in this MH-052-2018 Report as the 29 October 2018 Reasons (Appendix 1 or 2).

The Board was also asked to review various decisions it made, including the spatial limit for its assessment of Project-related marine shipping under the CEAA 2012. Ruling 22 provided the Board's reasons related to these review requests.

A summary of the requests and notices of motions received, and the decisions the Board made with respect to them, is found in Appendix 7.

1.5 Issues raised in argument

During written argument-in-chief for the MH-052-2018 hearing, participants raised a numerous issues related to the hearing process, scope of the hearing, and other legal arguments. The Board's views on many of these issues are discussed in this section. However, the Board views regarding other legal issues related to mitigation under the CEAA 2012, and the SARA requirements are covered in Chapter 14.

1.5.1 Procedural fairness

Some parties argued that the Board's Reconsideration process breached requirements for procedural fairness. Their arguments included the following points:

- That significant procedural fairness was owed and the timelines in the Reconsideration were unreasonable. An extension under subsection 52(7) of the NEB Act should have been sought by the Board.
- More time was required because intervenors had to review approximately 8,000 pages of direct evidence from Government departments and Trans Mountain.
- Large quantities of evidence were provided in response to written information requests that were filed on 31 December 2018 and motions to compel better responses that were granted were only filed shortly before final argument was due.
- Participant funding was limited.
- Oral cross-examination was not offered and unsatisfactory responses were received to questions asked in the form of written information requests.
- Only written final argument and not oral final argument was provided.
- The locations for oral traditional evidence were too far away from the Lower Mainland.

Trans Mountain countered that in its view procedural fairness was satisfied. Its arguments included the following points:

- Procedural fairness varies with the context and interests at stake and here the Reconsideration was narrow in scope, which should inform procedural fairness.

- Having a fair but expedited hearing was consistent with the NEB Act and the direction from both the Federal Court of Appeal and the OIC for a prompt redetermination.
- All parties had an opportunity to fully and fairly present their case.
- In response to a notice of motion from Squamish Nation and supported by other intervenors the Board granted the request for an additional 15 days for filing intervenor evidence. In contrast Trans Mountain had a very limited time to file its reply evidence

Views of the Reconsideration Panel

Summary

The Board has determined that parties raising concerns about the fairness of the hearing process have not demonstrated that the Board breached any duty of procedural fairness. In considering individual issues raised as well as considering procedural fairness in the context of the entire hearing process, all parties had a meaningful opportunity to present their case fully and fairly. This included an opportunity to comment on the MH-052-2018 hearing process, file evidence, present Indigenous oral traditional evidence, ask written questions and receive responses and present final written argument. Parties had an opportunity to challenge evidence they did not agree with. The Board considers that hearing deadlines, as amended, were fair.

The Law: Was the Board's Reconsideration Process Procedurally Fair?

The Board as a public authority that makes decisions and recommendations that affects the rights, privileges or interests of individuals and groups, including Indigenous people, owes a duty of procedural fairness to the parties before it.¹²

In describing the variable nature of procedural fairness which depends on the context and circumstances in each case, the Court in *Tsleil-Waututh Nation* went on to list and apply the non-exhaustive factors from *Baker v. Canada (Minister of Citizenship & Immigration)* which are used in determining what procedural fairness requires in a particular circumstance.¹³

In discussing whether procedural fairness has been satisfied in a particular case it is useful to keep in mind that a variety of procedural options are available to meet the duty to be fair. While it is important to keep in mind individual claims specific to procedural fairness, it is also important to assess them in the context of the process for the Reconsideration as a whole. There is generally no right to the most advantageous procedure¹⁴ but parties can expect a decision or recommendation pursuant to statutory authority will be made fairly.

Taking into consideration a number of factors, the Court in *Tsleil-Waututh Nation* determined that the procedural fairness owed in the OH-001-2014 hearing was "significant" and that parties were entitled "to a meaningful opportunity to present their cases fully and fairly." The Court stated that this "included in the right to present a case fully is the right to effectively challenge evidence that contradicts the case."¹⁵

Taking into consideration the importance of the Board's recommendations and the ultimate GIC decision on the rights of parties, and other factors discussed in *Tsleil-Waututh Nation*, the Board accepts that procedural fairness owed in the Reconsideration is significant. The main difference between the Reconsideration and OH-001-2014 is that the Reconsideration was more narrowly focused and the Reconsideration also had shorter time limit for completion. These differences were considered as part of the overall context of the Reconsideration.

Hearing timelines

At issue is whether when taking into account the new evidence filed by Trans Mountain and Federal Departments and Agencies, that the overall timelines for the Reconsideration were so tight that intervenors did not have an opportunity

¹² *Tsleil-Waututh Nation*, para. 230

¹³ [1999] 2 S.C.R. 817, 174 D.L.R. (4th) 193 (S.C.C.). The factors being the nature of the decision being made and the process followed in making it; the nature of the statutory scheme, including the existence of an appeal procedure; the importance of the decision to the lives of those affected; the legitimate expectations of the person challenging the decision; and, the choice of procedures made by the decision-maker.

¹⁴ *Ironside v. Alberta (Securities Commission)*, [2009] A.J. 376 at para 107 (Alta C.A.).

¹⁵ *Tsleil-Waututh Nation* at para 235.

to fully and fairly make their case. Related to this point was whether there was a breach of procedural fairness that the Board did not make a request of the Minister under subsection 52(7) of the NEB Act to extend the time limit by an additional period.

The Board is of the view that its previous findings regarding the timeline still apply to assertions made about timing during final argument:

The Board received comments stating that the timeline for the hearing, including the time allotted for the initial comment process, is too short. Others commented that the Board should extend the timeline or seek an extension from the GIC.

The Board acknowledges that the timeline is not lengthy. This requires an expedited process and the need for Parties to stay focused on the hearing steps and to work diligently. Section 53 of the NEB Act authorizes the GIC to direct the Board to undertake a reconsideration based on any factor specified, and to specify a time limit for the Board to complete its reconsideration. In this focused Reconsideration, it is not necessary that the Board have the same timelines as a new application. There is already significant evidence on the record on numerous topics being examined. Many of the Parties will also be familiar with the record from the OH-001-2014 hearing. Consistent with subsection 11(4) of the NEB Act, there is a need for proceedings to be conducted expeditiously and fairly and, in any case, within the time limit set by the GIC.¹⁶

Consistent with both the Court's direction for a prompt redetermination¹⁷ and the OIC, while the Reconsideration time line was expedited, the Board is satisfied that parties had a fulsome opportunity in the Reconsideration to make their case and challenge evidence from Trans Mountain and Federal Departments and Agencies. If there were particular circumstances requiring additional time, the Board explicitly stated that it was open to considering such requests.¹⁸ Both Squamish Nation and Tsleil-Waututh Nation did file a request on 5 November 2018 requesting that intervenor evidence be moved from 20 November to 5 December 2018 (Trans Mountain and Federal Departments and Agencies had filed direct evidence on 31 October 2018).

Squamish, for example, said it had been diligently working since the Board's letter of 26 September 2018 to retain experts. A number of intervenors wrote in support of the extension request. The Board fully granted the 15 day extension request. In doing so the Board recognized the fundamental importance of parties being able to full present their case with evidence. The Board also took into account the volume of evidence that Federal Departments and Agencies, in particular, had filed. This all factored into the extension request being granted in full. The Board stated that, in order to accommodate the 15-day extension, it had to shorten some other deadlines and compress the Board's own time for writing the MH-052-2018 Report.

On the revised deadline for intervenor evidence to be filed, the Board received dozens of reports and studies. This included those prepared by asserted experts from intervenors. There were a very limited number of parties that made requests to file late evidence, and those requests were considered on a case by case basis. In the Board's view, taking into consideration the limited scope of the Reconsideration, that parties had notice of the need to start preparing evidence since 26 September 2016 and that as requested a 15 day extension to the deadline of filing intervenor evidence was granted, the Board considers that parties had an adequate opportunity to fully and fairly present their case and procedural fairness was not breached.

With respect to the time lines to complete the balance on the Reconsideration process, while at times comment processes occurred on an expedited basis, parties appeared to have provided detailed comments within established time lines. Particularly for intervenors, in the Board's view there was a reasonable amount of time to ask written questions regarding other parties' evidence.¹⁹ While responses to questions resulted in additional evidence being filed on 31 December 2018, intervenors had over 3 weeks from this time to file written argument-in-chief. Where motions to compel were granted, the responses were filed closer to written argument, although these additional responses added limited new materials.

¹⁶ 29 October 2018 NEB Appendix 2 – Trans Mountain Expansion – Reconsideration – reasons to the List of Issues and Hearing Process, pages 18 and 19.

¹⁷ *Tsleil-Waututh Nation* at paras 768 and 774.

¹⁸ *Supra* note 16 at pg 19. Hearing Order MH-52-2018 at pg 13.

¹⁹ Information requests were due on 17 December 2018, which was more than 6 weeks after Trans Mountain and Federal Departments filed their direct evidence.

Taking all these facts and circumstances into consideration, the Board is of the view that hearing process deadlines, as amended, allowed parties to fully and fairly present their case and challenge evidence, and resulted in a procedurally fair hearing.

With regard to subsection 52(7) of the NEB Act, this extension provision arises in the context of the time limit that applies in a section 52 certificate hearing; its application to the time limit of a Reconsideration is questionable. Even if this subsection has application to a Reconsideration, the Board is not persuaded that a convincing case was made for the Board to make such a request of the Minister. Consistent with subsection 53(2) of the NEB Act which authorizes the Minister to impose a time limit for the Board to complete its Reconsideration, a 22 February 2019 time limit was imposed in the OIC, which is binding on the Board. The Board is not persuaded that such a time limit breached the requirement for a fair hearing. When a large number of parties made a specific request for more time, the request was granted. No party made a compelling case during the hearing process as to why the Board was required to request more time from the Minister in the context of a focused Reconsideration.

Participant funding

Limited comments were received that participant funding was insufficient to allow meaningful participation.

The Board provided information, forms and contact information regarding participant funding early in the hearing process. The Board's letter of 26 September 2018 stated:

Participant funding is available to facilitate eligible intervenors' participation in this hearing. A simplified funding process will be used for this hearing to reduce administrative burden. Eligible groups may request up to \$80,000, and individuals up to \$12,000.

For information about participant funding and eligible costs, visit www.neb-one.gc.ca/pfp or contact a Participant Funding Program Coordinator at 1-800-899-1265.

The Participant Funding Request Form is found at the link above, and also attached to this letter as Appendix 3.

In the few instances that parties raised participant funding as an issue, there were no detailed comments filed explaining why the funding amounts were insufficient or could not be accessed on a timely basis. It is worth noting that parties were advised that intervenors from the OH-001-2014 hearing were guaranteed intervenor status in the Reconsideration. As a result, there should not have been a concern about whether intervenor standing would be granted. Also parties had the opportunity to work with other parties and divide up issues or jointly tackle issues. For example, **Tsleil-Waututh Nation, Squamish Nation, Stz'uminus First Nation, Snuneymuxw First Nation, and the City of Vancouver** filed joint evidence from Dr. Gunton and Dr. Joseph.

For all these reasons, in the circumstances of the Reconsideration the Board is not persuaded that concerns raised about participant funding established there was a breach of procedural merit.

Lack of cross-examination and oral final argument

The issue raised about having only written questioning, and not oral cross-examination, was covered in detail in Ruling No. 14 in OH-001-2014 and in *Tsleil-Waututh Nation* and the Board adopts those reasons. In the context of this multi-party public hearing that is a reconsideration of a past hearing resulting in recommendations to GIC, the Board is of the view that the duty of fairness does not necessarily require cross-examination. Parties had an opportunity to challenge evidence both by filing their own evidence in response and by asking written questions and receiving responses. Parties unsatisfied with answers received had an opportunity to file motions to compel a better answer. For parties now claiming that responses received were inadequate, such a concern should have been appropriately detailed and raised ahead of final argument.

With respect to a concern raised about not having final oral argument the issue is whether, in looking at the hearing process as a whole, the lack of oral final argument was unfair. Largely the main process difference from the OH-001-2014 hearing to the MH-052-2018 hearing is that the Reconsideration added a step of providing parties the option of filing an opening statement with their evidence but the Reconsideration did not have oral summary argument. Parties were advised early in the Reconsideration to include all pertinent argument in their written argument-in-chief. The Hearing Order clearly stated that oral summary argument or oral summary argument on specific issues only "may be

held if needed and time permits.”²⁰ Later in Procedural Direction No. 4 the Board advised parties that it decided that oral argument was not necessary. The Board stated:²¹

The Board is not persuaded that such argument is necessary. This takes into consideration that the Board provided additional time for intervenors to prepare their evidence and an opportunity for Indigenous groups to provide oral traditional evidence at two locations on Vancouver Island. There is not sufficient time to also have oral summary argument, nor is oral argument considered necessary given the specific focus in the MH-052-2018 hearing and the List of Issues.

It is up to the Board's discretion whether it considers written versus oral argument to be the most helpful in making its decision or recommendation. As stated in the Hearing Order, “[t]he Parties should include all pertinent argument in their written argument-in-chief, as [oral summary argument] may not be held.” The Board looks forward to considering written final argument from the Parties.

Consistent with the case law cited above, the Board is of the view that there is no one process that is necessary to satisfy procedural fairness in the circumstances of this Reconsideration. While some hearings at the Board have an oral final argument or summary argument component, in some instances the Board has had only written final argument so there is no legitimate expectation²² of oral final argument.²³ Such an approach is consistent with section 22 of the *National Energy Board Rules of Practice and Procedure*, 1995.

In the case of this Reconsideration, the Board invited submissions on the process the Board should follow and considered those comments in designing a process. Necessarily, process steps may involve some compromise. Here the Board determined it was important to provide an opportunity for Indigenous oral traditional evidence, and many Indigenous intervenors participated by providing oral evidence. Additionally, part way through the hearing process, the Board was persuaded by a number of requests to provide additional time for the foundational step of preparing intervenor evidence. This limited the time available to hear a large group of parties provide oral final argument. In any event, parties had an opportunity to provide full final argument in written form and the Board determined in its discretion that it did not also require oral final argument. The Board does not dispute that there can be utility in the Board having oral final argument; however, it was not required in the circumstances of the Reconsideration. For all these reasons, in considering the Reconsideration process as a whole, the Board is not persuaded oral final argument was required for the hearing to be fair.

Concern that locations for Indigenous oral traditional evidence on Vancouver Island required too much travel

The Board previously ruled on this issue in Ruling No. 7 and found that the overall design of the hearing process was procedurally fair for Indigenous intervenors including those from the Lower Mainland. Those reasons continue to be relied upon by the Board and no basis has been provided to overturn this ruling.

Procedural fairness as a whole

The Board has responded to specific concerns raised which allege the Reconsideration process was procedurally unfair. However, as reflected in the views above, the whole of the Board's process must be considered in order to determine whether the Board's overall process for the Reconsideration was procedurally fair. Such a determination must take into consideration the circumstances that this was a focused Reconsideration with a specific time limit applying. Many of the parties would have been familiar with at least elements of the subject matter of the Reconsideration as they participated in the OH-001-2014 hearing. While the process was expedited, there were a number of steps, which when considered as a whole, allowed for meaningful participation. These process steps included opportunities to:

1. Comment on several aspects of the Reconsideration including the design of the hearing process.
2. File and respond to notices of motion and review applications as considered appropriate.

²⁰ Hearing Order MH-52-2018 page 8.

²¹ 10 January 2019, Procedural Direction No. 4, pages 1 to 2.

²² Legitimate expectations as contemplated by *Baker*, *supra* note 12.

²³ As stated above, parties were advised early on that oral summary argument, or oral summary argument on specific issues would only be held if needed and time permits. Comparable although not identical participation opportunities were offered in the GH-002-2015 hearing regarding the 2017 Nova Gas Transmission Ltd. System Expansion Project (where the GIC decision and NEB recommendation were considered and affirmed in *Bigstone Cree Nation v. NGTL*, 2018 FCA 89). Hearing steps in GH-002-2015 included an opportunity to provide oral traditional evidence, written evidence, written information requests and written final argument.

3. File written evidence in response to the evidence of Trans Mountain and Federal Departments and Agencies, and to address the List of Issues for the Reconsideration. This included being granted a 15 day extension as many of the intervenors requested.
4. Present oral Indigenous evidence, either in person or remotely, on Vancouver Island or in Calgary, or through an audio or video recording.
5. Ask information requests of other Parties' written evidence, and to file motions to compel full and adequate answers if the responses are not considered adequate; and
6. Filing written-argument-in chief, including replying to the argument of Trans Mountain, the Federal Departments and Agencies and the advice provided by Marine technical advisor John A. Clarkson²⁴. Parties could also comment on draft conditions and recommendations.

Participant funding was also available for hearing steps undertaken and travel costs. For all the above reasons, the Board is not persuaded that there was a breach in procedural fairness in the Reconsideration process.

1.5.2 Reliance on the OH-001-2014 hearing

In final argument, parties submitted diverging views regarding the extent to which the Reconsideration panel should rely on the assessment of Project-related marine shipping from the OH-001-2014 hearing. Some intervenors supported less reliance on the assessment from the OH-001-2014 hearing. For example, TWN argued that the extent to which the OH-001-2014 Report failed to meet the statutory requirements of the CEAA 2012 was not narrow in scope nor minor or technical in nature. TWN said that the FCA did not hold that the Board was permitted to simply re-use the findings it made on matters that were erroneously considered under the NEB Act. The Province of B.C. also said that the Board is not precluded from reconsidering evidence from the OH-001-2014 hearing and reaching different conclusions, so long as it limits its review to the scope of matters the GIC identified for reconsideration. Tsartlip First Nation argued that the Board's environmental assessment in this reconsideration under the CEAA 2012 is not functionally or legally the same as its environmental assessment conducted in the OH-001-2014 hearing. The Board is not bound to its past assessments in the OH-001-2014 hearing.

In contrast, Trans Mountain argued that the scope of the reconsideration was limited and nothing in the FCA's decision requires the Board to re-assess effects of Project-related marine shipping that were already assessed in OH-001-2014. Similarly, the Government of Alberta said that the scope of this reconsideration is targeted and narrow. The Board's original public interest inquiry was thorough and substantially complied with the requirements of the CEAA 2012. The "successive deficiencies" the Court identified in *Tsleil-Waututh Nation* flow not from the Board's approach to its public interest review of the environmental effects of Project-related marine shipping, but from its failure to "justify" its decision to exclude Project-related marine shipping from the "designated project." The underlying review itself was *not* deficient. In light of this, the primary focus of the Reconsideration is building upon the Board's original assessment of Project-related marine shipping by considering and evaluating mitigation or alternative measures.

Views of the Reconsideration Panel

As directed by the OIC and, as reflected in the Board's List of Issues, this Reconsideration is focused on Project-related marine shipping – a comparatively narrow scope to the OH-001-2014 hearing. The Board did not consider evidence or revisit issues that were outside of the scope of the Reconsideration. To understand the scope of the Reconsideration with respect to matters that fall within the List of Issues for the Reconsideration, it is important to look at what was assessed in the OH-001-2014 hearing. Although the Board did not include Project-related marine shipping under its CEAA 2012 environmental assessment during the OH-001-2014 hearing, the Board did consider Project-related marine shipping under the NEB Act. Issue #5 from the OH-001-2014 hearing List of Issues was "the potential environmental and socio-economic effects of marine shipping activities that would result from the proposed Project, including the potential effects of accidents or malfunctions that may occur." The Board also issued filing requirements specific to the issue of the potential effects of Project-related marine shipping activities.

The Board's reasons for its decision related to the List of Issues, Factors for the environmental assessment, and hearing process design outlines what was examined in the OH-001-2014 hearing:

²⁴ Mr. Clarkson was appointed by the federal government pursuant to section 10 of the NEB Act. Mr. Clarkson provided advice to the Board in the form of written argument-in-chief about evidence and draft conditions and recommendations filed on the record. At least one party raised a concern in final argument that Mr. Clarkson's participation was unfair. However, the Board is of the view that since all parties had an opportunity to comment on Mr. Clarkson's advice, there was no breach of procedural fairness. Rules of evidence concerning experts that may apply in a Court process, do not strictly apply in the Board's hearing process.

When carrying out its analysis under the NEB Act, the Board followed an approach similar to the [environmental assessment] conducted for the pipeline component under the CEAA 2012. As a result of this approach, the Board collected extensive evidence relevant to Project-related marine shipping. For example, Chapter 14 of the Board's OH-001-2014 Report extensively considered the effects of Project-related marine shipping, and the significance of those effects. Chapter 8 considered the environmental behaviour of spilled oil, and related environmental effects. This is reflected in the Federal Court of Appeal's decision in *Tsleil-Waututh*, when it stated that the Board, among other things, considered the effects of Project-related marine shipping on Southern resident killer whales (SRKW) and the significance of those effects,²⁵ and that the OH-001-2014 Report was adequate for the purposes of informing the GIC about the effects of Project-related marine shipping on SRKW and their use by Indigenous groups, and of the significance of these effects.²⁶

The Board has indicated that the entirety of the evidence filed in the OH-001-2014 hearing will be included as part of its record for this MH-052-2018 hearing, and will be considered by the Board to the extent it is relevant to the List of Issues for the MH-052-2018 hearing.

Accordingly, the Reconsideration List of Issues stated:

Parties are expected to limit their evidence filings to **new or updated** evidence (including comments from the public, community knowledge, and Indigenous traditional knowledge) relevant to the above issues. Parties are not required to re-file or re-test evidence on the record of the OH-001-2014 hearing. It is recommended that Parties focus their evidence on aspects of the above issues that were not fully canvassed in the OH-001-2014 hearing.

The Board recognized that a couple of issues in the Reconsideration List of Issues had not been thoroughly canvassed in the OH-001-2014 hearing and ensured that these were addressed in the MH-052-2018 Report. For example, mitigation of significant adverse environmental effects of Project-related marine shipping (Issue #2) and measures to avoid or lessen the adverse effects of Project-related marine shipping on SARA-listed wildlife species and their critical habitat (Issue 5).

The Board also accounted for the fact that many aspects of Project-related marine shipping were thoroughly canvassed in the OH-001-2014 hearing, particularly the environmental effects of Project-related marine shipping. However, this did not mean that the Reconsideration Panel blindly adopted the Board's findings on these aspects of Project-related marine shipping from the OH-001-2014 hearing. For matters that fall within the List of Issues for the Reconsideration, the Reconsideration Panel was open to the possibility of altering the Board's previous findings based on new or updated evidence. In the Reconsideration, the onus remained on Trans Mountain to make the case for its Project.

The Board carried out a full environmental assessment of Project-related marine shipping in accordance with the requirements of the CEAA 2012, SARA, OIC and paragraph 770 of *Tsleil-Waututh Nation* in this MH-052-2018 hearing. This included a comprehensive assessment of the factors and environmental effects set out in sections 19 and 5 of the CEAA 2012, respectively. As a result of its EA, the Board made its recommendations under subsection 30(4) of the CEAA 2012. The Board also considered whether its recommendation under the CEAA 2012 resulted in changes or additions to the recommendations (including recommended terms or conditions) from the OH-001-2014 hearing.

The interplay between Project-related marine shipping matters canvassed in the OH-001-2014 hearing and Reconsideration is reflected in the layout of the MH-052-2018 Report. For issues that fell within the scope of the MH-052-2018 hearing, the Reconsideration Panel included views of the parties from the OH-001-2014 hearing where they were still applicable. These were then followed by new or updated evidence raised by the parties in the MH-052-2018 hearing. The views of the Reconsideration Panel contain Board views from the OH-001-2014 Report that they found to remain applicable after considering relevant evidence from both the OH-001-2014 and MH-052-2018 hearings. The views of the Reconsideration Panel also include additional views to address the new or updated evidence and explain if it confirms or modifies the Board's previous findings from the OH-001-2014 hearing.

²⁵ *Tsleil-Waututh Nation* at para 438.

²⁶ *Ibid* at para 439.

1.5.3 Changed circumstances regarding need, economic feasibility, and financial matters

A number of parties filed evidence regarding the changed circumstances related to the need for and the economic feasibility of the Project since the OH-001-2014 hearing, including evidence on changes to supply and markets. Parties also argued that the Board should reconsider financial matters arising from Canada's purchase of the Project and associated changes to Trans Mountain's corporate structure.

Tsleil-Waututh Nation, Squamish Nation, Stz'uminus First Nation, and Snuneymuxw First Nation submitted a report by Mr. David Hughes entitled "Report on the Need For, and Economics Of, the Trans Mountain Expansion Project." In this report, Mr. Hughes evaluated if any significant developments have occurred since the OH-001-2014 Report that materially affect the conclusions regarding the need for and the benefits of the Project. Based on the developments, Mr. Hughes evaluated the need for the Project and if the Project will increase the price per barrel of oil that Canadian producers obtain.

Some intervenors, including Stz'uminus First Nation, Snuneymuxw First Nation and City of Burnaby, argued that the Board must consider new information, including economics of the Project, when reweighing the Project's benefits and burdens.

In its Argument-in-Chief, Trans Mountain asked the Board to take judicial notice of recent events that support the need for increasing Canadian pipeline export capacity to tidewater and, therefore, support the conclusion in the OH-001-2014 Report that the economic benefit of the Project is significant.

Views of the Reconsideration Panel

In the MH-052-2018 hearing, the Board did not consider any new evidence filed on need for the project, economic feasibility, or financial matters.

The scope of the MH-052-2018 hearing was defined by the List of Issues, released by the Board on 12 October 2018, and did not include need for the project, economic feasibility, or financial matters. The Board developed the List of Issues following comments from parties. The Board addressed this matter in the 29 October 2018 Reasons (Appendix 2)²⁷ and Ruling No.22²⁸.

Therefore, Chapter 12: Need for the Project and economic feasibility and Chapter 13: Financial Matters in this MH-052-2018 Report are the same as they were in the OH-001-2014 Report, as they fall beyond the scope of the MH-052-2018 hearing. These chapters contain the views of the original panel from the OH-001-2014 hearing, including the requirement for Trans Mountain to comply with Conditions 57 and 121, which remain unchanged.

As economic feasibility and the need for the Project fall outside of the List of Issues, the Board did not consider or give any weight to Mr. Hughes' report or any other evidence filed by parties with respect to these issues. The Board also rejects Trans Mountain's request for the Board to take judicial notice of recent events that support the need for increasing Canadian pipeline export capacity to tidewater. Furthermore, the Board is not persuaded that it should consider new information on the economics of the Project when reweighing the Project's benefits and burdens for its public interest recommendation. This would essentially circumvent the List of Issues and open the MH-052-2018 hearing up to other issues indirectly, rendering the purpose of section 53 of the NEB Act and narrow scope of the OIC meaningless.

Consistent with section 53 of the NEB Act, both the Federal Court of Appeal and the OIC prescribed a limited scope for the Reconsideration. The Board went out for comment early on regarding the scope of the Reconsideration and after considering the comments made determinations about hearing scope. It is not appropriate for the parties to then file whatever evidence they wish on out-of-scope issues or, in the case of Trans Mountain, to ask the Board to take judicial notice of something that is out of scope. To include any evidence filed during the MH-052-2018 hearing on need for the project, economic feasibility, or financial matters would be inappropriate in light of the scoping decision made with respect to the List of Issues.

²⁷ 29 October 2018 NEB Appendix 2 – Trans Mountain Expansion – Reconsideration – reasons to the List of Issues and Hearing Process at pg 11-12.

²⁸ NEB, Ruling No. 22 Applications for Review from Living Oceans, Raincoast and TWN (27 December 2018) at pg 22-23.

1.5.4 Issues dealt with in prior Board rulings

In final argument, some parties raised arguments related to issues which the Board had decided in earlier rulings. In particular:

- Some parties disagreed with the decision to include Project-related marine shipping between the WMT and the 12-nautical-mile territorial sea limit in the designated Project under the CEAA 2012 (the Spatial Limit Decision). They argued that the Board ought to also include shipping in the Exclusive Economic Zone. The Board first sought comments on this issue in its 5 October 2018 letter. In the 29 October 2018 Reasons (Appendix 1) the Board thoroughly explained the Spatial Limit Decision. On 16 November 2018, the Board received applications to review the Spatial Limit Decision. The Board established a comment process, considered all submissions on the merits, and denied the review of the Spatial Limit Decision on its merits, with reasons in Ruling No. 22 issued 27 December 2018.
- Some parties argued that a *de novo* hearing was required because the Reconsideration Panel did not hear the evidence and submissions of the parties in the OH-001-2014 hearing. The Board explained why it did not agree with this argument in the 29 October 2018 Reasons (Appendix 2), Section 4.3. On 16 November 2018, the Board received an application to review this decision. The Board established a comment process, considered all submissions, and denied the review of the decision not to conduct a *de novo* hearing, with reasons in Ruling 22 issued 27 December 2018.
- Some parties argued that Trans Mountain should have been required to conduct species-specific risk assessments. The Board established a comment process, considered all submissions and denied the motion to require Trans Mountain to conduct a new risk assessment of Project-related marine shipping, with reasons in Ruling no. 24 issued 4 January 2019. Additional Board views regarding the adequacy of Trans Mountain's risk assessment of Project-related marine shipping are contained in Chapter 14.
- Some parties argued that Canada's purchase of the Project created a conflict of interest for the federal agencies providing expert information and for the Board's assessment of the Project. The Board found that there is no conflict of interest in its 29 October 2018 Reasons (Appendix 2), Section 4.2. The Board addresses the alleged conflict of interest between the Crown's fiduciary role in respect of Indigenous peoples and its role as the owner of the Project in Chapter 5, finding that the Crown's fiduciary obligations toward Indigenous peoples can be balanced with its broader obligations with respect to the public interest.
- Some parties argued that the Board ought to have assessed the environmental effects of upstream and downstream activities, including greenhouse gas emissions. The Board decided not to include these effects in the List of Issues, and explained this in the 29 October 2018 Reasons (Appendix 2), Section 2.8. On 21 January 2019, the Board received an application to review this decision along with Ruling No. 25 from the OH-001-2014 hearing. The Board established a comment process, considered all submissions, and denied the review of the decision to exclude the effects of upstream and downstream greenhouse gas emissions from the List of Issues for the Reconsideration, with reasons in Ruling 30 issued 19 February 2019.

1.5.5 Request to strike Trans Mountain's reply evidence

Some parties, including Tsleil-Waututh Nation, BC Nature and Nature Canada argued that Trans Mountain's reply evidence ought to be inadmissible or given no weight, because it was not prepared by properly qualified experts and Trans Mountain has not demonstrated that it is fair, objective and non-partisan evidence.

In reply, Trans Mountain said that it has significant expertise within its organization, including internal subject matter experts and a long history of corporate experience with the issues raised by intervenors. Trans Mountain also said that parties could have asked more information about the experts through information requests, but that they did not do so.

Views of the Reconsideration Panel

Under the *National Energy Board Rules of Practice and Procedure, 1995*, the Board requires that filed written evidence be prepared by the party filing it, or under their direction and control, and that the party be able to answer questions about it. In this case, the evidence being challenged was prepared by Trans Mountain, or under their direction and control. No party demonstrated that Trans Mountain was unable to answer their questions related to that evidence.

As an administrative tribunal, the Board is not bound by strict rules of evidence including those regarding the admissibility of expert opinion and qualification of experts. The Board is an expert tribunal and has the ability to evaluate the evidence submitted in each hearing. The Board decides what weight, if any, to give evidence once the

record is closed and all submissions are made. The Board is of the view that Trans Mountain's reply evidence is admissible. With respect to weight, the views of the Reconsideration Panel are described throughout this Report.

1.5.6 Precautionary principle and adaptive management

Many parties in the MH-052-2018 hearing emphasized the application of the precautionary principle. Intervenor relied on the precautionary principle in relation to the mitigation measures that should be put in place. For example, PIPE UP said that consistent with the precautionary principle, the Board should require Trans Mountain to use a trenchless construction method for salmon watercourses, despite residual areas of uncertainty regarding SRKW diet.

A number of intervenors also interpreted the precautionary principle to mean that the Project should not be approved until there is a better understanding of the Project's effects and effectiveness of mitigation measures. Tsleil-Waututh argued that the precautionary principle leads to the conclusion that justification of significant adverse environmental effects cannot occur in these circumstances, given the environmental degradation marine shipping will visit upon Burrard Inlet and the Salish Sea, and the lack of any salutary benefits associated with the Project-related marine shipping.

Other parties interpreted the precautionary principle differently. Trans Mountain said that the precautionary principle should not be used or interpreted to the point of effectively paralyzing development, and that decision-makers should rely on the principle of adaptive management to address uncertainties in environmental assessment. The Government of Alberta argued that while the precautionary principle must inform the Board's review, its implications should not be overemphasized - particularly when the Project proponent and responsible agencies have demonstrated a willingness to develop and implement additional harm reduction and management strategies.

Views of the Reconsideration Panel

The Board recognizes the important role of the precautionary principle under the CEAA 2012. The mandate of the CEAA 2012 explicitly references the precautionary principle in subsection 4(2): The Government of Canada, the Minister, the Agency, federal authorities and responsible authorities, in the administration of this Act, must exercise their powers in a manner that protects the environment and human health and applies the precautionary principle. The purposes of the CEAA 2012 also include ensuring that designated projects that require the exercise of a power or performance of a duty or function by a federal authority under any Act of Parliament other than this Act to be carried out, are considered in a careful and precautionary manner to avoid significant adverse environmental effects (subsection 4(1)).

The Supreme Court of Canada used the definition of precautionary approach from the Bergen Ministerial Declaration on Sustainable Development (1990) in *114957 Canada Ltée (Spraytech, Société d'arrosage) v. Hudson (Town)*:

In order to achieve sustainable development, policies must be based on the precautionary principle. Environmental measures must anticipate, prevent and attack the causes of environmental degradation. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing measures to prevent environmental degradation.²⁹

This definition of precautionary principle was subsequently cited and expanded upon by the Supreme Court of Canada in *Castonguay Blasting Ltd. v. Ontario (Environment)*:

This emerging international law principle recognizes that since there are inherent limits in being able to determine and predict environmental impacts with scientific certainty, environmental policies must anticipate and prevent environmental degradation.³⁰

Trans Mountain relies on *Blaney et al v. British Columbia (The Minister of Agriculture Food and Fisheries) et al* to support its views on the precautionary principle:

[T]he precautionary principle does not require governments to halt all activity which may pose some risk to the environment until that can be proven otherwise. The decisions on what activity to allow and how to control it often require a balancing of interests and concerns and a weighing of risks.³¹

²⁹ 2001 SCC 40 at para 31 [*Spraytech*].

³⁰ 2013 SCC 52 at para. 20 [*Castonguay*]. Both *Spraytech* and *Castonguay* were also followed by the Federal Court of Canada in *Morton v. Canada (Fisheries and Oceans)* 2015 FC 575.

³¹ 2005 BCSC 283 at para 45 [*Blaney*].

The Board notes Tsleil-Waututh Nation's argument that aspects of *Blaney* can be distinguished from these circumstances. However, the Board finds it informative for supporting the notion that recommendations and decisions regarding project approval do require a balancing of interests and concerns and a weighing of risks.

The Board applies the precautionary principle in conducting its environmental assessments. The precautionary principle is applied in the Board's consideration of measures to mitigate impacts through design, planning, follow-up and monitoring, particularly where scientific uncertainty exists on the prediction of effects or effectiveness of mitigation. The Board requires proponents to minimize the effects or consequences that are *anticipated or possible* even if not certain. The Board also requires proponents to make considerable efforts to prevent or avoid environmental impact and, if impacts are unavoidable, to minimize and reduce them.

The Board also applies the precautionary principle in its significance determinations. The Canadian Environmental Assessment Agency guidance on "Determining Whether a Designated Project is Likely to Cause Significant Adverse Environmental Effects under CEAA 2012" notes that all project environmental assessments involve some level of uncertainty, and observed results will often deviate, to some degree, from predictions made in an environmental assessment.³² Uncertainty could be related to a number of factors such as: project design and components, baseline environmental conditions, overall scope of effects, accuracy of environmental effects prediction, risk assessment methodologies, assumptions around the effectiveness of mitigation, significance determination, follow-up programs, and adaptive management. Uncertainty also triggers the need for additional monitoring, additional consultation, validation of the predictions of models, etc. The Reconsideration Panel confirms the views regarding adaptive management from the OH-001-2014 hearing as discussed in Section 10.1.6:

[In] appropriate circumstances adaptive management can be an important part of the follow-up program for a project to allow for uncertainties. The Board's conditions also incorporate adaptive management, requiring the implementation of new or modified mitigation measures over the life of the Project in response to mitigation measures that do not achieve full success and to address unanticipated environmental effects.

The Board adds that the appropriate circumstances for relying on adaptive management include consideration of whether there is sufficient confidence that: (i) monitoring would detect an ineffective mitigation or unforeseen environmental impact, and (ii) responses would be available and have a reasonable chance of success.

The Board, consistent with the case law and statutory scheme of the CEAA 2012, does not interpret the precautionary principle to mean that approval of a project cannot be recommended if uncertainties remain about its effects or mitigation measures. The Board notes that environmental assessment is a planning and decision-making tool. The environmental assessment identifies potential adverse environmental effects, and proposes measures to reduce those effects, which the Board imposes through conditions or recommendations to the GIC. The precautionary principle cannot be applied in isolation; it must be applied in a manner consistent with the entire statutory scheme.

1.5.7 Justification pursuant to the CEAA 2012 and the SARA

Living Oceans and Raincoast argue that the effects of Project-related marine shipping cannot be justified under the CEAA 2012 because approving the Project would harm the SRKW and destroy critical habitat in contravention of section 32 and subsection 58(1) of the SARA, respectively. Living Oceans and Raincoast rely on *Alberta Wilderness Assn v. Cardinal River Coals Ltd.*³³ for the proposition that it is not lawful to issue an authorization under one federal law that will violate the provisions of another. Similarly, Tsleil-Waututh Nation said that justifying significant adverse environmental effects on SRKWs would defeat the purpose of the SARA and the protections it provides to endangered species.

In reply, Trans Mountain submits that the obligations under the SARA must be interpreted in the context of the entire statutory scheme, including CEAA 2012, which expressly contemplates that projects may proceed in the face of significant adverse environmental effects if those effects are justified in the circumstances.

Views of the Reconsideration Panel

The Board is of the view that these circumstances are distinguishable from *Cardinal River*, where the Federal Court in obiter found that the granting of a *Fisheries Act* authorization would permit the deposition of millions of tonnes of waste rock and materials in areas frequented by migratory birds. This was contrary to law because the *Migratory Birds*

³² Canadian Environmental Assessment Agency, *Determining Whether a Designated Project is Likely to Cause Significant Adverse Environmental Effects under CEAA 2012* (November 2015).

³³ [1999] 3 FC 425 at paras 104-105 [*Cardinal River*].

Convention Act prohibited a person from depositing or permitting the deposit of any substance harmful to migratory birds in any waters or areas frequented by migratory birds. The facts are not so clear in this case.

Pursuant to CEAA 2012, the Board has found that Project-related marine shipping is likely to cause significant adverse environmental effects on SRKW, a SARA-listed wildlife species. However, the Board is not persuaded that these effects necessarily result in harm to the SRKW or destruction of critical habitat that would contravene section 32 and subsection 58(1) of the SARA.³⁴ The Board found that while the effects from Project-related marine shipping will be a small fraction of the total cumulative effects, and the level of traffic is expected to increase with or without the Project, the increase in marine vessels associated with the Project would further contribute to cumulative effects that are already jeopardizing the recovery of SRKW. Furthermore, environmental effects on SRKW from underwater noise, as well as potential vessel strikes and spills from Project-related marine shipping, will be reduced by measures and monitoring under the CEAA 2012 and subsection 79(2) of the SARA; in some cases via Board conditions and in other cases if GIC implements the Board's recommendations.

The Board finds that the guidance on *Addressing Species at Risk Act Considerations Under the Canadian Environmental Assessment Act for Species Under the Responsibility of the Minister responsible for Environment Canada and Parks Canada* provides additional clarification:

There is no direct link between the SARA subsection 79(2) requirement to identify adverse effects on listed wildlife species and their critical habitat, and the prohibitions set out in the Act. In other words, determining that an activity will lead to an adverse effect does not necessarily mean that the activity itself is prohibited. Prohibitions are set out in sections 32 to 36 and 58 to 61 of the SARA and their applicability depends on a variety of circumstances.

...

In addition, the potential significance of an adverse environmental effect under CEAA is not necessarily an indication of whether an activity is prohibited under the SARA...³⁵

Furthermore, such an expansive interpretation of the prohibitions in SARA would mean that existing vessels calling at Westridge Marine Terminal and a great proportion of marine shipping currently occurring (i.e., ferries, whale watching boats, commercial vessels) are all in violation of the SARA since they also increase underwater noise, and the risk of vessel strikes and spills (from fuel if not cargo). It is unclear if the SARA prohibitions were intended to be used to manage these types of cumulative effects.

The Board agrees that CEAA 2012 and SARA are related legislation, and the principles of statutory interpretation require each to be read in the context of the other in a coherent manner.³⁶ The prohibitions in section 32 and subsection 58(1) cannot be read in isolation from subsection 79 of the SARA or the overall statutory scheme of the CEAA 2012. In the context of a "designated project" as defined by CEAA 2012, SARA requires that adverse effects on listed species be identified, and that measures are taken to avoid or lessen those effects and to monitor them. There is no explicit requirement in section 79 for there to be no residual effects on SARA-listed species, only that measures are taken in a way that is consistent with applicable recovery strategies and action plans. CEAA 2012 also expressly contemplates the possibility that a finding of likely significant adverse environmental effects can be justified. The potential significance of an adverse environmental effect under the CEAA 2012 or adverse effect under section 79 of the SARA, does not necessarily mean an activity is prohibited under the SARA; the facts need to be carefully examined. If a project is likely to hinder the recovery of endangered or threatened wildlife species, contrary to the purpose of the SARA, this will weigh heavily in the justification analysis. However, the analysis of whether significant adverse environmental effects can be justified will ultimately involve the balancing of many factors.

³⁴ Subsection 32(1) of the SARA states: No person shall kill, harm, harass, capture or take an individual of a wildlife species that is listed as an extirpated species, an endangered species or a threatened species.

Subsection 58(1) of the SARA states: ... no person shall destroy any part of the critical habitat of any listed endangered species or of any listed threatened species...

1.6 The Project application stage – codes, commitments, and conditions

This section contains the views of the Board from the OH-001-2014 Report (formerly Chapter 1.3). Some of the general concepts are relevant to the Reconsideration, but much of the content relates to conditions that are outside the scope of the Reconsideration. However, the Reconsideration Panel has included this section of the MH-052-2018 Report as it provides helpful background information. A more detailed discussion about the conditions relevant to Project-related marine shipping examined in the MH-052-2018 hearing is in Chapter 2, Section 2.4.

Trans Mountain's Application was filed while the Project was at an initial phase of the regulatory lifecycle, as is typical of applications under section 52 of the NEB Act. As set out in the Board's Filing Manual, the Board requires a broad range of information when a section 52 application is filed. At the end of the hearing, the level of information available to the Board must be sufficient to allow it to make a recommendation to the GIC that the Project is or is not in the public interest. There also must be sufficient information to allow the Board to draft conditions that would attach to any new and amended CPCNs, and other associated regulatory instruments (Instruments), should the Project be approved by the GIC.

The Board does not require final information about every technical detail during the application stage of the regulatory process. For example, much of the information filed with respect to the engineering design would be at the conceptual or preliminary level.³⁷ Site-specific engineering information would not be filed with the Board until after the detailed routing is confirmed, which would be one of the next steps in the regulatory process should the Project be approved. Completion of the detailed design of the project, as well as subsequent construction and operations, would have to comply with:

- the NEB Act, regulations, including the *National Energy Board Onshore Pipeline Regulations* (OPR), referenced standards and applicable codes;
- the company's conceptual design presented, and commitments made in the Application and hearing proceedings; and
- conditions which the Board considers necessary.

The Board may impose conditions requiring a company to submit detailed information for review (and in some cases, for approval) by the Board before the company is permitted to begin construction. Further information, such as pressure testing results, could be required in future leave to open applications before a company would be permitted to begin pipeline operations. In compliance with the OPR, a company is also required to fully develop an emergency response plan prior to beginning operations. In some cases, the Board has imposed conditions with specific requirements for the development, content and filing of the emergency response plan (see Table 1). This would be filed and fully assessed at a condition compliance stage once detailed routing is known. Because the detailed routing information is necessary to perform this assessment, it would be premature to require a fully detailed emergency response plan to be filed at the time of the project application.

While the project application stage is important, as set out in Chapter 3, there are further detailed plans, studies and specifications that are required before the project can proceed. Some of these are subject to future Board approval, and others are filed with the Board for information, disclosure, and/or future compliance enforcement purposes. The Board's recommendation on the project application is not a final determination of all issues. While some hearing participants requested the final detailed engineering or emergency response plans, the Board does not require further detailed information and final plans at this stage of the regulatory lifecycle.

To set the context for its reasons for recommendation, the Board finds it helpful to identify the fundamental consideration used in reaching any section 52 determination. The overarching consideration for the Board's public interest determination at the application stage is: can this pipeline be constructed, operated and maintained in a safe manner. The Board found this to be the case. While this initial consideration is fundamental, a finding that a pipeline could be constructed, operated and maintained in a safe manner does not mean a pipeline is necessarily in the public interest as there are other considerations that the Board must weigh, as discussed below. However, the analysis would go no further if the answer to this fundamental question were answered in the negative, as an unsafe pipeline can never be in the public interest.

³⁷ Pipeline projects generally follow a three phase design process consisting of a conceptual phase, a preliminary engineering phase, and a detailed engineering phase leading to final design.

1.6.1 Safety

The Board's regulations focus on results and there are NEB requirements that companies must follow in order to design, construct and operate their pipelines safely. These requirements cover everything from the selection of materials used to build a pipeline to the processes, controls, manuals and programs designed to manage risk and mitigate potential consequences during construction and operation. The Board requires NEB-regulated pipeline companies to consider thoroughly all of the hazards and potential hazards that are associated with their pipeline systems, and demonstrate to the Board that the appropriate safety and risk management plans and measures are in place. The Board provides considerable regulatory oversight throughout the pipeline lifecycle to verify that companies comply with regulatory requirement, and adequately and effectively anticipate, prevent, manage and mitigate risks to people and the environment.

1.6.2 Project-specific commitments and conditions

The Board considered the Project and associated risks in the context of the Board's stringent regulatory requirements, Trans Mountain's Application and the commitments Trans Mountain made during the hearing. The Board also considered the information from participants in the proceeding, including information about community-specific and environment-specific circumstances along the corridor.

The Board found that in addition to existing regulations, codes and standards, and Trans Mountain's commitments, Project-specific conditions would be required to mitigate residual effects posed by the Project and to make sure the Project is designed, constructed and operated safely, and in a manner that protects the environment (see conditions in Appendix 3). For example, evidence provided by the Grasslands Conservation Council of British Columbia led to the inclusion of conditions about grassland protection and management, and evidence submitted by municipalities of the lower mainland of B.C. led to the inclusion of conditions for the creation and operation of technical working groups.

The Board issued draft conditions throughout the hearing and gave participants the chance to consider and provide comments on them, and to propose other potential conditions. The Board used these suggestions and its own analysis of the evidence to create a final, comprehensive list of conditions that address a wide range of issues identified through this hearing process.

The Board concluded that the Project could be constructed and operated safely if designed, constructed, and operated in compliance with this list of conditions, which would mitigate risks posed by the Project.

1.6.3 Conditions

Should the GIC approve the Project, the Board would issue the CPCNs and Instruments, and impose 156 conditions to address the identified, outstanding issues.

In addition to conditions addressing specific technical issues, the Board would impose overarching Conditions 1, 2, 3, 4 and 5. The effect would be to make all commitments, plans or programs included, referenced or agreed to on the hearing record, regulatory requirements of the Board. Furthermore, to assist the Board and all stakeholders in tracking construction progress and compliance, and to assist the Board in planning appropriate compliance verification activities, the Board would impose conditions requiring Trans Mountain to file commitments tracking tables, phased filing information, a list of temporary infrastructure sites, construction schedules, construction progress reports, and a signed confirmation of Project completion and compliance (Conditions 6, 10, 61, 62, 106, 139).

The 156 conditions listed in Appendix 3 are arranged in approximate chronological order of the required filings. While the Board encourages those with an interest to review all of the conditions, we are aware it is a long list. In order to assist readers with specific areas of concern, Table 1 is provided, as a guide only.

It will be clear that there is overlap between conditions and categories, and a condition may apply to more than one category. For example, air emissions conditions may fall within the *Air quality and greenhouse gases* category, as well as within the Terminal categories. Conditions of interest to Indigenous people may appear under the Specific effects on Indigenous interests category, as well as various Environment and People categories.

Table 1 also illustrates that conditions would require fulfillment at the appropriate stage of the regulatory lifecycle.

Table 1: Conditions by subject matter and regulatory lifecycle stage

		Pipeline Lifecycle Stage			
		Over-arching	Prior to construction	Prior to operation	During operation
Regulatory Oversight		1, 2, 5	6, 10, 61, 62	6, 10, 62, 106	6, 139
Economics and Financial Responsibility			57	121	121
Emergency Preparedness and Response			89, 90	117, 118, 119, 120, 123, 124, 125, 126, 127, 136, 138	120, 145, 153
Environment	General	3	7, 60, 72, 78, 81		145, 151

	Project-related marine shipping		91	131, 132, 133, 134	134, 144

1.7 Risk overview

This section contains the views of the Board from the OH-001-2014 Report (formerly Section 1.4). The Reconsideration Panel adopts this approach to assessing risks from spills. The only change it has made is to revise the conclusions related to spills from Project-related marine shipping to reflect the Reconsideration.

It is important to carefully analyze the risks created by the Project and Project-related marine shipping. This includes considering the probability of incidents occurring and the severity of the consequences that could result from such incidents, even if such incidents are unlikely to occur. It also includes considering the acceptability of such risks in the context of the benefits and burdens of the proposed Project and Project-related marine shipping as part of the Board's public interest determination.

A bowtie diagram (Figure 2), as exemplified below, is a useful and common aid in illustrating:

- the various threats that could lead to an incident (such as a spill);
- prevention measures that reduce the probability of such threats leading to an incident;
- the various consequences that could result from an incident; and
- response actions that reduce the severity of such consequences.

Figure 2: Bowtie diagram for assessing risk

In addition, risk tables, such as that shown in Figure 3, can be useful to illustrate the combination of the probability (P) of an incident occurring and the anticipated consequences (C) if such an incident does occur, and the magnitude of the resulting risk (R). The Board notes, however, that the labels used for probability, consequences and risk (e.g., Very low to Very high) and the placement of risk labels in such tables can vary widely according to use and author, and can contain considerable subjectivity. Nevertheless, such tables are conceptually useful to illustrate the relationship that $R = P \times C$, that both probability and consequences need to be considered in fully understanding the risk of a spill, and to assist in prioritizing risk mitigation efforts.

Figure 3: Risk as combination of probability and consequence

Probability (P)	Very high P	Medium R	High R	High R	Very high R	Very high R
	High P	Medium R	Medium R	High R	High R	Very high R
	Medium P	Low R	Medium R	Medium R	High R	High R
	Low P	Very low R	Low R	Medium R	Medium R	High R
	Very low P	Very low R	Very low R	Low R	Medium R	Medium R
		Very low C	Low C	Medium C	High C	Very high C
Consequences (C)						

1.7.1 Consideration of spill risks

Throughout this Report, the Board has considered the risks associated with spills. For example, Chapter 6 discusses pipeline and facility integrity, which includes the assessment of risk-based design methods proposed by the company to identify, prevent or reduce the frequency of potential releases from the pipelines and terminals, as well as consequence reduction measures, such as leak detection, containment and valve placement. Chapter 8 discusses the environmental behaviour of spilled oil, which is relevant when considering spill response and the consequences of a spill. Chapter 9 discusses prevention, preparedness and response, and considers the likelihood of accidents and malfunctions. Chapter 10 includes a discussion of the potential environmental effects of a spill that might result from such an incident, while Chapter 11 discusses potential socio-economic effects. Chapter 14 discusses spills from Project-related marine shipping.

The Board acknowledges that achieving zero risk is impossible for most developments. The Board finds that there is very low probability of a Project spill (i.e., from the pipelines, tank terminals, pump stations or the WMT) that may result in a significant effect (high consequence). In regard to spills from the Project-related marine shipping, the Board finds that there is a very low probability of a marine spill from a Project-related tanker that may result in a significant effect (high consequence).

Having considered all of the evidence and in light of the spill prevention, preparedness and response measures discussed in Chapter 9, and the regulatory framework for marine oil spill preparedness and response discussed in Chapter 14, the Board finds that the risks associated with potential spills from the Project and Project-related marine vessels are acceptable.

Views of the Reconsideration Panel

The Board considered the risks associated with potential spills from Project-related marine shipping in the MH-052-2018 hearing. For example, Sections 14.9 and 14.10 of Chapter 14 includes a discussion of potential environmental and socio-economic effects of malfunctions and accidents. Chapter 8 discusses the environmental behaviour of spilled oil, which is relevant when considering spill response and the consequences of a spill. Section 14.11 of Chapter 14 discusses spill prevention, risk analysis, preparedness and response, and considers the likelihood of accidents and malfunctions.

Having considered all of the evidence and in light of the spill prevention, preparedness and response measures, the Board finds that there is a very low probability of a large marine spill from a Project-related tanker that may result in a significant effect (high consequence).

Benefits, burdens, and the National Energy Board recommendation

The content of this chapter has been updated since the Board's May 2016 OH-001-2014 Report to reflect the Reconsideration.

This chapter provides the Board's reconsideration of the overall benefits and burdens of the Trans Mountain Expansion Project (Project) in relation to its mandate under section 53, Part III of the *National Energy Board Act* (NEB Act). This chapter also summarizes the Board's reconsidered findings and recommendations in relation to the Project under section 30 of the *Canadian Environmental Assessment Act, 2012* (CEAA 2012) and the *Species at Risk Act* (SARA).

2.1 The Board's mandate

With respect to the Project application, the Board's original role was to determine if the Project is in the public interest, pursuant to section 52 of the NEB Act (as further described below). In the OH-001-2014 Report, the Board concluded that the Project is in the present and future convenience and necessity, and in the Canadian public interest. The Board recommended that a CPCN be issued under section 52 of the NEB Act along with 157 conditions.

The Board also has a mandate to conduct an environmental assessment under the CEAA 2012. In the OH-001-2014 hearing, Project-related marine shipping was not included within the scope of the Board's environmental assessment under the CEAA 2012. Rather, Project-related marine shipping was assessed under the NEB Act. Accordingly, in the OH-001-2014 Report, the Board recommended that the GIC decide that the Project is not likely to cause significant adverse environmental effects under the CEAA 2012.

As a result of the *Tsleil-Waututh Nation* decision by the Federal Court of Appeal, the Board was directed by the Governor in Council (GIC) in OIC P.C. 2018-1177 to conduct a reconsideration of aspects of its recommendations and terms or conditions for the Project relevant to Project-related marine shipping, pursuant to section 53 of the NEB Act and section 30 of the CEAA 2012 (Section 1.4 of this report contains complete details regarding the OIC).

The Reconsideration Panel conducted the Reconsideration in accordance with OIC P.C. 2018-1177. The Reconsideration Panel decided to include Project-related marine shipping between the Westridge Marine Terminal (WMT) and the 12-nautical-mile territorial sea limit in the "designated project" to be assessed under the *Canadian Environmental Assessment Act, 2012*. As a result, the Reconsideration Panel carried out an environmental assessment of Project-related marine shipping under the CEAA 2012. The entirety of the evidence filed in the OH-001-2014 hearing was included as part of the record for the MH-052-2018 hearing. In making its findings, the Reconsideration Panel considered new or updated evidence submitted during the MH-052-2018 hearing, as well as relevant evidence from the OH-001-2014 hearing.

The Board's environmental assessment of the Project can be found in Chapter 10, with the socio-economic components assessed in Chapter 11. The Reconsideration Panel's assessment of Project-related marine shipping is in Chapter 14. The Reconsideration Panel necessarily relies on Chapter 10 and 11 views and findings of the Board from the OH-001-2014 hearing in order to make the required recommendation to GIC under subsection 30(4) of the CEAA 2012 for the designated Project.

Under paragraph 30(4)(a) of the CEAA 2012, in its Reconsideration Report, the Board must:

- (i) confirm the recommendation or set out a different one with respect to the decision that may be made under paragraph 31(1)(a) in relation to the designated project, and
- (ii) confirm, modify or replace the mitigation measures set out in the report with respect to the environmental assessment.

Specifically, the Board must confirm or set out a different recommendation regarding whether the designated Project is likely, or is not likely, to cause significant adverse environmental effects after taking into account the implementation of mitigation measures, including the Board's recommended conditions.

Under paragraph 30(4)(b) of the CEAA 2012, in its Reconsideration Report, the Board must also confirm the recommendation or set out a different one with respect to the follow-up program that is to be implemented in respect of the designated project.

The Board then considered whether its recommendation under the CEAA 2012 resulted in changes or additions to the recommendations (including recommended terms or conditions) under the NEB Act from its OH-001-2014 Report.

Under subsection 53(6) of the NEB Act, in its Reconsideration Report, the Board must:

- (a) if its recommendation was referred back, either confirm the recommendation or set out a different recommendation; and
- (b) if a term or condition was referred back, confirm the term or condition, state that it no longer supports it or replace it with another one.

Specifically, the Board must confirm or set out a different recommendation as to whether or not the certificate should be issued for the Project, taking into account whether the pipeline is and will be required by the present and future public convenience and necessity.

2.1.1 Public interest test

The NEB Act provides the Board with flexibility and broad powers, but the Board must interpret and implement the Act in ways that serve the Canadian public interest.

Part III of the NEB Act provides a test for the Board to apply when making its assessment of a project and providing its recommendation to the GIC. When applying the "present and future public convenience and necessity" test under Part III of the NEB Act, the Board makes a recommendation in the overall Canadian "public interest." In its consideration of an application, the Board is required to weigh all relevant evidence on the record and come to a recommendation whether, overall, the project is in the public interest. This is referred to in the NEB Act as the present and future public convenience and necessity.

The Board has described the public interest in the following terms:

The public interest is inclusive of all Canadians and refers to a balance of economic, environmental and social interests that change as society's values and preferences evolve over time. As a regulator, the Board must estimate the overall public good a project may create and its potential negative aspects, weigh its various impacts, and make a decision.³⁸

In section 52 of the NEB Act, under which the Board's original recommendation was made, Parliament has given direction about the factors relevant to the Board's consideration in reaching a public interest determination.

52(2) In making its recommendation, the Board shall have regard to all considerations that appear to it to be directly related to the pipeline and to be relevant, and may have regard to the following:

- a) the availability of oil, gas or any other commodity to the pipeline;

³⁸ NEB Reasons for Decision, Emera Brunswick Pipeline Company Ltd., GH-1-2006.

- b) the existence of markets, actual or potential;
- c) the economic feasibility of the pipeline;
- d) the financial responsibility and financial structure of the applicant, the methods of financing the pipeline and the extent to which Canadians will have an opportunity to participate in the financing, engineering and construction of the pipeline; and
- e) any public interest that in the Board's opinion may be affected by the issuance of the certificate or the dismissal of the application.

52(3) If the application relates to a designated project within the meaning of section 2 of the CEEA 2012, the report must also set out the Board's environmental assessment prepared under that Act in respect of that project.

52(4) The report must be submitted to the Minister within the time limit specified by the Chairperson. The specified time limit must be no longer than 15 months after the day on which the applicant has provided, in the Board's opinion, a complete application. The Board shall make the time limit public.

With respect to the Project application, the Board's role is to determine if the Project is in the public interest, pursuant to section 52 of the NEB Act.

The Board also has a mandate to conduct an environmental assessment of the Project under the CEEA 2012. As a responsible authority under the CEEA 2012, the Board must, in its report to the GIC, set out its recommendation regarding the environmental effects of the Project. Specifically, the Board must provide a recommendation that the Project is likely, or is not likely, to cause significant adverse environmental effects after taking into account the implementation of mitigation measures, including the Board's recommended conditions. The Board's environmental assessment of the Project can be found in Chapters 10, 11 and 14.

2.2 Benefits and burdens of the Project

As directed by the OIC, and as reflected in the Reconsideration List of Issues, this was a reconsideration focused on Project-related marine shipping - a comparatively narrow scope to the OH-001-2014 hearing. However, under subsection 30(4) of the CEEA 2012, the Reconsideration Panel is required to confirm or set out a different recommendation regarding whether the designated Project is likely, or is not likely, to cause significant adverse environmental effects after taking into account the implementation of mitigation measures. Similarly, under subsection 53(6) of the NEB Act, the Reconsideration Panel is required to confirm or set out a different recommendation as to whether or not the certificate should be issued for the Project, taking into account whether the pipeline is and will be required by the present and future public convenience and necessity. In order to make these recommendations regarding the overall designated Project, it was necessary for the Reconsideration Panel to rely on the previous findings and views of the Board regarding benefits and burdens from the OH-001-2014 Report that were outside the scope of the List of Issues for the Reconsideration.

Some intervenors argued that the Board must consider new information when reweighing the Project's benefits and burdens. As discussed earlier in Chapter 1.5.3, the Board is not persuaded that it should consider new information unrelated to the Reconsideration List of Issues (i.e., economics) when reweighing the Project's benefits and burdens. This would essentially circumvent the List of Issues and open the MH-052-2018 hearing up to other issues indirectly, rendering the purpose of section 53 of the NEB Act and narrow scope of the OIC meaningless. Therefore, the benefits and burdens summarized in Tables 2 and 3 contain a mixture of findings from the Board in the OH-001-2014 hearing and the Reconsideration Panel.

Table 2 and Table 3 summarize the key benefits and key residual burdens, respectively, of the designated Project as outlined in the various chapters of this MH-052-2018 Report. Both tables indicate whether the benefits or burdens would apply locally (e.g., within the immediate vicinity of the Project, such as the specific municipalities along the route), regionally (i.e., Alberta and B.C.) or nationally.

These tables are not intended to be a comprehensive list of all benefits and burdens mentioned by participants during the OH-001-2014 and MH-052-2018 hearings. Rather, it is a summary of the key benefits and key residual burdens that the Board identified during its analysis of the evidence. A description of how the Board considered the balance of benefits versus residual burdens is found in Section 2.5 and a more in-depth assessment of the evidence is provided in the various chapters of the MH-052-2018 Report that follow.

2.2.1 Benefits

In the OH-001-2014 hearing, the Board found that the benefits associated with the Trans Mountain Expansion Project, taken as a whole, are considerable.³⁹ This includes market diversification, jobs, competition among pipelines, spending on pipeline materials, Community Benefit Program, capacity development and Government revenues. The Reconsideration Panel relies upon these findings of the Board from the OH-001-2014 Report, for matters that are outside the scope of the Reconsideration List of Issues.

As a result of the MH-052-2018 hearing, the Reconsideration Panel confirms that there is a modest benefit associated with enhanced marine spill response, and capacity development connected to Project-related marine shipping and spill response. The Reconsideration Panel also finds that, if GIC implements its recommendations to make changes to the operation of all marine traffic, including Project-related traffic, and takes action to relieve other stressors within the broader system, there will be the added benefit of material improvements to the health of the Salish Sea.

Table 2: Summary of key benefits

Benefit associated with:	Brief description	Type of impact	Report chapter(s)
Market diversification	The Board finds there would be a considerable benefit gained by providing Canadian shippers with more flexible and diverse markets, the ability to manage risk associated with competing in multiple markets, the ability to manage development and operational risk, and a likely reduction of discounts to Canadian crude.	Regional National	12
Jobs	The Board finds a considerable benefit in the form of jobs created across Canada: • Pipeline construction - 400-600 workers per spread • Tank construction - between 60 and 370 workers • Westridge Marine Terminal construction - 95 workers • Over the first 20 years of operation – 443 jobs/year (313 in B.C., with remainder in Alberta)	Local Regional National	11
Competition among pipelines	The Board finds a considerable benefit would be gained from the increase in flexibility and optionality for those producers looking to get their product to markets, and that all western Canadian producers are likely to benefit from the Project in the longer term, through greater customer choice and efficiencies gained through competition among pipelines.	Regional National	12
Spending on pipeline materials	The Board finds there would be a considerable benefit to local and regional economies from the direct spending on pipeline materials in Canada and spending within the regions where the Project is located.	Local Regional	11
Community Benefit Program	The Board finds a modest benefit to local communities and the environment along the Project from the establishment of a Community Benefit Program, including: • local emergency management capacity enhancements; • improvements to community parks and infrastructure; • support for events and educational programs; and • Environment Stewardship Program.	Local Regional	10 11
Enhanced marine spill response	The Board finds there would be a modest benefit from the enhanced marine spill response planning for and capacity to respond to spills from vessels not associated with the Project (e.g., fuel spills from container ships and cruise ships).	Local Regional	14
Capacity development	The Board finds that a modest benefit from local economic and educational opportunities, and the development of capacity of local and Indigenous individuals, communities and businesses.	Local Regional	5 11
Government revenues	The Board finds that direct Project expenditures will likely result in considerable revenues to various levels of government.	Local Regional National	11

³⁹ Definitions for the terms “considerable” and “modest” are not provided. Rather, the terms are meant to illustrate the weight the Board attributed to the benefits and burdens relative to each other.

3.6 Regulating emergency response

One of the key goals of the Board's compliance and enforcement program is to prevent pipeline incidents from happening in the first place. However, should an incident occur, the Board is ready to respond, as and when required.

In addition to reporting all incidents through the Board's Online Event Reporting System, companies are responsible for reporting significant incidents, including ruptures or larger spills which leave company property or the RoW, to the Transportation Safety Board which then notifies the Board. Each company is expected to implement its emergency response plan immediately, which must be on file with the Board prior to beginning operation and which must be kept up to date. An emergency response plan outlines the emergency management procedures that the company will follow during an incident. The procedures must address emergency management, environmental protection, and worker and public safety. The Board also requires a regulated company to develop a training program and conduct emergency exercises. The Board often independently observes these exercises to verify the company's capabilities in responding to incidents.

When the Board is notified of an incident, its top priorities are the safety and security of people, and the protection of property and the environment. The Board holds the company fully responsible and accountable for clean-up and site remediation, regardless of the size of the release.

When an incident is reported, the Board initiates its emergency response procedures and, if appropriate, activates its Emergency Operations Centre (EOC) or deploys field personnel. The Board coordinates, from the EOC, field staff at the incident site and provides situation reports to the Government of Canada's EOC. The Board also has working agreements with other government departments and agencies to coordinate responses and communicate effectively during emergencies.

In the case of a spill, once Board staff arrives at the incident site, they make sure that the company is properly cleaning up the spill and remediating any environmental effects caused by the incident. The Board's long-term goal with any incident is the full restoration of the site, including mitigating any potential sub-surface effects on groundwater. Companies are required to meet the most stringent applicable remediation criteria for all contaminants of concern.

3.7 Developing a safety culture

The Board believes that one of the best ways to prevent an accident from happening in the first place is to promote a workplace culture where safety is a way of life. This means that safety, not production or deadlines, must be a company's very first priority.

In some of the worst tragedies in the energy industry,⁴² there was often an observable disconnect between the company's vision and policies, and the planning, implementation, monitoring and review of these policies. While the direct causes of these incidents varied, investigators found the lack of a strong safety culture was a factor in all of the incidents.

To achieve a strong safety culture, companies set the tone, beginning at the very top of the organizational chart. It is the senior executives who shape and reinforce a robust safety culture in which the company demonstrates a continual respect for threats to its defenses. The required investment of time, energy and resources means it cannot simply be an intellectual exercise to meet a prescribed minimum standard. It has to be a personal mission for the person at the top. It is their duty to drive the culture and values down and across the organization.

When committed safety leadership exists, safety performance and oversight are considered part of the organization's governance model in the same way as financial performance. This means that leaders stand up for safety even when production may be impacted.

The OPR requires senior company leadership to be accountable for building a safety culture and supporting management systems. Companies must appoint a senior officer who is accountable to ensure that the company's management system and programs are in compliance with the OPR.

⁴² Det Norske Veritas. (2011). Major Hazard Incidents. Prepared for the National Energy Board's Arctic Offshore Drilling Review. Report No.: NEB 2010-04 / DNV Reg. No.: ANECA 851

Public consultation

With the exception of administrative adjustments (e.g., section /chapter cross-references, footnote numbering, etc.) and to replace “Aboriginal” with “Indigenous,” the content of this chapter remains as it was in the Board’s May 2016 OH-001-2014 Report.

The Board’s expectations of an applicant regarding public consultation are set out in the Board’s Filing Manual. Applicants are expected to undertake a level of public consultation commensurate with the setting, nature, and magnitude of their project. The Board uses the information gained through the company’s consultation process, and filed on the hearing record, to contribute to its understanding of the concerns and interests of those who are potentially affected by the project, and to help inform its public interest determination. The Board requires companies to involve the public during each phase in the lifecycle of a project (that is, project design, construction, operation and maintenance, and decommissioning or abandonment) in order to address potential impacts of that project.

This chapter addresses Trans Mountain’s public consultation program. Trans Mountain’s engagement and consultation with potentially affected Indigenous groups are discussed in Chapter 5.

4.1 Trans Mountain’s Stakeholder Engagement Program

4.1.1 Principles and goals of Trans Mountain’s Stakeholder Engagement Program

Trans Mountain said that its Stakeholder Engagement Program is designed to foster participation from the public who have an interest in the scope, activities and routing of the Project. The program seeks input from stakeholders regarding the proposed pipeline corridor, environmental effects, and socio-economic effects and benefits. The program also shares information with stakeholders to keep them informed throughout the process.

Prior to launching its Stakeholder Engagement Program in 2011, Trans Mountain said that it consulted with local governments and community leaders to seek input on the program. These early conversations with local governments and community leaders provided Trans Mountain with direction on areas of greatest interest to local communities, appropriate means of engagement for different communities and local stakeholders who should be engaged in the process.

Trans Mountain identified a number of stakeholder groups that could have an interest in the Project, including: private and public landowners and occupants, government authorities, industry and business development agencies, environmental non-governmental organizations, special interest groups and the general public. Trans Mountain said that its Stakeholder Engagement Program allows for the identification of new information and additional stakeholders as Trans Mountain proceeds through the life of the Project.

In consideration of the potential impacts to the marine environment from an increase in Project-related marine vessel traffic, Trans Mountain said that it extended stakeholder engagement to include coastal communities beyond the pipeline terminus

at the Westridge Marine Terminal (WMT) in Burnaby, B.C. In recognition of this and the high level of stakeholder interest in marine shipments of petroleum products, Trans Mountain engaged communities on Vancouver Island and the Gulf Islands along established marine shipping corridors transited by oil tanker traffic, as well as communities in and around Port Metro Vancouver.

Trans Mountain described the principles it used to guide the development and execution of the Stakeholder Engagement Program. These included principles regarding accountability, communication, local focus, mutual benefit, relationship building, respect, responsiveness, shared process, sustainability, timeliness and transparency.

Trans Mountain said it is committed to ongoing engagement throughout the life of the Project, including the continuation of engagement opportunities through hosting facility open houses, providing newsletters and Project updates, making safety and public awareness presentations; and participating in community events, regulatory processes and ongoing informal meetings with stakeholders.

4.1.2 Public consultation activities

Trans Mountain said that its engagement activities were designed to reflect the diverse and varied interests of the various communities and areas along the proposed pipeline route, and provided various engagement opportunities, including public open houses, community workshops, and online discussion activities. Trans Mountain said that since 2012, there were tens of thousands of exchanges with stakeholders through face-to-face meetings, presentations, public forums, technical meetings, community meetings, social media sites, community investment events, emails, telephone calls, letters, advertisements and website postings. It noted that some of these exchanges included:

- providing 159 open houses or workshops along the pipeline and marine corridors, including topics focused on routing, emergency management, economic benefits, regional environmental and socio-economic assessment (ESA), and terminal information;
- organizing more than 1,700 meetings between Project team members and stakeholder groups;
- responding to approximately 550 phone inquiries and 1,500 emails received from the public; and
- providing responses to approximately 950 media inquiries and giving 430 media interviews.

Trans Mountain translated various documents, such as news releases, newspaper advertisements and information material, into French, Chinese, Punjabi and Korean with the goal to provide Project information in other languages that would help inform and serve public audiences and media in communities along the proposed pipeline and marine corridor. Trans Mountain said that community and technical workshops, and public open houses were advertised in numerous newspaper and online advertisements and direct mail postcard drops.

Trans Mountain said that feedback received from the stakeholder engagement initiatives helped shape various aspects of the Project, including topics and issues related to construction, routing, economic benefits and impacts, employment and training, environment, liability and safety. Examples of how Trans Mountain said that it incorporated stakeholder feedback into the design of the Project included:

- exploring alternative methods of construction in order to avoid the use of temporary workspace in Colony Farm Regional Park;
- establishing access plans, construction schedules, pipeline alignments and compensation plans to minimize impacts to Ledgeview Golf Course;
- having horizontal directional drilling entry and exit points more than 30 metres away from the watercourse in order to avoid routing the proposed pipeline through riparian zones; and
- assigning community construction liaison roles as part of its construction team as a key point of contact, in response to concerns raised by the Wembley Estates Strata Council.

4.1.3 Landowner Relations Program

Trans Mountain said that the primary objectives of its Landowner Relations Program were to:

- introduce the Project to landowners and occupants;
- obtain approval for land access on a timely basis to support engineering and environmental surveys;
- obtain landowner understanding, acceptance, and land rights for survey, construction, restoration, and transition to operations; and

- preserve good relationships that currently exist and reinforce positive relations into operations.

Trans Mountain identified a study corridor of, generally, 150 metres width along the entire length of the Project. Since the commencement of the Landowner Relations Program, Trans Mountain's Project representatives identified and contacted more than 4,400 owners and occupants of properties located in part or in whole within the proposed pipeline corridor and alternative corridors in Alberta and B.C. A standard information package was provided that included information regarding the Project, NEB publications and a copy of the original easement. As route refinements were made, some landowners and occupants were no longer within the 150-metre-wide pipeline corridors. Those who no longer fell within the consultation areas were notified and no longer engaged. Those landowners or occupants that were identified as being within these areas were contacted.

Trans Mountain said that it continued to engage with landowners into 2014 to obtain permission for environmental and engineering surveys, discuss changes in potentially affected lands resulting from routing modifications, and provide Project notification and details to any new landowners or occupants potentially affected by these changes. In addition to commencing discussions on land rights acquisition, land agents continued efforts to obtain survey consent for those lands where landowners had not yet provided their consent, to collect issues and concerns, and to provide information to landowners in response to any questions and concerns. Trans Mountain said that the questions, issues or concerns raised by landowners commonly included topics such as land access, compensation, environmental and land impact, land value, legacy concerns, opposition to the Project, and construction and routing.

Some of the evidence filed and concerns raised by intervenors related to issues that occurred respecting the existing Trans Mountain Pipeline (TMPL) system. Trans Mountain said that although these specific issues related to the existing TMPL system and are therefore not within the scope of this hearing, Trans Mountain representatives attempted to meet with landowners and address the concerns identified.

Trans Mountain said that its Landowner Relations Program continues to be an ongoing process, and questions or concerns will continue to be addressed throughout the life of the Project.

4.2 Trans Mountain's consultation with governments

Trans Mountain said that it incorporated consultation with municipal, provincial and federal governments into its consultation activities for the Project, as it anticipated that they would have an interest in shaping project planning. The company said that local government officials from relevant jurisdictions in Alberta and B.C. were invited to and participated in, stakeholder and issues identification, public information and input gathering, community conversations and continuing engagement. In June and July 2012, a Project information package was mailed to municipal governments, members of the legislative assemblies, and members of parliament along the proposed pipeline corridor and in marine communities.

Trans Mountain said that it held more than 250 government meetings to provide information on the Project and respond to questions on a wide range of topics, including routing, Indigenous and stakeholder engagement, the marine ESA, Transport Canada's Technical Review Process of Marine Terminal Systems and Transshipment Sites (TERMPOL) marine risk studies, and economic benefits.

Several government authorities requested further information from Trans Mountain on aspects of its consultation with various stakeholders, landowners and other government authorities. They also requested further information from Trans Mountain on aspects of its ongoing engagement program with regard to concerns about the impact of the Project on emergency services, transportation rights-of-way, infrastructure, permits and further route refinements.

In the joint final argument of the City of Abbotsford, Township of Langley, Fraser Valley Regional District, Fraser-Fort George Regional District and Village of Valemount, the intervenors expressed concerns regarding Trans Mountain's overall consultation methods and its failure to communicate with them or incorporate their feedback on important matters that would impact them, specifically during the design and construction phase of the Project. These intervenors said that Trans Mountain had not fully recorded all of the commitments it made to them, and it had failed to identify and adequately mitigate the risk and impacts to the local governments.

The City of Burnaby said that it had not made formal or informal arrangements with Trans Mountain for many of the necessary services, resources, and planning initiatives that Trans Mountain contemplates will be available. It said that Trans Mountain made many assumptions concerning emergency services, emergency planning, evacuation, availability of external resources, fire services, police services, traffic management, planning and development, land use, access to water, noise and compensation that were either incorrect or unsupported by commitments from the City of Burnaby.

Trans Mountain said that the City of Burnaby declined several attempts by Trans Mountain to engage with the city about its concerns.

Trans Mountain said that it maintained regular engagement with the governments of Alberta and B.C., facilitating effective participation in the assessment process by provincial authorities. Trans Mountain said that it will continue ongoing municipal and regional government engagement, including undertaking a number of specific engagement commitments it has made during the hearing process that extend from approval through the entire lifecycle of the Project. It also committed to work jointly with municipalities to identify and address specific municipal issues and concerns through joint technical working groups. Trans Mountain said that it would review intervenor submissions and incorporate all applicable commitments into the commitments tracking table to ensure no commitments are missed.

Views of the Board

The Board regards engaging the public as an essential and ongoing activity throughout the Project's entire lifespan. Thorough and effective consultation requires a process that must provide timely, appropriate and effective opportunities for all potentially affected parties to learn about the Project, provide their comments and concerns, and to discuss how Trans Mountain could address them.

The Board is of the view that Trans Mountain has developed and implemented a broadly based public consultation program, offering numerous venues and opportunities for the public, landowners, governments and other stakeholders to learn about the Project, and to provide their views and concerns to the company.

Since a company's relationship with directly affected stakeholders will continue for several decades throughout the lifecycle of a project, it is critical for all parties to recognize and understand their respective roles and responsibilities for achieving effective dialogue during consultation, including those offered outside of the NEB hearing process. The Board expects affected parties, including municipalities, to engage with Trans Mountain by communicating their concerns to the company and making themselves available to discuss potential solutions. The Board observes with regret that not all municipalities accepted the opportunity to engage with the Trans Mountain effectively. In particular, the City of Burnaby declined a number of opportunities to engage with Trans Mountain. The Board is of the view that when municipalities decline opportunities to engage, this diminishes the quality of information available to both the company and the Board, and creates the potential that less than satisfactory solutions to municipal concerns may be the result.

The Board acknowledges the concerns raised by municipalities regarding ongoing consultation, particularly during the design and construction phase of the Project. Trans Mountain has committed to offer continued engagement opportunities to affected municipalities through the formation of technical working groups, with the stated goal to build trust and good relationships where the company operates. The Board views such working groups as useful opportunities to explore collaborative approaches through the design and construction phases of the Project, and to pursue ongoing dialogue. To facilitate the establishment and development of the technical working groups, the Board would impose Condition 14 requiring Trans Mountain to file with the Board, prior to commencing construction, the terms of reference for the technical working groups, to be developed in collaboration with participating affected municipalities, and facility owners and operators.

Although consultation with government authorities was initiated early in the process, the Board expects Trans Mountain to continue to offer opportunities for effective and timely consultation with government stakeholders, as appropriate, through the lifecycle of the Project in order to further identify and adequately address concerns regarding the Project's potential effects on governments, including municipalities. To facilitate Trans Mountain's ongoing consultation with government stakeholders, and to apprise the Board and all parties of the outcomes of this ongoing consultation, the Board would impose Condition 49 requiring Trans Mountain to file with the Board reports of the meetings of the technical working groups. In the Board's view, this reporting would allow the Board and all parties to understand the outcomes achieved by the technical working groups, and provide for the transparent reporting to the Board of any potential issues regarding the design and construction of the Project. The reporting would also allow the Board and all parties understand how these issues have been addressed, to the extent possible, by Trans Mountain and the members of the technical working groups.

As discussed in Chapter 7, the Board would impose a condition requiring Trans Mountain to file with the Board an updated commitments tracking table prior to the start of construction (Condition 6). This update should include all commitments made to landowners and government stakeholders. The Board reminds Trans Mountain that even where commitments may not be specifically included in Trans Mountain's filings submitted pursuant to Condition 6, Trans Mountain would still be required to implement all commitments made in its Project application, or as otherwise agreed to in the evidence it filed during the hearing, or in its related submissions (Condition 2).

Trans Mountain has committed to continue consulting with and addressing issues raised by affected landowners, both before and after pipeline construction. The Board is of the view that an effective and responsive process for responding to issues that may be raised by affected landowners is an important part of the company's ongoing engagement with landowners. To that end, the Board would impose Condition 102 requiring Trans Mountain to

confirm that it has created, and will maintain, a process/system that tracks Project-related landowner and tenant complaints or concerns and how Trans Mountain has addressed them, up until the Project is abandoned or decommissioned pursuant to the NEB Act. The Board would also impose Condition 99. Some groups were critical of the approach requiring Trans Mountain to maintain and file with the Board records of its landowner and tenant consultations, and provide confirmation that it will make available to a landowner or tenant, upon request, a copy of the consultation records related to that landowner or tenant. The Board is of the view that these requirements would facilitate an effective and responsive process for responding to issues raised by landowners and tenants in order that potential concerns can be appropriately addressed, to the extent possible.

The Board is of the view that with Trans Mountain's commitments and the Board's recommended conditions, Trans Mountain can continue to effectively engage the public, landowners and other stakeholders, and address issues raised throughout the Project's operational life.

Indigenous matters

The potential impacts of Project-related marine shipping on Indigenous interests was relevant to the List of Issues for the Reconsideration. The content of this chapter has been updated since the Board's May 2016 OH-001-2014 Report to reflect the Reconsideration.

Section 5.1 is unchanged from the OH-001-2014 Report (with the exception of administrative adjustments and to replace "Aboriginal" with "Indigenous"), as the Reconsideration Panel found that the views of the Parties and of the Board from the OH-001-2014 Report were still valid.

Section 5.2 sets out the submissions of the Parties from the MH-052-2018 hearing, followed by the Views of the Reconsideration Panel. In order for the Reconsideration Panel to reach its views, it reviewed all relevant evidence from both the OH-001-2014 hearing and the MH-052-2018 hearing.

5.1 Indigenous matters – OH-001-2014 hearing

5.1.1 Overview

The Board's process was designed to obtain as much relevant evidence as possible on Indigenous concerns about the Project, the potential impacts on Indigenous interests, and possible mitigation measures to minimize adverse impacts on Indigenous interests. The Board was provided with and considered extensive information about concerns related to the Project, and the measures that would be required to address those concerns, as brought forward through consultation undertaken by the applicant and through the participation of potentially affected Indigenous groups and others in the hearing process. In assessing the potential impacts on Indigenous interests, the Board considered all of the evidence provided.

This chapter includes summaries of evidence provided directly by Indigenous groups through their participation in the hearing, as well as summaries of Indigenous concerns and interests as recorded by Trans Mountain in its evidence. Appendix 8 refers to information and evidence sources provided by Indigenous groups who participated in the hearing. The Board notes that identifying and referring to specific passages within the record can lead to other direct and indirect references being overlooked. Therefore, anyone wishing to fully understand the context of the information and evidence

provided by Indigenous groups should familiarize themselves with the entire record of the hearing.⁴³ In addition, evidence provided by Indigenous groups and evidence of Indigenous concerns and interests recorded by Trans Mountain in its evidence is summarized in chapters throughout this Report, including matters relating to the use of lands, waters and resources for traditional purposes by Indigenous groups as described in Chapter 11 and Chapter 14.

5.1.2 Trans Mountain's consultation with Indigenous groups

Trans Mountain said it views working with Indigenous communities along the Project route as part of its commitment to promote open and transparent consultation and communication with Indigenous communities, and to build lasting and mutually beneficial relationships with these communities and Indigenous businesses.

Trans Mountain said it embarked on an extensive consultation program commencing in 2012 to engage with Indigenous communities about the Project. To ensure meaningful engagement continues to occur, the company committed to continue its engagement with Indigenous communities, groups, associations, councils and tribes throughout the life of the Project.

5.1.2.1 Trans Mountain's Indigenous Engagement Program design

Trans Mountain said it worked in collaboration with the Government of Canada and provincial ministries to identify Indigenous groups in Alberta and B.C. that might have an interest in the Project, or have Indigenous interests potentially affected by the Project.

Trans Mountain said that its final engagement list for Indigenous communities and groups with traditional territories in the Project area was developed in collaboration with federal departments, provincial ministries, the Major Projects Management Office (MPMO), the NEB, and the B.C. Oil and Gas Commission. The company said it followed the recommendation of Indigenous and Northern Affairs Canada (INAC) and used a 10-kilometre buffer area around the proposed pipeline corridor in B.C. to identify Indigenous groups with traditional territory in the Project area. Trans Mountain said, given the lower degree of certainty regarding traditional territories in Alberta, a 100-kilometre buffer was used. In Alberta, the pipeline would cross Treaty 6 territory, Treaty 8 territory, and the Métis Nation of Alberta Region 4, but would not cross any Indian Reserves. In B.C., the Project would cross both Crown lands and privately held lands, and is proposed to cross seven Indian Reserves utilized by five Indigenous communities:

- Zoht #4 - Lower Nicola Indian Band
- Zoht # 5 - Lower Nicola Indian Band
- Joeyaska # 2 - Lower Nicola Indian Band
- Ohamil # 1 - Shxw'ōwhámél First Nation
- Popkum # 1 - Popkum First Nation
- Tzeachten #13 - Tzeachten First Nation
- Matsqui Main # 2 - Matsqui First Nation

Trans Mountain said that it extended its Indigenous engagement program to include coastal communities, beyond the pipeline terminus at the Westridge Marine Terminal (WMT). Trans Mountain said it engaged with communities on Vancouver Island and the Gulf Islands along established marine shipping corridors transited by tanker traffic, as well as communities in and around Port Metro Vancouver. At the recommendation of Transport Canada, for the Technical Review Process of Marine Terminal Systems and Transshipment Sites (TERMPOL) review process, Trans Mountain also engaged with Indigenous groups located in the Burrard Inlet Region and Marine Corridor.

Trans Mountain said it added Indigenous groups to its engagement when groups expressed an interest in the Project. Trans Mountain's final list included 120 Indigenous groups, two non-land-based B.C. Métis groups, and 11 Indigenous associations, councils and tribes. The list of Indigenous groups engaged by Trans Mountain can be found in Appendix 9.

Trans Mountain said its Indigenous Engagement Program for the Project was guided by the Kinder Morgan Canada Indigenous Relations Policy and focused on:

⁴³ Indigenous groups provided evidence and made argument addressing all the chapters contained in this Report. Their evidence and views were fully considered as is reflected throughout the Report. As noted above, this chapter of the Report cannot be considered in isolation from the Report as a whole.

- enhancing trusting and respectful relationships;
- sharing Project information such as the Project scope, routing options, safety and emergency response, scheduling and environmental field study components;
- negotiating group and community-specific protocols, capacity agreements, Letters of Understanding (LOUs) and Mutual Benefit Agreements (MBAs);
- facilitating traditional land use (TLU) and traditional marine resource use (TMRU) studies, including traditional ecological knowledge (TEK) and socio-economic research;
- identifying potential impacts and addressing concerns;
- discussing the adequacy of planned impact mitigation and opportunities; and
- identifying education, training, employment, and procurement opportunities.

Trans Mountain said it considered Indigenous Traditional Knowledge according to subsection 19(3) of the *Canadian Environmental Assessment Act, 2012*, the filing requirements and guidance provided in the Board's Filing Manual, as well as pertinent issues and concerns identified through Indigenous engagement for the Project. Trans Mountain said that Indigenous Traditional Knowledge was typically collected from Indigenous communities through the participation of their members in biophysical field studies for the Project, and that their knowledge about the land formed part of the documented studies.

5.1.2.2 Trans Mountain's consultation activities with Indigenous groups

Trans Mountain said it made substantial efforts to provide Indigenous groups with opportunities to participate in planning the Project. It said that it used a number of methods to inform Indigenous communities, obtain feedback and identify issues about the Project. Activities began in 2012, including sending out Project letters, holding open houses during 2012 and 2013, maintaining a project website, providing Project update letters, and holding a number of Project meetings. Trans Mountain said more than 24,000 engagement activities were completed with Indigenous groups based on the following framework of activities:

- project announcement;
- initial contact with Indigenous community or Indigenous group;
- negotiation and execution of confidential LOUs or capacity agreements;
- host community information session(s);
- conduct TLU, TMRU and TEK studies;
- identify interests and concerns;
- review key mitigation options;
- provide additional capacity funding, if required; and
- negotiate and execute confidential MBA.

Trans Mountain said the communications materials that it sent to communities included:

- advanced notice of field study work and a field study process brochure;
- Project update letters and newsletters including updates to the Project website content, regulatory filings and participation funding; and
- invitations to meet to discuss routing options for those communities where the existing Trans Mountain Pipeline system encounters Indian Reserve lands.

Trans Mountain said its process for engagement allowed each community and group to engage in meaningful dialogue in the manner they chose, and in a way that met its objectives and values. Trans Mountain said many communities worked cooperatively with Trans Mountain in relation to the Project, some openly and others on a strictly confidential basis at their request.

Trans Mountain said that in March 2013, it provided a copy of the environment and socio-economic assessment (ESA) approach summary to Indigenous groups. Trans Mountain requested feedback on the methodology for field studies that would be undertaken starting in May 2013.

Trans Mountain said that potential environmental elements interacting with the Project were identified through consultation with Indigenous groups. These elements included air and water quality, fish and fish habitat, wetland loss or alteration, vegetation, wildlife and wildlife habitat, and species at risk. Effects from potential accidents and malfunctions were also identified. Issues raised through consultation were included in the assessment of potential Project effects. Trans Mountain said the feedback it received informed its Project planning in a number of areas including routing, the scope of ESA, the identification of mitigation measures to reduce environmental and socio-economic impacts, emergency management, construction planning, Project-related benefits and routing alternatives.

Trans Mountain said that engagement with participating Indigenous communities about socio-economic issues occurred in parallel with its Indigenous Engagement Program. Activities included one-on-one meetings with leaders and staff members, and meetings, interviews and discussions with people living in the area. Trans Mountain said that information related to socio-economic elements (e.g., cabin locations, resource use and employment and economy concerns) is often provided during meetings and discussion associated with TLU and TEK. As a result, information made available from the non-confidential TLU study reports and TEK discussions as it relates to the socio-economic elements was incorporated into the socio-economic assessment.

Trans Mountain said traditional land and resource use (TLRU) and TMRU studies were initiated for the Project in 2012 and were consultant-facilitated or independently directed by the group. Trans Mountain said the aim of the TLRU and TMRU studies was to identify and mitigate effects of the Project on current use of traditional land and marine resources. At the time of the submission of its evidence, Trans Mountain said a total of 52 communities participated in TLRU studies, 15 communities participated in TMRU studies and 57 communities provided TEK.

Trans Mountain said that the remainder of the Indigenous groups consulted on the Project either did not request to participate in a TLRU study or, in other cases, funding for a TLRU study had been discussed but the parties were unable to reach agreement.

Trans Mountain said it executed 94 agreements, including LOUs (which include components for TEK, TLRU and TMRU studies), capacity funding, and integrated cultural assessments with an aggregate value of \$36 million.

Trans Mountain said it received 30 letters of support from Indigenous groups.

Trans Mountain said it is committed to working with Indigenous groups to address Project-related interests and concerns. The company said this is an ongoing and iterative process that is part of the ongoing dialogue with Indigenous groups. Trans Mountain said its ongoing consultation process is designed to refine and optimize the work based on knowledge of the mitigation measures to be implemented in the field. Trans Mountain said this would include regional workshops with Indigenous groups to discuss Environmental Protection Plans (EPPs) and emergency management, including mitigation measures to minimize Project-related effects.

Trans Mountain said that through its Environmental Education Program, all personnel working on the construction of the Project would be informed of the location of known TLRU sites.

Trans Mountain said that it is committed to the continuation of an effective Indigenous Engagement Program that satisfies all parties, and that it will continue engagement into Project development and through operations.

5.1.2.3 Concerns raised about Trans Mountain's consultation with Indigenous groups

A number of Indigenous groups raised concerns in their written evidence and submissions filed with the Board about Trans Mountain's consultations, including Adams Lake Indian Band, Asini Wachi Nehiyawak Traditional Band, Cheam First Nation, Chawathil First Nation, Coldwater Indian Band, Cowichan Tribes, Katzie First Nation, Lyackson First Nation, Métis Nation of Alberta Gunn Métis Local 55, Métis Nation of British Columbia, Matsqui First Nation, Michel First Nation, Musqueam Indian Band, Nooaitch Indian Band, Pacheedaht First Nation, Stk'emlupsemc Te Secwépemc, Stó:lō Collective, Snuneymuxw First Nation, Squamish Nation, Tsartlip First Nation, Tsawout First Nation, Tsawwassen First Nation, Tsleil-Waututh Nation, and Upper Nicola Band. The concerns raised in relation to Trans Mountain's consultation for the Project included:

- the engagement process and/or timing;
- Project benefits;
- emergency response management and planning;
- capacity funding;

- the opportunity to provide input; and
- the potential Project-related effects on the assertion of Indigenous rights and title governing traditional and cultural use of the land and/or marine environment.

Cheam First Nation and Chawathil First Nation said that Trans Mountain has not engaged in any consultation with respect to emergency response, and did not give consideration to their Indigenous rights and title.

Adams Lake Indian Band said that Trans Mountain's engagement has been impersonal, inaccurate, and lacking sincerity. It also said that Trans Mountain offered to engage on its Aquatics Offset Plans. However, when Adams Lake Indian Band expressed interest and proposed engagement, Trans Mountain retreated from its offer of engagement.

Cowichan Tribes said that Trans Mountain's approach to consultation limited the measures available to mitigate impacts, and that to properly account for the Project's potential impacts on the Cowichan Tribes' Indigenous rights and title, Trans Mountain must have understood Cowichan Tribes' strength of claim at a stage where Trans Mountain could have fundamentally altered the Project design and been open to all options for mitigation measures. Cowichan Tribes said that did not occur.

Coldwater Indian Band said targeted and specific consultation with Coldwater is required to develop appropriate avoidance, mitigation and accommodation of impacts, and this has not occurred. Coldwater Indian Band also said that meaningful consultation on the Project, including routing, has not occurred.

Katzie First Nation said it had difficulties in reaching agreement with Trans Mountain on capacity funding or Mutual Benefit Agreements, and therefore could not provide all of the information Trans Mountain needed to understand the potential impacts to traditional sites and uses.

Kwantlen First Nation expressed concerns with Trans Mountain's lack of consultation and consideration of Indigenous rights and title for emergency response in Trans Mountain's identification of "High Consequence Areas" for emergency response.

Lyackson First Nation said that Trans Mountain did not discuss mitigation measures and without further consultation, issues remain unresolved.

Métis Nation of Alberta Gunn Métis Local 55 said that it wishes for meaningful consultation beyond the hearing and construction phase. It said this should include operation of the pipeline, since a spill could impact water bodies downstream of the Project, as well as lands holding burial, archaeological and heritage sites, and lands used for harvesting. It also said it has been excluded from discussions on developing a fish and fish habitat offset program.

Michel First Nation said Trans Mountain only initiated consultation with Michel First Nation on the proposed Project once Michel First Nation made Trans Mountain aware of the need to consult with them, and that the late start to the consultation process and collection of TLU information has resulted in a failure to include Michel First Nation in the overall development of the assessment, failure to assess effects on Michel First Nation rights and interests, and failure to include Michel First Nation in discussions of mitigation and accommodation.

The Stó:lō Collective raised a number of concerns regarding its consultation with Trans Mountain. The Stó:lō Collective expressed concern about Trans Mountain's reluctance to formalize commitments to the Stó:lō Collective outside of a Mutual Benefit Agreement, to directly involve Stó:lō technical and cultural experts in Project mitigation and Environmental Protection Planning (EPP development), emergency response planning, or environmental survey work in order to mitigate concerns pertaining to traditional fisheries, spiritual and cultural sites, wetlands, old growth forests, communication protocols, capacity development, economic development or emergency response procedures. The Stó:lō Collective also raised concerns with the engagement process, in that communication has been on a proponent to Band level, when Trans Mountain was asked to have communication sent through the Stó:lō Collective as the process for engagement established by the Collective, leading to negative impacts on the engagement process.

Stk'emlupsemc Te Secwépemc said that there had been no discussion with Trans Mountain on the proposed routing of the pipeline.

Tsawwassen First Nation said in their written evidence that Trans Mountain mischaracterized its engagement with Tsawwassen First Nation through the Indigenous Engagement Logs filed by Trans Mountain. Trans Mountain acknowledged errors and omissions, and accepted the updated information on consultation filed by Tsawwassen First Nation.

Simpcw First Nation, First Nations of Maa-nulth Treaty Society, and Adam Olson said they were not meaningfully consulted by Trans Mountain about the Project and its potential impacts to their Indigenous rights, title and interests.

In response to the concerns expressed, Trans Mountain said it made every effort to provide Indigenous groups with opportunities to engage in meaningful dialogue in the manner they chose, and in a way that met their objectives and values. Trans Mountain said it tailored its engagement approach to accommodate the myriad of diverse objectives and values it

encountered. The sharing of information was integral to this process. As a result of the information it received, Trans Mountain said it made modifications to the Project in order to reduce impacts on the land and marine environment, address concerns regarding routing and construction, address socio-economic considerations, and enhance Indigenous involvement and engagement.

Trans Mountain said during engagement activities, Indigenous groups expressed an interest in participation in emergency response planning and programs (ERPs). Trans Mountain said the integration of Indigenous groups into ERPs provides opportunities for reduced response time in some locations and additional workforce to respond to a spill and participation of Indigenous communities in emergency planning and response also aligns with the principles outlined in the B.C. land-based spill initiative. Trans Mountain said ERPs will be developed with the participating Indigenous group(s) and Indigenous groups will be invited to participate in regional workshops regarding emergency response planning. Finally, Trans Mountain committed to file a consultation plan related to their Emergency Management Program (EMP), including its ERPs.

Trans Mountain said the company and the Stó:lō Collective have had multiple engagements throughout the hearing process. Trans Mountain said it has proactively engaged with the communities represented by the Stó:lō Collective, with the Stó:lō Collective, and with Ts'elxweyeqw Tribe Management Limited (TTML) to ensure Stó:lō interests are heard, and potential issues and concerns can be avoided or mitigated. Trans Mountain's evidence of the engagement activities, completion of land use studies, and the provision of funding to support engagement is outlined in its evidence filed throughout the hearing process.

Trans Mountain also said it has continued to share information with Stó:lō, in response to the information received through the Integrated Cultural Assessment Report.

Trans Mountain said it has made multiple efforts to share information regarding procurement, employment, and training for the Project, including with Tsartlip First Nation, and has requested that Tsartlip share information regarding the abilities of the Nation and its membership to participate in the business and employment-related opportunities that would arise as a result of the Project.

In response to Tsawwassen First Nation, Trans Mountain said that starting in 2012, Trans Mountain has been engaging Tsawwassen First Nation on the Project to provide comprehensive information to them, to seek feedback from them, and to identify anticipated impacts of the Project on the assertion of Indigenous rights and title governing traditional and cultural use of the environment. Trans Mountain stated it is aware of the Tsawwassen First Nation Final Agreement, and the resulting rights and obligations. Trans Mountain said its understanding of the Final Agreement is based on both reviewing the agreement and on discussions with Tsawwassen First Nation. Trans Mountain confirmed that, in engaging with Tsawwassen First Nation regarding the Trans Mountain Expansion Project, it took the Final Agreement into consideration.

Trans Mountain said it is committed to continued engagement to discuss the Project, mitigation measures, Project-related issues and the potential Project-related effects on Indigenous groups.

5.1.3 The Government of Canada's consultation process with Indigenous groups

The Government of Canada said it would rely on the Board's review process, to the extent possible, to identify, consider and address any adverse impacts on potential or established Indigenous and treaty rights resulting from the Project. The Government of Canada said federal authorities work together to ensure the legal duty to consult Indigenous groups is fulfilled and performed in a coordinated manner that is integrated with the environmental assessment and regulatory review process for the Project. In the Government's correspondence to Indigenous groups, Indigenous groups were informed of the Crown's reliance on the Board's process, to the extent possible, to meet the Crown's duty to consult and encouraged to participate in the Board's process to express Project-related concerns.

The Government of Canada outlined its approach to consultation with Indigenous groups for the Project, which occurs in four phases:

- Phase I: Initial engagement, from submission of project description to the start of NEB review process;
- Phase II: NEB hearings, from the start of the NEB review process to the close of the hearing record;
- Phase III: Post-NEB hearings, from the close of the hearing record to the Governor in Council (GIC) decision on the project; and
- Phase IV: Regulatory permitting, from the GIC decision on the project to issuance of departmental regulatory approvals (if required).

The Government of Canada said that commencing at the close of the NEB hearing record and ending with a GIC decision on the Project, the MPMO will coordinate consultation meetings between the Government and Indigenous groups for which the depth of consultation has been determined to be moderate or high. The purpose of these consultations is to conduct a

meaningful two-way dialogue to determine if there are any concerns related to the Project that have not been fully addressed by the NEB's draft conditions or the proponent's commitments to that point in the process, and to consider proposals from Indigenous groups for accommodation measures to further address outstanding issues or concerns that could be considered by the Crown.

A number of Indigenous groups expressed concerns about the limitations of the Government of Canada's approach to discharging its duty to consult with Indigenous groups, including its reliance on the NEB process. Some said that direct government-to-government consultation with the federal government is required to address their concerns, or as part of their decision-making about whether the Project may proceed in their territory.

5.1.4 Participation of Indigenous groups in the Board's hearing process

The Board's Enhanced Indigenous Engagement (EAE) initiative aims to provide proactive contact with Indigenous groups that may be affected by a proposed project, and to help Indigenous groups understand the Board's regulatory process and how to participate in that process. The Board reviews the completeness of the list of potentially affected Indigenous groups identified in the proponent's Project Description filed with the MPMO and the Board. The Board may suggest to the applicant any necessary revisions. The Board then sends letters to each potentially impacted Indigenous group on the revised list, informing them of the project as well as the Board's regulatory role in respect of the project, and offers to provide further information on the hearing process. Following issuance of these letters, Board staff follow up, respond to questions or conduct information meetings, where requested.

As committed to in the Project Agreement with the MPMO for the Project, the Board carried out its EAE activities for the Project from the time the Project Description was received on 23 May 2013 until February 2014. In August 2013, the Board sent a letter to 131 potentially affected Indigenous groups and organizations. The letter discussed the Board's hearing process and its Participant Funding Program. It also included a summary of the Project, information on how to obtain further information and an offer for NEB staff to attend a community meeting. Between November 2013 and February 2014, NEB staff presented information in person at nine community meetings attended by 22 different Indigenous groups and organizations.

Seventy-three Indigenous groups participated as intervenors in the OH-001-2014 hearing and provided their comments, views and evidence through written submissions and oral evidence to the Panel. Appendix 8 refers to information sources provided by Indigenous groups who participated in the review process and where this information can be located on the public record.

A total of 35 Indigenous groups and individuals provided oral traditional evidence (OTE) to the Board during the hearing. The Board received OTE at five locations (Edmonton, Chilliwack, Kamloops, Victoria, and Calgary). The Board received traditional evidence from the Horse Lake First Nation by telephone. The Board also made the audio recordings of OTE sessions available free of charge from the audio recording service provider.

5.1.5 Potential impacts on Indigenous groups

5.1.5.1 Trans Mountain's assessment of impacts on Indigenous groups

Trans Mountain said that through its Indigenous Engagement Program, it worked with Indigenous groups to identify anticipated impacts of the Project on the assertion of Indigenous rights and title governing traditional and cultural use of the land and marine environment. Trans Mountain said it endeavored to gather Indigenous perspectives on rights and asserted rights, identify issues and concerns relating to those rights and the Project, and reach understandings or agreements that address potential infringement of Indigenous rights affected by the Project.

Trans Mountain said its understanding that existing Indigenous and treaty rights of the Indigenous peoples of Canada are recognized and affirmed through section 35 of the *Constitution Act, 1982*.

Trans Mountain said it acknowledges the importance of the environment and the resources within it to Indigenous communities, and understands that the ability to participate in traditional land use activities is an important component of the exercise of their rights. Trans Mountain said its assessment of potential adverse effects of the Project considered the following value components that support Indigenous rights and interests:

- economy;
- employment;
- community services and infrastructure;
- individual, family and community well-being;

- human health;
- traditional culture;
- section 35 rights to fish, hunt and gather;
- Governance;
- visual and aesthetic resources; and
- species and habitats required to maintain a traditional lifestyle.

Trans Mountain said the methodology used to assess potential adverse effects of the Project on valued components supporting the exercise of Indigenous rights and interests considers: the potential environmental and socio-economic effects of the Project; ways in which these effects can be minimized or avoided altogether; and key mitigation strategies in place that would further reduce these effects. Trans Mountain said that it included Indigenous participation in its environmental field program to incorporate Indigenous views and additional traditional knowledge of the land into the consideration of potential Project-related environmental effects, and to provide Indigenous community members with the opportunity to provide TEK information to the ESA. Trans Mountain said its approach for collecting TEK tried to ensure a free, informed and ongoing process that meets Canadian ethical research standards. Translators were made available in the field upon the request of a given community, as warranted. Trans Mountain said that during field surveys, over 200 participants reviewed, collected and discussed TEK and potential Project-related effects and mitigation strategies.

Trans Mountain said it considered the potential effects of spills on elements of the environment that support Indigenous rights and interests. It said it acknowledges that salmon are vital to First Nations people in B.C.

Trans Mountain said TLU studies were completed on Crown land to obtain information regarding the TLU activities that participating Indigenous communities engage in on the land. The aim of the TLU studies was to assess and mitigate effects of the Project on current use of Crown lands for traditional activities and on identified TLU sites. Trans Mountain said this is achieved by meeting the following objectives:

- determine the extent and general nature of each community's current use of lands for traditional activities relative to the Project;
- identify existing concerns and potential effects of the Project on traditional land and resource use for baseline scoping and selection of social or environmental indicators for the effects assessment;
- provide traditional knowledge information, where appropriate, for the assessment of potential Project-related effects on traditional land and resource use; and
- establish appropriate site-specific mitigation measures to address traditional land and resource use concerns raised relative to the Project.

As discussed in detail in Chapters 11 and 14 of this report, Trans Mountain said it based the assessment of TLRU and TMRU on biophysical and human environments.

For the pipeline and associated facilities, Trans Mountain said that subsistence activities may be temporarily disrupted by construction or operations of the Project and the disruptions could mean that the traditional resource users miss the opportunity to harvest wild foods (e.g., wildlife, fish, plants) or that their participation is curtailed. Trans Mountain said that, despite these disruptions, the construction and routine operations would not result in significant adverse effects on the ability of Indigenous communities to continue to use land, waters or resources for traditional purposes, and thus the Project's contribution to potential broader cultural impacts related to access and use of natural resources is also considered not significant.

For the WMT, Trans Mountain said the expanded dock complex would become a permanent feature of the inlet and long-term traditional resource use patterns will likely adapt over time. Trans Mountain concluded there are no situations for TLRU that would result in a significant residual socio-economic effect, and that residual socio-economic effects of construction and operations activities of the WMT on TLRU indicators would be not significant.

With respect to the effects of Project-related marine vessel traffic, Trans Mountain said that a disruption of subsistence activities may occur due to increased transit of Project-related marine vessel traffic by restricting access to traditional use areas particularly if the resource users' travel occurs at the same time and in the same location as the Project vessel's transit. The company said that this could result in limiting the ability to harvest in certain areas, missed harvesting opportunities, or an increase in travel time to reach a destination. Trans Mountain said the Project-related disruption would only be temporary and activities are likely to be resumed in most cases once the vessel has passed. Trans Mountain said the effects associated with Project-related marine vessel traffic on TMRU are considered not significant, with the exception of

the expected residual effects on the traditional use associated with Southern resident killer whale population, which are considered to be significant.

Trans Mountain also said that its assessment of total cumulative effects for the Project concluded that there would be no significant Project contribution to adverse cumulative effects to the biophysical resources in the environment used for TLRU or TMRU by Indigenous groups. Trans Mountain concluded that overall there would be no significant adverse effects on the biophysical resources or the ecosystems that support TLU activities, with the exception of the Project's effects on the Southern resident killer whale.

With respect to human environment considerations, Trans Mountain concluded that there are no situations where social and cultural well-being, infrastructure and services, and community health indicators would result in a significant residual socio-economic effect with respect to Indigenous groups, including with respect to increased stress and anxiety related to perceived contamination that Indigenous groups may feel could result from the Project. Trans Mountain said that the assessment of effects on TLU patterns is based on alterations to the biophysical resources that TLU practices are based on and on consideration of the human environment, and concluded that the effects of the Project on TLU are not significant. Therefore, according to Trans Mountain, the residual socio-economic effects of Project construction and operations would be not significant.

5.1.5.2 Impacts raised by Indigenous groups

Indigenous groups have raised concerns throughout their written and oral evidence in this proceeding, and information about their concerns and interests has also been provided directly to Trans Mountain, which has filed evidence summarizing the concerns presented to them. Indigenous groups have characterized their concerns and interests in ways specific to each of them and, while information regarding key concerns and interests are summarized here, anyone wanting to understand the full context of the concerns and interests expressed by Indigenous groups should familiarize themselves with all of the relevant evidence on the record.

Indigenous groups provided information on impacts through their consultation activities with Trans Mountain as well as through their participation in the NEB hearing process. This evidence included completed TLRU and TMRU studies, OTE, responses to information requests, written evidence and final argument.

A number of Indigenous groups raised overarching concerns about impacts on their Indigenous and treaty rights. Within both written and oral evidence, Indigenous groups provided information on how, where, and when they exercise their asserted and established Indigenous and treaty rights, and they expressed their concerns as to how these rights might be impacted.

Groups described their established rights in the Project area, including those established through Treaty No. 6, Treaty No. 8, the Douglas Treaties, the Tsawwassen First Nation Final Agreement and court cases, including *R. v. Sparrow* and *R. v. Van der Peet*. Groups also described their rights in areas that would be traversed by Project-related marine vessel traffic. Indigenous groups referred to, and provided evidence on, their rights to hunt, trap, fish and gather and noted their rights related to the establishment of reserves.

In addition, a number of Indigenous groups provided information about their asserted rights. Details were provided as to claims to Indigenous title in areas potentially impacted. Descriptions were provided of stewardship and governance rights. Indigenous groups described their rights to fish for food, social, ceremonial and commercial purposes, and specific reference was made to fishing and harvesting sites, including those for salmon, crabs, prawns, shellfish and waterfowl. A number of Indigenous groups noted the importance of the Fraser River for the exercise of rights. Indigenous groups also noted the importance of marine areas for exercising their rights, including Burrard Inlet, Howe Sound, Swiftsure Bank and the Strait of Georgia. Details were provided regarding rights to gather plants for food and medicine as well as rights to engage in hunting and trapping activities, including harvesting of ungulates, waterfowl, fish, and shellfish. Travel and access was often referred to in the descriptions of their Indigenous rights. Many Indigenous groups noted rights related to ceremonial and spiritual practices and places. Rights related to archaeological and cultural heritage sites were also described. Much emphasis was placed on the importance of the exercise of their Indigenous rights to their culture.

Indigenous groups expressed significant concern as to how the exercise of these rights would be impacted. A number of Indigenous groups noted the importance of protecting the land and water for future generations, and indicated that the Project would introduce too much risk and additional impacts to their territories, rights, and identities. Indigenous groups also said that they must be part of all part decisions regarding access to their lands, waters and resources.

INAC said First Nations involved in the review of the proposed Project are at various stages of the British Columbia treaty process. INAC described in its evidence the ongoing status of negotiations within the British Columbia treaty process.

In addition to these overarching concerns related to their asserted and established Indigenous rights and title, key concerns raised by Indigenous groups about the Project relate to its potential impacts on:

- traditional land and marine resource uses, practices and activities;
- cultural heritage resources;
- community health;
- cultural practices;
- effects of cumulative development; and
- employment.

Many of the topics of concern raised by Indigenous groups are addressed in the chapters throughout this Report. The potential impacts on biophysical components, including fish and fish habitat, wildlife, vegetation, soils, and water quality and quantity, are discussed in Chapters 10 and 14. The potential effects on TLRU and TMRU are addressed in Chapters 11 and 14 respectively. Navigation, navigation safety and potential effects on recreational and commercial fishing are discussed in Chapter 11. Potential effects on human health, including the health of Indigenous people, are discussed in Chapters 11 and 14. Emergency management and spill response is discussed in Chapters 9 and 14. The concerns raised by Indigenous groups that relate specifically to these elements are discussed in detail in each of these respective chapters.

5.1.2.1.1 Impacts on traditional land and marine resource uses, practices, and activities

Indigenous groups said that their people have lived, hunted, gathered and fished within their traditional territories since time immemorial, and their uses of the lands, waters and resources within their territories are the backbone of their cultures. Many groups said they felt that the construction and operation of the Project would adversely impact their uses and activities within their traditional territories.

Indigenous groups raised concerns about how the Project could negatively impact their ability to continue their traditional uses, practices and activities such as hunting, fishing, trapping, the gathering of plants for subsistence and medicinal purposes, as well as their ability to access the land and specific sites for these purposes. Groups expressed concerns about their ability to harvest traditional food resources, including fish, shellfish, birds, and wild game as well as the impacts any reductions in their ability to harvest these resources would have on cultural and ceremonial activities as well as cultural transmission. Groups said that the harvesting and preparing of food is the primary context for many aspects of cultural transmission.

Many groups were concerned about their ability to continue to harvest plants for traditional uses, including medicinal plants. Some Indigenous groups said that they had concerns with the clearing of vegetation and with contamination of plants and loss or alteration of traditional use subsistence sites for plant gathering.

With respect to the WMT and marine shipping, a number of groups expressed concern these would negatively impact fish and fish habitat and would impact the reliance on fish for food and sustenance, and for economic purposes and spiritual practices and ceremonies, including harvesting at and around the WMT.

Concerns about specific marine resource harvesting locations, such as Swiftsure Bank, were also raised.

Several Indigenous groups expressed concern that accessing marine harvesting sites will be further restricted as a result of increased Project-related marine traffic.

Indigenous groups contend that a spill would have a catastrophic effect on the resources that they traditionally harvest and that the fact that the probability of a spill is small is not sufficient reason to determine the effects of a spill are not significant. They fear that a substantial spill or series of smaller spills could push resources past the tipping point and dramatically pollute and reduce stocks and habitat for many years.

5.1.2.1.2 Impacts on cultural heritage resources

A number of Indigenous groups raised concerns about the potential effects on their cultural heritage resources, including potential impacts to specific sites as well as effects on their continued ability to access sites in areas of cultural significance such as spiritual sites and gathering places. Groups said the Project would have impacts on their lands, resources and cultural practices including potential contamination of ancient village sites and cemeteries. Groups said their cultural rights and interests include sacred sites like villages, cemeteries, burning and ritual bathing sites, pit houses, and travel routes. Some groups expressed concern about their most sacred sites, including house pits and burial grounds.

Some groups expressed concern that specific information relating to their particular cultural heritage and spiritual sites were not fully accounted for in Trans Mountain's assessment of the project or its mitigation measures. The Stó:lō Collective raised specific concerns about potential impacts of the Project on the Lightning Rock site.

5.1.2.1.3 Impacts on community health

Several Indigenous groups expressed concerns about potential direct or indirect effects on community health, particularly in the event of a spill, through impacts on cultural activities, traditional food resources, or through increased anxiety and perception of contamination. Groups raised concerns about how the ability to continue traditional land use activities has resulting effects on the physical and psychological health of community members.

Some Indigenous group expressed concern about predicted impacts on physical and community health including stress, and reduced pre-natal health and youth development.

5.1.2.1.4 Impacts on cultural practices

Many Indigenous groups expressed concerns that the Project would impact opportunities to transmit knowledge from one generation to the next. Indigenous groups said that being on the land connects the present to the past, and traditional and cultural activities, such as harvesting, fishing and ceremonies bind families together. A number of groups were concerned that the Project would accelerate the process of loss of the spiritual connection to the land being experienced by youth and successive generations.

Indigenous groups said that their sense of place, privacy and quiet enjoyment are all-essential to their cultural and sacred practices, and that they will suffer sensory disturbance to these from tanker noise, light and vibration. Groups noted specific cultural practices they undertake, such as bathing in the waters of Burrard Inlet and associated creeks. Groups said continuing to engage in their ceremonial practices is a very important part of their culture.

Many Indigenous groups described how a disruption or reduction to traditional travelways would represent a loss of cultural expression and identity, as well as a loss of teaching opportunities for youth.

5.1.2.1.5 Effects of cumulative development

Many Indigenous groups discussed cumulative effects in their written and oral evidence. Indigenous groups said that their traditional territories have already been subject to change and continued encroachment. Groups said that the cumulative effects of development activities, including large-scale residential, industrial and commercial development, highways, railways and other infrastructure, and agricultural development have severely impacted their ability to exercise their Indigenous and treaty rights. Indigenous groups are concerned about the effects of existing development on the health of the ecosystems and resources harvested, and on their cultural and spiritual well-being, and the potential effects of the Project in addition to these existing effects.

Groups said that hunting activities continue to be impacted by development, and expressed concerns about the fragmentation of lands, loss of access to hunting and trapping areas, encroachment of developments, and loss of natural habitat.

A number of Indigenous groups had concerns with increased access to traditional areas. They were concerned that this would threaten wildlife, increase fishing pressure, and increase competition for resources used for traditional purposes.

A number of groups expressed concerns about Tran Mountain's cumulative effects assessment. Some groups said it did not accurately characterize or reflect the implications of incremental impacts on their use and occupancy of their territory, their interests, or their Indigenous rights and title.

5.1.2.1.6 Employment

In addition to the concerns noted above, numerous Indigenous groups also expressed an interest in employment and procurement opportunities as well as assistance with training to provide required skills. Many Indigenous groups said they wanted to participate in monitoring activities, and that community members or Elders should be present during construction and involved in reclamation work to ensure mitigation measures are completed. Samson Cree First Nation expressed concerns with monitoring by third parties and said ongoing traditional land use and environmental monitoring should be part of prevention and protection mechanisms.

5.1.2.1.7 Mitigation for potential impacts on Indigenous groups

Trans Mountain said it developed mitigation measures in accordance with Trans Mountain standards, industry and provincial regulatory guidelines, current industry-accepted best practices, engagement with Indigenous communities, experience gained from other pipeline projects with similar environmental and socio-economic conditions, and professional judgment. Mitigation measures, Management Plans and Contingency Plans are included in the Pipeline, Facilities and Westridge Marine Terminal EPPs. Trans Mountain said the EPPs and Environmental Alignment Sheets would be used to

guide inspection and monitoring of the Project during construction. Details of the mitigation measures Trans Mountain committed to for specific impacts are outlined throughout this Report.

Trans Mountain said that, in response to concerns and requests from Indigenous groups, it made a number of changes to the Project, including:

- reconfiguring the pipeline design in the Upper Fraser River and Upper North Thompson River Valley as a result of concerns raised during Indigenous engagement activities;
- revising a proposed route as a result of engagement with Peters First Nation on routing options across the Peters Indian Reserve No. 1A;
- implementing mitigation to ensure Project personnel are prohibited from fishing on Jacko Lake during construction activities, and working to provide continuous access to Jacko Lake for Stk'emlupsemc te Secwepemc members; and
- in response to concerns from the Katzie First Nation about Surrey Bend Regional Park, confirming that no land would be taken or removed from Surrey Bend Regional Park, and acquiring an easement for the pipeline that ensures ownership of the land will remain with the Park authority.

To mitigate the effects and concerns regarding traditional marine harvesting and cultural activities, Trans Mountain committed to, among other measures, provide regular updated information on Project-related marine vessel traffic to Indigenous communities. It also committed to initiate a public outreach program prior to the Project operations phase to communicate information on Project-related timing and scheduling with Transport Canada, the Canadian Coast Guard, the Chamber of Shipping for British Columbia, commercial and tourism associations, and potentially affected Indigenous groups.

Trans Mountain said that Project-related marine vessels would be fully compliant with all applicable navigational, communications and safety regulations, including those of Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority (PPA) and Port Metro Vancouver.

Trans Mountain said that, during engagement activities, Indigenous groups expressed an interest in participation in ERPs. Trans Mountain said that ERPs will be developed with the participating Indigenous group(s) and Indigenous groups will be invited to participate in regional workshops regarding emergency response planning. Trans Mountain committed to file a consultation plan related to its EMP, including its ERPs.

In response to the high level of interest in monitoring activities, Trans Mountain said Indigenous Monitors would be part of the onsite Environmental Inspection Teams to provide traditional knowledge to the construction program to ensure protection of the environment, and to ensure the successful protection, mitigation and monitoring requirements set out in the EPPs. Trans Mountain also committed to manage access along portions of its right-of-way by implementing mitigation measures during the pre-construction, construction and post-construction phases.

Trans Mountain said it is committed to continued engagement with Indigenous groups when reclamation management plans are being finalized.

Trans Mountain said that site-specific mitigation and enhancement measures will be implemented to ensure that the potential adverse social effects are eliminated or reduced and potential positive effects are enhanced during Project activities.

Trans Mountain said it will support employment and economic opportunities for Indigenous groups for the Project and that it has developed a Training Policy for Indigenous peoples to create initiatives that increase the long-term capability for Indigenous people to participate in the economy and to share in the success of the Project. Trans Mountain also said it will work with Indigenous communities to promote economic development through the identification of opportunities that offer Indigenous communities and businesses the ability to participate in the procurement of goods and services in support of the Project.

5.1.6 Submissions related to section 35, *Constitution Act*, 1982

Indigenous groups noted that the Board is required to act in a manner that is consistent with the *Constitution Act*, 1982. They said that federal action cannot unjustifiably infringe treaty and Indigenous rights and that the Crown is always subject to the limits imposed by the honour of the Crown, including the obligation to engage in proper consultation.

Indigenous groups argued that, in accordance with the Supreme Court of Canada's decision in *Rio Tinto Alcan Inc. v. Carrier Sekani Tribal Council*, 2010 SCC 43 ("*Carrier Sekani*"), the Board must assess the adequacy of Crown consultation as it has the power to decide questions of law, and Parliament has not excluded the ability to decide constitutional questions from the Board's jurisdiction under either the *National Energy Board Act* (NEB Act) or the CEEA 2012. They argued that if the Board is to exercise its jurisdiction under section 52, it must first address and decide all necessary questions of fact and law,

including whether the Crown has discharged the duty to consult and accommodate. They said that the Board cannot make a recommendation in the public interest until it is satisfied that the duty to consult has been discharged. Groups argued that, because the Crown participated in the process, this case was different from the facts considered in *Chippewas of the Thames First Nation v. Enbridge Pipelines Inc.*, 2015 FCA 222. It was argued that the Board's recommendation was not simply one of many decisions in relation to the Project but rather was the key regulatory decision to be made in relation to the Project. Indigenous groups characterized the Board's recommendation as a strategic higher-level decision or recommendation.

Indigenous groups said that the controlling question in all situations is what is required to maintain the honour of the Crown and to effect reconciliation between the Crown and the Indigenous peoples with respect to the interests at stake. Reference was made to what was described as the two primary purposes of the duty to consult and accommodate: balancing interests and preserving the honour of the Crown. Indigenous groups noted that the duty to consult is intended to advance reconciliation between Indigenous people and the Crown by ensuring Indigenous concerns are heard and considered and that Indigenous rights are accounted for in decision-making, protected and accommodated. Consultation must involve a dialogue with a genuine intention of understanding the rights and concerns of Indigenous groups, and with an openness towards changing course if required. They noted that there must be an intention to substantially address Indigenous concerns.

Indigenous groups argued that the Crown has not discharged its duty to consult and accommodate and therefore the Board must recommend that the Project not be approved. Some Indigenous groups argued that there had been no Crown consultation to date and that a decision-maker who proceeds on the basis of inadequate consultation errs in law. Indigenous groups argued that while the Board does not have an independent duty to consult and accommodate, it does have an obligation to exercise its decision-making function in accordance with section 35 but that because of procedural flaws in the hearing process, the Board did not have sufficient evidence to recommend the Project. Several groups argued that the Board's process was inadequate and that their participation in that process was hampered by a variety of issues, including funding. Some argued that they were not provided with complete information, that their rights were not appropriately scoped and that the Project impacts on their rights were not appropriately assessed, as there was too much reliance on biophysical indicators as proxies for Indigenous rights rather than on evidence dealing directly with impacts to Indigenous rights. A number of Indigenous groups noted that consultation must occur early in the process and cannot be put off to later stages; they argued that such early consultation had not occurred in this case. Several groups argued that the Board's process was ill-suited for the intended purpose of consultation.

Indigenous groups argued that the Government of Canada's commitment to consultation after the Board has issued its decision cannot have any bearing on the Board's determination of whether the duty to consult and accommodate has been discharged as it is impossible to know whether it would be meaningful or effective. They argued that consultation that occurs after the Board issues its Report cannot be meaningful as the conditions of approval will have already been set. Indigenous groups pointed to Natural Resources Canada's list of potentially outstanding issues as evidence that the Crown is of the view that Crown consultation has not been adequate. Indigenous groups suggested that the Crown does not rely on Trans Mountain to discharge its duty to consult and, therefore, Trans Mountain's regulatory filings regarding engagement with Indigenous groups are not relevant. Some Indigenous groups argued that the Crown has not put any evidence before the NEB that would allow the Board to find that consultation has been fulfilled.

While most Indigenous groups were of the view that the Board had to make a finding on Crown consultation, the Stó:lō Collective said during oral argument that the Board did not have a role as far as commenting on the Crown's consultation because Crown consultation was not complete. The Stó:lō Collective said the Board should make a finding on whether Trans Mountain has done an adequate job of consultation such that the Crown could rely on it in some way. Additionally, the Stó:lō Collective submitted that since the Crown has made filings with the Board, the Board could comment on them. However, in the Stó:lō Collective's view, the final determination about adequacy of Crown consultation rests with the GIC.

Several groups argued that the Board's constitutional role includes determining whether they had proven their Indigenous rights for the purposes of the application and whether issuing the Certificate would infringe those rights. Groups also argued that a justification analysis must be performed to determine whether, absent consent of the Indigenous groups, infringements of proven rights are justified such that the government action is consistent with subsection 35(1). A number of Indigenous groups argued that the infringements to its rights could not be justified, with one group noting that a "public interest" justification was too vague to be a valid legislative objective. Indigenous groups argued that the Crown must fully discharge its constitutional obligation to justify the infringement prior to permitting the Project to proceed and that the NEB regulatory process was not designed to justify the infringement. They argued that the Board should recommend dismissal of the application on the grounds that the Crown has to date failed to justify the infringement of proven Indigenous rights.

Trans Mountain said that the Board must exercise its decision-making function in accordance with both the NEB Act and subsection 35(1) of the *Constitution Act, 1982*. It said the Board does this through broad consultation requirements it imposed on the proponent and by providing Indigenous groups with an opportunity to participate in a robust and accessible regulatory process in a meaningful way.

Trans Mountain said the Federal Court of Appeal was clear in *Standing Buffalo First Nation v. Enbridge Pipelines Inc.*, 2009 FCA 308 that the Board is not the Crown nor its agent when considering a section 52 application. This case was said to be directly analogous to the current Project because here the NEB process also ensures that the proponent has due regard for Indigenous rights. Trans Mountain argued that the Board's process also provides a practical and efficient framework within which the Indigenous group can request assurances regarding project impacts.

Trans Mountain said that the Crown has indicated that the feedback it receives in the NEB's Report will refine the Crown's understanding of potential Project impacts on Indigenous interests. While acknowledging that the NEB Act gives the Board full jurisdiction to hear and determine all matters, whether of law or of fact, Trans Mountain submitted that in *Carrier Sekani*, the Court rejected the argument that every tribunal with jurisdiction to consider questions of law has a constitutional duty to consider whether adequate consultation has occurred and if not to fulfill that requirement itself. In Trans Mountain's view, given the evidence on the Board's record that the Crown consultation process with Indigenous groups is not over, an adequacy determination by the Board at the NEB recommendation stage would effectively usurp the Crown's role in the consultation process that will follow the NEB's regulatory process. Phase III and Phase IV of the Crown's consultation will occur after the close of the public record. Therefore, according to Trans Mountain, it would be premature for the NEB to assess the adequacy of Crown consultation prior to issuing this report. In any event, the Crown is the final decision-maker of whether a Project certificate will be issued.

Regarding requested justification for infringement by Indigenous intervenors, Trans Mountain was of the view that there is no legal basis for a justification test to be applied by the Board at this stage of the process when the GIC will be considering the process and its own consultation with Indigenous groups in entirety.

5.1.7 Views of the Board

The Board interprets its responsibilities in a manner consistent with the *Constitution Act, 1982*, including subsection 35(1), which recognizes and affirms the existing Indigenous and treaty rights of Indigenous peoples. In order to ensure that its recommendations and decisions with respect to this application are consistent with both subsection 35(1) and procedural fairness requirements, the Board has adopted the following assessment process. The Board is of the view that this process is appropriate, recognizing the complexity of this application, the importance of the constitutionally protected rights of Indigenous peoples, and the many and varied societal interests that must be considered in its assessment.

The Government of Canada and the NEB hearing process

The Board notes that the Government of Canada indicated in letters to potentially affected Indigenous groups that it is relying on the NEB process to the extent possible to meet the Crown's duty to consult Indigenous groups. While the Board itself does not owe the duty to consult, the Board is of the view that this reliance is appropriate given the Board's robust and inclusive process, its technical expertise, and broad remedial powers with respect to Project-related matters. The Board notes that a number of judicial decisions, including *Taku River Tl'itnit First Nation v. British Columbia (Project Assessment Director)* 2004 SCC 74, have acknowledged the Crown's ability to rely on opportunities for Indigenous consultation that are available within existing processes for regulatory or environmental review. This is a means by which the Crown may be satisfied that Indigenous concerns have been heard and, where appropriate, accommodated. The evidence of the Government of Canada also indicates that following the issuance of this Report, the Government of Canada will continue consulting with certain Indigenous groups.

Requirements of Trans Mountain

The Board's process was designed to obtain as much relevant evidence as possible on Indigenous concerns about the Project, potential impacts on Indigenous interests and possible mitigation measures to minimize adverse impacts on Indigenous interests. In addition to providing technical information addressing Project-related impacts on, among other things, fisheries, wildlife, vegetation, and heritage resources, Trans Mountain was required to make all reasonable efforts to consult with potentially affected Indigenous groups and to provide information about those consultations to the Board. This included evidence on the nature of the interests potentially affected, the concerns that were raised and the manner and degree to which those concerns have been addressed. Trans Mountain was expected to report to the Board on all Indigenous concerns that were expressed to it, even if it was unable or unwilling to address those concerns. Therefore, even if an Indigenous group chose not to participate in the subsequent hearing process, any concerns could be brought to the attention of the Board through the applicant's evidence.

This early consultation was guided by the Board's Filing Manual Requirements, direction given by the Board during the Project Description phase, as well as information the applicant received from other government departments and agencies that it consulted in relation to the Project. The requirements reflect the fact that an applicant is often in the best position to respond to Indigenous concerns about a project before an application is filed and while a project is still in the early stages of development.

The Board expects an applicant to design and implement its consultation activities with regard to the nature and magnitude of a project's potential impacts. Where there is a greater risk of more serious impacts on Indigenous interests (which would, in part, depend on the nature of that interest), the Board has greater expectations in terms of the applicant's consultation with the potentially impacted Indigenous group. In contrast, where there is a remote possibility of an impact on Indigenous interests, or the impacts are minor in nature, the applicant's consultation will generally not be expected to be as extensive. An evaluation of Trans Mountain's consultation is outlined below.

Indigenous groups and the NEB hearing process

In addition to the mandated one-on-one consultation that is to occur between an applicant and potentially impacted Indigenous groups, it should also be understood that the Board's hearing process itself, including this report, is part of the overall consultative process. While much of the early consultation was performed by Trans Mountain, the Board process acted as a necessary and important check on that consultation and gave Indigenous groups an additional avenue to explain their concerns about the Project and have those concerns carefully considered by the Board.

Indigenous groups who are concerned with potential Project-related impacts on their interests had opportunities to present their views directly to the Board. While the Board required the applicant to implement a consultation program and perform an impact assessment, the Board also took steps to facilitate the direct participation of Indigenous groups in its proceedings. The Board entered into a Project Agreement with the MPMO for the Project, which described the Board's commitments related to its Enhanced Indigenous Engagement activities. The Board sent letters to each potentially impacted Indigenous group informing them of the Project, as well as the Board's role in respect of the Project. The letters provided information regarding the Board's participant funding program and offered to provide further information on the hearing process. Board staff followed up on these letters, responded to questions regarding the Board's process and conducted information meetings where requested.

Independent of the Panel and regulatory process, the Board administered a participant funding program, which allotted funding to assist intervenors with their participation. A total of approximately \$3 million was made available for participant funding for this hearing. This amount was offered to 72 eligible intervenors, with 79 per cent of the funding offered to Indigenous groups.

In addition, potentially affected Indigenous groups were provided with a choice of a number of methods of participating in the hearing. Indigenous intervenors had the option of participating in the Board's proceeding in writing or orally, remotely or in person. The Board understands that Indigenous peoples have an oral tradition for sharing information and knowledge from generation to generation. Since this information cannot always be shared adequately in writing, the Board provided Indigenous groups with the opportunity to present oral traditional evidence (OTE). The Board finds OTE provided by Indigenous groups valuable for the Board's consideration of a project. The opportunity to provide OTE was unique to Indigenous participants. A total of 35 Indigenous groups and individuals provided OTE to the Board during the hearing.

Given the sensitivity of some of the information that was provided by Indigenous groups in their evidence, the Board also ordered that certain information be treated confidentially.

To further facilitate Indigenous groups' participation, the Board generally held oral portions of its hearing in locations near those interested in the Project, and accommodated requests to incorporate traditional ceremonies into its proceeding. When advised of a potential conflict with certain traditional activities, the Board revised, to the extent practical, its schedule to accommodate those timing concerns. The Board also provided both audio and video online broadcasts, as well as transcripts of its proceedings and audio recordings of OTE sessions, so that interested parties who were not in attendance could be aware of what was occurring during the hearing.

Many Indigenous groups took the opportunity to participate in the Board's hearing process and make submissions directly to the Board. Many of those submissions are reflected throughout this Report. Such submissions by Indigenous groups included, among other things, descriptions of the nature and extent of their interests in the Project area, views on the potential Project-related impacts, and discussion of appropriate mitigation measures, including their views on the draft conditions the NEB released for comment. The Board thanks each community for providing their traditional and cultural knowledge at the oral traditional evidence hearings.

Government departments and the NEB hearing process

Given the comprehensiveness of the Board's process, the Board's technical expertise and its broad remedial powers that are generally not within the purview of other government departments, it was important that concerns related to the Project be brought to the Board's attention through consultation with the applicant and participation in the hearing process. To the extent that other government departments had information to provide to the Board, they had the opportunity to participate in the Board's process and file relevant information on the Board's record. Several government departments participated in the Board's proceeding, including Natural Resources Canada, Transport Canada, Environment and Climate Change Canada, Port Metro Vancouver, and Fisheries and Oceans Canada and Canadian Coast Guard. These government participants filed expert information on the Board's hearing record and were available (and required) to answer questions asked by both the Board and intervenors, including Indigenous groups. These authorities also had the opportunity to comment and provide information on appropriate mitigation measures.

There were concerns identified by Indigenous groups during the Board proceeding that are generally unrelated to the application under consideration. The Board recognizes that Indigenous people have a broad range of matters and concerns that they wish to raise, discuss and resolve with the Government of Canada. While the Board recognizes the importance of these issues, the Board does not have the ability within its proceedings, to properly address issues that are unrelated to the application. Nevertheless, the Board carefully considered all of the submissions of Indigenous groups so that it could have a greater understanding of the context for Indigenous concerns with the Project.

Consideration of potential impacts and mitigation

Before making its decisions and recommendation on the Project, the Board considered all of the relevant information before it, including information regarding the consultation undertaken with Indigenous groups, the views of Indigenous groups, the potential impacts on Indigenous interests, and proposed mitigation measures. While the Board considered the nature of the interests potentially impacted, its consideration of claimed interests is not tantamount to the process undertaken to determine the definitive scope of a right through a claims process or a court proceeding aimed at confirming the existence and parameters of an asserted Indigenous right. In the Board's view, the Board is not required to make a declaration that a claimed right has or has not been proven.

The Board looked at the claimed or established interest in the context of how it may be impacted, what measures can be employed to mitigate that impact and how any impact should be considered in light of other interests related to the Project. The Board then considered all of the benefits and burdens associated with the Project, balancing Indigenous concerns with other interests and factors (such as the need for the Project), before determining whether, in its opinion, the Project is in the public interest.

In carrying out this part of its mandate, the Board's objective was to reconcile Indigenous interests and concerns with other public interest considerations. The Board's process is designed to be thorough and accessible to Indigenous groups so that they may make their concerns known to the Board and have those concerns considered and addressed as appropriate. Further, the open nature of the Board's process allowed all participants interested in the application to be fully aware of the evidence that the Board considered in making its recommendations and decisions on the Project, which is consistent with principles of procedural fairness.

Consultation through the Project lifecycle

It is important to understand that there is a need for consultation to occur early in the planning stages of a project. However, information about a project is necessarily refined as project planning progresses, including in response to information provided by Indigenous groups through consultation, and therefore, it is important that consultation is ongoing. The Board has set out broad expectations for all regulated companies that consultation will continue throughout the life of a project and the Board routinely imposes binding obligations on the applicant to ensure that such consultation is occurring in an appropriate manner throughout the lifecycle of a pipeline. As the regulator of a project throughout its lifecycle, the Board also has a number of processes and tools at its disposal to execute its oversight of a project, including ensuring compliance with any conditions imposed by the Board.

If a certificate is issued for this Project, consultation will be ongoing throughout the life of the Project as conditions are met and additional permits are obtained. Notwithstanding this additional consultation, the Board is satisfied that the initial certificate process described above serves an important role in reconciling the various interests involved in such applications and ensuring that *Constitution Act, 1982*, subsection 35(1) obligations associated with the Project are met.

Trans Mountain's consultation

In assessing the consultation undertaken by Trans Mountain with Indigenous groups, the Board evaluated the design and implementation of Trans Mountain's consultation activities. The Board considered the company's activities to engage Indigenous groups and to learn about their concerns and interests. It also considered how Indigenous groups responded to opportunities for consultation and how Trans Mountain sought to understand, consider and address the concerns of potentially affected groups. The Board considered how this input influenced the Project's proposed design and operation. The Board also considered the concerns and views expressed by Indigenous groups.

A company's early consultation with Indigenous groups is a critical part of the development of proposed project, and a key matter for consideration within the regulatory review process. Timely, accessible and inclusive consultation facilitates the effective exchange of information, and provides opportunities for the company to learn about the concerns of potentially affected Indigenous groups, to discuss how those concerns can be addressed through project design and operational considerations, and to develop and discuss measures to reduce and mitigate the effects a project may have on the interests of Indigenous groups. Timely and effective consultation can help establish productive relationships that can carry on throughout the life of the project. It also informs the Board of the concerns Indigenous groups may have about a project's impacts.

With respect to Trans Mountain's consultation with Indigenous groups, the Board finds that Trans Mountain met the expectations of the National Energy Board, including those set out in the Board's Filing Manual. Since 2012, as part of the initial phases of the consultation process, the company provided Project information to Indigenous groups. This included information about the Project's design, operations, as well as its potential environmental, social and economic effects, including potential economic benefits through employment and training opportunities. The Board notes that Trans Mountain continued to provide opportunities to raise and discuss concerns with the company to those Indigenous groups that were identified as being potentially affected, and those that identified themselves to Trans Mountain as wishing to be engaged in consultation, throughout the early Project design phase and the regulatory review process.

The Board finds that the criteria used by Trans Mountain to identify potentially affected Indigenous groups were appropriate. The Board notes that Trans Mountain's consultation with Indigenous groups took into consideration the Project's proximity to areas of traditional use along the proposed right-of-way, and in proximity to the WMT. Trans Mountain also considered input from relevant federal and provincial departments and ministries. Once groups identified to Trans Mountain their interest in engaging in consultation, Trans Mountain was responsive to these requests, including Michel First Nation. The Board also notes that Trans Mountain included Indigenous groups along the shipping route that would be used by tankers associated with marine transportation activities. This included Indigenous groups on Vancouver Island and the Gulf Islands along established marine shipping corridors transited by tanker traffic, as well as communities in and around Port Metro Vancouver. The Board finds these aspects of Trans Mountain's consultation program design and implementation to be inclusive and appropriate for the Project's location and scope.

The Board finds that Trans Mountain offered all potentially affected Indigenous groups adequate opportunities to raise any concerns they had with the company, and to provide information about their concerns and interests in the Project area and within their traditional territories. The Board notes that this included the opportunity for each potentially affected Indigenous group: to complete or participate in traditional land and resource use (TLRU) studies and traditional marine use (TMRU) studies; to provide traditional ecological knowledge (TEK); and to identify potential effects on the current use of lands and waters and resources for traditional purposes. The Board also finds Trans Mountain provided appropriate opportunities to identify and discuss measures to reduce or avoid potential adverse effects. The Board notes the variety of information provided by Trans Mountain to Indigenous groups, as well as the numerous opportunities and offers to engage in consultation. These included providing Indigenous groups with notices of field study work, Project updates, and invitations to meet with the company to discuss concerns. The Board also notes Trans Mountain's offers to provide capacity funding to Indigenous groups, which Trans Mountain said were facilitated through the signing of 94 agreements for capacity funding and assessment studies with an aggregate value of \$36 million.

The Board notes that some Indigenous groups were critical of Trans Mountain's approach to consultation. A number of Indigenous groups raised concerns about the adequacy of Trans Mountain's consultation activities and efforts. Some groups said they were not provided adequate opportunities to raise their concerns with the company, or to discuss or participate in the development of mitigation measures for the Project. Other groups felt that the time allowed to review Project information was inadequate. The Stó:lō Collective felt some of its information was not fully considered by Trans Mountain.

The Board finds that Trans Mountain provided numerous opportunities and venues for Indigenous groups to provide information about their interests to the company, and that Trans Mountain considered the information that it received

from those Indigenous groups that chose to provide it. The Board notes that many Indigenous groups chose not to participate in TLRU and TMRU studies for the Project.

The Board is of the view that Trans Mountain considered the information that was provided by Indigenous groups about their use of the lands, waters, and resources, and made a number of changes to the design and planned operation of the Project as a result of this information. These changes include reconfiguring the pipeline design in the Upper Fraser River and Upper North Thompson River Valley, and revising a proposed route across the Peters Indian Reserve No. 1A. As the Board discusses in Chapter 11, the majority of the pipeline route for the Project parallels existing disturbance, including the right-of-way for Trans Mountain's existing pipeline. The Board finds this appropriate, as this reduces the requirements for new right-of-way disturbance, minimizes the potential impacts of construction, and reduces effects on nearby residents and communities. The Board is of the view that Trans Mountain appropriately responded in its design and routing to the concerns and recommendations made by Indigenous groups, to the extent that was possible while maintaining minimal disturbance by paralleling existing disturbance.

Trans Mountain committed to ongoing consultation with affected Indigenous groups throughout the life of the Project. The Board views consultation as an iterative and ongoing process of discussion and dialogue. The Board expects companies to continue to learn about the concerns that groups may have about a project, and to discuss ways to address those concerns to the extent possible. Trans Mountain's approach to its ongoing consultation with potentially affected Indigenous groups meets the Board's expectations. Trans Mountain has committed to implement its ongoing consultation efforts in order to further develop and finalize those measures that will be used to mitigate and reduce the potential effects on the Indigenous groups in the Project area. The Board finds this approach acceptable, and encourages Indigenous groups to continue to engage with Trans Mountain in order to provide input into the final plans and mitigation measures for the Project. In order to apprise the Board and all potentially affected Indigenous groups about Trans Mountain's ongoing consultation efforts, including how it has addressed any concerns raised by Indigenous groups, the Board would impose Condition 96 requiring Trans Mountain to file with the Board reports on its ongoing consultation with potentially affected Indigenous groups during construction, and through the first five years of operations (Condition 146).

Some groups were critical of this approach to ongoing consultation, and felt that Trans Mountain had not yet adequately completed or fulfilled its consultation with Indigenous groups. For example, Kwantlen First Nation, Cheam First Nation and Chawathil First Nation felt that Trans Mountain did not adequately provide opportunities to discuss or finalize emergency response plans for the Project. The Board finds that, for this phase of the Project, Trans Mountain provided appropriate and adequate opportunities to discuss elements of the Project such as emergency response plans. Trans Mountain has committed to engaging directly with potentially affected groups on the development of emergency response plans. The Board finds this appropriate. In order to apprise the Board and potentially affected Indigenous groups about its consultations, and to ensure that Indigenous groups are provided with opportunities to provide input into the final plans and measures, the Board would require Trans Mountain to file with the Board its plan for consultation on the development of its Emergency Management Program (Condition 90). Trans Mountain would also be required to incorporate the results of consultation into its Emergency Management Program, including tactical plans for high consequence areas (Condition 124). The Board finds that Trans Mountain provided Indigenous groups appropriate and adequate opportunities to discuss the measures and plans that would protect communities and the environment, and that these opportunities will continue as part of ongoing planning for the Project.

The Board acknowledges that Trans Mountain and a number of Indigenous groups entered into agreements and letters of understanding for the Project. The Board also notes the letters from certain Indigenous groups expressing their support for the Project, some of which note they do not object to the Project, or are satisfied by the mitigation measures and consultation provided with respect to the Project. Several of the letters from Indigenous groups also expressed their opinion that the Project would result in positive economic effects. The Board is supportive of the aims of such agreements, which clarify the nature of the relationship between the parties, outline any support necessary to aid in discussion about the Project, and facilitate cooperation. The Board views the expressions of support offered by Indigenous groups to reflect the outcomes of effective consultations and discussions between the company and those Indigenous groups that have chosen to enter into arrangements with Trans Mountain. The Board also notes the concerns expressed by Indigenous groups regarding opportunities to participate in the Project through employment, training, and contracting or procurement. As discussed in Chapter 11, in order to facilitate the economic participation of Indigenous groups in the Project, the Board would impose Condition 12 requiring Trans Mountain to file with the Board a plan for monitoring the implementation of training and education opportunities, and to file a local, regional and Indigenous skills and business inventory (Condition 11).

The Board finds that Trans Mountain has designed and implemented an appropriate and effective consultation program, that meets the requirements and expectations set out in the Board's Filing Manual. The Board also finds that, with Trans Mountain's commitments and the Board's recommended conditions, Trans Mountain can effectively continue to consult with Indigenous groups, to learn more about their interests and concerns, and address issues raised by Indigenous groups throughout the Project's operational life.

Project-related impacts

In assessing potential impacts on Indigenous interests, the Board considered all of the evidence provided. The Board assessed how Trans Mountain identified and evaluated the potential impacts, the concerns raised by Indigenous groups, and the measures Trans Mountain has proposed to minimize or eliminate the Project's potential impacts on the interests of Indigenous groups.

Through the review process, Indigenous groups had the opportunity to make their views and concerns about the Project, including what effects it might have on their potential or established interests, known to both Trans Mountain and the Board. Indigenous groups expressed their views and concerns about how the Project might affect their Indigenous and treaty rights relating to hunting, fishing, trapping, the gathering of plant resources for subsistence and medicinal purposes, and the continued cultural and ceremonial practices and activities that are intimately interwoven with and dependent on their access to lands, waters, and resources within their traditional territories. The Board acknowledges the importance that Indigenous groups place on being able to exercise their Indigenous and treaty rights, and continue their traditional activities, uses and practices within the entire area of their traditional territories, including access to resources and areas and sites of cultural importance and significance.

Trans Mountain outlined its approach for assessing the potential impacts on the rights and interests of Indigenous groups. Its approach relied on an assessment of the effects on biophysical and human environments. This incorporated information provided by Indigenous groups through consultation, traditional land and marine use studies, and their participation in biophysical field studies.

The Board considered the evidence provided by Trans Mountain, Indigenous groups, and other participants about the nature and extent of the activities, uses, and practices that are carried out by Indigenous groups in the Project area, and the concerns expressed regarding the impacts of spills on traditional use and activities. The Board considered the potential impacts on those activities, uses, and practices. The Board also considered all the measures committed to by Trans Mountain to minimize or avoid such impacts.

As described in detail in Chapters 10, 11, and 14, Trans Mountain has described its specific and broad mitigation measures that would be implemented to address potential effects on biophysical elements, including fish and fish habitat, wildlife, vegetation, and water quality and quantity, as well as measures to address specifically the potential effects on TLRU, TMRU and socio-economic components, including cultural heritage resources. Trans Mountain concluded that with the application of its mitigation measures, adverse effects on TLRU, TMRU and the biophysical elements that support such use, as well as on socio-economic components, including cultural heritage resources, are not likely to be significant, with the exception of effects on the Southern resident killer whale, including traditional uses associated with the Southern resident killer whale.

Some Indigenous groups did not agree with the approach taken by Trans Mountain. Some groups expressed concern that Trans Mountain did not undertake group-specific assessments of the potential effects, or did not assess the potential impacts to established or asserted rights. The Board finds Trans Mountain's approach to assessing the potential effects on Indigenous interests is acceptable. Trans Mountain has assessed the effects related to construction, operations, and potential accidents and malfunctions including spills that may impact biophysical resources and socio-economic components within the Project area, and the Indigenous uses, practices and activities associated with those resources.

The Board recognizes that there would be impacts associated with this Project, and that these would be experienced by some Indigenous groups. Reduced or interrupted access to lands, waters, or resources used by Indigenous groups, including for traditional land and marine uses, and for cultural and ceremonial purposes, may result in disruptions in the ability of Indigenous groups to practice their traditional activities. The Board has fully considered all the evidence in relation to these matters, which are described in detail in Chapters 11 and 14, and the Board finds that, during construction and routine operations, these impacts would be temporary and are not likely to be significant. With respect to TMRU activities directly affected by the WMT, the Board finds that these effects would persist for the operational life of the Project, as TMRU activities would not occur within the expanded water lease boundaries for the WMT. The Board finds that while the effects would be long-term in duration, these would be reversible in the long term, and that adverse effects are not likely to be significant.

With respect to the potential effects of Project-related vessel traffic on Indigenous marine vessels and users, the Board finds, as described in Chapter 14, that these effects would be limited to the time during which the Project-related vessels are in transit and therefore, these effects would be temporary and Indigenous marine vessels will be able to continue their movements and to access areas outside of those brief periods of interruption. As outlined in Chapter 14 of this Report, the Board finds that with the exception of effects on the traditional uses associated with the Southern resident killer whale, adverse effects of Project-related marine vessel traffic on traditional marine resource uses, activities and sites are not likely to be significant.

With respect to the potential impacts of a worst-case spill from the pipeline or from Project-related vessels on the ability of Indigenous groups to continue their traditional uses, practices and activities, the Board finds, as described in Chapters 11 and 14, that depending on the size, location and conditions of a spill and the effectiveness of response measures, there could be significant adverse effects on these traditional uses, practices and activities. As noted in its views on these matters in the respective chapters, the Board finds that the probability of such events is very low. The Board has incorporated the potential consequences of a spill outlined above into its discussion on spill risks in Chapter 1 and considered them in its overall weighing of the benefits and burdens of the Project in Chapter 2.

The review and final design of a proposed project is, in the Board's view, an iterative process. Should the Project proceed, Trans Mountain would be required to continue its consultation with potentially affected Indigenous groups, and to finalize the development of its plans and measures to reduce and mitigate the potential effects and to protect the environment and the resources that are of importance to and utilized by Indigenous groups. The Board would impose a number of conditions requiring Trans Mountain to report to the Board on its consultation with Indigenous groups during construction, through the first five years of operations, and to report to the Board on its consultations regarding the development of a number of its plans related to, among other things, environmental protection and emergency response programs.

Viewing all of these factors together, and as the Board has concluded within Chapters 10, 11, and 14, the Board is satisfied that with Trans Mountain's commitments, its proposed mitigation measures, and with the Board's proposed conditions, that the effects on the interests of potentially affected Indigenous groups can be effectively minimized, and that there would not be significant adverse effects on the ability of Indigenous people to continue to use lands, waters and resources for traditional purposes, with the noted exception of traditional uses associated with the Southern resident killer whale.

Summary of views on subsection 35(1), Constitution Act, 1982

The Board heard a number of arguments regarding requirements related to subsection 35(1) of the *Constitution Act, 1982*, including the need for the Board to assess the adequacy of Crown consultation. The Board recognizes that the law with respect to such matters is regularly being clarified. Nevertheless, the Board understands that the duty to consult with Indigenous groups, triggered when government decisions have the potential to adversely affect Indigenous and treaty rights, is a constitutional duty invoking the honour of the Crown and it must be met. While the Board does not itself owe the duty, its process is relied upon, to the extent possible, to discharge the duty to consult.

Having considered all the evidence submitted in this proceeding, the consultation undertaken with Indigenous groups, the impacts on Indigenous interests, the proposed mitigation measures, including conditions, to minimize adverse impacts on Indigenous interests and the commitments to and Board imposed requirements for ongoing consultation, the Board is satisfied that the Board's recommendation and decisions with respect to the Project are consistent with subsection 35(1) of the *Constitution Act, 1982*. The Board is of the view that this assessment is consistent with what is required for the purposes of the Board's Report.

The Government of Canada has stated that there will be additional consultation following the issuance of this Report, and the GIC will be making a determination as to whether it will direct the Board to issue a certificate for the Project pursuant to section 54 of the NEB Act.

5.2 Indigenous matters – MH-052-2018 hearing

5.2.1 Overview

The Board has considered all of the evidence provided in the MH-052-2018 hearing by Indigenous communities and others, including Trans Mountain and the Federal Authorities about the potential impacts of Project-related marine shipping on Indigenous interests, including rights; Trans Mountain and the Federal Authorities' proposed mitigation of the potential effects of marine shipping; requirements in the regulatory framework; and the Conditions listed in Appendix 3 and the recommendations in Chapter 2.

The Board interprets its responsibilities in a manner consistent with the *Constitution Act, 1982*, including subsection 35(1), which recognizes and affirms the existing Indigenous and Treaty Rights of Indigenous peoples. Further discussion of the Board's role in upholding section 35 of the *Constitution Act, 1982* is available in Section 5.2.6 of this chapter. The Board is of the view that there has been adequate consultation and accommodation for the purpose of the Board's reconsideration and recommendations in respect of Project-related marine shipping. The Board is of the view that any potential impacts from marine shipping on the interests, including rights, of affected Indigenous peoples are not likely to be significant and can be effectively addressed, with the exception of the impacts on the traditional use of Southern resident killer whales by Indigenous peoples.

In addition to the summaries of evidence in this section, Appendix 14 provides a summary of the general and specific concerns and issues about the potential impacts of Project-related marine shipping, raised by Indigenous communities through the MH-052-2018 hearing, as well as summaries of the responses to these concerns provided by Trans Mountain, the Federal Authorities, the Board (including conditions and recommendations), and applicable requirements provided through regulation and/or legislation. As noted in Section 5.1, this chapter of the Report should not be considered in isolation from the recommendation as a whole and anyone wishing to fully understand the context of the information and evidence provided by Indigenous communities should familiarize themselves with the entire record of the MH-052-2018 hearing.

The sections below are organized as follows. Section 5.2.2 summarizes the submissions regarding Trans Mountain's engagement program and the Government of Canada's consultation to date. Section 5.2.3 describes the participation of Indigenous communities in the Board's process for this Reconsideration, Section 5.2.4 summarizes the submissions on asserted rights, and Section 5.2.5 summarizes the submissions on potential impacts to the interests, including rights of Indigenous communities. The views of the Board are provided in Section 5.2.6, detailing the Board's findings on Trans Mountain's engagement, the Government's consultation, and the potential impacts, including the Crown's consultation obligations.

5.2.2 Consultation with Indigenous peoples

5.2.2.1 Trans Mountain's engagement with Indigenous peoples

The Board considered evidence related to Trans Mountain's Indigenous Engagement Program in its OH-001-2014 hearing, as described in Section 5.1.2.

In its updated evidence filing for the Reconsideration, Trans Mountain confirmed that it continues to engage Indigenous communities affected by the Project and will continue to update the Board through compliance with Condition 96.

With regards to marine shipping specifically, Trans Mountain stated that since 2012, Trans Mountain has engaged with 27 marine and inlet Indigenous communities, 21 of which have indicated an interest in the Project or interests potentially affected by Project-related marine vessel traffic.

Throughout 2015 to the present, Trans Mountain said that it had facilitated introductions and meetings of marine Indigenous communities with the Western Canada Marine Response Corporation (WCMRC). The purpose of these meetings was to inform Indigenous communities of WCMRC's state of preparedness and current plans in place should a marine spill occur and to mitigate the impacts thereof. This includes protection of wildlife, economic and environmental sensitivities.

Trans Mountain also said that, in accordance with its Consultation Plan for its Emergency Management Plan (Condition 90 of the original Certificate), it has engaged with Indigenous communities regarding the development of several aspects of its Emergency Management Program. Trans Mountain said that the consultation is an extensive, multi-step, ongoing process in which local and traditional knowledge from affected Indigenous communities is sought out through various engagement opportunities, including face to face meetings, workshops and field visits.

Trans Mountain also said that it is advancing the concept of a Salish Sea Initiative as part of an existing commitment with marine Indigenous communities to enhance their stewardship over the Salish Sea. While conceptual at this time, the Salish Sea Initiative has been introduced to marine Indigenous communities with a focus on where there is an already existing commitment, and the intention is for the Initiative to be Indigenous-led and developed in partnership with Trans Mountain. Due to Project-uncertainty the long-term initiative was suspended, but pending the resumption of the Project, Trans Mountain said that it would re-engage with interested Indigenous marine communities in the design and scope of the initiative, together with, as appropriate, other marine organizations and authorities.

Trans Mountain said that it continues to foster and develop working relationships with Indigenous communities to receive Indigenous knowledge. Trans Mountain said that where appropriate, it has established formal relationships with Indigenous communities that includes opportunities to incorporate Indigenous knowledge into Project plans. Trans Mountain said that it continues to review and identify opportunities to facilitate and support Indigenous participation in activities related to Trans Mountain's areas of responsibility.

Finally, Trans Mountain said that it is committed to ongoing and meaningful consultation with Indigenous communities throughout the lifecycle of the Project. Trans Mountain said that it intends to engage directly with Indigenous communities to understand issues, and where appropriate implement avoidance, mitigation and accommodation measures, and agreements.

5.2.2.2 Concerns raised by Indigenous peoples about Trans Mountain's consultation

Some Indigenous communities raised concerns in their evidence about Trans Mountain's consultation related to marine shipping impacts. The concerns raised in relation to Trans Mountain's ongoing consultation regarding marine shipping included the lack of capacity funding and limited opportunity to provide input into condition filings and other management plans.

Lyackson First Nation (Lyackson) stated that none of the concerns it has brought to the attention of Trans Mountain during ongoing engagement have been addressed. Lyackson further noted that Trans Mountain has provided insufficient funding for review of compliance filings or to ensure that it can be meaningfully engaged in the development of programs or mitigation measures to address Lyackson's concerns.

Musqueam Indian Band (Musqueam) characterized Trans Mountain's ongoing engagement activities with Indigenous communities, in particular as they related to condition compliance, as an empty record keeping process with no substance. Neskonalith Indian Band (Neskonalith) stated that Trans Mountain's consultation regarding the Project continues to be poor and does not meet the standard of meaningful consultation. Neskonalith also raised concerns about how Trans Mountain's future engagement would take place given the change in ownership.

During its oral traditional evidence, Stó:lō Tribal Council noted that Trans Mountain had limited its engagement regarding marine issues, and that it would only discuss the pipeline corridor and the Westridge Terminal.

The Indigenous Caucus for the IAMC (IAMC Caucus) raised concerns with the limited detail of engagement information provided by Trans Mountain in its condition compliance filings with the Board. It noted that Trans Mountain did not provide sufficient details regarding the recommendations or results of consultation with various Indigenous communities, including any outcomes or follow up activities to address Indigenous concerns.

BC Métis Federation submitted that meaningful, timely, transparent, and cultural sensitive consultation was not carried out for the Project, and that Trans Mountain has not engaged in discussion with members about how they may be impacted by the Project, nor about the role that they and their community might play in addressing those impacts.

Blood Tribe, Driftpile Cree Nation, Louis Bull Tribe, Papaschase First Nation #136, Tsuut'ina Nation and Whitefish Lake First Nation #459 all indicated that they had not been engaged by Trans Mountain as part of the Project and said that Trans Mountain should be engaging with each of them to discuss accommodation and mitigation measures to be implemented for the lifecycle of the Project.

5.2.2.3 Trans Mountain's reply to consultation concerns

Trans Mountain noted that it continues to dialogue with Lyackson regarding marine transportation activities and Lyackson's concerns over potential Project and regional marine transportation effects on the Southern resident killer whale (SRKW) population. It noted that it is working with provincial and federal maritime agencies with the goal of identifying effective, actionable mitigation measures that balance environmental and marine shipping industry needs. Trans Mountain committed to continue to provide Lyackson with updates and further details on research results and recommendations for possible mitigation measures to reduce potential effects of marine transportation effects on SRKW. More information regarding these measures are found in Chapter 14.

In reply to concerns raised by the BC Métis Federation, Trans Mountain said that it has been engaging with the BC Métis Federation on all facets of the Project since 2012 and that it has entered into a contractual arrangement in relation to the Project with BC Métis Federation and, based on that agreement, Trans Mountain is committed to continued engagement with BC Métis Federation in a meaningful way to address the questions and concerns of its members, including the recommendations brought forth in their direct evidence.

In response to Stó:lō Tribal Council's statement that Trans Mountain had placed restrictions on topics for engagement, Trans Mountain noted that it has engaged Stó:lō governance organizations on all aspects of the Project. While Trans Mountain has clearly stated that its operational control ends at the Westridge Marine Terminal (WMT), this was never intended to and has not precluded engagement on marine issues that extended beyond the WMT, including marine shipping. For example, it noted that Stó:lō Tribal Council was invited to the last two full-scale emergency response exercises at WMT in 2015 and 2018.

In response to questions about how Trans Mountain's engagement activities may change as a result of the change in ownership, Trans Mountain stated that it continues to be the proponent of the Project and as such, it will continue to engage with Indigenous communities and comply with any and all NEB conditions in respect of the Project. Trans Mountain noted that from a constitutional perspective, the ultimate responsibility for ensuring that the duty is adequately fulfilled remains with the Crown under the leadership of the Minister of Natural Resources. Trans Mountain said that it has started collaboration activities with the Federal Government in relation to the resumption of Phase III consultation, and will

participate as appropriate in subsequent consultations with Indigenous groups, to provide proponent and project specific information. Trans Mountain said that it is committed to participating in meaningful dialogue and consultation with Indigenous communities across the Project.

Finally, in response to overarching concerns raised about its engagement program, including the consultation it is doing with communities as part of condition compliance, Trans Mountain said that consultation and engagement with all Indigenous communities is ongoing, and there are no Project-related topics that are considered closed for discussion. Trans Mountain confirmed that it is open to hearing and discussing all issues with Indigenous communities and incorporating feedback into Project plans and development at every opportunity. Further, Trans Mountain said that it welcomes the involvement of Indigenous communities in the development and implementation of key marine conditions. Trans Mountain said that engagement on these conditions will occur through workshops, ongoing one-on-one meetings and Indigenous Engagement Roundtables planned for 2019.

5.2.2.4 The Government of Canada's consultation process with Indigenous peoples

The Board considered evidence related to the Government of Canada's consultation process with Indigenous communities in its OH-001-2014 hearing, as described in Section 5.1.3.

As part of the MH-052-2018 hearing, Natural Resources Canada (NRCan) filed information related to Crown consultation and engagement with Indigenous communities potentially impacted by the Project, outlining the initiatives that Canada has undertaken to identify Indigenous communities' substantive issues and to develop and implement mitigation or accommodation measures where appropriate.

NRCan filed the Joint Federal/Provincial Consultation and Accommodation Report (2016 CAR) for the Trans Mountain Expansion Project which summarizes the procedural and substantive aspect of consultation with Indigenous communities of the Project as part of the Original Phase III consultations on the OH-001-2014 Report. The 2016 CAR describes:

- Indigenous consultation undertaken in respect of the Project;
- View of Indigenous communities on how the Project may impact Indigenous interests;
- Measures proposed to address potential impacts of the Project on Indigenous interests raised by Indigenous communities;
- The Crown's conclusions regarding the potential impacts of the Project on Indigenous interests; and
- Conclusions regarding the adequacy of consultation.

The 2016 CAR also included appendices specific to consultation with the 40 Indigenous communities on the Crown list who had raised issues related to marine transportation during the Original Phase III consultations. NRCan said that the 2016 CAR's appendices summarize the Crown's understanding of concerns raised by Indigenous communities, governments, or nations, including the Crown's conclusion of the impacts of the Project to rights and title, and the depth of consultation owed to each Indigenous community, government or nation. NRCan noted that the key concerns raised by Indigenous communities related to marine shipping activities outlined in the 2016 CAR included impacts on marine fishing and harvesting, impacts on other traditional and cultural practices, and impacts of a spill.

NRCan noted that much of the collaboration and conversation with Indigenous groups on the Project after the Original Phase III consultation process occurred through the co-development and implementation of the Indigenous Advisory and Monitoring Committee (IAMC or Committee) on the Trans Mountain Expansion Project and existing pipeline. This measure was to supplement the proponent's commitments to Indigenous communities, the NEB conditions on the project, and the commitments made by the Government of Canada in the Oceans Protection Plan (OPP). NRCan highlighted Section 23 of the Terms of Reference for the IAMC, which refers to marine issues, noting that Indigenous communities indicated that they had not been meaningfully involved in the oversight of these activities in the past and that there was no clear alternative process for them to participate in the monitoring of those activities.

NRCan also described its West Coast Energy Infrastructure Initiative (WCEI), which was launched in 2014 to facilitate a coordinated federal presence in B.C. and ensure that federal engagement with Indigenous communities was translated into concrete actions and investments. With respect to Indigenous communities potentially impacted by the Project, it said that the WCEI work was undertaken outside of the formal Crown consultation and accommodation process, both prior to the release of the NEB report, as well as after, spanning a period from June 2014 to present. NRCan noted that WCEI work informed the federal response to Indigenous concerns through project funding, or other initiatives with respect to marine shipping, marine safety, marine pollution response, and marine stewardship.

The Federal Authorities said that the engagement outcomes outlined in the 2016 CAR, IAMC, and WCEI were carefully considered in developing the OPP. It said that the OPP aims to build strong relationships and partnerships with Indigenous

coastal communities and organizations. The third pillar of the OPP prioritizes launching co-management practices with Indigenous coastal communities, by building local emergency response capacity, marine training, and governance strategies for northern shipping. The Federal Authorities noted that formal regional partnerships with Indigenous communities will establish long-term relationships and partnerships that will provide opportunities for Indigenous communities to play a meaningful role in marine safety, including decision-making, and environmental protection. It noted that partnerships and agreements will be jointly developed, reflect the priorities and interests of Indigenous communities and Canada, advance common issues and achieve tangible outcomes that meaningfully contribute to reconciliation. More information regarding the Federal Authorities' consultation with Indigenous communities, including Indigenous participation in OPP initiatives is found in Section 5.2.5 of this chapter.

Finally, NRCan said that the Crown has decided to follow the guidance from the Federal Court of Appeal to engage in a specific and focused dialogue with Indigenous communities on the Project. As a result, NRCan stated that the government will re-engage consultations with all 117 Indigenous communities potentially impacted by the Project. On 5 October 2018, the Minister of Natural Resources sent a letter to Indigenous communities outlining the Government's intentions to engage in a specific and focused dialogue with Indigenous groups on the Trans Mountain Expansion Project. It stated that the next round of consultations will lead to an updated CAR that will outline the potential impacts to rights and interests of Indigenous communities in relation to the Project, and how these impacts have been mitigated and, where appropriate, accommodated. NRCan stated that consultation will be guided by four core objectives:

1. Consult with all Indigenous communities that are potentially impacted by the Project;
2. Tailor consultations to reflect the potential impacts, preferences and capacities of each group and outstanding concerns with the Project from the existing Phase III consultations;
3. Consult meaningfully through a substantive two-way dialogue and reasonable accommodations; and
4. Consult in a way that is fully consistent with meeting Canada's obligations under the s. 35 of the *Constitution Act, 1982*, and the Government's commitments to advance reconciliation with Indigenous peoples, including its pledge to implement the United Nations Declaration on the Rights of Indigenous peoples.

NRCan stated that it is committed to respecting the duty to consult and recognizes that consultation is an ongoing process. NRCan also indicated that the Government will rely on the NEB public hearing process to the extent possible to fulfill the legal duty to consult related to the Reconsideration of Project-related marine shipping. It noted that the re-engagement of Phase III consultation on the Project will see Canada engage in meaningful, two-way dialogue with First Nations and Métis communities impacted by the Project to validate and discuss marine shipping (and other) concerns and accommodation measures to address those concerns. As such, it noted that existing measures to address marine shipping concerns may continue to develop and new initiatives will be introduced in response to issues raised.

5.2.2.5 Concerns raised by Indigenous peoples about the Government of Canada's consultation

Indigenous intervenors raised concerns with Canada's consultation efforts at various stages of the Project, including consultation regarding the MH-052-2018 hearing, the ability of the Crown to rely on the NEB's Reconsideration process as part of its consultation obligations, the information filed by Canada as a result of the Original Phase III consultation process, and plans going forward for the re-engagement on Phase III Consultation. Indigenous communities also raised concerns with Canada's consultation around the OPP and its various initiatives, which is discussed further in Section 5.2.5.2 of this chapter.

2016 CAR

Multiple Indigenous intervenors raised concerns regarding the accuracy of the information in the 2016 CAR filed by NRCan, noting where errors and generalities were made, as well as questioning how the Crown came to its determination of impacts on individual First Nation's rights and interests and the depth of consultation owed to their respective communities.

Squamish Nation (Squamish) stated that the 2016 CAR does not accurately represent Squamish's rights, impacts to those rights from the Project and Squamish's outstanding concerns with the Project. Tsawout First Nation (Tsawout) noted that there was incorrect information in the CAR that the Crown relied on in their assessment of Tsawout's rights and interests, leading to an incomplete determination of impacts of the marine shipping component of the Project on Tsawout's rights and interests, as well as the depth of consultation owed.

Musqueam noted that the CAR has numerous errors and omissions regarding the information it provided both to the NEB in the OH-001-2014 hearing and the Crown during its Original Phase III consultations. Musqueam said that the Board should not rely upon it as information regarding Musqueam's concerns with the Project and the potential impacts of the Project on Musqueam's rights. Tsleil-Waututh Nation (TWN) also raised concerns with the CAR, stating that it was unilaterally developed without TWN's involvement, does not capture issues of concern that have been raised in the MH-052-2018

hearing, and that there are many outstanding issues of concern that were not resolved in the previous Phase III consultation process.

Consultation on the scope and process for the MH-052-2018 hearing

Numerous Indigenous intervenors raised concerns with the MH-052-2018 hearing process, including the scope of the Order in Council (OIC) referring aspects of the OH-001-2014 Report back to the NEB for reconsideration, the length of time given for the hearing, as well the scope of the hearing itself.

Squamish, Stz'uminus First Nation (Stz'uminus), Snuneymuxw First Nation (Snuneymuxw) and TWN all submitted that Canada should have consulted with them on the scope of the OIC, as well as procedural aspects related to the MH-052-2018 hearing.

Multiple Indigenous intervenors also noted that the Governor in Council (GIC) time line of 155 days for the Reconsideration was set without consulting impacted First Nations. Indigenous communities noted that the overall timeline was too short and that deadlines for hearing steps were too short to participate meaningfully or provide in-depth studies, or allow for an appropriate level of meaningful consultation. Indigenous intervenors noted that the short timeline for the Board to complete its assessment is especially problematic given the Government of Canada's position that it will be relying on the MH-052-2018 hearing to the extent possible to fulfill its constitutional duty to consult with Indigenous peoples. Indigenous intervenors noted that, since the Reconsideration is considered to be part of the consultation process, it must be conducted in a manner that upholds the honour of the Crown and the process must provide Indigenous communities with a meaningful opportunity to put forward their concerns and have them addressed.

For example, Squamish maintained that the overall time period for the Reconsideration was inadequate and unfair. It noted that since the Reconsideration is considered to be part of the consultation process, it must be conducted in a manner that upholds the honour of the Crown and should not be unduly rushed at the expense of First Nations' ability to lead the evidence they consider necessary for the process.

TWN said that for Canada to be able to rely on the MH-052-2018 hearing to discharge its duty to consult, the process must provide TWN, and other Indigenous intervenors, with a meaningful opportunity, and sufficient time, to put forward its concerns and have them addressed by the Board, so that in turn, the GIC can properly assess the environmental effects and the impacts to, and infringements of, TWN's Indigenous title and rights as a result of the Project.

Stó:lō Collective raised concerns with the length of the MH-052-2018 hearing, noting that the time limits did not allow for procedural fairness or the ability to fully canvas and consider the potentially significant adverse impacts of Project-related marine shipping on, inter alia, Indigenous rights and title, the environment, and species at risk. It also noted that the 155 day timeline imposed by GIC limited its ability to participate substantively in the MH-052-2018 hearing, including the inability to engage with specialists, adequately review and respond to additional evidence filed by Canada and Trans Mountain, or prepare additional assessments on the potential impacts of Project-related marine shipping.

Nooaitch Indian Band stated that it considered the Reconsideration process to be inadequate, stating that there has not been sufficient time for it to review the significant volume of new evidence filed by the Federal Authorities and Trans Mountain, nor to gather its own evidence. Tsartlip First Nation stated that the time limit is woefully inadequate to consider and respond to the serious issues in question, many of which are of a scientific or technical nature. Tsawout stated that the evidence it was able to submit was limited in scope and content due to the timelines imposed upon the hearing.

Stz'uminus said that it did not feel that a meaningful two-way dialogue can be achieved within the compressed timeline of the reconsideration process, and further was of the view that findings of fact generated through the process will be very unlikely to form a sufficient foundation for meaningful consultation between First Nations and the Crown.

Stk'emlúpsemc te Secwépemc of the Secwépemc Nation (SSN) noted that consultation must take place early in the decision-making process for it to be meaningful. SSN said that it was concerned with the late start to the Phase III consultation process and the inadequacy of consultation in the Reconsideration process. It noted that the timelines for the Reconsideration process have not been sufficient to allow for fulsome participation by SSN and other intervenors and so SSN does not accept this process as an appropriate method for Canada to use to discharge its duty to consult and accommodate SSN's Indigenous rights and interests.

Driftpile Cree Nation said that the format, process and timelines for the Reconsideration will prevent the Crown from relying upon the Reconsideration process to fulfill the duty to consult, whether it be in whole or in part. Adam Olsen said that it was disrespectful to Indigenous cultures and societies to put a limit of 22 weeks on consultation with Indigenous peoples.

Shxw'ówhámél First Nation said that the MH-052-2018 hearing process as structured could not consider the potentially significant adverse impacts of Project-related marine shipping on, inter alia, Indigenous rights and title, the environment and species at risk, as it does not, in substance, provide for an appropriate level of meaningful consultation, and particularly

given that Project-related marine shipping could have significant adverse impacts on Shxw'ōwhámel First Nation's Indigenous rights.

Malahat First Nation raised concerns about fairness and adequacy of the Reconsideration process itself, taking issue both with the scope of the Reconsideration and with the abbreviated timeline imposed on the Board by the GIC. Other Indigenous intervenors also noted that scope of the MH-052-2018 hearing should be broader than just Project-related marine shipping. Stz'uminus for example, submitted that it is not reasonable to consider the environmental impacts of marine shipping without also reconsidering whether the Project is necessary. Squamish noted that it is deeply connected to and dependent on its lands, waters and resources that stand to be impacted by the Project, and it is artificial and not in keeping with how Squamish uses its Territory to consider certain Project effects on Squamish's Indigenous rights and title in isolation from the broader Project impacts.

Indigenous intervenors who are located along the pipeline route also raised concerns with the scope of the Reconsideration, suggesting that Project-related marine shipping should not be considered in isolation. Louis Bull Tribe, for example, said that the Board should give serious consideration to evidence of environmental, socio-economic and socio-cultural impacts of this Project both upstream and downstream before making its recommendation. Little Shuswap Lake Indian Band (LSLIB) submitted that it is an error to consider only the interests of the immediate and adjacent nations and not to consider the interests of those whose lands may not be bisected by the Project or whose lands or waters do not directly flank the Project. LSLIB said that as part of the MH-052-2018 hearing, the Board should consider the Indigenous interests of every Indigenous nation that may be affected by the Project and specifically by the increased marine shipping that will result of the Project, as pollution, spills and marine life are not fixed to the land, but are mobile.

Phase III consultation

Multiple Indigenous intervenors raised concerns with the Government of Canada's Phase III consultation activities, both what has occurred to date, as well as plans going forward. Neskonalith stated that Canada's consultation with Neskonalith regarding the Project continues to be poor and does not meet the standard of meaningful consultation.

Squamish stated that Canada has yet to engage substantively in a reinitiated Phase III consultation process and that Squamish is still waiting to hear about how Canada proposes to discharge its constitutional obligations. Squamish further stated that Canada's duty to consult and accommodate Squamish must be discharged prior to Project approval.

Lyackson stated that, to date, the Crown has not engaged meaningfully to ensure that the issues and concerns raised by the First Nation will be adequately addressed. It said that the Crown has not committed to providing sufficient funding to Lyackson to ensure that it can be meaningfully engaged in the development of initiatives and measures to mitigate Lyackson's vast outstanding concerns.

Blood Tribe, Driftpile Cree Nation, Louis Bull Tribe, Papaschase First Nation #136, and Tsuut'ina Nation, Whitefish Lake First Nation #459, and Stoney Nakoda Nations all indicated that they had not been meaningfully engaged by Canada as part of the original Project or the Reconsideration. The Alberta-based communities said that Canada should be consulting with each of them, including providing capacity funding for this consultation to take place, so that their views regarding mitigation and accommodation measures can be considered.

5.2.2.6 NRCan reply to concerns regarding Government of Canada consultation

2016 CAR

In response to concerns raised about the accuracy of the information in the appendices for individual First Nations that are part of the 2016 CAR that was filed on the NEB's record, NRCan said that the Crown's depth of consultation assessment is iterative and is expected to evolve as the NEB MH-052-2018 hearing unfolds and as Indigenous communities, governments and nations engage in re-initiated consultations with the Crown.

NRCan noted that when it sent letters to Indigenous communities in November 2018 as part of its re-engagement in Phase III consultations, it attached that community's Appendix from the 2016 CAR, as a starting point, and invited communities to identify where information needs to be changed or updated. NRCan said that the Crown will re-engage in Phase III consultations, outside of the MH-052-2018 hearing, with all impacted Indigenous communities, governments and nations, to meaningfully fulfill its duty to consult through understanding, and identifying measures to avoid, mitigate or accommodate, where appropriate, impacts of the Project to Indigenous and Treaty rights. Through this process, the Crown's interpretation of the depth of consultation owed and potential impacts on rights of the Project will continue to be updated in collaboration with each Indigenous community, government or nation, to ensure a thorough understanding of potential or established rights, and any potential impacts of the Project on those rights.

NRCan further stated that the next round of consultations will lead to an updated CAR that outlines the potential impacts to rights and interests of Indigenous communities in relation to the Project, and how these impacts have been mitigated, and

where appropriate, accommodated. The updated CAR resulting from the new process will inform the final decision with respect to the Project.

Consultation on the scope and process for the MH-052-2018 hearing

In response to concerns regarding Canada's consultation with Indigenous communities on the scope of the OIC to the Board for the MH-052-2018 hearing, NRCan noted that the Crown was following the guidance from the Federal Court of Appeal and that the Crown recognizes that the MH-052-2018 hearing is operating within the broader context of the re-initiated Phase III consultation process.

NRCan said that the NEB MH-052-2018 hearing provides a mechanism for Indigenous communities, government and nations to express their concerns regarding how Project-related marine shipping might adversely impacts potential or established Indigenous and Treaty rights, and related avoidance, mitigation and other accommodation measures.

NRCan said that the Crown will rely on the NEB Reconsideration Process, to the extent possible, to consider all forms of mitigation to Project-related marine shipping and assess the residual effects. The Crown will then assess the potential seriousness of any residual effects of the Project on Indigenous and Treaty rights, taking into account proposed mitigation and/or accommodation measures.

Phase III consultation

NRCan said that the Crown will re-engage in Phase III consultations, outside of the MH-052-2018 hearing, with all impacted Indigenous communities, governments and nations to meaningfully fulfill its duty to consult through understanding, and identifying measures to avoid, mitigate or accommodate, where appropriate, impacts of the project to Indigenous and Treaty rights. NRCan said that the NEB recommendations will inform the Crown's Phase III consultation. NRCan also stated that a recommendation on whether to approve the Project will only be considered by the GIC once it is satisfied that the Crown's obligation to consult and accommodate has been fulfilled.

NRCan also said that timely and accessible support for participant funding is part of the approach to Crown consultation activities. NRCan said that it offered participant funding to impacted Indigenous communities, governments and nations in November 2018, to support participation in consultation activities with the Crown. It said that this funding is available to cover: preparing input and reports to inform the Crown's record on the Project; building community capacity to engage in and benefit from major project reviews; and other activities, upon approval, considered necessary to ensure meaningful participation in Crown consultations. NRCan further stated that the Consultation Team has been mandated to engage in meaningful two-way dialogue and discuss the concerns of Indigenous communities, government and nations, including agreeing to accommodation measures, where appropriate (following Cabinet approval where required) to address those concerns. This will be an ongoing back and forth conversation between representatives of the Indigenous community, government or nation, and the Crown.

NRCan said that the re-initiated Phase III consultation process will build on existing relationships, the information submitted by Indigenous communities, governments, and nations to date, and the existing consultation record, while making improvements to ensure the duty to consult is appropriately fulfilled. This new process will result in an updated CAR that will be presented to the GIC prior to a decision being made in accordance with section 54 of the *National Energy Board Act*, which includes provisions allowing the Crown to seek an extension beyond the mandated three month review period. Prior to completion, Indigenous communities, governments and nations' views and comments on this document will further inform the Crown's assessment, which will then be reflected in the report.

NRCan also confirmed that Canada has not delegated the procedural aspects of its duty to consult to Trans Mountain. However, it noted that representatives of Trans Mountain will be part of the consultation and accommodation process and participate in meetings with representatives of Indigenous communities, government and nations, where appropriate, although the ultimate responsibility for ensuring that the duty is adequately fulfilled remains with the Crown under the leadership of the Minister of Natural Resources.

In addition, NRCan noted that the NEB process requires the proponent to work with, and potentially accommodate, Indigenous communities, governments and nations impacted by the Project. NRCan noted that while the NEB Filing Manual provides information to the proponent on the requirement to engage with potentially affected Indigenous communities, governments and nations, this does not constitute delegation of the duty to consult.

5.2.3 Participation of Indigenous communities in the Board's MH-052-2018 hearing

A description of the participation of Indigenous communities in the OH-001-2014 hearing process can be found in Section 5.1.4.

The Board's MH-052-2018 hearing process was designed to obtain as much relevant evidence as possible on concerns related to the issues to be considered as part of the Reconsideration, including the potential impacts of Project-related marine shipping on Indigenous interests (as noted in the Board's List of Issues), and possible mitigation measures to minimize those impacts, including on traditional Indigenous use associated with the Southern resident killer whale (SRKW).

The Board received and considered information about concerns related to Project-related marine shipping and the measures that would be required to address those concerns, as brought forward through engagement undertaken by Trans Mountain and the Government of Canada, and through the participation of potentially affected Indigenous communities and other participants in the hearing process.

As described in Section 1.3.4 of this Report, the Participant Funding Program offered a total of \$4,981,760 to 69 recipients, of which 82 per cent was offered to Indigenous intervenors.

The Order in Council P.C. 2018-1177, which referred aspects of the Board's recommendation for the Project back to the Board for Reconsideration, was issued on 20 September 2018. As described further in Section 1.3.2 of this Report, the Board sought comments on the scope and design of the Reconsideration process:

- On 26 September 2018, a letter providing an overview of the Reconsideration and seeking comments was sent to all Indigenous intervenors in the OH-001-2014 hearing for the Trans Mountain Expansion, as well as all Indigenous peoples and groups on the Crown Consultation List in the OH-001-2014 hearing.
- On 5 October 2018, additional, focused comments on the definition of the "designated project" were sought from the Parties.

On 12 October 2018, the Board issued Hearing Order MH-02-2018, which outlined the process to be followed in the Board's adjudication of the Reconsideration. 52 Indigenous intervenors participated as intervenors in the MH-052-2018 hearing and provided their comments, views and evidence through written submissions and oral evidence to the Panel.

During the proceeding, Indigenous intervenors had opportunities to obtain further information about issues and mitigation measures related to Project-related marine shipping and present their views to the Board through the following steps:

- Written evidence submissions
- Oral Traditional Evidence (OTE)
- Written questions (information requests) of Trans Mountain, the Federal Authorities and other intervenors
- Responses to any written questions
- Comments on draft conditions and recommendations
- Written final argument

The Board carefully considered comments from Indigenous intervenors on the Board's draft conditions and recommendations and included a requirement for consultation with Indigenous peoples in the recommendations to the GIC.

The Board understands that Indigenous peoples have an oral tradition for sharing information and knowledge from generation to generation and that this information cannot always be shared adequately in writing. The Board considers it valuable to hear OTE which assists the Board in understanding how the Project may impact Indigenous interests, including rights. A total of 28 Indigenous intervenors provided OTE during the MH-052-2018 hearing. The Board received OTE at three locations (Calgary, Victoria and Nanaimo) and also received traditional evidence by two Indigenous communities via teleconference/video.

Appendix 8 lists and provides references to submissions made by Indigenous communities that participated in the review process. Appendix 14 provides a summary of the general and specific concerns, relevant to the List of Issues, raised by Indigenous communities through the proceeding, as well as summaries of the responses to these concerns provided by Trans Mountain, Canada, the Board (including conditions) and applicable requirements provided through regulation and/or legislation.

5.2.4 Submissions on asserted or established rights

In the MH-052-2018 hearing, Indigenous communities asserted a number of rights potentially impacted by Project-related marine shipping. These rights are summarized below, and the potential impacts of Project-related marine shipping to the interests, including rights, of Indigenous communities are considered in Section 5.2.5. The Board has, for the purposes of this Reconsideration, accepted asserted rights without assessing whether each of these rights has been proven. The descriptions below are summaries and anyone wishing to fully understand the information and evidence provided by Indigenous communities should review the entire record of the hearing.

- Tsleil-Waututh Nation (TWN) provided a table entitled “Summary of Tsleil-Waututh Title, Rights and Interests and of Proposal Effects and Consequences,” which included rights such as harvesting and stewardship rights, which includes the right to determine how its lands, waters, and resources are used, and to manage them, based on its values and aspirations. TWN also shared its defining cultural relationship with the SRKW and the importance of maintaining, and enhancing that relationship as part of TWN’s cultural obligations and revitalization.
- Lyackson First Nation (Lyackson) described how its members rely on the waters and resources within the marine area to continue their traditional way of life and noted their strong cultural connection with the SRKW. It also asserted a strong *prima facie* claim to Indigenous rights and title to *Le’eyqsun* Island, along with other traditional sites at Tl’qutinus on the south bank of the Fraser River south of Vancouver and in and around the waters of the Salish Sea.
- Squamish Nation (Squamish) described how its members rely heavily on the marine and freshwater resources throughout its territory, including within Burrard Inlet, the Fraser River, Howe Sound and the Salish Sea, to practice their rights to harvest resources for food, social and ceremonial purposes. Squamish also asserted title and self-governance within its traditional territory and noted its cultural connection with the SRKW.
- Stz’uminus First Nation (Stz’uminus) noted that the tanker route passes through its marine territory where its members exercise their fishing and harvesting rights. Stz’uminus also described the importance the SRKW play in its cultural and spiritual identity.
- Cowichan Tribes noted that it holds licenses for both commercial and food, social and ceremonial fishing, and explained that its members also practice other forms of marine harvest in accordance with their rights throughout their traditional territories.
- Ditidaht and Pacheedaht described their right to harvest a diverse array of marine resources in their traditional marine areas, in particular within Swiftsure Bank, which is both an area of transit for Project-related vessels and has also been designated as critical habitat for the SRKW.
- Esquimalt Nation, Pauquachin First Nation, and Scia’new First Nation noted that they have constitutionally protected Douglas treaty rights and Indigenous rights, including title, within the marine area.
- Malahat First Nation described its Indigenous and Douglas Treaty rights to fish within the Salish Sea and the lower Fraser River.
- Snuneymuxw First Nation described its Indigenous and Douglas Treaty rights to fish, which it said also includes the right to travel to and from its fishing grounds and the continued existence of an ecological system suitable to sustain those fish. Snuneymuxw also noted that it conducts fisheries for sockeye and halibut under food, social, and ceremonial licences. Snuneymuxw also described how the SRKW that inhabit the Salish Sea have a special place in Snuneymuxw culture.
- Tsartlip First Nation described how its members continue to access cultural and spiritual sites of significance within their traditional territory, and how they actively practice their Indigenous and Douglas Treaty rights to hunt and fish adjacent to or near the Project shipping lanes. Tsartlip also described their cultural use of the SRKW.
- Tsawout First Nation described its established Douglas Treaty right to fish, which includes incidental rights such as being able to travel to and from the preferred fishing areas, as well as an established Treaty right to hunt. Tsawout also claimed Indigenous rights, including title, in the areas of their territory impacted by Project-related marine shipping, and noted that the Tsawout and W̱S̱ANEC̱ Indigenous title includes the ability to decide how the land will be used and the right to proactively manage the land.
- T’Sou-ke First Nation provided information about its Indigenous and Douglas Treaty rights to fish, its coastal reserve lands, its traditional marine-based activities as well as its role as stewards for its territory. T’Sou-ke also described how the SRKW is integral to T’Sou-ke’s spirituality and connection with its marine waters.
- Adams Lake Indian Band noted that the salmon is a keystone species and described their cultural use of the salmon and their right to fish within their traditional territory in the vicinity of the Adams and Fraser Rivers.
- Coldwater Indian Band described their right to fish, particularly the salmon and the Steelhead that migrate from the Salish Sea to the Coldwater River and are integral to their way of life.
- Little Shuswap Lake Indian Band (LSLIB) described its right to fish and harvest within its ancestral lands and waters, noting that the Secwepemc – which includes the LSLIB – are known as the “salmon people” because of their close cultural ties with the salmon. LSLIB also said that its people have a claim of Indigenous title to lands beyond its reserves.

- Neskonlith Indian Band (Neskonlith) described how salmon are a keystone species in its culture and traditional way of life and that, as a core food source, Neskonlith fishing rights are maintained under Secwepemc law, which guarantees the right to resources on Secwepemc territory.
- Simpcw First Nation also described its rights and practices related to salmon.
- Nooaitch Indian Band (Nooaitch) described its right to fish, especially the Chinook and Thompson River Steelhead, which it said that it relies on for sustenance, as well as for ceremonial and socio-economic reasons.
- Stk'emlupsemc te Secwepemc (SSN) also described these fish as keystone species, noting that its members exercise their rights to fish, hunt, gather, and trap and exercise cultural and spiritual practices on the lands and waters within SSN territory.
- Chawathil First Nation, Cheam First Nation, Kwantlen First Nation, Seabird Island Band, and Stó:lō Tribal Council described their fishing and harvesting rights within the Fraser River and explained how the salmon fishery is vital to the cultural identity of the Stó:lō people, who are also known as "People of the River."
- The Stó:lō Collective described how its members have inhabited, controlled and relied on S'ólh Téméxw, their traditional territory in the lower Fraser River watershed and that they exercise rights throughout the territory, including hunting, gathering, trapping and their established (non-treaty) right to fish.
- Shxw'ōwhámél First Nation asserted title to the land and waters of S'ólh Téméxw and also described its fishing, hunting and gathering rights within its traditional territory and waterways.
- Heiltsuk Nation (Heiltsuk) asserted Indigenous rights and title to their lands and waters, including the right to steward marine resources. Heiltsuk also noted that it has a proven Indigenous right to harvest herring spawn-on-kelp for commercial, as well as food, social and ceremonial purposes.
- Musqueam Indian Band (Musqueam) noted that it has an established right to fish for food, social and ceremonial purposes. Musqueam also described its reliance on other marine, aquatic, foreshore and estuarine resources and the integral role they play in Musqueam's culture.
- Shishalh Nation described their right to fish and harvest within their marine territories and noted that this requires access to a healthy marine environment and asserted their collective right to live as a distinct people. Shishalh also described their close cultural ties with the SRKW which it said is found in the legends, myths, teachings, dances, songs, carvings and regalia of the shisall.
- Driftpile Cree Nation, Louis Bull Tribe, Tsuut'ina Nation, and Whitefish Lake First Nation #459 described their Indigenous and Treaty rights to hunt, trap, harvest and fish throughout their traditional territories and these activities remain central to the distinctive cultures of each of the First Nations and their members' traditional way of life.
- Papaschase First Nation described how it was seeking recognition of its Indigenous rights as First Nation under Treaty 6 and the settlement of its claims and wrongful surrender of Indian Reserve #136, which is along the pipeline route.
- Blood Tribe explained that its members exercise their Indigenous and Treaty rights to hunt, fish, trap and gather across the Blackfoot Confederacy Traditional Territory (and beyond) and have a duty as stewards to protect the environment and cultural heritage of these lands.
- Ermineskin Cree Nation and Whitefish (Goodfish) Lake First Nation #128 explained that their members have historically used and occupied, and continue to use and occupy their traditional territory to exercise their Treaty rights, including trapping, hunting, fishing and gathering, as well as practices that are incidental to these rights.
- The three distinct Nations of Stoney Nakoda Nations, Chiniki, Wesley and Bearspaw First Nation, said they hold Indigenous rights and title recognized by Treaty No. 7.
- Métis Nation British Columbia (MNBC) noted that its citizens depend on the marine environment and its resources for food, social, and ceremonial purposes.
- The BC Métis Federation noted Métis people have been closely connected to the diverse social, cultural and economic fabric of the area known today as British Columbia since the early 19th century and have a diverse range of traditional and non-traditional lifeways within this territory.
- Both Indigenous intervenors from the United States noted that their use of the marine areas is not limited by the international boundary between Canada and the United States. The U.S. Tribes (Swinomish, Tulalip, Suquamish and Lummi Indian Nations) noted that they are sovereign nations recognized by the United States government. As

sovereign nations, and as Indigenous peoples who have lived on the Salish Sea since time immemorial, the U.S. Tribes said they have rights reserved by Treaties to fish in their “usual and accustomed grounds,” and have inherent rights to culture. The Makah Tribal Council also noted that it is a sovereign tribal government with Treaty rights assured in the 1855 Treaty of Neah Bay, which includes the role of resource trustee with legal ownership of natural resources within the Treaty area.

Two of the intervenors have modern treaties, which recognize their rights:

- The First Nations of the Maa-nulth Treaty Society described how Project-related tankers will pass through its Southern Domestic Fishing Area, an area in which it has constitutionally protected treaty harvesting rights, as part of the Maa-nulth First Nations Final Agreement.
- Tsawwassen First Nation (Tsawwassen) described its relationship with the Salish Sea and the manner in which its members practice their Indigenous and Treaty fishing rights, as set out in the Tsawwassen First Nation Final Agreement, including Tsawwassen’s ability to harvest traditional foods and carry out traditional cultural practices on the lands and waters within its traditional territory. Tsawwassen also noted its strong cultural ties to the SRKW.

In addition to the above, Alexander First Nation, Kwikwetlem First Nation, Saddle Lake Cree Nation, Samson Cree Nation, and Shackan Indian Band, indicated that there may be impacts on their rights, but these intervenors did not provide a description of asserted rights. The potential impacts raised are, however, included in the next section.

5.2.5 Potential impacts on Indigenous communities

The Order in Council P.C. 2018-1177 directed the Board to consider the environmental effects of Project-related marine shipping, noting the requirements of the CEAA 2012 and the SARA. As described in the List of Issues (issue no. 6), the Board also considered the potential impacts of Project-related marine shipping on Indigenous interests, including rights. The consideration of issue no.6 is not limited to the environmental effects of Project-related marine shipping, but also includes consideration of the potential impact on the interest or right itself. Potential impacts were raised by Trans Mountain, the Federal Authorities, and Indigenous intervenors, as described below.

5.2.5.1 Trans Mountain’s assessment of potential impacts on Indigenous communities

The Board considered evidence related to Trans Mountain’s assessment of impacts on Indigenous communities in its OH-001-2014 hearing, as described in Section 5.1.5.1.

In the MH-052-2018 hearing, Trans Mountain pointed to its previous environmental and socio-economic assessment and risk assessment of Project-related marine transportation in its original Project application and subsequent submissions during the OH-001-2014 hearing. It noted that the effects of Project-related shipping on the environment and Indigenous interests were fully considered by the Board in the OH-001-2014 hearing.

In its updated filing for the MH-052-2018 hearing, Trans Mountain indicated that it is aware that Indigenous communities continue to have concerns related to the impacts of Project-related marine shipping on their traditional Indigenous marine use, the traditional use associated with the Southern resident killer whale (SRKW), as well as concerns related to a marine spill and the involvement of Indigenous peoples in emergency planning and response. More information regarding Trans Mountain’s assessment of these impacts is found in Chapter 14.

Trans Mountain noted that it continues to engage potentially affected Indigenous communities and welcomes their input into project design and the development and implementation of key marine conditions. Trans Mountain said that ongoing engagement will take place through workshops, one-on-one meetings, and Indigenous Engagement Roundtables planned for 2019.

5.2.5.2 Government of Canada’s assessment of potential impacts on Indigenous communities and proposed mitigations

As previously noted, the 2016 CAR filed by the Federal Authorities included appendices specific to consultation with the 40 Indigenous communities on the Crown list who had raised issues with marine transportation during the Original Phase III consultations. NRCan noted that the key concerns raised by Indigenous communities related to marine shipping outlined in the 2016 CAR included:

- Impacts on marine fishing and harvesting
- Impacts on other traditional and cultural practices

- Impacts of a spill

NRCan also noted that, since the completion of the 2016 CAR and federal decision on the Project in November 2016, it received correspondence from Indigenous communities who raised the following concerns related to marine shipping:

- Concerns about increased acoustic disturbance arising from increased vessel traffic, and the need to fill a gap in knowledge;
- Questions about how the federal government will protect Indigenous fishing rights in relation to the impacts of marine shipping;
- The view that the IAMC does not accommodate concerns related to tanker vessel traffic;
- A desire to conduct community-based monitoring on the effects of vessel traffic in the Salish Sea, including on the impact of the vessel traffic on Indigenous communities' ability to hunt, gather, and "fish as formerly," safeguard the Salish Sea's sacred locations and burial places, and protect salmon and orca;
- A desire to move shipping lanes to avoid a key harvesting area at Swiftsure Bank;
- A desire to establish emergency response centres in or near Indigenous communities;
- A desire to discuss or participate in the Oceans Protection Plan; and
- A desire to have community members participate in pollution response, including through the Canadian Coast Guard, and Coast Guard Auxiliary.

The Federal Authorities outlined various programs and initiatives, such as the Oceans Protection Plan (OPP), the Whales Initiative, the IAMC, the West Coast Energy Infrastructure (WCEI) Initiative and others, all of which include federal responses to mitigate impacts to Indigenous interests and rights. The Federal Authorities noted that Pillar 3 of the OPP is to strengthen partnerships and launch co-management practices with Indigenous communities, by building local emergency response capacity, marine training and governance strategies for northern shipping.

The Federal Authorities said that they understood that Indigenous coastal communities are seeking to play an active and meaningful role in marine safety. Canada noted that the majority of the feedback from Indigenous coastal communities that it is working with to build partnerships have identified the lack of capacity – both funding and resources and time – to effectively participate in the Oceans Protection Plan initiatives. Transport Canada said that it is developing a long-term Grant and Contribution program designed to build Indigenous capacity and facilitate their participation in the marine safety system. The program is expected to be launched by December 2018, with funding to flow in April 2019.

The Federal Authorities also said that they understand that the Southern resident killer whale (SRKW) holds cultural significance for Indigenous peoples in B.C. They said that they are committed to protecting the SRKW and that the OPP includes funding for research and engagement to inform the development of a strategy on how to address underwater noise from vessels affecting SRKW.

In its evidence, the Federal Authorities described a variety of measures and initiatives that include consultation and partnerships with Indigenous communities, including the incorporation of Indigenous traditional knowledge where applicable. These measures and initiatives are aimed at providing opportunities for Indigenous communities to play a meaningful role in marine safety, including decision-making, environmental protection, and strategies to address the recovery of the SRKW. The Federal Authorities said that partnerships and agreements will be jointly developed; reflect the priorities and interests of Indigenous communities and Canada; advance common issues; and achieve tangible outcomes that meaningfully contribute to reconciliation. Some of the initiatives that were highlighted by the Federal Authorities include the following:

- *Cumulative Effects of Marine Shipping*: Transport Canada explained that this initiative is aimed at understanding the cumulative effects from marine shipping at six pilot sites across Canada, including on the south coast of B.C.
- *Coastal Environmental Baseline Program*: Fisheries and Oceans Canada and Transport Canada are working with Indigenous partners, coastal communities and local stakeholders to determine key concerns and help collect coastal environmental baseline information that can be used to inform ecosystem assessments, including the cumulative effects of marine shipping.
- *Enhanced Maritime Awareness Information System*: Led by Transport Canada and the Canadian Coast Guard, this pilot initiative aims to inform better decision-making and increased awareness with regards to culturally important areas and resources.

- *Collaborative Situational Awareness Portal*: Developed by the Canadian Coast Guard (CCG), the Portal will provide web-based platform for Indigenous and Coastal communities to access information on local marine traffic.
- *Indigenous Community Response Training*: Led by CCG, this initiative is aimed at enhancing Canada's community-based marine emergency preparedness and response capacity by providing training to individuals who are frequently the first responders to a marine emergency in B.C., including formal training for search and rescue, environmental response, and incident management.
- *SRKW Symposium*: Led by Fisheries and Oceans Canada, Indigenous communities that participated provided a review of the linkages between threats, and expressed that the complexity and importance of killer whales and their relationship to First Nations is fundamental to cultural traditions and teachings.
- *SRKW Indigenous and Multi-Stakeholder Advisory Group*: This groups brings together Indigenous communities, non-Governmental organizations, the shipping and marine transportation, fishing, and whale watching sectors, the Government of British Columbia, and Metro Vancouver Regional District to facilitate communication and coordination of activities to recover SRKW.

5.2.5.3 Issues and concerns raised by Indigenous peoples

The Board considered evidence provided by Indigenous peoples related to potential impacts of the Project in its OH-001-2014 hearing, as described in Section 5.1.5.2.

Indigenous communities filed information in this MH-052-2018 hearing regarding their concerns and interests in ways specific to each of them and while information regarding key concerns and interests is summarized here, anyone wanting to understand the full context of the concerns and interests expressed by Indigenous peoples should familiarize themselves with all of the relevant evidence on the record. Appendix 14 provides an additional summary of concerns raised by Indigenous communities throughout the MH-052-2018 hearing regarding Project-related marine shipping. Indigenous communities also raised concerns regarding the Project beyond marine-shipping related impacts. As these were beyond the scope of the issues being considered in this MH-052-2018 hearing, they are not captured in this chapter or elsewhere in the Report. Instead they have been tracked in a separate document which will be shared publicly with the Government of Canada, on the Major Projects Management Office website, who will use the information to inform its Phase III Consultation process.

As in the OH-001-2014 Hearing, Indigenous intervenors continued to raise concerns regarding the impacts of Project-related marine shipping on their Indigenous and Treaty rights. Some Indigenous communities filed new information, while others indicated that they were relying on the information filed in as part of the OH-001-2014 hearing. As part of both their oral and written evidence, Indigenous communities provided information on how, where, and when they exercise their asserted and established Indigenous and Treaty rights, and they expressed their concerns as to how these rights may be impacted and how the potential impacts would be mitigated and accommodated by both Trans Mountain and Canada.

In addition to the overarching concerns related to their asserted and established Indigenous and Treaty rights, Indigenous communities raised the following concerns about Project-related marine shipping.

Environmental effects of Project-related marine shipping

A number of Indigenous communities raised concerns about the environmental effects of Project-related marine shipping, including concerns about air quality, marine mammals, marine birds, marine fish and fish habitat. A full discussion of these matters, including the views of the Board, is provided in Sections 14.7 and 14.9.

Socio-economic effects of Project-related marine shipping

A number of Indigenous communities raised concerns about the socio-economic effects of Project-related marine shipping, including concerns about heritage resources, human health, traditional marine resource uses, cultural practices and activities. A full discussion of these matters, including the views of the Board, is provided in Sections 14.8 and 14.10

Spill prevention, emergency preparedness, and response

A number of Indigenous communities raised concerns about spill prevention, emergency preparedness and response. A full discussion of these matters, including the views of the Board, is provided in Section 14.11.

Indigenous governance and stewardship

Indigenous intervenors described their established rights in marine areas along the shipping route, including those established through the Douglas Treaties, the Tsawwassen First Nation Final Agreement, the Maa-nulth Final Agreement, and court cases including *R. v. Sparrow* and *R. v. Van der Peet*.

Indigenous intervenors described their rights to harvest marine resources, including to fish for food, social and ceremonial and commercial purposes. Indigenous intervenors described how they rely on the marine resources of the Salish Sea to maintain their way of life, exercising their Indigenous rights throughout the marine shipping area. Indigenous communities noted the importance of the marine areas for exercising their rights, including Burrard Inlet, Howe Sound, Swiftsure Bank and the Strait of Georgia. Indigenous intervenors described their spiritual connection with SRKW, including concerns that increased Project-related marine traffic could adversely impact the SRKW population, as well as their traditional use associated with the SRKW.

Indigenous intervenors also noted that inherent in these rights is the legal responsibility to care for the marine environment and everything within it. Indigenous intervenors spoke about their roles as stewards and protectors for the marine resources and animals. Tsawout referred to the WSÁNEĆ laws and governance, which it said includes the legal responsibility to care for relatives such as the marine waters and lands. Tsawout spoke to the inter-connectedness between WSÁNEĆ identity, the lands and waters in its territory, its ancestors, all of which are part of WSÁNEĆ laws. Therefore, Tsawout said, impacts to its lands, waters and various plants, animals, birds and fish species are also impacts to the exercise of its laws and governance. TWN explained that it has laws, protocols and sacred responsibilities that require it to rehabilitate and restore the ecosystem of Burrard Inlet.

LSLIB spoke of its Indigenous laws respecting salmon, including that every member of LSLIB is responsible for the preservation and protection of their traditional territories, their waters and the creatures contained within. LSLIB also said that its Indigenous laws should be considered and applied when governmental actors are consulting LSLIB and seeking to accommodate LSLIB's Indigenous rights and interests. Neskonlith noted that the Secwepmc People of the Lakes are working together as stewards and caretakers. It said that any impact on the health of the resources in its territory will significantly impact Neskonlith's way of life, Secwepmc laws, customs and traditions.

SSN noted that one of the flaws of the Reconsideration process is that it does not respect SSN's own Project assessment based on its laws and customs. Shxw'ówhámél explained the importance of the law which dictated that Shxw'ówhámél members have to take care of things once they start using those places. It was explained by Mr. Albert McHalsie of Shxw'ówhámél that when chiefs would meet, they would start off with the statement:

"S'olh Temexw Ikw'elo. Xolhmet Te Mekw'stam It Kwelat," meaning, "This is our land, we have to take care of everything that belongs to us."

Anchorage

Indigenous communities as part of the MH-052-2018 hearing raised concerns related to the impacts of anchorages in the Southern Gulf Islands. Cowichan Tribes, Lyackson, Snuneymuxw and Stz'uminus brought forward concerns about whether Project-related tankers would result in an increased use of existing anchorages in marine areas of importance to them or if increased Project-related tankers would result in additional anchorage sites being established. Snuneymuxw and Stz'uminus noted that Trans Mountain had not provided any information about the use of anchorages for Project vessels outside of the First Narrows. Indigenous intervenors also raised concerns about a lack of consultation when it came to the establishment of the existing anchorages in their marine territories, as well as consultation for any new anchorages being established. They also said that the increased use of these anchorages will have a serious impact on their ability to exercise their Treaty and Indigenous fishing rights, on their ability to use the marine resources in their territory, and that the presence of these vessels is accompanied by environmental risks and inherent social-cultural impacts, including noise and light pollution.

Trans Mountain reply regarding: Anchorages

Trans Mountain said it expected that tankers will anchor at the three anchorages east of Second Narrows, and pressure on anchorages will be reduced by holding tankers at the dock whenever a berth is available. Trans Mountain said that vessels destined to the Westridge Marine Terminal (WMT) do not currently anchor and will not anchor in the future, in the areas of concern raised by Indigenous intervenors. It also stated that it intends to manage arriving vessels to minimize the use of anchorages.

PPA reply regarding: Anchorages

The Pacific Pilotage Authority confirmed that there were no WMT bound or departing vessels that anchored in the Southern Gulf islands in the last five years.

Federal Authorities reply regarding: Anchorages

Transport Canada noted that through the National Anchorages Initiative it is conducting research studies to inform the creation of a National Anchorages Framework, which are expected to be completed in 2019. Transport Canada said that it is consulting with the marine industry, Indigenous communities, community organizations, and stakeholders as it works to develop an approach to identify anchorage sites, and traditional knowledge from First Nations will be collected during this process. Finally, Transport Canada said that it will also be undertaking a review and evaluation of the need for possible regulatory changes for oversight and management of anchorage sites. It said that these activities will allow for the development of a national anchorage framework and best practice guide for ships at anchor.

Government of Canada programs and initiatives as mitigation measures

Indigenous intervenors raised concerns about some of the Federal Authorities programs and initiatives as described in Section 5.2.5.2 of this chapter, that have been established since the OH-001-2014 hearing to address the potential impacts of Project-related marine shipping. Multiple communities indicated that engagement on the OPP and Whales Initiative have not been meaningful and that the IAMC is not an appropriate mechanism to address their concerns regarding Project-related marine shipping. Indigenous intervenors also raised concerns with the adequacy of the Federal Authorities plans and programs, including Indigenous involvement in emergency response efforts. Finally, they raised concerns regarding the implications of the initiatives to address impacts to SRKW, which may impact certain communities' Indigenous fishing rights.

Squamish and Lyackson noted that the IAMC does not address their concerns with the lack of proper risk assessment for the Project, and the potentially catastrophic consequences of accidents and malfunctions associated with the Project. Lyackson noted that based on its participation with the IAMC to date, it has received no assurance of any emergency response measures that would effectively mitigate catastrophic effects to the marine ecosystem and First Nations' rights and interests in the case of a spill.]

Squamish also said that the government's overarching initiatives such as the OPP and the IAMC do not address its specific concerns with the Project. Squamish further noted that any participation in the government's general initiatives is outside the consultation and accommodation process for the Project, and should not be considered as engagement on the Project.

Musqueam said that the Terms of Reference for the IAMC are clear that Indigenous Nations do not consider the IAMC nor funding provided through it to be an accommodation for the Trans Mountain Project.

The IAMC Caucus noted that while NRCan has characterized the IAMC as a "governance body," the IAMC neither governs any Indigenous nations' section 35 rights, nor has the Committee been provided decision-making authority with which to govern any aspect of the Project or of Project-related marine shipping. The IAMC Caucus said that it is constrained to monitoring and providing advice. The IAMC Caucus further noted that it is not a forum for consultation with Indigenous nations. It said the IAMC does not replace nor does it reduce the Crown's duty to consult Indigenous nations and that is not a window by which the government can come and consult all of the nations affected by the Project.

Lyackson, Heiltsuk Nation, and the IAMC Caucus also raised concerns regarding the Federal Authorities' engagement with regards to the OPP. Indigenous communities stated that to date, engagement sessions as part of the OPP have been limited in scope to information gathering or overview presentations, the format of which has not been conducive to dialogue, engagement or meaningful input in the planning and implementation of OPP programs. These intervenors noted that this type of engagement does not represent the "partnership" that is used to describe the goal of the OPP initiatives when it comes to Indigenous participation.

Adams Lake Indian Band (Adams Lake) said that it has not been engaged with Canada regarding any of the initiatives that are part of the OPP. It noted that while it is not a marine-side First Nation, the lifecycle of the salmon species upon which Adams Lake relies is dependent upon survival of the marine environment. Adams Lake said that it considers it to be a failure of the OPP to not engage with Indigenous communities who are so interconnected with species from the marine environment.

Indigenous communities also raised concerns with the content of the OPP programs regarding marine protection and emergency response. Heiltsuk stated that it did not agree with Canada's assertion that the Oceans Protections Plan initiatives represent "world-class" marine protections. Heiltsuk said that the initiatives under the Oceans Protection Plan, which was announced over two years ago, have failed to live up to their objectives.

Musqueam said that the OPP initiatives identified by the Federal Authorities in their evidence do not currently amount to substantial commitments and actions that could mitigate impacts from the Project to Musqueam. Cowichan Tribes said that while many of the OPP initiatives are a positive step towards enhanced coastal protection and management from major shipping, which is long overdue, it also said that the initiatives will have marginal benefit – if any – to actually prevent or mitigate an oil spill from a Project tanker.

Ditidaht First Nation (Ditidaht) said while the OPP contains a number of broad commitments, it is not clear what the specific action plan is to address its oil-spill response concerns within Ditidaht territory. Ditidaht noted that Canada must consider Indigenous knowledge, and include a specific commitment to create local spill response and emergency preparedness plans and the infrastructure and training required to implement it.

Pacheedaht First Nation (Pacheedaht) noted that recognition needs to be given to the jurisdiction of Pacheedaht and other Indigenous communities along the Project tanker route. It said that initiatives must be jointly developed and implemented with Indigenous Nations to meet the specific needs in the areas in question, based on the recognition of Indigenous rights and jurisdiction. Pacheedaht said that it needs to be fully involved in marine safety, spill preparedness and emergency response initiatives in its marine waters, and noted the OPP may be a vehicle for this approach to be taken, but while various ideas and proposals have been discussed, to date, few changes have been implemented and few timelines for implementing changes have been set.

The IAMC Caucus said that Coastal Indigenous nations are uniquely well positioned to contribute to effective emergency response by virtue of their locations along the coast line, their marine experience, their knowledge of critical marine areas and shorelines that require priority protection, and their special motivation to protect the lands and waters on which their people demand. The IAMC Caucus said that far more must be done to include Indigenous nations in emergency preparedness and response on the south coast.

The First Nations of the Maa-nulth Treaty Society, Ditidaht and Pacheedaht also raised concerns that the initiatives that form part of the OPP and the Whales initiative may have negative impacts on their fishing rights. In particular they noted that recovery measures for the SRKW including new critical habitat, may impact their ability to fish within their traditional territory.

Pacheedaht First Nation said that any potential conditions relating to fisheries closures intended to help address impacts to SRKW, must be considered in the context of Indigenous fishing rights. It noted that the critical habitat area for SRKW being proposed at Swiftsure Bank means that the entire marine area of Pacheedaht's Territory will be critical habitat. Pacheedaht said that it would like to collaboratively manage any conservation or protected areas in its Territory through a shared decision-making structure.

Ditidaht said that Fisheries and Oceans Canada has not meaningfully consulted Ditidaht on these issues and has not considered the potential adverse impacts of its proposed SRKW strategies on Ditidaht's fishing rights.

The First Nations of the Maa-Nulth Treaty Society also said that the proposed critical habitat at Swiftsure Bank would designate a significant portion of their domestic fishing area as critical habitat, which would have the potential to significantly impact their Treaty rights. It also noted that Canada is moving ahead with these measures without adequate consultation and without providing science to back the measures.

Federal Authorities reply regarding: mitigation measures

Transport Canada stated that Canada has a dedicated OPP engagement team that continues to support ongoing dialogue with South Coast First Nations. Transport Canada noted that while these discussions are still at an early stage, it is ready to work with interested Nations to explore shared goals and interests in more depth. In the course of these discussions, the parties would determine the purpose of potential agreements and the appropriate forums for carrying out this work, establish terms of reference and begin the work planning process. Transport Canada pointed to the recently launched Indigenous and Local Communities Engagement and Partnerships Program (ILCEPP) as a measure to support any future agreements on the South Coast. Transport Canada said that the objective of the ILCEPP is to support relationship building and encourage participation in longer-term engagement work on one or more OPP initiatives. This includes implementing federal-Indigenous or multilateral (e.g., federal, provincial, Indigenous) plans and agreements to facilitate collaborative management and/or partnerships in marine safety and environmental protection.

To assist Indigenous communities in participating in the OPP, the Federal Authorities noted that over \$13 million is being made available to eligible Indigenous and local communities to be engaged and participate in the OPP. It said that this funding gives recipients the opportunity to take part in developing and improving Canada's marine transportation system and contribute their knowledge towards tailoring marine transportation systems to local conditions and the environment.

The Federal Authorities said that it understood that Indigenous peoples are interested in being informed about the OPP as a whole and understanding how it will strengthen marine safety in Canada and the benefits to their communities, including capacity building and the protection of Indigenous coastal communities' way of life, culture, environment, food sources, and commerce. It also noted that Indigenous coastal communities are asking how the OPP will advance reconciliation and rights recognition, and want to move quickly to advance OPP initiatives and see tangible results.

Transport Canada said that because the OPP is not project-specific, engagement is being led through a broader process than the MH-052-2018 hearing and Phase III consultation of the Project. Transport Canada further noted that if Canada contemplates further actions related to OPP initiatives, and these actions have the potential to impact Indigenous rights,

Canada will consult with potentially affected Indigenous communities. Transport Canada noted that while the OPP was not designed to address Project-specific impacts, OPP initiatives directly respond to the marine safety concerns which have been raised through previous consultation, including those done as part of the Trans Mountain Project.

Transport Canada noted that it continued to engage Indigenous communities to establish partnerships and to advance a co-development approach, to identify shared interests and develop solutions. These activities are ongoing and the results will vary based on the specifics of each OPP initiative and the outcomes of the co-development process.

In response to concerns related to the involvement of Indigenous communities in OPP initiatives related to marine safety, Transport Canada noted that Indigenous communities will continue to be engaged on various OPP initiatives to: inform, enhance transparency, establish partnerships, and work towards inclusion in the marine safety system. Transport Canada said that through co-development, the OPP aims to identify shared issues and develop solutions for relevant initiatives. It further noted that these activities are ongoing and the outcomes will vary based on each initiative and the results of the co-development process.]

The Canadian Coast Guard said that through the Indigenous Community Response Training initiative under the OPP, the Coast Guard has provided training to First Nations in the following courses: Coastal Nation Search and Rescue, Marine Advanced First Aid, Small Vessel Operators' Proficiency, and Incident Command System. It said that this training is then applied in joint operational exercises that incorporate all on-water first response partners, such as the Coast Guard Auxiliary, First Nations communities, Parks Canada, other federal, provincial and municipal partners and any other implicated organizations. The Canadian Coast Guard said that it coordinates over 20 such exercises each year along the B.C. coast and that the exercises integrate search and rescue, environmental response, and first aid to ensure an integrated and comprehensive response.

The Canadian Coast Guard also said that regional training workshops are available to all coastal Indigenous communities. Invitations to participate in training depend on the nature of the training that is being offered. For example, Incident Command System courses are offered on a regional basis, the Coastal Nations Search and Rescue program is offered on a rotational basis between northern and southern communities, and environmental response training is location specific. It also said that Indigenous communities may also request in-community training for specific training programs, such as environmental response and incident management.

In response to concerns regarding the new critical habitat for SRKW off southwest Vancouver Island, DFO it explained that the identification of these areas is based on scientific advice stemming from research carried out over the last 40 years. It also noted that there is no immediate plan to add new closures or change the fisheries closures that protect the key SRKW foraging areas. DFO also said that it will be reviewing its fishery closure approach with Indigenous communities going forward and through these discussions, DFO can address questions such as understanding the information used to inform management measures, considering how other threats interact with the threat of lack of available prey for SRKW, and understanding how best to include and incorporate Indigenous and local knowledge to adaptively manage the mitigation of these threats.

Trans Mountain reply to concerns regarding: mitigation measures

Trans Mountain said that as a pipeline operator with no direct control over Project-related marine shipping, it believes that multi-party solutions with active collaboration between industry and government are required to ensure continued maintenance and advancement of the marine safety regime, and Trans Mountain supports the approach proposed under the OPP, whether or not the Project proceeds.

Involvement of Indigenous peoples in monitoring Project-related marine shipping

Many Indigenous communities expressed an interest in having a more active role in monitoring and oversight of Project-related marine shipping. Some Indigenous intervenors argued that the draft conditions released by the Board do not provide for sufficient involvement in Project monitoring and oversight. Shackan Indian Band said that the conditions and recommendations proposed by the Board must ensure that an ongoing role in monitoring and stewardship is provided to First Nations. Malahat First Nation said that it is participating in a number of initiatives relating to environmental stewardship activities in its territory and that it is prepared to play a much larger role in Project-related environmental monitoring and oversight. Tsawout said that an ongoing monitoring program of the Salish Sea must be carried out and include Tsawout in the crafting of the monitoring program.

The IAMC Caucus explained that the IAMC was established in 2017 to provide a collaborative forum supported by the technical resources of Indigenous nations, the Government of Canada and regulators. It said that the committee's purpose is to enhance environmental protections and the safety of the existing pipeline and the proposed expansion and to support Indigenous communities' meaningful participation in monitoring the pipelines and marine shipping. The IAMC Caucus said that the IAMC is comprised of: five members representing various federal departments (Natural Resources Canada, Transport Canada, Fisheries and Oceans Canada, Canadian Coast Guard, and Environment and Climate Change Canada);

one member representing the NEB; and the Indigenous Caucus, which is comprised of up to 13 members who strive to represent the interests of the potentially impacted Indigenous communities along the pipeline and marine shipping routes.

The Terms of Reference (TOR) for the IAMC set out the purposes and guiding principles of the IAMC, stating that the Committee is intended to form the basis of a new relationship between Indigenous communities, the Government of Canada and the NEB in respect of the Trans Mountain project activities. The IAMC Caucus noted that central to the Committee's work is the integration of Indigenous knowledge, values and perspectives into the monitoring, regulation and performance of the Trans Mountain project activities. It was noted that Section 9 of the TOR states that, in working towards that objective, the Committee is guided by s.35 of the *Constitution Act, 1982*, the principles of UNDRIP, and the Committee works to support reconciliation. Section 44 of the TOR states that in their participation on the Committee, government and NEB committee members seek to understand Indigenous perspectives, exchange information and build understanding regarding the work of the relevant regulators and collaborate on solutions to matters of concerns.

The IAMC noted that much of the work of the Committee takes place through subcommittees, including the Indigenous Monitoring and Marine Shipping Subcommittees. It noted that the Monitoring Subcommittee's goal is to work towards meaningful Indigenous inclusion in project monitoring. Section 19(c) of the TOR describes the monitoring activities that may be undertaken, including:

- Identifying monitors to accompany and advise NEB Inspection Officers and other staff from the NEB;
- Engaging with NEB Inspection Officers as described on corrective actions to be taken when non-compliance is identified; and or
- Providing or arranging for training and educational materials to Indigenous communities to improve their knowledge and capacity surrounding the Trans Mountain Project activities, including their ability to detect and respond to any spills or other hazards or emergencies.

The IAMC Caucus noted that the Monitoring Subcommittee has to date participated in twelve inspections, four emergency management exercises and one marine exercise.

The IAMC Caucus indicated that it hopes for an expanded role for the IAMC. It said that Indigenous peoples and interests need to be fully integrated into the oversight of the Project, if it proceeds, and into broader planning and stewardship process in respect of the use of marine areas off the south coast. It said that the IAMC is well positioned to play an expanded role in monitoring and oversight with the aim of increasing the safety of the Project-related marine shipping and reducing its impacts on Indigenous use of the lands and waters. During oral traditional evidence, members of the IAMC Caucus explained that the involvement of the IAMC in inspections along the pipeline route and at WMT has shown to add value to the process and it would be something positive to see other regulators starting to adopt this process, to have greater collaboration and participation by Indigenous communities in marine exercises, in inspections, and working with other regulators.

Chawathil First Nation, Cheam First Nation, Kwantlen First Nation, Seabird Island Band, and Stó:lō Collective all indicated that they wished to see the IAMC take on an expanded role in spill response, monitoring, oversight and compliance activities. Ditidaht also said that it supported the expansion of the IAMC's role, but noted that the IAMC activities should be in addition to the specific consultation and accommodation work that must be carried out with each First Nation that has the potential to be adversely affected by the Project.

Lyackson noted while it does have a seat on the IAMC marine shipping sub-committee, to date no concrete plans exist that effectively include First Nations in Indigenous-led monitoring that adequately address their concerns about Project-related marine shipping. The First Nations of the Maa-Nulth Treaty Society and the Métis Nation of BC noted that they had concerns regarding the membership of the IAMC, indicating that they had not been invited to participate as members of the IAMC.

Federal Authorities reply regarding: monitoring

NRCan said that the IAMC participation in the monitoring and oversight of Project-related marine shipping and its potential impacts to the marine environment is pursued primarily by the Marine Shipping subcommittee (the Subcommittee). Between October 2018 and March 2019, it said that the Subcommittee will be engaging with Indigenous communities with interests related to the marine corridor to validate and advance the following objectives:

- Explore and develop an Indigenous marine stewardship program: explore the idea of an Indigenous Pilotage Partnership through information gathering and engagement with communities, marine regulators and other relevant organizations. This priority work would include development of cultural training for pilots and support for building Indigenous capacity, coordinating efforts, and integrating Traditional Knowledge in marine monitoring.

- Provide advice on Indigenous inclusion in spill response: engage with relevant agencies; review the proponent and government's spill notification system, response and crisis communications plans; and provide advice to improve those plans.
- Provide advice on marine-related conditions: examine the marine-shipping related project conditions. The Indigenous members may assess the proponents' fulfillment of those Project conditions and provide advice on improvements to the conditions or proponents' plans.
- Enhance Indigenous capacity: support community member training with the Canadian Coast Guard (in coordination with OPP Marine Training), and review programs targeted at Indigenous marine training and related capacity needs such as equipment, in order to recommend areas for potential IAMC support.

Canada noted that it has committed \$64.7 million to support the IAMC for the Project. It noted that so far, the Committee is reviewing or supporting 13 community projects related to the effects of Project-related marine shipping, including projects that analyze vessel traffic associated with the Project, the enhancement of emergency planning, the development of environmental management, and the hiring of emergency response personnel in individual First Nations, among others.

Trans Mountain reply regarding: monitoring

Trans Mountain noted that it is not a member of the IAMC nor does it provide funding to the IAMC. Trans Mountain stated that it understands that the IAMC is an Indigenous-led committee, established with a goal to form the basis of a new relationship between Indigenous communities, the government and the NEB in respect of Trans Mountain's activities. Trans Mountain's understanding is that the IAMC is already advancing Indigenous interests with respect to guardianship and stewardship over land and water operations during the lifecycle of the Project. Trans Mountain noted that the IAMC provides for collaborative, inclusive and meaningful Indigenous involvement in the review and monitoring of environmental, safety and socio-economic issues, and Trans Mountain is supportive of the IAMC's role as it pertains to the Project.

Crown's duty to consult and accommodate

As described in more detail in Section 5.2.2.4 of this chapter, Indigenous communities raised concerns regarding the Government of Canada's consultation to date. Intervenor argued that the 2016 CAR was inaccurate, that the Crown did not consult on the scope and process for the Board's MH-052-2018 hearing, and that no meaningful dialogue has occurred, neither through Phase III consultation nor otherwise.

Indigenous intervenors and commentators argued that the Crown continues to fall short on its consultation obligations. They pointed to a lack of meaningful two-way dialogue with the Government of Canada with respect to both the Project and the Reconsideration process. They argued that Canada should engage in consent based and collaborative Nation-to-Nation decision-making as required by the United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP).

With respect to the MH-052-2018 hearing, Indigenous communities noted that the Board is required to act consistently with the *Constitution Act, 1982*, but argued that the Board's process is not properly set up to meet the requirements of the honour of the Crown. They said that the Board cannot find that the Project is in the public interest if their rights are infringed and if the Crown has not meaningfully consulted. Indigenous communities argued that the Government of Canada's commitment to the re-engagement of Phase III consultations cannot have any bearing on the Board's determination of whether the duty to consult and accommodate has been discharged as it is impossible to know whether the consultation will be meaningful and effective. They note the "inadequacies of [Canada's] consultation process" found by the FCA in *Tsleil-Waututh Nation*⁴⁴.

Indigenous intervenors said that Indigenous and Treaty rights will be seriously harmed by marine traffic associated with the Project and the Crown has corresponding obligations to justify this infringement. Indigenous intervenors noted that marine resources, including salmon and Southern resident killer whales are integral to their way of life and that the Crown has an obligation to consult and accommodate to ensure their rights are not unjustifiably infringed.

Stó:lō Collective and Shxw'ōwhámel First Nation also argued that the Crown is in a conflict of interest as the owner of the Project. They argue that the Crown will be held to the highest standard in meeting its legal obligations to Indigenous peoples, with whom a fiduciary relationship exists.

Trans Mountain reply regarding: consultation and accommodation

Trans Mountain submitted that, as a starting point, the Board's OH-001-2014 Report extensively considered the potential impacts from Project-related shipping on Indigenous interests. The FCA in *Tsleil-Waututh Nation* considered the adequacy of

⁴⁴ *Tsleil-Waututh Nation* at para. 760.

the OH-001-2014 hearing process and stated that it was satisfied that the Board's process was adequate for fulfilling its consultation obligations.

Trans Mountain said that in the MH-052-2018 hearing, the Board has invited new or updated evidence on, among other things, the potential impacts of Project-related marine shipping on Indigenous interests and mitigation measures to avoid, reduce, or offset potential adverse effects. Trans Mountain argued that the information filed in this hearing was generally consistent with the information filed in the OH-001-2014 hearing and no new or updated information has been filed that should cause any of the Board's conclusions in the OH-001-2014 Report to change.

Trans Mountain submitted that it has continued to engage with all potentially affected Indigenous communities in relation to Project-related marine shipping since the conclusion of the OH-001-2014 hearing. Further, it noted that the MH-052-2018 hearing provided opportunities for potentially affected Indigenous communities to learn more about Project-related marine shipping, ask information requests of Trans Mountain and federal government agencies, file written evidence and present oral traditional evidence. Taken together, Trans Mountain argued that Indigenous communities have been provided with extensive opportunities to engage on all aspects of Project-related marine shipping.

Trans Mountain further argued that notwithstanding this, the Board's task is not to assess the adequacy of Crown consultation in its Reconsideration Report. Trans Mountain noted that the Government of Canada has indicated that it intends to carry out additional consultation beyond and outside the NEB process. Trans Mountain submitted that the adequacy of Crown consultation can only be assessed once all consultation has been completed and at such time when the Crown (in this case, Cabinet) renders its final decision on the Project. As such, while the Board can assess the adequacy of Trans Mountains' consultation for the purposes of this Reconsideration, Trans Mountain argued that the Board need not and cannot at this time assess the adequacy of Crown consultation overall. Trans Mountain argued that such an assessment would be premature and beyond the purview of the Board.]

Federal Authorities reply regarding: consultation and accommodation

In response to concerns raised about the Crown relying on the Board's Reconsideration Process to meet its duty to consult, NRCan noted that the Crown can rely on existing regulatory processes, to the extent possible, to fulfill the duty to consult. As such, it said that the Crown may rely on the NEB MH-052-2018 hearing, to the extent possible, to identify, consider and address how the Crown's conduct in relation to Project-related marine shipping might adversely impact potential or established Indigenous and Treaty rights. NRCan said that this approach avoids duplication and ensures that the NEB, which has broad powers to set conditions for the Project, has full access to relevant information on potential adverse Project-related marine shipping impacts on Indigenous and Treaty rights. NRCan noted that the Crown will also consult on Project-related marine shipping impacts in its re-initiated Phase III of the consultation process.

Following the FCA decision in *Tsleil-Waututh Nation*, the Federal Authorities noted that NRCan wrote to Indigenous communities, governments and nations potentially impacted by Project-related marine shipping, encouraging them to participate in the NEB process. NRCan said that officials advised Indigenous communities that the Crown intended to rely on the NEB Reconsideration process, to the extent possible, to fulfill the legal duty to consult related to Project-related marine shipping.

NRCan also submitted that the Minister of Natural Resources wrote to potentially impacted Indigenous communities, governments and nations following the announcement that it would re-initiate Phase III consultations on the Project, outlining the Crown's intentions to engage in a specific and focused dialogue on the Project. NRCan said that the Crown's Phase III consultation and accommodation process will work with Indigenous communities, governments and nations in a manner that aligns with the Crown's commitment to strengthen and renew its relationships with Indigenous peoples while respecting and upholding the rights of Indigenous peoples in Canada.

The Federal Authorities noted argued that in re-initiating Phase III consultation, the Crown said it has been clear that this consultation and accommodation process is not about starting over. The Crown will build on existing relationships, the information submitted by Indigenous communities, governments and nations, and the existing consultation record, while making improvements to ensure the consultation is carried out in a meaningful way.

NRCan stated that the Crown consults in a way that is fully consistent with meeting Canada's obligations under s.35 of the *Constitution Act, 1982*, and the Crown's commitments to advance reconciliation with Indigenous peoples, including the pledge to implement UNDRIP. NRCan further stated that the Crown recognizes that meaningful engagement and consultation with Indigenous peoples aims to secure their free, prior and informed consent and this is especially true when Canada proposes to take actions, which impact them and their rights, including their lands, territories and resources. The Crown also recognizes the rights of Indigenous peoples to participate in decision-making in matters that affect them and their rights. NRCan said that this is what the overall consultation process for this Project is meant to achieve, including the renewed Phase III consultations.

Appendix 1: Lists of Issues

1.1 OH-001-2014 hearing

The Board has decided on a list of 12 issues it will consider during the hearing process.

1. The need for the proposed project.
2. The economic feasibility of the proposed project.
3. The potential commercial impacts of the proposed project.
4. The potential environmental and socio-economic effects of the proposed project, including any cumulative environmental effects that are likely to result from the project, including those required to be considered by the NEB's Filing Manual.
5. The potential environmental and socio-economic effects of marine shipping activities that would result from the proposed Project, including the potential effects of accidents or malfunctions that may occur.
6. The appropriateness of the general route and land requirements for the proposed project.
7. The suitability of the design of the proposed project.
8. The terms and conditions to be included in any approval the Board may issue.
9. Potential impacts of the project on Aboriginal interests.
10. Potential impacts of the project on landowners and land use.
11. Contingency planning for spills, accidents or malfunctions, during construction and operation of the project.
12. Safety and security during construction of the proposed project and operation of the project, including emergency response planning and third-party damage prevention.

The Board does not intend to consider the environmental and socio-economic effects associated with upstream activities, the development of oil sands, or the downstream use of the oil transported by the pipeline.

1.2 MH-052-2018 hearing

The National Energy Board's (Board) Reconsideration hearing will consider any necessary changes or additions to its May 2016 Recommendation Report (Report), in light of the inclusion of Project-related marine shipping between the Westridge Marine Terminal and the 12-nautical-mile territorial sea limit in the "designated project" under the *Canadian Environmental Assessment Act, 2012* (CEAA 2012). This includes issues related to factors described in paragraphs 19(1)(a) through (h) and subsection 19(3) of the CEAA 2012, and to section 79 of the *Species at Risk Act* (SARA).

1. The environmental¹³⁵ effects of Project-related marine shipping, and the significance of these effects.
This includes adverse effects on species at risk, the environmental effects of malfunctions or accidents that may occur, and any cumulative environmental effects.
2. Measures that are technically and economically feasible, and that would mitigate any significant adverse environmental effects of Project-related marine shipping.
Given that the Board found four significant adverse effects related to Project-related marine shipping in its previous assessment¹³⁶ (i.e., greenhouse gas emissions, Southern resident killer whale, traditional Indigenous use associated with Southern resident killer whale, and the potential effects of a large or credible worst-case spill), the consideration of mitigation measures will include these four matters. This issue will also include consideration of whether the mitigation measures will change the Board's previous significance findings.
3. Alternative means of carrying out Project-related marine shipping that are technically and economically feasible, and the environmental effects of such alternative means.
4. Requirements of any follow-up program in respect of Project-related marine shipping.
5. Measures to avoid or lessen the adverse effects of Project-related marine shipping on SARA-listed wildlife species and their critical habitat, monitoring of the measures, and consideration of how to ensure the measures and monitoring are undertaken.
The Board's previous assessment identified the SARA-listed marine fish, marine mammal, and marine bird species that could be found in the area of, or affected by, Project-related marine shipping.¹³⁷ Consideration will also be given to any species that have been newly listed or have seen a change to their designation since the issuance of the Board's Report and that could be affected by Project-related marine shipping.
6. The potential impacts of Project-related marine shipping on Indigenous¹³⁸ interests.
7. Whether there should be any changes or additions to the Board's recommendations set out in its Report, or to the recommended terms or conditions, including Conditions 91, 131 to 134, 144, and 151.

Parties are expected to limit their evidence filings to new or updated evidence (including comments from the public, community knowledge, and Indigenous traditional knowledge) relevant to the above issues. Parties are not required to re-file or re-test evidence on the record of the OH-001-2014 hearing. It is recommended that Parties focus their evidence on aspects of the above issues that were not fully canvassed in the OH-001-2014 hearing. The Board's Filing Requirements for Trans Mountain, and its requests for specialist or expert information or knowledge in the possession of Federal Authorities pursuant to paragraph 20(a) of the CEAA 2012, reflect this.

¹³⁵ All references to environmental effects in this List of Issues include health and socio-economic matters as described in section 5 of the CEAA 2012.

¹³⁶ See the Board's Report at pages 337, 350-351, 363, 378, and 397-398.

¹³⁷ See the Board's Report at pages 338, 341, and 352.

¹³⁸ The Board's use of the term "Indigenous" or "Indigenous peoples" in this hearing has the meaning assigned by the definition of "aboriginal peoples of Canada" in subsection 35(2) of the *Constitution Act, 1982*.

Appendix 2: Overview of work/activity authorized by individual legal instruments

This table is provided as an overview and guide only. The legal instruments themselves provide the actual authorizations. Appendix 3 sets out the list of 156 conditions and illustrates which conditions would attach to each instrument.

Instrument	Work/activity being authorized
1 Line 2 CPCN (CPCN)	Add to Line 2 CPCN (transfer from existing Trans Mountain Pipeline system and put into service on Line 2): • active 150 km NPS 36 pipeline segment from Hinton to Hargreaves • active 43 km NPS 30 pipeline segment from Darfield to Black Pines Authorization to expand the Westridge Marine Terminal (WMT): • tanker loading dock complex at the WMT, with a total of three Aframax-capable berth faces and a utility dock Authorization to construct and operate: • two new parallel NPS 30 delivery pipelines from the Burnaby Terminal to the Westridge Marine Terminal Authorization to construct and operate: • 339 km NPS 36 pipeline from Edmonton to Hinton • 121 km NPS 42 pipeline from Hargreaves to Blue River • 158 km NPS 36 pipeline from Blue River to Darfield • 368 km NPS 36 pipeline from Black Pines to the Burnaby Terminal
2 CPCN OC-2 (OC2)	Authorization to Decommission: • one existing tank at the Edmonton Terminal West Tank Area • one existing tank at the Burnaby Terminal Authorization to Reactivate: • 150 km NPS 24 pipeline segment from Hinton to Hargreaves • 43 km NPS 24 pipeline segment from Darfield to Black Pines • Niton Pump Station Remove from CPCN OC-2 (transfer from Line 1 and put into service on Line 2): • 43 km NPS 30 pipeline segment from Darfield to Black Pines
3 CPCN OC-49 (OC49)	Remove from CPCN OC-49 (transfer from Line 1 and put into service on Line 2): • 150 km NPS 36 pipeline segment from Hinton to Hargreaves Deactivate • Wolf Pump Station
4 NEB Act, s.58 Order (Temp)	Authorization for temporary construction lands and infrastructure: • development of camp locations, stockpile sites, • contractor staging areas (i.e., co-located with camps or stockpile sites), • construction yards, borrow pits, and • access roads for the first 10 km of each pipeline spread (including temporary, clear-span bridges associated with these access roads)

5	NEB Act, s.58 Order (Pump1)	Line 1 Pump Stations Authorization to construct and operate: • Black Pines Pump Station on Line 1 Authorization to: • drag reducing agent (DRA) injection at Jasper Pump Station • add one pump unit to Kamloops Pump Station • add one pump unit to Sumas Pump Station
6	NEB Act, s.58 Order (Pump2)	Line 2 Pump Stations Authorization to construct and operate: • Edmonton Pump Station • Gainford Pump Station • Wolf Pump Station • Edson Pump Station • Hinton Pump Station • Blue River Pump Station • McMurphy Pump Station • Blackpool Pump Station • Black Pines Pump Station • Kamloops Pump Station • Kingsvale Pump Station
7	NEB Act, s.58 Order (Tanks)	New Tanks (Line 1 and Line 2) Authorization to construct and operate: • five new tanks at the Edmonton Terminal West Tank Area • one new tank at the Sumas Terminal • 14 new tanks at the Burnaby Terminal
8	Deactivation order (Deact)	Authorization to deactivate: • Blue River Pump Station

Appendix 3: Conditions applied to legal instruments

In these conditions, the following terms are defined as:

Appropriate Government Authorities	Federal, Provincial, Regional or Municipal government departments or agencies with jurisdiction, statutory obligations, regulatory oversight or a decision-making role in relation to the subject-matter of the specific condition. For location-specific conditions or phased filings, this is limited to those with such a role in relation to the geographic location to which the condition filing applies. (Indigenous groups are treated separately and listed separately in each applicable condition.)
Commencing operations	The Project is opened for oil storage and transmission. Unless otherwise specified, “prior to commencing operations” means an action must be completed prior to commencing operation of any component of the Project, and “after commencing operations” means an action must be completed after all components of the Project are operating.
Construction	Any in-field activity that may have an effect on the environment and that is necessary for installing, deactivating, reactivating¹³⁹ or decommissioning, or preparing to install, deactivate, reactivate¹ or decommission, any component of the Project. Construction activities include, clearing, mowing, grading, trenching, drilling, boring, and blasting. Construction activities <u>do not</u> include activities associated with routine surveying operations or data collection activities, such as geotechnical investigations (e.g., geophysical surveys, bore holes, and test pits), activities required to obtain integrity information on the reactivation pipeline segments, or operations and maintenance activities (to which NEB “Operations and Maintenance Activities on Pipelines under the <i>National Energy Board Act</i> – Requirements and Guidance Notes” apply). Construction at the Westridge Marine Terminal also includes construction activities occurring in the marine environment that are necessary for installing, or preparing to install, any component of the Westridge Marine Terminal expansion. This includes dredging, blasting, and pile drilling.
Consultation	Unless otherwise specified in a condition, Trans Mountain’s consultation must be carried out in a manner that: a) provides, to those to be consulted: i) notice of the matter in sufficient form and detail to allow them to prepare their views or information on the matter; ii) a reasonable period for them to prepare those views or information; and iii) an opportunity to present those views or information to Trans Mountain; b) considers, fully and impartially, the views or information presented; c) provides, to those in a) who request it, a draft summary of the consultation undertaken with that party, and a reasonable period for them to provide feedback to Trans Mountain; and d) provides, to those in a) who request it, a copy of the NEB filing receipt for, or notice of, the condition filing to which the consultation pertained.
Dry commissioning	Dry commissioning involves the systematic inspection and testing of mechanical, piping, electrical, instrumentation, control, and communications systems, prior to the introduction of process fluids , to ensure that they are ready for the introduction of fluids and are expected to function as intended.
For approval	Where a condition requires a filing or filings for NEB approval, Trans Mountain must not commence the indicated activity until the NEB issues its written approval of that filing or filings.
Including	Use of this term, or any variant of it, is not intended to limit the elements to just those listed. Rather, it implies minimum requirements with the potential for augmentation, as appropriate.
Line 1	After the expansion, the 1 147 km Line 1 pipeline will consist of, combined, the following pipeline segments, including segments to be reactivated and currently operating TMPL segments: · the existing 229 km of 609.6 mm outside diameter (NPS 24) and 89 km of 762.0 mm outside diameter (NPS 30) pipeline segments from Edmonton, AB, to Hinton, AB; · the reactivated 150 km of NPS 24 pipeline segment from Hinton, AB, to Hargreaves, B.C. (built in 1957); · the existing 273 km of NPS 24 pipeline segment from Hargreaves, B.C., to Darfield, B.C.; · the reactivated 43 km of NPS 24 pipeline segment from Darfield, B.C., to Black Pines, B.C. (built in 1953); · the existing 325 km of NPS 24 and 38 km of NPS 30 pipeline segments from Black Pines, B.C., to the Burnaby Terminal, B.C.

¹³⁹ Excluding engineering assessment and operations and maintenance activities required to meet Conditions 19 and 31.

Line 2	After the expansion, the approximately 1,180 km Line 2 pipeline will consist of, combined, the new transmission pipeline segments and the two currently operating TMPL segments transferring to Line 2 service: · approximately 339 km of new 914 mm outside diameter (NPS 36) pipeline from Edmonton, AB, to Hinton, AB; · the existing 150 km of NPS 36 pipeline segment from Hinton, AB, to Hargreaves, B.C. (built in 2008); · approximately 121 km of new 1 067 mm outside diameter (NPS 42) pipeline from Hargreaves, B.C., to Blue River, B.C.; · approximately 158 km of new NPS 36 pipeline from Blue River, B.C., to Darfield, B.C.; · the existing 43 km of NPS 30 pipeline segment from Darfield, B.C., to Black Pines, B.C. (built in 1957); and · approximately 368 km of new NPS 36 pipeline from Black Pines, B.C., to the Burnaby Terminal, B.C.
Monitoring	Observing the environmental and socio-economic effects of the Project for the purposes of assessing and measuring the effectiveness of mitigation measures undertaken, identifying unanticipated environmental and socio-economic issues, and, based on the results of these activities, determining any remedial actions required. From an engineering perspective, monitoring involves regularly observing pipelines, terminals and pump stations (e.g., through surveys, patrols, inspections, testing, instrumentation) to ensure their operation is within defined parameters, with the goal of identifying any issues or potential concerns (e.g., pipeline integrity, geohazards, erosion, security) that may compromise the protection of the pipelines, terminals, pump stations, property, persons, and the environment.
Monthly (in relation to a condition filing or posting)	Unless otherwise specified in a condition, a monthly filing shall be made on the 5 th working day of the calendar month following the month to which the filing pertains.
NEB or Board	National Energy Board
New delivery pipelines	Collectively, the two new NPS 30 oil delivery lines between Trans Mountain's Burnaby Terminal and its Westridge Marine Terminal (approximately 2.6 km for the tunnel option and 3.6 km for the street option).
Officer of the company	Where a condition requires a filing to be signed by an officer of the company, the filing must include a statement confirming that the signatory to the filing is an officer of the company duly authorized for that purpose.
Project	The Trans Mountain Expansion Project in all its components, including pipeline construction, reactivation, and changes to operating conditions resulting in operation as Line 1 and Line 2; deactivation, reactivation, construction and operation of or at the respective pump stations; decommissioning of 2 tanks and construction and expanded operation at the existing Edmonton, Sumas and Burnaby Terminals and the Westridge Marine Terminal; construction and operation of the new delivery pipelines; and all infrastructure. The Project does not include Project-related marine shipping.
Quarterly (in relation to a condition filing or posting)	Unless otherwise specified in a condition, a quarterly filing shall be made on the 10 th working day of the quarter following the quarter to which the filing pertains.
Temporary infrastructure	All structures or sites necessary for pipeline, terminal and pump station construction, reactivation, deactivation, modification and expansion approved as part of the Project. Examples of infrastructure include construction camps, stockpile sites, contractor yards, laydown areas, borrow pits, roads, bridges, snow pads, and temporary power supply lines necessary for operating infrastructure and equipment during the construction phase.
Third party (in relation to a report, review or assessment)	An independent consultant, expert, or contractor that, except for receiving payment for acting as a third party, is unaffiliated with Trans Mountain, Kinder Morgan Canada Inc., the principal consultants of either, or any other corporate entity with a financial interest in the Project. A third party is, because of their knowledge, training, and experience, qualified and competent to perform an assessment or review, and was not involved in developing the manual, report, plan, program, or policy being assessed or reviewed.
TMPL	The existing operating Trans Mountain Pipeline system.
Trans Mountain	Trans Mountain Pipeline ULC, as general partner of Trans Mountain Pipeline L.P.

Government authorities are mentioned in certain conditions. If a particular authority's name changes in the future, Trans Mountain's requirements relating to that authority would rest with its successor. Similarly, if a particular authority's function is assumed by another authority, Trans Mountain's requirements relating to that function would rest with the new authority.

Note: Appendix 2 provides a summary of work/activities authorized under each legal instrument.

No.	Overarching conditions	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
1	Condition compliance Trans Mountain must comply with all of the [certificate/order] conditions, unless the NEB otherwise directs.	X	X	X	X	X	X	X	X
2	Compliance with commitments Without limiting Conditions 3, 4 and 6, Trans Mountain must implement all of the commitments it made in its Project application or to which it otherwise committed on the record of the OH-001-2014 proceeding, as well as the MH-052-2018 proceeding.	X	X	X	X	X	X	X	X
3	Environmental protection Trans Mountain must implement or cause to be implemented, at a minimum, all of the policies, practices, programs, mitigation measures, recommendations, and procedures for the protection of the environment included or referred to in its Project application or to which it otherwise committed on the record of the OH-001-2014 proceeding.	X	X	X	X	X	X	X	X
4	Engineering and safety Trans Mountain must cause the Project to be designed, located, constructed, installed, and operated in accordance with, at a minimum, the specifications, standards, policies, mitigation measures, procedures, and other information included or referred to in its Project application or to which it otherwise committed on the record of the OH-001-2014 proceeding.	X	X	X	X	X	X	X	X
5	Certificate expiration (sunset clause) Unless the NEB otherwise directs prior to 30 September 2021 , this [certificate/order] will expire on 30 September 2021 , unless construction of the Project has commenced by that date.	X	X	X	X	X	X	X	X
No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
6	Commitments tracking table Without limiting Conditions 2, 3 and 4, Trans Mountain must implement the commitments contained within its commitments tracking table and must: - file with the NEB, at the following times, an updated commitments tracking table including the status of each commitment: within 3 months after the [certificate/order] date; at least 30 days prior to commencing construction; monthly, from the commencement of construction until the first month after commencing operations; and quarterly thereafter until: all commitments on the table are satisfied (superseded, complete or otherwise closed), at which time Trans Mountain must file confirmation, signed by an officer of the company, that the commitments on the table have been satisfied; or 6 years after commencing operations, at which time Trans Mountain must file with the NEB a summary of any outstanding commitments and a plan and implementation timeline for addressing these commitments; whichever comes earlier; and - post on its company website the same information required by a), using the same indicated timeframes; and - maintain at each of its construction offices: - the relevant environmental portion of the commitments tracking table listing all of Trans Mountain's regulatory commitments, including those from the Project application and subsequent filings, and environmental conditions or site-specific mitigation or monitoring measures from permits, authorizations, and approvals for the Project issued by federal, provincial, or other permitting authorities; - copies of any permits, authorizations, and approvals referenced in i); and - copies of any subsequent variances to permits, authorizations, and approvals referenced in i).	X	X	X	X	X	X	X	X

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
7	Environmental and socio-economic assessment - route re-alignments As applicable, Trans Mountain must file with the NEB <u>for approval</u>, concurrent with its filing of the Plan, Profile and Book of Reference pursuant to section 33 of the National Energy Board Act, an environmental and socio-economic assessment for each proposed detailed route re-alignment that extends beyond the applied-for corridor width of Trans Mountain's preferred route in proximity to: · Ohamil Indian Reserve 1; · Tzeachten Indian Reserve 13; and · Surrey Bend Regional Park. Any assessment must include: - environmental alignment sheets at an appropriate scale, clearly depicting the proposed route re-alignments; - results of any pre-construction surveys within the areas that were not previously subject to such surveys, and an indication of potential residual effects; - all associated mitigation measures that are beyond those identified during the OH-001-2014 proceeding; - analysis supporting the use of the measures in c), including any supplementary reports; - confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information based on any supplemental surveys completed; and - a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants, as well as copies of all written comments that may be provided to Trans Mountain by those consulted. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the assessment.	X			X				
8	Design temperatures – terminals and pump stations Trans Mountain must file with the NEB, at least 3 months prior to ordering pipe for terminals and pump stations, confirmation, with rationale, that: - the selected maximum and minimum design temperatures are in accordance with CSA Z662-15, Clause 5.2.1; - the selected design temperatures are based on historical, location-specific extreme daily maximum and minimum temperatures, as opposed to average temperatures; and - the extent of the historical weather data used is commensurate with the expected operational life of the Project.	X				X	X	X	
9	Quality Management Plan Trans Mountain must file with the NEB, at least 4 months prior to manufacturing any pipe and major components for the Project, a Project-specific Quality Management Plan that includes: - material /vendor qualification requirements; - quality control and assurance of pipe, fittings, and components that ensure all materials meet Trans Mountain's specifications (i.e., processes, procedures, specifications, random testing, inspection, and test reports); - mandatory documentation of process conditions during manufacture and verification of the conformance of manufacturer material test reports with Trans Mountain's requirements; - mandatory inspection requirements, inspector competency training, and qualifications; - non-conformance reporting and correction procedures; - change management process; - commissioning requirements; and - material handling requirements during transportation.	X				X	X	X	
10	Phased filings Due to the Project's large spatial extent, Trans Mountain may wish to commence Project construction activities at specific locations at different times (i.e., using a phased approach). This may entail doing so on the basis of pipeline spreads of defined lengths, or by regions, or work areas of Trans Mountain's choosing (such as terminals or pump stations). If Trans Mountain intends to use a phased approach for Project construction, it must undertake the following: Trans Mountain must file with the NEB, at least 7 months prior to commencing construction, a complete list of construction spreads, regions, or work areas that, for the duration of Project construction, will serve as the basis by which Trans Mountain may submit condition filings in a phased approach. Each spread, region, or work area must be clearly delineated (e.g., by	X	X	X	X	X	X	X	X

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	kilometre posts). b) As part of its filing for a), to aid the NEB in anticipating future submissions, Trans Mountain must indicate the specific conditions and related spread(s), region(s) or work area(s) for which it expects to apply this phased approach. Trans Mountain must file updates to this list as they are available. c) When submitting a filing for any condition using this phased approach, Trans Mountain must clearly indicate which spread(s), region(s), or work area(s) that filing applies to. d) Construction of a particular spread, region, or work area must not proceed until all pre-construction conditions using this phased approach have been satisfied for that spread, region, or work area. Prior to commencing construction of the initial spread, region, or work area, all applicable conditions with more general pre-construction timing elements must also be satisfied.								
11	Indigenous, local, and regional skills and business capacity inventory a) Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, an Indigenous, local, and regional skills and business capacity inventory for the Project. The skills and capacity inventory must include: i) a description of the information and data sources; ii) a summary of Indigenous, local, and regional skills and business capacity; iii) an analysis of the Indigenous, local and regional capacity for employment and business opportunities for the Project; iv) plans for communicating employment and business opportunities to Indigenous, local, and regional communities; v) a description of identified or potential skills and business capacity gaps, and any proposed measures to address them or to support or increase skills or capacity; and vi) plans for communicating identified gaps regarding skills and business capacity with Indigenous, local, and regional communities and businesses, and any proposed measures to support or increase skills or capacity. b) Trans Mountain must file with the NEB, at least 3 months prior to commencing construction, any updates to the elements of the inventory described in a)i) through vi).	X							
12	Training and Education Monitoring Plan a) Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, a plan for monitoring the implementation and outcomes of Indigenous, local, and regional training and education measures and opportunities for the Project. The plan must include: i) a description of, and rationale for selecting, the indicators that will be monitored to track the implementation of training and education measures and opportunities; ii) the monitoring methods and schedule, including information and data sources for the indicators being monitored; iii) plans for consulting and reporting on the implementation and outcomes of training and education measures and opportunities with Appropriate Government Authorities, potentially affected Indigenous groups, business, industry, and education and training organizations; and iv) a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups, business, industry, and education and training organizations on the development of the plan. b) Trans Mountain must file with the NEB, at least 3 months prior to commencing construction, any updates to the elements of the Training and Education Monitoring Plan described in a)i) through iii) above.	X							
13	Socio-Economic Effects Monitoring Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, a plan for monitoring potential adverse socio-economic effects of the Project during construction. The plan must include the following: a) the factors or indicators to be monitored; b) the methods and rationale for selecting the factors or indicators; c) a description of the baseline, pre-construction socio-economic conditions; d) the monitoring methods and schedule, including third party data source identification; e) data recording, assessment, and reporting details;	X	X		X	X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	f) a discussion of how measures will be implemented to address any identified adverse effects, including: i) the criteria or thresholds that will require measures to be implemented; ii) how monitoring methods and measures implementation to address adverse effects, as necessary, are incorporated into Construction Execution Plans; and iii) a description of the roles and responsibilities of construction prime contractors, sub-contractors, and community relations staff in monitoring socio-economic effects and implementing measures to address adverse effects; g) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and h) plans for regular consultation and reporting on effects during construction with potentially affected communities, Indigenous groups, local and regional authorities, and service providers.								
14	Technical working group (TWG) – Terms of Reference Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, Terms of Reference for TWGs established in order to address specific technical and construction issues with affected municipalities. The Terms of Reference must be developed in consultation with participating municipalities, and facility owners and operators that will be affected by the Project. The Terms of Reference must, at a minimum: a) identify how TWG membership will be determined; b) identify the TWG structure; c) identify an officer of the company who will be accountable for implementing the Terms of Reference; d) describe the scope and mandate to be addressed or implemented by the TWG, including: i) the TWG's goals; ii) the issues and activities that will be within the TWG's mandate; iii) the protocols and mechanisms for implementing TWG recommendations or decisions; and iv) the protocols for reporting and communicating with TWG members, and other potentially-affected or interested parties; and e) provide a summary of any outstanding concerns raised by participating municipalities, and facility owners and operators regarding the Terms of Reference.	X							
15	Pipeline risk assessment Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, the following information for Line 2 and the new delivery pipelines: a) the results of the updated risk assessment in a tabular format similar to that provided in its Line 2 Consequence Report (Filing A3Z8G5). The risk assessment tables must also include: i) any updates to High Consequence Areas; ii) the risk mitigation method(s); iii) the mitigated Environmental Risk Scores; iv) pre-mitigation maximum outflow volumes; and v) the outflow volumes after mitigation; b) Environmental Risk Score acceptance criteria, with supporting rationale; and c) a detailed description of the adequacy of the following from its Line 2 Consequence Report (Filing A3Z8G5): i) the coefficients used in the scoring system equations; and ii) the values from the scoring tables.	X							
16	Quantitative Geohazard Frequency Assessment Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, an updated Quantitative Geohazard Frequency Assessment for the new Line 2 and delivery pipeline segments that contains a re-assessment of the Frequency of Loss of Containment (FLoC) values based on the results of site-specific field assessments and any required mitigation as determined in the detailed engineering and design process. Trans Mountain must provide in the assessment a plan to manage and mitigate geohazards at any location where the FLoC value is greater than 10^{-5} events per year to reduce the level of risk to As Low As Reasonably Practicable (ALARP), including a detailed explanation of how the ALARP level has been attained at each location.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
17	Valve locations on Line 2 Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, its final valve location assessment for Line 2. This assessment must include: a) a table showing each valve's location, function, and description (the description must include valve type, valve closure time, and whether the valve can be remotely controlled by the control centre); b) confirmation that the valve closure times provided in a) will not cause unsafe transient pressures according to the final transient analysis, along with a summary of the analysis; c) calculated volume release and elevation plots in a format similar to that provided by Trans Mountain in its Oil Spill Outflow Model Results for Line 2 for May 2014 Route (Filing A3Z8G6); d) clarification of how the Outflow Volume Score for Non-Watercourse Intersects ($S_{v,Nonwatercourse}$) is considered in identifying and prioritizing pipeline segments for valve optimization; e) for each 5-kilometre-long section of Line 2, information demonstrating that the release volumes are minimized to manage risks within the section to a level that is ALARP, based on the valve locations provided in a); f) an outflow volume versus chainage graph illustrating the effectiveness of the valve locations provided in a) showing the outflow limit in a format similar to that provided in Figure 4 of Attachment 2 to Trans Mountain's response to NEB Information Request No. 3.050b) (Filing A4H2D7); g) mitigation measures for the locations shown to exceed the outflow limit in the graph provided in f); and h) full-bore release and spill extent mapping that identifies and plots all geohazards with a FLoC greater than 10^{-5} events per year after mitigation identified by Trans Mountain at the time of its submission, in a format and scale similar to the maps provided by Trans Mountain in Filing A3Z8G7.	X							
18	Valve locations and upgrades – Line 1 Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, its final valve location assessment for Line 1. This assessment must include: a) a plan for upgrading existing manual block valves to automated or remotely operable valves, and a plan for adding new valves, including initiation and completion dates for the required activities; b) a table showing each valve's location, function, and description (the description must include valve type, valve closure time, and whether the valve can be remotely controlled by the control centre); c) confirmation that the valve closure times provided in b) will not cause unsafe transient pressures according to the final transient analysis, along with a summary of the analysis; d) calculated volume release and elevation plots in a format similar to that provided by Trans Mountain in its Oil Spill Outflow Model Results for Line 2 for May 2014 Route (Filing A3Z8G6); e) an outflow volume versus chainage graph illustrating the effectiveness of the valve locations provided in b), in a format similar to that provided in Figure 4 of Attachment 2 to Trans Mountain's response to NEB Information Request No. 3.050b) (Filing A4H2D7); f) full-bore release and spill extent mapping that identifies and plots all geohazards identified by Trans Mountain in its Natural Hazards Management Program or otherwise, at the time of its submission, in a format and scale similar to the maps provided by Trans Mountain in Filing A3Z8G7; and g) the associated Line 1 risk assessment used to determine the new valve locations and planned valve upgrades in a).		X						

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
19	Pipeline segment reactivation (Hinton to Hargreaves; Darfield to Black Pines) – engineering assessment and certificate Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction: a) an engineering assessment for the above two pipeline segments, in accordance with Canadian Standards Association (CSA) Z662-15, Clauses 3.3 and 10.15.2; and b) a certificate with a supporting report issued by an independent certification body,¹⁴⁰ stating unconditionally that the above two pipeline segments: i) are fit for service for the specified operating conditions;¹⁴¹ ii) meet all applicable requirements of CSA Z662-15; and iii) will meet the hydrostatic test requirements outlined in CSA Z662-15, Clause 8, at any time during the certified period. The certificate must be valid for at least 5 years and be validated on an annual basis during the certified period. The supporting report must include the qualifications of the independent certification body, the justification used to grant the certificate, and the expiry date of the certificate.		X						
20	Existing NPS 24 delivery pipeline location Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, its decision on whether it intends to “relocate” the existing NPS 24 delivery pipeline to the Burnaby Mountain tunnel (i.e., replace it with a new third pipeline in the Burnaby Mountain tunnel) and, if so, provide: a) details of any required changes to the design, construction, and operation of the proposed Burnaby Mountain tunnel; b) a discussion of the factors Trans Mountain considered in deciding to replace/relocate the existing NPS 24 delivery pipeline; and c) an indication of when Trans Mountain expects to apply for NEB approval to relocate/replace the existing NPS 24 delivery pipeline.	X							
21	Transient hydraulic analysis on the existing NPS 24 delivery pipeline Trans Mountain must file with the NEB, at least 6 months prior to commencing construction, the conclusions of the transient hydraulic analysis undertaken on the existing NPS 24 delivery pipeline from the Burnaby Terminal to the Westridge Marine Terminal. The filed conclusions must: a) demonstrate that the analysis considered the occurrences of maximum surge pressure in the existing NPS 24 delivery pipeline; and b) support Trans Mountain's decision to either retain or eliminate the proposed relief tank at the Westridge Marine Terminal.	X							
22	Updated terminal risk assessments Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, and at the same time as Trans Mountain's filings for Conditions 23, 24 and 25, updated risk assessments for the Edmonton Terminal West Tank Area, the Sumas Terminal, and the Burnaby Terminal. The updated risk assessments must quantify and/or include the following: a) the effect of any revised spill burn rates; b) the potential consequences of a boil-over; c) the potential consequences of flash fires and vapour cloud explosions; d) the cumulative risk based on the total number of tanks in the terminal, considering all potential events (pool fire, boil-over, flash fire, vapour cloud explosion);							X	

¹⁴⁰ For Conditions 19, 122 and 152, an “independent certification body” is an internationally recognized company or organization, such as Lloyd's Register or Det Norske Veritas, which is able to certify compliance to statutory requirements. The independent certification body must have expertise in pipeline integrity. The NEB reserves the right to accept or reject the certificate. In addition, the NEB's decision is not contingent on the results of the certificate.

¹⁴¹ For Conditions 19, 122 and 152, “operating conditions” must include the Project-specific operating conditions, possible transient flow conditions, slack flow conditions, and effects on operating pressure due to temperature changes.

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	e) the domino (knock-on) effect caused by a release of the contents of one tank on other tanks within the terminal's common impoundment area(s), or other tanks in adjacent impoundment areas; and f) risk mitigation measures, including ignition source control methods. For those risks that cannot be eliminated, Trans Mountain must demonstrate in each risk assessment that mitigation measures will reduce the risks to levels that are ALARP while complying with the Major Industrial Accidents Council of Canada (MIACC) criteria for risk acceptability. The quantitative risk analysis must be based on recognized methodology, models, and software. Product release frequencies and event probabilities must be based on recent, documented data sources. The effect of mitigation measures on the risk results must be justified and documented.								
23	Secondary containment – Edmonton Terminal Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, the final design of the Edmonton Terminal West Tank Area, including a report demonstrating the following: a) the drainage system's capability to rapidly and safely channel a significant release from any tank in the West Tank Area Common Impoundment to the Remote Impoundment Annex and Remote Impoundment at the same time that a design precipitation event is occurring, without overtopping the diked areas; b) the adequacy of the design in mitigating the following consequences of an accidental release and /or ignition of hydrocarbons, both within and beyond the Edmonton Terminal property boundary: i) harm to personnel and the public; ii) environmental damage; and iii) damage to facilities; and c) the ability of the Common Impoundment, Remote Impoundment Annex, and Remote Impoundment to contain a release of hydrocarbons from a rupture of the largest tank within the West Tank Area concurrent with a 1-in-100 year, 24-hour storm event. The scenario must include an allowance for water generated from potential firefighting activities and the maximum potential amount of standing water in all areas of the secondary containment system.							X	
24	Secondary containment – Burnaby Terminal Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, the final design of the Burnaby Terminal, including a report demonstrating the following: a) the drainage system's capability to rapidly and safely channel a significant release from either Tank 96, 97, or 98 to the Partial Remote Impoundment at the same time that a design precipitation event is occurring, without overtopping the diked areas; b) the adequacy of the proposed design in mitigating the following consequences of an accidental release and /or ignition of hydrocarbons, both within and beyond the Burnaby Terminal property boundary: i) harm to personnel and the public; ii) environmental damage; and iii) damage to facilities; and c) the ability of the individual secondary containment areas, Common Impoundment areas, Intermediate Stormwater Retention, Partial Remote Impoundment, and Tertiary Containment to contain a release of hydrocarbons from a multiple-tank rupture scenario concurrent with a 1-in-100 year, 24-hour storm event. The scenario must include an allowance for water generated from potential firefighting activities and the maximum potential amount of standing water in all areas of the secondary containment system. The assessment may include a calculation of the probability of exceedance of on-site containment considering all possible tank rupture combinations, excluding those tanks with sufficient individual secondary containment. The calculation may be based on a tank utilization histogram most representative of the expanded terminal operations, similar to that provided in Attachment 1 of Trans Mountain's response to NEB Information Request No. 4.24a) (Filing A4K4X3).							X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
25	Secondary containment – Sumas Terminal Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction, the final design of the Sumas Terminal, including a report demonstrating the following: - the adequacy of the proposed design in preventing the following consequences of an accidental release and/or ignition of hydrocarbons, both within and beyond the Sumas Terminal property boundary: - harm to personnel and the public; - environmental damage; and - damage to facilities; and - the ability of the secondary containment system to contain a release of hydrocarbons from a multiple-tank rupture scenario concurrent with a 1-in-100 year, 24-hour storm event. The scenario must include an allowance for water generated from potential firefighting activities and the maximum potential amount of standing water in all areas of the secondary containment system. The assessment may include a calculation of the probability of exceedance of on-site containment considering all possible tank rupture combinations, excluding those tanks with sufficient individual secondary containment. The calculation may be based on a tank utilization histogram most representative of the expanded terminal operations, similar to that provided in Attachment 1 of Trans Mountain's response to NEB Information Request No. 4.24b) (Filing <u>A4K4X4</u>).							X	
26	Burnaby Mountain tunnel option – design, construction, and operation For the tunnel between the Burnaby Terminal and the Westridge Marine Terminal and related delivery pipelines, at least 6 months prior to commencing Burnaby Mountain tunnel construction activities, Trans Mountain must: - file with the NEB <u>for approval</u>: - a description of the selected tunnel lining method with the rationale for its selection; and - tunnel confined space entry procedures during construction and visual inspections, and, if applicable, following construction; and - file with the NEB: - the results of any geotechnical or geophysical feasibility surveys completed since the evidence filed in the OH-001-2014 hearing; - a description of the tunnel portals and permanent road access, if applicable; - a description of the selected tunnel excavation method with rationale for its selection; - a description of the tunnel backfilling method with rationale for its selection; - a description of the methods to be used for pipe handling and welding; - a discussion on the adequacy of the pipe support methods for the new delivery pipelines during construction, commissioning, hydrostatic testing and operation, if applicable; - a discussion on the adequacy of the selected leak detection methods; - information demonstrating how the precautionary design of the new delivery pipelines would mitigate issues related to limited accessibility for future maintenance and repairs; and - the final tunnel cross-sectional design drawings.	X							
27	Burnaby Mountain tunnel option – backfilling Trans Mountain must file with the NEB, at least 6 months prior to commencing Burnaby Mountain tunnel construction activities, the following information on backfilling the tunnel between the Burnaby Terminal and the Westridge Marine Terminal: - a discussion of the adequacy of the measures to be taken during tunnel backfilling to eliminate or mitigate potential damage to the delivery pipelines; - the method(s) that will be used to confirm the consistency and continuity of the tunnel backfill (i.e., backfilling is completed without any spatial gaps); - the method(s) that will be used for holiday detection and coating repair prior to backfilling; - the methods that will be used to confirm the integrity of the delivery pipelines in the tunnel, both prior to and after backfilling, but prior to commissioning; and - the methods that will be used for monitoring, maintaining, and repairing backfill during operations, considering conditions such as fill deterioration and a potential increase in permeability.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
28	Burnaby Mountain tunnel option – cathodic protection Trans Mountain must file with the NEB, at least 6 months prior to commencing Burnaby Mountain tunnel construction activities , the following information on the cathodic protection system for the delivery pipelines in the tunnel between the Burnaby Terminal and the Westridge Marine Terminal: a) a description of the cathodic protection system design; b) risk mitigation measures for all potential cathodic protection performance issues, such as shielding from the backfill material; and c) a method for verifying the effectiveness of the cathodic protection system during operations.	X							
29	Burnaby Mountain tunnel option – rock mass and waste rock management Trans Mountain must file with the NEB <u>for approval</u> , at least 6 months prior to commencing Burnaby Mountain tunnel construction activities , the following details on rock mass expected to be encountered during construction of the tunnel between the Burnaby Terminal and the Westridge Marine Terminal: a) the characterization of the rock mass quality; b) waste rock management methods during construction and operations, if applicable; c) proposed acid rock mitigation measures, such as the treatment or disposal of acid rock, if encountered; d) the locations, sizes, and designs of all confirmed waste rock disposal areas; and e) plans for disposing any waste rock that is not expected to be stored in the confirmed waste rock disposal areas.	X							
30	Power system protection for pump stations and terminals Trans Mountain must file with the NEB the following details of its electrical power system design for each pump station and each of the following: Westridge Marine Terminal, Burnaby Terminal, Edmonton Terminal, and Sumas Terminal: a) Descriptions of the overcurrent and ground fault protection schemes including: i) a summary of coordination studies between the upstream and downstream protective devices, at least 3 months prior to commencing dry commissioning; ii) relay settings and time-current curves, at least 3 months prior to commencing dry commissioning; iii) the specification of neutral grounding resistors, at least 6 months prior to commencing construction; iv) specifications of contactors, fuses, and circuit breakers, at least 6 months prior to commencing construction; and v) a description of other electrical protections, relay settings, and trip characteristics, at least 3 months prior to commencing dry commissioning. b) Consistent with the NEB's Safety Advisory SA-2015-03, dated 4 May 2015, at least 6 months prior to commencing construction, information confirming that Trans Mountain has performed the ground fault and arcing fault protection designs for each pump station and terminal, including: i) a means to clear ground faults without intentional time delay if the fault currents exceed the design limit set by the neutral grounding resistance; and ii) a means to block the stored energy from other running motors from feeding an electrical fault in another motor running from the same bus. This filing must include a description of the ground fault and arcing fault protection designs including the above measures. c) At least 6 months prior to commencing construction, either: i) a written confirmation that Trans Mountain determined during detailed design that electrical faults will not exceed their design limits and migrate to an arcing fault; or ii) for a station or a terminal for which Trans Mountain determined during detailed design that an electrical fault could exceed its design limit and migrate to an arcing fault, the electrical configuration of that station or terminal and the additional equipment and devices that will be used to mitigate the adverse effects of such arcing faults. d) Single-line diagrams of the electrical power systems, at least 6 months prior to commencing construction.	X				X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
31	Reactivation of the Niton Pump Station Trans Mountain must file with the NEB <u>for approval</u> , at least 6 months prior to commencing any pump station construction , an engineering assessment for the Niton Pump Station, in accordance with CSA Z662. The engineering assessment must demonstrate that the pump station is fit for its intended service, and meets all applicable requirements of CSA Z662.		X						
32	Sumas Terminal Geotechnical Report Trans Mountain must file with the NEB, at least 6 months prior to commencing construction at the Sumas Terminal , a geotechnical report that provides feasibility-level geotechnical design recommendations for the proposed expansion at the Sumas Terminal.							X	
33	Westridge Marine Terminal Onshore Geotechnical Report Trans Mountain must file with the NEB, at least 6 months prior to commencing construction at the Westridge Marine Terminal , a geotechnical report that provides feasibility-level geotechnical design recommendations for the proposed new onshore facilities at the Westridge Marine Terminal, including consideration of the potential for seismic damage.	X							
34	Westridge Marine Terminal Offshore Geotechnical Report Trans Mountain must file with the NEB, at least 6 months prior to commencing construction at the Westridge Marine Terminal , the final Preliminary Geotechnical Report on the offshore portion of the Westridge Marine Terminal, based on the selected pile design option, including consideration of the potential for seismic damage.	X							
35	Marine Sediment Management Plan Trans Mountain must file with the NEB, at least 6 months prior to commencing construction at the Westridge Marine Terminal , confirmation whether or not dredging is required at the Westridge Marine Terminal. In the event that dredging is determined to be unavoidable during the expansion of the Westridge Marine Terminal, Trans Mountain must file with the NEB <u>for approval</u> , at least 4 months prior to commencing construction , and also include as part of its Westridge Marine Terminal Environmental Protection Plan, a Marine Sediment Management Plan. This plan must include: a) a summary of any supplemental marine sediment survey results; b) quantification of the area and the volume of marine sediment to be dredged along with an explanation of the measures that have been taken to eliminate or reduce the dredge footprint and volume proposed for disposal at sea; c) results of sediment plume modelling for any areas to be dredged; d) options for dredged sediment management, including the volumes of sediment that will be re-used or disposed of at sea or on land, as well the criteria and methods for determining how the dredged sediment will be disposed of at sea or on land; e) criteria and methods for determining how the dredged sediment will be managed recognizing that any proposed disposal at sea will only be considered for approval under the <i>Canadian Environment Protection Act</i>, 1999, if it is demonstrated to be the most technically and environmentally preferable option; f) confirmation that Trans Mountain will update the Westridge Marine Terminal Environmental Protection Plan to include any relevant information from the Marine Sediment Management Plan; g) details of monitoring that will be undertaken during construction; h) details of monitoring (both abiotic and biotic parameters) that will be undertaken during operations, including a discussion on evaluating the level of contaminants in the marine environment and any changes from pre-construction levels, as well as a proposed reporting schedule; and i) a summary of its consultations with Appropriate Government Authorities and potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.	X							
36	Pre-construction caribou habitat assessment Trans Mountain must file with the NEB, at least 6 months prior to commencing construction of any Project component potentially affecting each caribou range , a detailed caribou habitat assessment of the Project right-of-way through each caribou range traversed by the Project, including a 500 metre buffer on either side. The framework of the habitat assessment must use the updated critical habitat polygons delineated by the Southern Mountain Caribou Recovery Team and components of critical habitat outlined in the <i>Recovery Strategy for the Woodland Caribou, Southern Mountain Population in Canada (2014)</i> . The habitat assessment must include: a) map(s) indicating the location of the habitat;	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	b) a description of the amount of habitat and the existing habitat alteration, in hectares; c) a description of how Trans Mountain has taken available and applicable Indigenous traditional ecological knowledge into consideration into the assessment including demonstration that those Indigenous persons and groups that provided Indigenous traditional ecological knowledge, as reported during the OH-001-2014 proceeding and /or pursuant to Condition 97, had the opportunity to review and comment on the information; d) a description of how Trans Mountain has incorporated input from Appropriate Government Authorities and species experts into the assessment methodology; and e) a description of the type of habitat characterized by the biophysical attributes of critical habitat, as defined in the applicable Recovery Strategy.								
37	Caribou Habitat Restoration Plan (CHRP) Trans Mountain must file with the NEB for approval, in accordance with the timelines below, preliminary and final versions of a CHRP for each caribou range potentially affected by the Project. a) Preliminary CHRP – to be filed at least 6 months prior to commencing construction of any Project component potentially affecting each caribou range. This version of the CHRP must include the following: i) the CHRP's goals and measureable targets for each caribou range, including the goal of avoidance of critical habitat destruction; ii) a detailed description of measures that will be used to avoid or lessen Project activities that impact critical habitat, and the rationale for selecting the measures; iii) a list of criteria used to identify potential caribou habitat restoration sites; iv) conceptual decision-making tree(s) or decision framework(s) that will be used to identify and prioritize potential caribou habitat restoration sites, and mitigative actions to be used at different types of sites, including consideration of typical site factors that may constrain implementation; v) a literature review upon which the decision-making tree(s) or decision framework(s) are based, including: 1) an identification of applicable temporal and spatial caribou habitat restoration methodologies; 2) an assessment of the relative effectiveness of the identified methodologies; and 3) a detailed methodology of how the literature review was conducted. vi) the quantifiable targets and performance measures that will be used to evaluate the extent of predicted residual effects, CHRP effectiveness, the extent to which the goals and measurable targets have been met, and the need for further measures to offset unavoidable and residual effects on caribou habitat; vii) a schedule indicating when mitigation measures will be initiated and their estimated completion dates; viii) a description of how Trans Mountain has taken available and applicable Indigenous traditional ecological knowledge studies into consideration in identifying potential caribou habitat restoration sites including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and /or pursuant to Condition 97, had the opportunity to review and comment on the information; and ix) a summary of its consultations with Appropriate Government Authorities and any potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the preliminary CHRP. b) Final CHRP – to be filed on or before 1 November after the first complete growing season after completing final clean-up. This version of the CHRP must include the following: i) the preliminary CHRP, with any updates identified in a revision log that includes the rationale for any changes to decision-making criteria; ii) a complete tabular list of caribou habitat restoration sites, including locations, spatial areas, habitat quality descriptions, site-specific restoration activities, and challenges; iii) a description of how selected restoration measures are consistent with the <i>Recovery Strategy for the Woodland Caribou, Southern Mountain Population in Canada (2014)</i>; iv) maps or updated Environmental Alignment Sheets showing the site locations; v) specification drawings for the implementation of each restoration method; vi) a qualitative and quantitative and assessment of the total area of direct and indirect disturbance to caribou habitat that will be restored, the duration of spatial disturbance,	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	and the area-based extent of the resulting unavoidable and residual effects to be offset, including indirect disturbance; and vii) a summary of its consultations with Appropriate Government Authorities and any potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the final CHRP.								
38	Sowaqua Spotted Owl Mitigation Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to commencing construction of any Project component within the Sowaqua spotted owl wildlife habitat area, a Sowaqua Spotted Owl Mitigation Plan that includes: a) a summary of results from supplemental surveys conducted in the Sowaqua spotted owl wildlife habitat area; b) the area of habitat potentially directly and indirectly affected by the Project; c) a description of how an avoidance, mitigation, and offset hierarchy was considered in the plan; d) mitigation measures to be implemented, including all relevant measures committed to throughout the OH-001-2014 proceeding, any new mitigation measures resulting from supplementary surveys, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, and measurable goals for evaluating mitigation success; e) an evaluation of offset options within or outside of the Sowaqua spotted owl wildlife habitat area, an indication of the selected option, and the rationale for the selected option; f) details on post-construction monitoring of mitigation measures and offset measures, including survey methods, corrective measures, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, any adjustments to the offset measures, and a proposed reporting schedule; g) a commitment to include results of the monitoring in the post-construction environmental monitoring reports filed under Condition 151; h) details on how the mitigation and monitoring measures are consistent with applicable Recovery Strategies and Action Plans; i) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the mitigation plan including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; j) a summary of its consultations with Appropriate Government Authorities, any species experts and potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the mitigation plan; and k) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the mitigation plan.	X	X		X	X	X		
39	Hydrogeological study at Coldwater Indian Reserve (IR) No. 1 Trans Mountain must file with the NEB, at least 6 months prior to commencing construction between Veale Road and Kingsvale Pump Station, a hydrogeological report relating to the aquifer at Coldwater IR No. 1 in British Columbia. The report must: a) describe the methodology and information sources used, including any field investigations; b) delineate the extent of the aquifer in the area of Coldwater IR No. 1; c) characterize the aquifer recharge sources and aquifer confinement; d) characterize the direction and speed of groundwater movement to wells on Coldwater IR No. 1; e) quantify the risks posed to groundwater supplies on Coldwater IR No. 1 in the event of leaks, accidents or malfunctions from the Project; f) based on the assessment of risks, describe proposed measures to address identified risks, including but not limited to considerations related to routing, Project design, operational measures, or monitoring; g) provide justification for the measures proposed to address identified potential risks to groundwater supplies on Coldwater IR No. 1; and h) include a summary of consultations undertaken with the Coldwater First Nation and Appropriate Government Authorities, as well as copies of all written comments that may be provided to Trans Mountain by the Coldwater First Nation or Appropriate Government	X			X		X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	Authorities. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from the Coldwater First Nation or Appropriate Government Authorities, into the assessment.								
40	Rare Ecological Community and Rare Plant Population Management Plan Trans Mountain must file with the NEB <u>for approval</u> , at least 5 months prior to commencing construction , an updated Rare Ecological Community and Rare Plant Population Management Plan for ecological communities of concern, rare plants and lichens, and early draft, candidate, proposed, or final critical habitat for plant and lichen species under the <i>Species at Risk Act</i> , that are potentially affected directly or indirectly by the Project during construction or operations, that includes: a) a summary of supplementary survey results, and a demonstration of the overall adequacy of the rare ecological community and rare plant surveys, including the adequacy for the identification of biophysical attributes for any early draft, candidate, proposed, or final critical habitat under the <i>Species at Risk Act</i> ; b) avoidance and mitigation measures to be implemented during construction and operations, including all relevant measures committed to throughout the OH-001-2014 proceeding and any new measures resulting from supplementary surveys, with rationales and unambiguous criteria explaining under what circumstances each measure will be applied, and measurable goals against which the success of each measure will be evaluated; c) a description of how the avoidance, mitigation, and offset hierarchy was considered in developing the plan, with rationales for progressing from avoidance to mitigation to offsets; d) details on post-construction monitoring, including survey methods, the appropriate number of years of monitoring to determine the success of each type of avoidance and mitigation measure, corrective actions that might be necessary, and the circumstances under which each such action would be taken; e) a Preliminary Rare Ecological Community and Rare Plant Population Offset Plan for any ecological communities and rare plant and lichen species that have an at-risk status of S1, S1S2 or S2, or that are listed under federal or provincial legislation for protection, and for any early draft, candidate, proposed, or final critical habitat under the <i>Species at Risk Act</i> , and that, after five years of operations, have ongoing effects. This preliminary plan must include: i) a rationale for why the community, species, or critical habitat cannot be avoided by a sufficient distance to avoid both direct and indirect residual effects; ii) the expected residual effects on that community, species, or critical habitat, including a discussion of the potential for time lags between when Project effects occur and when mitigation measures would become fully functional, and taking into account the success on past projects of the proposed mitigation and corrective measures in b) and d) above; iii) an analysis of the appropriateness of offsets for the community, species or critical habitat, taking their specific features into account, and of any potential limitations on offset effectiveness; iv) a description of how the avoidance, mitigation, monitoring, corrective and offset measures are consistent with any applicable recovery, action or management strategies or plans for the community, species or critical habitat; v) an explanation with rationales of how the need for offset measures will be determined and how quantitative offset objectives will be developed, including the use and selection of offset ratios, with the aim of achieving no-net-loss; vi) the potential types of offset measures, the process for selecting which will be implemented, an estimation of the probability of their success, and how compensation sites will be selected; and vii) a discussion of how the effectiveness of offset measures will be monitored, assessed, and reported on, and problems corrected; f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; g) a summary of its consultations with Appropriate Government Authorities, any species experts and any potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and h) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Rare Ecological Community and Rare Plant Population								
			X	X		X	X	X	X

	Management Plan, including confirmation that the avoidance, mitigation, monitoring, corrective, and offset measures in the Rare Ecological Community and Rare Plant Population Management Plan will be implemented to the extent feasible in the case of discovery via their inclusion in the Rare Ecological Communities or Rare Plant Species Discovery Contingency Plan.								
41	Wetland Survey and Mitigation Plan Trans Mountain must file with the NEB <u>for approval</u> , at least 5 months prior to commencing construction , a pre-construction Wetland Survey and Mitigation Plan for wetlands potentially affected directly or indirectly by the Project during construction or operations, that includes: a) a summary of supplementary survey results and a demonstration of the overall adequacy of the wetland surveys; b) a description of any wetlands for which ground-based surveys were not possible, an explanation as to why not, attempts made to obtain access, and what further information on each wetland will be collected immediately prior to or during construction; c) a description of the functional condition of each wetland for comparison during post-construction monitoring, including individual functional conditions (e.g., habitat, hydrology and biogeochemistry, including the presence and abundance of migratory birds and species at risk), and a description of the methods used to determine the type and amount of each individual wetland function and the overall functional condition; d) a description of the crossing methods, mitigation measures and reclamation measures to be implemented during construction and operations, with rationales and unambiguous criteria explaining under what circumstances each such method and measure will be applied; e) measurable goals against which the success of wetland mitigation and reclamation will be evaluated, including a description of how such goals incorporate the aim of returning wetlands to their original functionality while allowing for reasonable natural variation, and including measurable goals for each of the first-, third- and fifth-year post-construction monitoring reporting stages for any wetland to which no-net-loss under the Federal Policy on Wetland Conservation applies; f) a description of how the i) avoidance, mitigation, and offset hierarchy; and ii) the goal of no-net-loss of wetland function, were considered in developing the plan, with rationales for progressing from avoidance to mitigation to offsets; g) details of the post-construction monitoring plan for wetlands for the first five years of operations, including corrective actions that might be necessary and the circumstances under which each such action would be taken; h) a Preliminary Wetland Offset Plan for any wetland that has not achieved reclamation success in terms of overall wetland function after five years of operations, and for any wetland to which no-net-loss under the Federal Policy on Wetland Conservation applies and that has had a temporary or ongoing loss in any individual functional condition – this plan must include: i) the expected residual effects on the wetland, including a discussion of the potential for time lags between when Project effects occur and when mitigation measures would become fully functional, taking into account the success on past projects of the proposed mitigation, reclamation and corrective measures in d) and g) above; ii) an analysis of the appropriateness of offsets for the wetland, taking its specific features into account, and of any potential limitations on offset effectiveness; iii) an explanation with rationales of how the need for offset measures will be determined and how quantitative offset objectives will be developed, including the use and selection of offset ratios and indicator species, with the aim of achieving no-net-loss; iv) the potential types of offset measures, the process for selecting which will be implemented, an estimation of the probability of their success, and how compensation sites will be selected; v) a discussion of how the effectiveness of offset measures will be monitored, assessed, and reported on, and problems corrected; and vi) for any wetland to which no-net-loss under the Federal Policy on Wetland Conservation applies, details with rationales on the offset measures that will be implemented before or during the first five years of operations to compensate for expected temporary or ongoing losses to individual functional conditions, including the amount and type of offsets required, the selection of compensation sites, identification of the parties involved in planning and implementation and their respective roles and responsibilities, a timeline for implementation, and the methods and schedule for monitoring and reporting to demonstrate offset success;	X	X		X	X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	i) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; j) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and k) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Wetland Survey and Mitigation Plan.								
42	Grasslands Survey and Mitigation Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 5 months prior to commencing construction, a pre-construction Grasslands Survey and Mitigation Plan for native grasslands in the B.C. interior that are potentially affected directly or indirectly by the Project during construction or operations, that includes: a) a summary of survey results for such grasslands, including but not limited to native plant species diversity, species at risk, the density and distribution of existing invasive plant species, and the presence of cryptogamic crust, together with a demonstration of the adequacy of such surveys and a summary of existing and ongoing land management impacts; b) a description (including quantification) of overlap of the Project with grasslands and of expected residual effects; c) a description of the mitigation and reclamation measures to be implemented for grasslands during construction and operations, including the extent to which native seed will be used, with rationales and unambiguous criteria explaining under what circumstances each such measure will be applied; d) measurable goals against which the success of grassland mitigation and reclamation will be evaluated, including goals related to cryptogamic crust recovery, invasive species control, and access control, and how existing and ongoing land management impacts and land-use changes by landowners outside the control of Trans Mountain will be taken into account; e) a description of how the i) avoidance, mitigation, and offset hierarchy, and ii) the goal of no-net-loss for grasslands, were considered in developing the plan, with rationales for progressing from avoidance to mitigation to offsets; f) details of the post-construction monitoring plan for grasslands for the first ten years of operations, including corrective actions that might be necessary and the circumstances under which each such action would be taken; g) a Preliminary Grasslands Offset Plan for those grasslands that, after ten years of operations, have not achieved reclamation success. This plan must include: i) expected residual effects on the grasslands, including a discussion of the potential for time lags between when Project effects occur and when mitigation measures would become fully functional, taking into account the success on past projects of the proposed mitigation, reclamation and corrective measures in c) and f) above; ii) an analysis of the appropriateness of offsets for the grasslands, taking their specific features into account, and of any potential limitations on offset effectiveness; iii) an explanation with rationales of how the need for offset measures will be determined and how quantitative offset objectives will be developed, including the use and selection of offset ratios, with the aim of achieving no-net-loss; iv) the potential types of offset measures, the process for selecting which will be implemented, an estimation of the probability of their success, and how compensation sites will be selected; and v) a discussion of how the effectiveness of offsets measures will be monitored, assessed, and reported on, and problems corrected; h) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information;	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	i) a summary of its consultations with Appropriate Government Authorities, any species experts, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and j) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Grasslands Survey and Mitigation Plan.								
43	Watercourse crossing inventory Trans Mountain must file with the NEB, at least 5 months prior to commencing <u>any</u> watercourse crossing construction activities, the following: a) an updated inventory of all watercourses to be crossed, including, for each crossing: i) the name of the watercourse being crossed and an identifier for the crossing; ii) the location of the crossing; iii) the primary and contingency crossing methods; iv) planned construction timing; v) information on the presence of fish and fish habitat; vi) information on the composition of riparian habitat; vii) the provincial instream work window; viii) the proposed least risk biological window and the rationale to support the proposed least risk biological window if it differs from the provincial instream work window; and ix) an indication of whether any of Fisheries and Oceans Canada's applicable "Measures to Avoid Causing Harm to Fish and Fish Habitat" cannot be implemented; b) detailed generic design drawings of trenchless, dry open-cut, frozen open-cut, and isolation crossings of various watercourse types; c) site-specific information for each watercourse crossing where any of Fisheries and Oceans Canada's applicable "Measures to Avoid Causing Harm to Fish and Fish Habitat" cannot be implemented for the primary pipeline construction method: i) detailed crossing-specific design drawings; ii) photographs up-stream, down-stream, and at the crossing location; iii) a description of the fish species and habitat that is present at the crossing location, and if fish spawning is likely to occur within the immediate area; iv) a description of the composition of the riparian habitat at the crossing location and an indication if the riparian habitat has a limiting effect on the productive capacity of the watercourse, and if its removal or disturbance represents a potential influence on fish communities; v) the site-specific mitigation and habitat enhancement measures to be used to minimize impacts; vi) any potential residual effects; vii) proposed reclamation measures; and viii) a discussion of the potential impacts to local fisheries resources within the immediate area as a result of the crossing's construction; d) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the inventory, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and e) a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted.	X	X						
44	Wildlife Species at Risk Mitigation and Habitat Restoration Plans Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction, Wildlife Species at Risk Mitigation and Habitat Restoration Plans for each species whose draft, candidate, proposed, or final critical habitat is directly or indirectly affected by the Project. Each plan must include: a) a summary of supplementary pre-construction survey results, including surveys for biophysical	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	attributes of critical habitat; b) the location and type of critical habitat, for those wildlife species with early draft and candidate critical habitat, including a description of the biophysical attributes, potentially directly and indirectly affected by the Project; c) the location, types and total spatial area for each type of critical habitat for those wildlife species with proposed or final critical habitat, including a description of the biophysical attributes, potentially directly and indirectly affected by the Project; d) a detailed description of measures that will be used to avoid the destruction of critical habitat; e) a detailed description of mitigation and habitat restoration measures to be implemented to reduce direct and indirect Project effects on critical habitat, including all relevant measures committed to throughout the OH-001-2014 proceeding, any new mitigation measures resulting from supplementary surveys, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, and measurable targets for evaluating mitigation and critical habitat restoration success; f) identification and review of alternative mitigation and habitat restoration measures to avoid or lessen direct and indirect Project effects on critical habitat, and the rationale for the selected measure(s); g) detailed description of how selected mitigation and critical habitat restoration measures address the potential for time lags between when the Project impacts occur and when mitigation and critical habitat restoration measures are implemented and are fully functional; h) details on post-construction monitoring of mitigation measures and critical habitat restoration measures, including survey methods, corrective measures, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, and a proposed reporting schedule; i) details on how the mitigation, critical habitat restoration measures, and monitoring measures are consistent with applicable Recovery Strategies and Action Plans; j) a commitment to include the results of the monitoring in the post-construction environmental monitoring reports filed under Condition 151; k) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plans including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; l) a summary of its consultations with Appropriate Government Authorities, any species experts, potentially affected Indigenous groups and affected landowner/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and m) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Wildlife Species at Risk Mitigation and Habitat Restoration Plans.								
45	Weed and Vegetation Management Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction, an updated Weed and Vegetation Management Plan for the Project that includes: a) a summary of supplementary survey results, including pre-construction weed surveys, and a demonstration of the adequacy of such surveys; b) measurable goals; c) criteria describing when and where problem vegetation will be managed for each Project phase, including pre-construction, construction, post-construction, and operations; d) a description of potential adverse effects related to treatment measures; e) management procedures and a decision-making framework for selecting appropriate prevention and treatment measures, including a description of relevant specific habitats, land uses and land management plans and how each will be considered and kept up-to-date in selecting prevention and treatment measures; f) the methods and schedule for short- and long-term vegetation monitoring; g) a summary of its consultations with Appropriate Government Authorities, invasive plant councils or committees, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and	X	X	X	X	X	X	X	X

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	h) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Weed and Vegetation Management Plan.								
46	Contamination Identification and Assessment Plan Trans Mountain must file with the NEB <u>for approval</u> , at least 4 months prior to commencing construction , a Contamination Identification and Assessment Plan that includes: a) a description of the procedures that have been implemented to-date, and that will be implemented prior to or during construction, to identify and assess pre-existing solid, liquid or gaseous contamination that could be disturbed by, or affect, the Project, including whether site investigations have been or will be undertaken; b) a demonstration of the adequacy of the procedures in a) with reference to relevant standards, guidelines, and best practices, including how historical land use has been taken into account and a discussion of the potential for chemicals of concern to not be detectable by smell or by sight; c) the information that has been or will be reported by Trans Mountain, including to whom and when, concerning pre-existing contamination; d) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and e) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Contamination Identification and Assessment Plan.	X	X	X	X	X	X	X	X
47	Access Management Plan(s) Trans Mountain must file with the NEB <u>for approval</u> , at least 4 months prior to commencing construction , an Access Management Plan(s) to be included within the updated Environmental Protection Plans required by Conditions 72 and 78. Each plan must address issues related to soil, vegetation, fish and fish habitat, and wildlife and wildlife habitat. Each plan must also describe access control measures proposed to control both human and predator access during construction and operations, and include: a) objectives of the plan; b) measurable goals for evaluating the plan's success in achieving its objectives; c) a summary of any related baseline information that has been or will be collected to aid in evaluating the plan's success, and justification of the adequacy of this baseline information, or a rationale if no baseline information has or will be collected; d) a list of sites where access control measures will be implemented for construction and those that will remain in place throughout operations, the control measure(s) proposed at those sites, and the rationale for selecting those sites and measures; e) the methods for monitoring the effectiveness of access control measures implemented during construction and operations, and justification of the adequacy of such monitoring; f) a description of available adaptive management measures and of the criteria Trans Mountain will use to determine if and when adaptive management measures are warranted based on monitoring results; g) a commitment to report, as part of Trans Mountain's post-construction environmental monitoring reports (required by Condition 151), on the control measures implemented, monitoring undertaken, and the success of control measures in meeting Access Management Plan goals and objectives, as well as a schedule, with rationale, for reporting throughout operations; h) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge studies into consideration including demonstration that those Indigenous persons and groups that provided Indigenous traditional ecological knowledge, as reported during the OH-001-2014 proceeding and /or pursuant to Condition 97, had the opportunity to review and comment on the information; and i) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Plan / Report.	X	X		X	X	X		
48	Navigation and navigation safety plan Trans Mountain must file with the NEB, <u>for approval</u> , at least 4 months prior to commencing construction , a Navigation and Navigation Safety Plan that includes: a) an updated list of navigable waterways to be crossed by or affected by the Project (including power lines, marine terminal, temporary or permanent bridge crossings, or other ancillary works that are physically or operationally connected to the Project);	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	b) an updated listing of effects of the Project on navigation and navigation safety for each of the identified waterways identified in a); c) proposed mitigation measures to address Project effects on navigation and navigation safety for each of the identified waterways, including adherence to codes and standards (such as the CSA); and d) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and waterway users, regarding their navigational use of each of the identified waterways. In its summary, Trans Mountain must: i) describe the Appropriate Government Authorities, potentially affected Indigenous groups, and commercial and recreational waterway users consulted; ii) describe how Trans Mountain identified those consulted; and iii) provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.								
49	Technical working group (TWG) reports Trans Mountain must file with the NEB, at least 4 months prior to commencing construction and every 6 months thereafter until after commencing operations, a report describing the activities undertaken by the TWGs during the reporting period and the outcomes of these activities. The reports must include, at a minimum: a) a list of all members of each TWG; b) the methods, dates and location of all TWG activities or meetings; c) a summary of all issues or concerns raised or addressed during the TWG activities; d) a description of outcomes or measures that were or will be implemented to address the issues identified or concerns raised; or, if any measures will not be implemented, a rationale for why not; and e) a description of any unresolved issues or concerns, and a description of how these will be addressed, or a rationale for why no further measures will be required.	X							
50	High-voltage alternating current (AC) interference Trans Mountain must file with the NEB, at least 4 months prior to commencing construction: a) a report confirming that Trans Mountain has achieved an engineered solution to mitigate possible damage to pipeline segments caused by the power line fault current from power line footings and other below ground fault current discharge facilities of B.C. Hydro's unshielded transmission power lines that are located less than 30 metres from those segments. The report must include: i) a summary of the above-mentioned engineered solution and an explanation of how the engineered solution adequately mitigates possible damage to the pipeline; ii) a list of pipeline segments where mitigation will be applied; and iii) an explanation of measures taken by Trans Mountain to reach an agreement with B.C. Hydro towards implementing the engineered solution. Trans Mountain must provide a copy of the report to B.C. Hydro at the same time that it is filed with the NEB; b) a report detailing how Trans Mountain's design reduces hazardous induced voltages on its pipeline segments to meet a maximum 15 VAC under all steady state operating conditions; and c) a report demonstrating how Trans Mountain would comply with the requirements of IEEE Standard 80 to limit touch and step potentials to all points of contacts to pipeline segments due to power line faults or switching surges, and include a list of affected pipeline segments.	X							
51	Field changes manual for geohazard mitigation Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction, a field changes manual for geohazard mitigation. This manual must include: a) decision criteria for implementing mitigation for any geohazards identified during construction; b) specific criteria for implementing changes to the designs, grading, special materials, protective structures, burial depth, installation procedures, erosion mitigation measures, and monitoring; and c) details regarding the required qualifications of the field staff that will implement the manual.	X							
52	Air Emissions Management Plan for the Westridge Marine Terminal Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction at the Westridge Marine Terminal, an Air Emissions Management Plan for the Westridge Marine Terminal that includes:	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	a) locations of air monitoring sites (on a map or diagram), including the rationale for the locations selected; b) confirmation that the new fixed air monitoring stations will be installed and operating at least one year prior to commencing operations at the Westridge Marine Terminal to establish robust local baseline data; c) the methods and schedule for ambient monitoring of contaminants of potential concern in air (e.g., particulate matter [including diesel particulate matter and speciation of PM_{2.5}], nitrogen oxides (including NO₂), sulphur dioxide, hydrogen sulphide, ozone, mercaptans, reduced visibility and volatile organic compounds) following a recognized protocol (e.g., National Air Pollution Surveillance program or U.S. Environmental Protection Agency), and emissions source tracking; d) representative meteorological data (e.g., wind speed, wind direction, air temperature and relative humidity) for the monitoring period; e) description of monitoring equipment and procedures for monitoring station data recording, assessment, quality assurance and reporting details, including a description of how the real time and non-continuous air quality monitoring data will be made available to the public; f) a particulate matter management plan; g) a description of the public and Indigenous communication and complaint response processes; h) the criteria or thresholds that, if triggered or exceeded, would require implementing additional mitigation measures; i) a description of additional mitigation measures that would be implemented as a result of the monitoring data or ongoing concerns; and j) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.								
53	Fugitive Emissions Management Plan for the Westridge Marine Terminal Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction at the Westridge Marine Terminal, a Fugitive Emissions Management Plan for the Westridge Marine Terminal that includes: a) a description of the sources of the fugitive emissions that will be generated from the Westridge Marine Terminal during construction and operations; b) a description of the emission and odour controls that will be employed to reduce fugitive emissions during tanker loading and other sources identified in a); c) procedures for verifying, tracking, and reporting on: i) fugitive emissions during tanker loading; ii) volatile organic compound collection efficiency; iii) the vapour recovery unit's hydrogen sulphide and mercaptan removal efficiency, as well as its BTEX reduction efficiency; and iv) the vapour combustion unit's hydrogen sulphide and mercaptan; removal efficiency, as well as its combustion efficiency; d) procedures for identifying any leaks or equipment malfunctions during operation of the vapour recovery and vapour combustion units; e) methods for quantifying emissions of particulate matter and volatile organic compounds (with vapour recovery and vapour combustion units in operation); f) any additional mitigation measures that will be employed to further reduce fugitive emissions; g) a description of Trans Mountain's program for addressing complaints with respect to fugitive emissions, including a communication and notification plan; and h) a summary of its consultations with Appropriate Government Authorities. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
54	Fugitive Emissions Management Plan for Edmonton, Sumas and Burnaby Terminals Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction at each Terminal, a Fugitive Emissions Management Plan for the Edmonton, Sumas, and Burnaby Terminals. This plan must include: a) a description of the fugitive emission sources within the terminals during construction and operations; b) a description of the emission and odour controls that will be employed to reduce fugitive emissions from the tanks, and any other sources identified in a); c) procedures for verifying the capture and destruction efficiency of tank vapour activation units or any other emission or odour control units at the terminals; d) quantification of fugitive emissions during operations, including the methods used; e) any additional mitigation measures that will be employed to further reduce the fugitive emissions; f) a description of Trans Mountain's program for addressing complaints with respect to fugitive emissions, including a public and Indigenous communication and complaint response process; and g) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.							X	
55	Fugitive Emissions Management Plan for pump stations Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction at any pump stations, a Fugitive Emissions Management Plan for the pump stations associated with the Project that includes: a) a description of the procedures implemented for leak detection and the criteria used in selecting target leaking components; b) quantification methods considered and the rationale for the selected method(s); c) monitoring frequency for each target leaking component and the parameters that will be measured; d) a decision framework that will be implemented to repair or replace leaking components; e) a description of record-keeping procedures; and f) a discussion of additional mitigation measures that will be employed to minimize fugitive emissions.		X			X	X		
56	Grizzly Bear Mitigation Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 4 months prior to commencing construction in each vulnerable grizzly bear population unit / grizzly bear management area, a Grizzly Bear Mitigation Plan for each of these areas. Trans Mountain must provide a rationale for why any vulnerable grizzly bear population units / grizzly bear management units potentially affected by the Project are not addressed in the plan. The Grizzly Bear Mitigation Plan(s) must include: a) a summary of results from any supplemental surveys conducted; b) potential direct and indirect effects of Project activities on vulnerable grizzly bear population units and grizzly bear management units; c) mitigation measures to be implemented, including all relevant measures committed to throughout the OH-001-2014 proceeding, any new mitigation measures resulting from supplementary surveys, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, and measurable targets for evaluating mitigation success; d) details on post-construction monitoring of mitigation measures, including survey methods, corrective measures, detailed criteria using clear and unambiguous language that describes the circumstances under which each measure will be applied, and a proposed reporting schedule; e) a commitment to include results of the monitoring in the post-construction environmental monitoring reports filed under Condition 151; f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; g) a summary of its consultations with Appropriate Government Authorities, any species experts and potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its	X	X		X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	consultation, including any recommendations from those consulted, into the plan(s); and h) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Grizzly Bear Mitigation Plan, including confirmation that the mitigation, monitoring, and corrective measures in this plan will be implemented in the case of discovery via their inclusion in Trans Mountain's Wildlife Species of Concern Discovery Contingency Plan.								
57	Commercial Support for the Project Trans Mountain must file with the Board, at least 3 months prior to commencing construction , confirmation, signed by an officer of the company, that: a) the Project has secured agreements or contracts that remain in force with shippers for a minimum term of 15-years for no less than 60 per cent of its total capacity (890,000 barrels per day); and b) any rights to terminate held by shippers that may have existed in any agreements or contracts between Trans Mountain and shippers (which may have reduced the Project's contracted total capacity to less than 60 per cent for a minimum term of 15 years) have lapsed and or expired because their conditions precedent have been satisfied or waived.	X							
58	Training and education monitoring reports a) Trans Mountain must file with the NEB, at least 3 months prior to commencing construction, and every 6 months thereafter until after commencing operations , monitoring reports for the implementation and outcomes of Indigenous, local, and regional training and education measures and opportunities for the Project. The reports must include the following: i) a description of each training and education measure and opportunity indicator that was monitored, including duration, participant groups, education and training organization, and intended outcomes; ii) a summary and analysis of the progress made toward achieving intended outcomes of each training and education measure and opportunity, including an explanation for why any intended outcomes were not achieved; and iii) a description of identified or potential training or education gaps, and any proposed measures to address them or to support or increase training and education measures and opportunities. b) Trans Mountain must file with the NEB, within 6 months after commencing operations , a final report.	X							
59	Worker accommodation strategy Trans Mountain must file with the NEB <u>for approval</u> , at least 3 months prior to commencing construction , a worker accommodation strategy, developed in consultation with appropriate municipal or provincial authorities. The strategy must include: a) a final summary of all proposed accommodations, including the location of any temporary camp(s); b) the number of workers that will be housed; and c) a description of how the strategy addresses any concerns or requests raised in consultation with municipal or provincial authorities. In the event that temporary camp(s) are to be used, the strategy must also include: i) a description of how the potential environmental and socio-economic impacts have been assessed, and a description of all associated mitigation measures; ii) copies of, or reference to, any mitigation or operational plans that will be required or implemented for the camp(s), including a description of how Trans Mountain has incorporated any additional mitigation measures into relevant Environmental Protection Plan(s); iii) copies of any necessary municipal or provincial permits for any camp(s) that have been received 3 months prior to construction. If camp permits are not yet in place 3 months prior to commencing construction, provide: 1) a list of the outstanding camp permits and a schedule for when these camp permits will be in place; and 2) copies of any outstanding camp permits prior to commencing construction; iv) copies or excerpts of all policies relating to the rules of conduct for workers housed at the camp(s); v) confirmation that all policies relating to the camp(s) will be provided to workers; vi) confirmation that all policies relating to the camp(s) were made available to all local communities and other relevant service providers in proximity to any camp(s) that will be	X	X		X	X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	used for the Project; and vii) a summary of its consultations with affected landowners / tenants where any camp(s) will be located. Trans Mountain must provide: 1) a description of the information provided to landowners / tenants; and 2) description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Strategy.								
60	Environmental and socio-economic assessment - s.58 temporary construction lands and infrastructure Trans Mountain must file with the NEB <u>for approval</u> , at least 3 months prior to commencing construction , an environmental and socio-economic assessment for all temporary construction lands and infrastructure approved pursuant to this Order. The assessments must include: a) a list of the locations and dimensions of all temporary construction lands and infrastructure; b) environmental alignment sheets or as-built drawings at an appropriate scale, clearly depicting temporary construction lands and infrastructure; c) results of any pre-construction surveys within the areas that were not previously subject to such surveys, and an indication of potential residual effects; d) all associated mitigation measures that are beyond those identified during the OH-001-2014 proceeding; e) analysis supporting the use of the measures in d), including any supplementary reports; f) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information based on any supplemental surveys completed; and g) a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants, as well as copies of all written comments that may be provided to Trans Mountain by those consulted. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the assessment.				X				
61	List of temporary infrastructure sites Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , a complete list of all temporary infrastructure sites to be constructed for the Project, and must file any updates as they become available . This list must include information on each site's location, structures to be installed, the anticipated date for commencing construction, and activities involved in its construction. The initial list and any updates must also include the condition numbers (those under the "prior to commencing construction" phase heading) that are applicable to each site and an indication of whether each of those conditions has been or remains to be satisfied.				X				
62	Construction schedule Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , a construction schedule identifying the major construction activities expected and, on a monthly basis, on the first working day of each calendar month from the commencement of construction until after commencing operations , updated detailed construction schedules.	X	X	X	X	X	X	X	X
63	Security Management Programs Trans Mountain must file confirmation, signed by an officer of the company: a) at least 3 months prior to commencing construction , that it has developed a Security Management Program for the construction phase of the Project; and b) at least 3 months prior to commencing operations , that it has amended its operations phase Security Management Program to include operation of the Project; pursuant to the <i>National Energy Board Onshore Pipeline Regulations</i> and CSA Z246.1 (as amended from time to time).	X	X	X	X	X	X	X	X
64	Construction safety manuals Trans Mountain must file with the NEB: a) at least 3 months prior to commencing construction , the Health and Safety Management Plan for the Project; and b) at least 2 months prior to commencing construction , Construction Safety Manuals (Project-Specific Safety Plans) for the applicable Project components. These must include separate Construction Safety Manuals for pipeline construction, terminal and pump station construction, Burnaby Mountain tunnel construction, and Westridge Marine Terminal construction. These manuals must address routine construction activities, as well as blasting, tunneling, avalanche	X	X	X	X	X	X	X	X

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	safety, safe work in proximity to operational pipelines and facilities, and special access procedures that may be required in areas subject to activities other than Project construction.								
65	Hydrology – notable watercourse crossings Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , revised flood frequency estimates for all notable watercourse crossings, as defined by Trans Mountain in its application. These estimates must incorporate the results of field investigations and bathymetric surveys completed since the Project application was filed, and be presented in a format similar to that presented in Application Volume 4A, Appendix I – Route Physiography and Hydrology Report, Appendix B – Notable Water Crossing Catchment Details (Filing A56000).	X							
66	Risk Management Plan for geohazards Trans Mountain must develop and file with the NEB, at least 3 months prior to commencing construction , an updated Risk Management Plan for addressing the threats of existing and potential geohazards during construction of the Project. This plan must be updated as additional site-specific geotechnical information is obtained through detailed investigations, and modified as geohazards are encountered during construction. Trans Mountain must make any updates or modifications available to the NEB upon request .	X			X				
67	Outstanding horizontal directional drilling geotechnical and feasibility reports Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , Geotechnical Reports and Horizontal Directional Drilling Feasibility and Design Reports, along with final design drawings, for each of the following crossings: a) Coldwater River 4 crossing; b) North Thompson River 6 crossing; c) North Thompson River 7 crossing; d) Pembina River crossing. e) Raft River crossing; f) Sumas River crossing (suitability for Direct Pipe® installation); g) any additional river crossing along the new Line 2 pipeline segments where horizontal directional drilling or other trenchless crossing method is being considered; and h) the Coquitlam Landfill, if Horizontal Directional Drilling or other trenchless crossing method is being considered.	X							
68	Seismic reports – liquefaction potential Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , a final report that identifies all sites along the Project, that have “Very High,” “High,” and “Moderate” liquefaction-triggered ground movement potential, and that describes how the potential for liquefaction-triggered ground movement will be mitigated at each site.	X							
69	Fault studies Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , the results of fault-mapping studies that were ongoing during or undertaken after the OH-001-2014 proceeding, for use in the detailed design of the Project. This filing must include conclusions regarding possible seismic activity during the Holocene epoch for Sumas Fault, Vedder Mountain Fault, Fraser River-Straight Creek Fault and Rocky Mountain Trench, and other possible hidden faults, as well as the potential for compounding risks due to the proximity of the Vedder Mountain and Sumas Faults.	X							
70	Strain-based design Trans Mountain must file with the NEB, at least 3 months prior to commencing construction , the following information related to strain-based design, where it is applied: a) the location and rationale for selecting strain-based design in each location; b) a report summarizing the adequacy of the strain-based design for various loading scenarios during pipeline construction and operation for each location provided in a); and c) a list of standards and Project-specific specifications, including testing procedures, used in the strain-based design.	X							
71	Riparian Habitat Management Plan Trans Mountain must file with the NEB for approval , at least 3 months prior to commencing construction , a Riparian Habitat Management Plan that would apply to all defined watercourses crossed by the Project. The plan must be supported with rationales and unambiguous criteria explaining under what circumstances each such measure and strategy would apply, and must include the following.	X	X						

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	a) a description of the methods used to determine pre-construction functionality (e.g., for fish, wildlife, and rare plants) of the riparian habitat, including a justification how such functionality is assessed; b) a description of the mitigation measures and the watercourse reclamation strategies (reclamation method, reclamation measures, and application criteria) for the range of defined watercourses crossed by the Project; c) a description of the generalized vegetation planting plans for the range of defined watercourses crossed by the Project; that includes the diversity and density of species to be planted, planting locations, and application criteria; d) clearly defined measureable reclamation goals and targets for years 1, 3, and 5, post-construction, to determine whether riparian habitat has returned, or is on a sufficient trajectory to return, to pre-construction functionality; e) a discussion of how the mitigation measures, reclamation strategies, and vegetation planting plans are anticipated to return riparian habitat to pre-construction functionality, using the goals and targets provided in d); f) a summary of the information in a)-d) for each defined watercourse crossing, that includes: i) watercourse crossing ID; ii) a defined riparian habitat buffer; iii) a catalogue of the pre-construction species diversity and density of the riparian habitat; iv) classification of riparian habitat functionality; v) area of the riparian habitat to be impacted; vi) the mitigation measures, reclamation strategy, and vegetation planting plan to be implemented; and vii) the measureable goals and targets; g) details of the post-construction monitoring plan for the first five years of operations, including evaluations of reclamation activities, and potential corrective actions and enhancement measures that might be necessary and the circumstances under which each such action would be taken; h) a Preliminary Riparian Habitat Offset Plan, that would apply to all defined watercourse crossings located in watersheds identified as being above the riparian habitat disturbance threshold (>18 per cent of riparian habitat disturbed in the watershed) or classified as High Sensitive fish-bearing by Trans Mountain during the OH-001-2014 proceeding, and, where, after the fifth complete growing season, riparian habitat has not returned, or is not trending towards sufficient pre-construction functionality. The plan must include: i) how the need for offset measures will be determined, including offset ratios; ii) potential offset measures, the process for selecting which will be implemented, and an evaluation of the probability of their success; and iii) how the effectiveness of offset measures will be assessed, monitored, and reported on; i) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and j) a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its plan, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan of updates.								
72	Pipeline Environmental Protection Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction, an updated Project-specific Pipeline Environmental Protection Plan for the construction of the pipeline. The updated Pipeline Environmental Protection Plan must be a comprehensive compilation of all environmental protection procedures, mitigation measures, and monitoring commitments, as set out in Trans Mountain's Project application, its subsequent filings, or as otherwise committed to during the OH-001-2014 proceeding. The updated Pipeline Environmental Protection Plan must describe the criteria for implementing all procedures and measures using clear and unambiguous language that confirms Trans Mountain's intention to implement all of its commitments. The updated Pipeline Environmental Protection Plan must include the following: a) environmental procedures (including site-specific plans), criteria for implementing these	X	X						

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	procedures, mitigation measures, and monitoring applicable to all Project phases and activities; b) policies and procedures for environmental training and the reporting structure for environmental management during construction, including the qualifications, roles, responsibilities, and decision-making authority for each job title identified in the updated Pipeline Environmental Protection Plan; c) any additional measures arising from supplemental pre-construction studies and surveys; d) updated contingency plans and management plans; e) updated alignment sheets; f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the Pipeline Environmental Protection Plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and g) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Pipeline Environmental Protection Plan.								
73	Traffic Control Plans for public roadways Trans Mountain must file with the NEB, at least 3 months prior to commencing construction of the pipeline and at least 2 months prior to commencing construction at each terminal and pump station, Traffic Control Plans for the use of public roadways for the Project. The plans must include: a) information regarding the timing and location of key construction activities (including equipment mobilization and staging, pipe stockpiling, pipeline and pump station construction, and equipment demobilization); b) current traffic volumes and anticipated traffic volumes during the construction period for both day and night times; c) a description of the predicted traffic flows, including vehicle types and volumes, at key construction points, marshalling areas, access roads, and public roadways; d) an assessment of the potential impacts associated with the increased volume of construction-related traffic (e.g., safety hazards, noise, light, dust, etc.) and associated mitigation measures; and e) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plans.	X	X	X	X	X	X	X	X
74	Horizontal directional drilling (HDD) Noise Management Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction of each HDD crossing, a site-specific HDD Noise Management Plan that includes: a) proposed hours of daytime and nighttime work; b) baseline daytime and nighttime ambient sound levels at noise sensitive areas within 500 metres of the HDD entry and exit sites; c) predicted noise levels caused by HDD at the most affected receptors without mitigation measures implemented; d) proposed HDD noise mitigation measures, including all technologically and economically feasible mitigation measures; e) predicted noise levels at the most affected receptors with mitigation measures implemented, including noise contour map(s) showing potentially affected receptors; f) an HDD noise monitoring program, including locations, methodology, and schedule; g) a description of the public and Indigenous communication and complaint response process; h) a contingency plan that contains proposed mitigation measures for addressing noise complaints, which may include the temporary relocation of specific residents; and i) confirmation that Trans Mountain will provide notice to nearby residents in the event that a planned blowdown is required, and that the planned blowdown will be completed during daytime hours whenever possible.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
75	Nooksack Dace and Salish Sucker Management Plan a) Trans Mountain must construct all watercourse crossings located within nooksack dace or salish sucker proposed or final critical habitat, as defined by Fisheries and Oceans Canada Recovery Strategies for the species, using trenchless crossing methods with entry and exit points located outside of the riparian habitat area, unless demonstrated to be not feasible. b) At least 3 months prior to commencing construction of any watercourse crossing located within nooksack dace or salish sucker proposed or final critical habitat, Trans Mountain must file a list of these watercourse crossings, and, for each, indicate whether or not a trenchless crossing method is feasible. c) For each watercourse crossing in b) where a trenchless crossing method is not feasible, at least 3 months prior to commencing construction of that crossing, Trans Mountain must file the following with the NEB <u>for approval</u>: i) a summary of the trenchless crossing feasibility studies completed and a discussion of the risks and constraints associated with the trenchless watercourse crossing, and the rationale for not employing a trenchless method; ii) the updated watercourse crossing method, location of crossing, planned construction timing, and the provincial instream work window; iii) any site-specific mitigation and reclamation measures, and species-specific habitat enhancement measures; iv) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include measures listed in iii); v) a discussion of how the site-specific mitigation and reclamation measures, and species-specific enhancement measures, relate to Fisheries and Oceans Canada Recovery Strategies and Action Plans; vi) details on any monitoring to be undertaken and a commitment to include any results in the post-construction environmental monitoring reports filed under Condition 151; vii) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and viii) a summary of consultations with Appropriate Government Authorities and any species experts. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan. d) For any watercourse crossing identified in b) where Trans Mountain will employ a trenched contingency crossing method, Trans Mountain must file with the NEB, <u>for approval</u>, the information listed in c), at least 30 days prior to commencing construction of the contingency watercourse crossing.	X							
76	Old Growth Management Areas Mitigation and Replacement Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction within old growth management areas, an Old Growth Management Areas Mitigation and Replacement Plan for these areas that are potentially affected directly or indirectly by the Project during construction or operations, that includes: a) avoidance and mitigation measures to be implemented during construction and operations, with rationales and unambiguous criteria explaining under what circumstances each measure will be applied, and measurable goals against which the success of each measure will be evaluated; b) a description of how the avoidance, mitigation, and offset hierarchy was considered in developing the plan, with rationales for progressing from avoidance to mitigation to offsets; c) details on post-construction monitoring, including corrective actions that might be necessary and the circumstances under which each such action would be taken; d) the expected residual effects (including quantification) on old growth management areas, including a discussion of the potential for time lags between when Project effects occur and when mitigation measures would become fully functional; e) replacement or other offset measures that will be implemented to compensate for residual effects with the aim of no-net-loss to old growth forests within old growth management areas overall, including: i) discussion of the appropriateness of compensation for the old growth management area, taking its specific features into account, and of any potential limitations of the effectiveness of such replacement or offset measures;	X			X	X	X		

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	ii) an explanation with rationales on the amount and type of replacements or other offsets required; iii) a timeline for their implementation; iv) the selection of compensation sites; v) identification of the parties involved in planning and implementation and their respective roles and responsibilities, and vi) a description of the methods and schedule for monitoring and reporting to demonstrate compensation success; f) a summary of its consultations with Appropriate Government Authorities and any potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; and g) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the Old Growth Management Areas Mitigation and Replacement Plan.								
77	Archaeological and cultural heritage assessment – Lightning Rock Trans Mountain must file with the NEB, at least 3 months prior to commencing construction of the pipeline between the Sumas Terminal and the Sumas Pump Station, a report on archaeological and cultural heritage field investigations undertaken to assess the potential impacts of Project construction and operations on the Lightning Rock site at Sumas, British Columbia. The report must include: a) a detailed description of the assessment plan that was developed, in consultation with the Stó:lō Collective, for the involvement of the Stó:lō Collective in designing and undertaking surveys; b) a description of the pre-construction archaeological and cultural heritage surveys conducted at the site, including: i) survey methodologies used; and ii) data and information sources, including information and Indigenous traditional knowledge provided by the Stó:lō Collective; c) a site description, including maps at appropriate scales and levels of detail, confirming the site boundaries; d) an assessment of the potential environmental and socio-economic impacts of Project construction and operations on the archaeological resources and cultural heritage of the site; e) all associated mitigation measures that are beyond those identified during the OH-001-2014 proceeding to address any identified impacts; f) analysis supporting the use of the measures in e), including any additional relevant reports; g) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) and Environmental Alignment Sheets to include any relevant information based on the surveys completed; and h) a summary of consultations undertaken with the Stó:lō Collective, and Appropriate Government Authorities, as well as copies of all written comments that may be provided to Trans Mountain by the Stó:lō Collective or government authorities. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from the Stó:lō Collective or government authorities, into the assessment.	X			X				

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
78	Facilities Environmental Protection Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction at the facilities (terminals, pump stations, temporary facilities, and associated infrastructure), an updated Project-specific Facilities Environmental Protection Plan for the construction at the facilities. The updated Facilities Environmental Protection Plan must be a comprehensive compilation of all environmental protection procedures, mitigation measures, and monitoring commitments, as set out in Trans Mountain's Project application, its subsequent filings, or as otherwise committed to during the OH-001-2014 proceeding. The updated Facilities Environmental Protection Plan must describe the criteria for implementing all procedures and measures using clear and unambiguous language that confirms Trans Mountain's intention to implement all of its commitments. The updated Facilities Environmental Protection Plan must include the following: - environmental procedures (including site-specific plans), criteria for implementing these procedures, mitigation measures, and monitoring applicable to all Project phases and activities; - policies and procedures for environmental training and the reporting structure for environmental management during construction, including the qualifications, roles, responsibilities, and decision-making authority for each job title identified in the updated Facilities Environmental Protection Plan; - any additional measures arising from supplemental pre-construction studies and surveys; - updated contingency plans and management plans; - updated facility drawings including relevant site-specific resources and mitigations; - a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the Environmental Protection Plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and / or pursuant to Condition 97, had the opportunity to review and comment on the information; and - a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Facilities Environmental Protection Plan.		X	X	X	X	X	X	X
79	Air Emissions Management Plan for the Edmonton, Sumas and Burnaby Terminals Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction at each of the Edmonton, Sumas, and Burnaby Terminals, an Air Emissions Management Plan for each of those terminals that includes: - a description of the baseline, pre-construction conditions informed by relevant modelling results and recent existing monitoring data; - descriptions of the locations of air monitoring sites (on a map or diagram), including the rationale for the locations selected; - the timing for installing air monitoring stations; - the methods and schedule for monitoring ambient ground-level concentrations of potential concern (e.g., volatile organic compounds, ozone, hydrogen sulphide, mercaptans, criteria air contaminants, secondary ozone and particulate matter, and reduced visibility) and emissions source tracking; - procedures for monitoring station data recording, assessment, and reporting details, including a description of how the real time and non-continuous air quality monitoring data will be made available to the public; - a description of the public and Indigenous communication and complaint response process; - the criteria or thresholds that, if triggered or exceeded, will require implementing additional emissions reduction measures; - possible measures that will be implemented as a result of the monitoring data or ongoing concerns; and - a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners / tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan.							X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
80	Noise Management Plan for construction at terminals and pump stations Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction at each terminal and pump station, a Noise Management Plan for construction, where residences are within 300 metres of the proposed construction activities. The plan must include: a) proposed hours of daytime and nighttime work; b) noise mitigation measures, including all technologically and economically feasible mitigation measures; c) a noise monitoring program, including locations, methodology, and schedule; d) a description of the public and Indigenous communication and noise complaint response process; and e) a contingency plan that contains proposed mitigation measures for addressing noise complaints, which may include the temporary relocation of specific residents.	X				X	X	X	
81	Westridge Marine Terminal Environmental Protection Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing construction at the Westridge Marine Terminal, an updated Project-specific Westridge Marine Terminal Environmental Protection Plan for the construction at the Westridge Marine Terminal. The updated Environmental Protection Plan must be a comprehensive compilation of all environmental protection procedures, mitigation measures, and monitoring commitments, as set out in Trans Mountain's Project application, its subsequent filings, or as otherwise committed to during the OH-001-2014 proceeding. The updated Westridge Marine Terminal Environmental Protection Plan must describe the criteria for implementing all procedures and measures using clear and unambiguous language that confirms Trans Mountain's intention to implement all of its commitments. The updated Westridge Marine Terminal Environmental Protection Plan must include the following: a) environmental procedures (including site-specific plans), criteria for implementing these procedures, mitigation measures, and monitoring applicable to all Project phases and activities; b) policies and procedures for environmental training and the reporting structure for environmental management during construction, including the qualifications, roles, responsibilities, and decision-making authority for each job title identified in the updated Environmental Protection Plan; c) any additional measures arising from supplemental pre-construction studies and surveys; d) updated contingency plans and management plans; e) updated facility drawings including relevant site-specific resources and mitigations; f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the Westridge Marine Terminal Environmental Protection Plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and g) a summary of its consultations with Appropriate Government authorities and any potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Westridge Marine Terminal Environmental Protection Plan.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
82	Light Emissions Management Plan for the Westridge Marine Terminal Trans Mountain must file with the NEB, at least 3 months prior to commencing construction at the Westridge Marine Terminal, a Light Emissions Management Plan for the Westridge Marine Terminal that includes: a) a summary of the results of an area lighting study, including how potential impacts on surrounding communities and safety and operational requirements were considered; b) a description of the mitigation and best practice measures considered for the terminal lighting design and how the proposed design and operation will minimize the impacts from light on land-based residents and marine users; c) a summary of its consultations with Port Metro Vancouver, as well as copies of all written comments that may be provided to Trans Mountain by Port Metro Vancouver. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from Port Metro Vancouver, into the plan; and d) a plan for how Trans Mountain will communicate its proposed terminal lighting design and associated mitigation measures to limit any nuisance lighting disturbances to land-based residents and marine users.	X							
83	Westridge Marine Terminal (offshore) – pile design Trans Mountain must file with the NEB, at least 3 months prior to commencing construction at the Westridge Marine Terminal, the final design basis for the offshore pile foundation layout of the Westridge Marine Terminal.	X							
84	Emergency release system at the Westridge Marine Terminal Trans Mountain must file with the NEB, at least 3 months prior to commencing construction at the Westridge Marine Terminal, its conclusions on the necessity of an emergency release system for the loading arms at the Westridge Marine Terminal. The conclusions must be supported by a comprehensive study describing the advantages and disadvantages of incorporating an emergency release system. This study must: a) consider the application of: i) emergency release couplers; and ii) an emergency release system, during both normal operating conditions and under abnormal conditions such as seismic events; and b) include a description of the final emergency release system design, if applicable.	X							
85	Air Emissions Management Plan – Burnaby Mountain tunnel construction Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing Burnaby Mountain tunnel construction activities, an Air Emissions Management Plan for tunnel construction. The plan must include: a) proposed hours for daytime and nighttime work; b) sources that would generate air emissions; c) an Air Emissions and Dust Emissions Management Plan that includes mitigation measures, their predicted effectiveness, and implementation timeframes; and d) a description of Trans Mountain's program for addressing complaints received during tunnel construction with respect to air and dust emissions, including a communication and notification plan.	X							
86	Burnaby Mountain Tunnel Construction Noise Management Plan Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing Burnaby Mountain tunnel construction activities, a Burnaby Mountain Tunnel Construction Noise Management Plan that includes: a) proposed hours of daytime and nighttime work; b) baseline daytime and nighttime ambient sound levels at noise sensitive areas within 500 metres of the entry and exit sites for the tunnel; c) predicted noise levels at the most affected receptors caused by tunnel construction without mitigation measures implemented; d) proposed noise mitigation measures, including all technologically and economically feasible mitigation measures; e) predicted noise levels at the most affected receptors with mitigation measures implemented, including noise contour map(s) showing the potentially affected receptors; f) a tunnel construction noise monitoring program, including locations, methodology, and schedule;	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	g) criteria that will be used to determine when tunnel construction would be shut down due to noise; h) a summary of its consultations with Appropriate Government Authorities and any potentially affected receptors (residences and businesses), as well as copies of all written comments that may be provided to Trans Mountain by those consulted. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the plan; i) a description of the public and Indigenous communication and noise complaint response processes; and j) a contingency plan that contains proposed mitigation measures for addressing noise complaints, which may include the temporary relocation of specific residents.								
87	Groundwater Seepage Management Plan – Burnaby Mountain tunnel construction Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to commencing Burnaby Mountain tunnel construction activities, a Groundwater Seepage Management Plan for tunnel construction. The plan must include: a) an estimate quantifying the anticipated average and maximum amounts of groundwater seepage into the tunnel, and an assessment of any potential impacts on the water table; b) a discussion of Trans Mountain's proposed pumping, treatment, and disposal options; c) a description of the potential effects of dewatering of bedrock aquifers, springs and streams on local groundwater and surface water resources, and of measures that Trans Mountain would implement to mitigate such effects; and d) a description of measures that Trans Mountain would implement during the operations phase in the event that there is groundwater seepage into the tunnel.	X							
88	Project organizational structure for Project construction Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a diagram of the Project's organizational structure (i.e., project management, design, and field staff) that clearly identifies roles, accountabilities, responsibilities, and reporting relationships for construction of the applicable Project components.	X							
89	Emergency Response Plans for construction Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a Project-specific Emergency Response Plan, including the Trans Mountain Expansion Project Emergency Response Plan and site-specific Emergency Response Plans as referenced in Volume 4B, Section 5.4.2 of its Project application (Filing A3S1K6), that would be implemented during the construction phase. The plan(s) must include spill contingency measures that Trans Mountain will employ in response to accidental spills attributable to construction activities, 24-hour medical evacuation, fire response, and security.	X	X	X	X	X	X	X	X
90	Consultation on improvements to Trans Mountain's Emergency Management Program Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a consultation plan for its review of its Emergency Response Plans and equipment (including its availability), as referenced in Volume 7, Section 4.8.2 of its Project application (Filing A3S4V5). This plan must include: a) the consultation plan's scope; b) the consultation plan's objectives; c) a preliminary list of Appropriate Government Authorities, first responders, potentially affected Indigenous groups and affected landowners/tenants with whom Trans Mountain will consult; d) a preliminary list of consultation locations and timing; and e) the methods that will be used to track commitments made during consultations and to incorporate them into Trans Mountain's Emergency Management Program, including its Emergency Response Plans.	X					X	X	
91	Plan for marine spill prevention and response commitments Trans Mountain must file with the NEB, within 6 months from the issuance date of the Certificate, a plan describing how it will ensure that it will meet the requirements of Condition 133 regarding marine spill prevention and response. The plan must be prepared in consultation with Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority, Vancouver Fraser Port Authority, British Columbia Coast Pilots, Western Canada Marine Response Corporation, Fisheries and Oceans Canada and the Province of British Columbia, and must identify any issues or concerns raised and how Trans Mountain has addressed or responded to them. Trans Mountain must provide the plan to the above-mentioned parties at the same time as it is filed with the NEB.	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
92	Updates under the Species at Risk Act Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a summary of any relevant updates under the <i>Species at Risk Act</i>, including new Schedule 1 listings and new or amended Recovery Strategies, Action Plans, and Management Plans for species that have the potential to be affected by the Project. For each species-specific update, the summary must include: a) a discussion of the Project activities' potential effects on the listed species or its critical habitat, including an explanation as to whether additional surveys are required to locate such critical habitat; b) identification of all reasonable alternatives to the Project activities referred to in a), including avoidance measures, and a discussion on the potential effects of the alternatives, the chosen approach, and the rationale for selecting the chosen approach; c) any additional site-specific mitigation; d) any monitoring to be undertaken and a commitment to include monitoring results as part of the post-construction environmental monitoring reports filed under Condition 151; e) an explanation as to how the responses to b), c) and d) above are consistent with applicable Recovery Strategies and Actions Plans; and f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the summary of updates, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information.	X	X		X	X	X		
93	Water well inventory Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, an inventory of physically verified ("ground-truthed") water wells that are within 150 metres of either side of the centre of the pipeline right-of-way. The filing must contain confirmation that Trans Mountain will maintain and update the inventory until the Project is abandoned or decommissioned pursuant to the NEB Act. The inventory must include a description of the methods used to identify and physically verify wells, including: a) each well's location in proximity to the right-of-way, including its GPS coordinates; b) a description of each well's type or use (e.g., drinking water, agricultural use, use by Indigenous groups, any other uses); c) each well's tenure or ownership (e.g., private, municipal, Indigenous community); d) each well's operational status, including abandoned or decommissioned wells, and information about each well, including well depth, lithology, and water depth, if available; e) a plan for updating the inventory over the life of the Project, including: i) the methods for identifying and verifying abandoned or decommissioned wells, and new or replacement wells; and ii) the frequency of inventory updates; f) a list of any properties or sections of the right-of-way that were not physically verified, including: i) the reason why properties or right-of-way sections were not physically accessed; ii) an estimate of the potential number of wells that have not been physically verified; and iii) a proposed schedule for accessing properties or right-of-way sections; and g) a description of Trans Mountain's plans for communicating information about the locations of water wells to owners or affected users.	X							
94	Consultation reports – protection of municipal water sources Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, and on or before 31 January of each year during construction and of the first 5 years after commencing operations, a report on Trans Mountain's consultations with municipalities and regional districts, communities, and Indigenous groups related to the protection of municipal and community water sources, including those sources currently relied upon and sources identified for potential future use. Each report must include: a) the name of the municipality, regional district, community, or Indigenous group consulted; b) the methods, dates, and locations of all meetings or consultations; c) a summary of all issues or concerns raised; and d) a summary of any steps or measures that have been or will be undertaken, including	X	X			X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	groundwater modelling or monitoring, as a result of consultations with municipalities, regional districts, communities, or Indigenous groups. This summary must include: i) any updates or amendments to maintenance policies, systems, programs, procedures, practices, and activities aimed at preventing pipeline releases; ii) the criteria used to identify and select modelling or monitoring locations and parameters; iii) results of any modelling or monitoring; iv) any measures that have been taken to address modelling or monitoring results; and v) any measures to share or to make accessible to municipalities, regional districts, communities, or Indigenous groups data or issues that arise regarding drinking water (aquifers, groundwater, and well water supplies); or in the alternative to i)-v) above, an explanation why no further action is required to address or respond to issues or concerns raised.								
95	Visual Impact Plan Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a Visual Impact Plan that includes: a) the results of any supplemental visual modelling surveys conducted of select locations that are highly visible to the public, identified in consultation with Appropriate Government Authorities, and potentially affected Indigenous groups and affected landowners/tenants, where the proposed pipeline corridor deviates from the existing TMPL system right-of-way; and b) mitigation measures to be implemented, including all relevant measures committed to throughout the OH-001-2014 proceeding, and any new mitigation measures resulting from supplementary surveys.	X							
96	Reports on engagement with Indigenous groups – construction Trans Mountain must file with the NEB, at least 2 months prior to commencing construction and every 6 months thereafter until after commencing operations, a report on the engagement activities it has undertaken with potentially affected Indigenous groups. Each report must include, at a minimum, for each Indigenous group engaged: a) the name of the group; b) the method(s), date(s), and location(s) of engagement activities; c) a summary of any issues or concerns raised; and d) the measures taken, or that will be taken, to address or respond to issues or concerns, or an explanation why no further action is required to address or respond to issues or concerns. Trans Mountain must provide a copy of each report to each group engaged (and identified in a) above) at the same time that it is filed with the NEB.	X	X	X	X	X	X	X	X
97	Traditional Land Use (TLU) and Traditional Marine Resource Use (TMRU) Investigation Report Trans Mountain must file with the NEB <u>for approval</u>, at least 2 months prior to commencing construction, a report describing pre-construction TLU and TMRU investigations that were not reported during the OH-001-2014 proceedings and that relate specifically to the Project (up to and including the foreshore lands and boundaries of the water lease for the Westridge Marine Terminal). The report must include: a) the name of the potentially affected Indigenous group to which each investigation pertains; b) a description of any identified potentially affected TLU or TMRU sites, resources, or activities; c) the methods used to identify the potentially affected TLU or TMRU sites, resources or activities; d) a summary of any mitigation measures that Trans Mountain will implement to reduce or eliminate (to the extent possible) Project effects on TLU or TMRU sites, resources or activities; e) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include mitigation measures (summarized in (d)) to reduce or eliminate (to the extent possible) Project effects on TLU or TMRU sites, resources or activities; f) a summary of consultations undertaken with or concerns raised by potentially affected Indigenous groups regarding investigations on Project effects on the current use of lands and resources or marine resource use for traditional purposes, as well as copies of all written comments provided to Trans Mountain by potentially affected Indigenous groups to which each investigation pertains. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those Indigenous groups to which each investigation pertains, into the report; g) a description of any outstanding concerns raised regarding potential Project effects on the current use of lands and resources or marine resource use for traditional purposes, including a description of how Trans Mountain will or address or respond to them, or an explanation why it	X							

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	will not address or respond to them; and h) a summary of any outstanding TLU or TMRU investigations or follow-up activities that will not be completed prior to commencing construction, including estimated completion date(s), if applicable, and a description of how Trans Mountain has already identified, or will identify, any potentially affected TLU and TMRU sites, resources or activities for these outstanding investigations. Trans Mountain must provide a copy of the report to each potentially affected group identified in a) at the same time that it is filed with the NEB.								
98	Plan for Indigenous group participation in construction monitoring Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a plan describing participation by Indigenous groups in monitoring activities during construction for the protection of traditional land and resource use for the pipelines, terminals and pump stations, and traditional marine resource use at the Westridge Marine Terminal. The plan must include: a) a summary of engagement activities undertaken with Indigenous groups to determine opportunities for their participation in monitoring activities; b) a list of potentially affected Indigenous groups, if any, that have reached agreement with Trans Mountain to participate in monitoring activities; c) the scope, methodology, and justification for monitoring activities to be undertaken by Trans Mountain and each participating Indigenous group identified in b), including those elements of construction and geographic locations that will involve Indigenous Monitors; d) a description of how Trans Mountain will use the information gathered through the participation of Indigenous Monitors; and e) a description of how Trans Mountain will provide the information gathered through the participation of Indigenous Monitors to the participating Indigenous group. Trans Mountain must provide a copy of the report to each potentially affected group identified in b) above at the same time that it is filed with the NEB.	X	X		X	X	X	X	
99	Landowner and tenant consultation reports Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, and every 6 months thereafter until 5 years after commencing Project operations: a) a description of landowner and tenant consultations, including the consultation methods, dates, and a summary of any issues or concerns raised by landowners and tenants; b) a summary of actions that Trans Mountain has undertaken to address or respond to each of the issues or concerns raised, or an explanation for why no actions were taken, and any outstanding concerns; and c) confirmation that Trans Mountain will make available to a landowner or tenant, upon request, a copy of the consultation records related to that landowner or tenant.	X							
100	Heritage resources Trans Mountain must file with the NEB, at least 2 months prior to commencing construction of individual Project components as described in Condition 10(a): a) confirmation, signed by an officer of the company, that it has obtained all of the required archaeological and heritage resource permits and clearances from the Alberta Department of Culture and the British Columbia Ministry of Forests, Lands and Natural Resource Operations; b) confirmation that it has consulted with the British Columbia Ministry of Forests, Lands and Natural Resource Operations, and that the Ministry has reviewed and approved the mitigation measures for disturbance to impacted palaeontological sites within British Columbia; c) a description of how Trans Mountain will meet any conditions and respond to any comments and recommendations contained in the permits and clearances referred to in a) or obtained through the consultation referred to in b); and d) confirmation that Trans Mountain will update the relevant Environmental Protection Plan(s) to include any relevant information from the conditions or recommendations referred to in c).	X	X	X	X	X	X	X	X
101	Uninterruptible Power Supply (UPS) and battery systems Trans Mountain must file with the NEB, at least 2 months prior to commencing construction at each terminal and pump station, confirmation that the UPS system design and planned operation related to that facility, is in compliance with the requirements of CSA 22.1 – 15 or other applicable standard(s) that exceeds the requirements of CSA 22.1 – 15. If another standard is used, this filing must include the name of the standard and an explanation of why the standard was used and how it meets or exceeds the requirements of CSA 22.1 – 15.	X				X	X	X	

No.	Conditions with initial filings due prior to commencing construction, or prior to commencing construction of specified Project component(s)	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
102	Landowner and tenant complaint process / system Trans Mountain must file with the Board, at least 30 days prior to commencing construction, confirmation that it has created and will maintain, up until the Project is abandoned or decommissioned pursuant to the NEB Act, a process / system that chronologically tracks landowner and tenant complaints related to the Project. The filing must contain confirmation that the process / system will track: a) a description of each complaint; b) how each complaint was received (e.g., telephone, letter, email); c) the date each complaint was received; d) subsequent dates of all contact or correspondence with each complainant; e) records of any site visits, monitoring, or inspections; f) contact information for all parties involved in each complaint; g) the date of each complaint's resolution; and h) if a complaint remains unresolved, a description of any further actions to be taken or an explanation for why no further action is required. Trans Mountain must make available to a landowner or tenant, upon request, the records related to the complaint(s) that the landowner or tenant made to Trans Mountain, including any investigations, reports or surveys conducted in relation to the complaint.	X							
103	Utility crossings Trans Mountain must file with the Board, at least 30 days prior to commencing construction, a list of all underground utilities to be crossed by the Project. The list must include the location and owners of the utilities to be crossed, as well as confirmation that all the agreements or crossing permits for those utilities to be crossed have been acquired or will be acquired prior to construction.	X			X				
No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
104	Updated engineering alignment sheets and drawings Trans Mountain must file with the NEB, at least 3 months prior to commencing pipe installation, updated engineering alignment sheets and drawings and, as they become available and prior to their implementation, any modifications to those sheets and drawings.	X							
105	Quality assurance verification Trans Mountain must file monthly summary reports, from commencing construction until after commencing operations, outlining non-conformances with its design, materials, and construction specifications and the disposition of these non-conformances.	X				X	X	X	
106	Construction progress reports Trans Mountain must file with the NEB monthly construction progress reports from commencing construction until after commencing operations. The reports must include information on the progress of activities carried out during the reporting period, including: a) safety, environmental and security issues or non-compliances that occurred during the reporting period; b) measures undertaken to resolve safety and environmental issues or non-compliances identified in a); c) confirmation that security issues identified in a) have been addressed; d) a description and the location of any change made to geohazard mitigation measures pursuant to Condition 51; and e) the location of any pressure tests carried out during the reporting period and a description of any unsuccessful pressure tests, including the reasons for the lack of success of each.	X	X	X	X	X	X	X	X
107	Indigenous, local, and regional employment and business opportunity monitoring reports a) Trans Mountain must file with the NEB, within 3 months after commencing construction, and every 6 months thereafter until after commencing operations, monitoring reports for Indigenous, local, and regional employment and business opportunities for the Project. The reports must include: i) a summary of the elements or indicators monitored; ii) a summary and analysis of Indigenous, local, and regional employment and business opportunities during the reporting period; and iii) a summary of Trans Mountain's consultation, undertaken during the reporting period, with	X							

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	relevant Indigenous groups and local, regional, community and industry groups or representatives, regarding employment and business opportunities. This summary must include any issues or concerns raised regarding employment and business opportunities and how Trans Mountain has addressed or responded to them. b) Trans Mountain must file with the NEB, within 6 months after commencing operations, a final report on employment during the construction phase.								
108	Contingency watercourse crossings a) For any watercourse crossing where Trans Mountain will employ a contingency crossing method instead of its proposed primary method, and where any of Fisheries and Oceans Canada's applicable "Measures to Avoid Causing Harm to Fish and Fish Habitat" cannot be implemented, Trans Mountain must file with the NEB at least 30 days prior to commencing construction of the contingency watercourse crossing: i) confirmation of the contingency watercourse crossing method that will be employed, the rationale for employing that method, and a summary of the differences between the primary and contingency watercourse crossing methods; and ii) the following site-specific information: 1) detailed crossing-specific design drawings; 2) photographs up-stream, down-stream, and at the crossing location; 3) a description of the fish species and habitat that is present at the crossing location, and if fish spawning is likely to occur within the immediate area; 4) a description of the composition of the riparian habitat at the crossing location and an indication if the riparian habitat has a limiting effect on the productive capacity of the watercourse, and if its removal or disturbance represents a potential influence on fish communities; 5) the site-specific mitigation and habitat enhancement measures to be used to minimize impacts; 6) any potential residual effects; 7) proposed reclamation measures; and 8) a discussion of the potential impacts to local fisheries resources within the immediate area as a result of the crossing's construction; and b) For all other instances where a contingency crossing method will be employed and all of Fisheries and Oceans Canada's applicable "Measures to Avoid Causing Harm to Fish and Fish Habitat" will be implemented, Trans Mountain must file with the NEB a notification, at least 15 days prior to commencing the contingency crossing, that the contingency method will be employed. With this notification, Trans Mountain must explain why the contingency method is being employed and provide a summary of the differences between the primary and contingency watercourse crossing methods. c) Trans Mountain must confirm, within 30 days after commencing operations, that any contingency watercourse crossing(s) identified to the NEB pursuant to a) and b) were the only contingency watercourse crossing(s) implemented for the construction of the pipeline.	X							
109	Authorization(s) under paragraph 35(2)(b) of the Fisheries Act – Westridge Marine Terminal a) In the event that Fisheries and Oceans Canada determines that the Westridge Marine Terminal expansion requires Authorization(s) under paragraph 35(2)(b) of the <i>Fisheries Act</i>, Trans Mountain must file with the NEB, at least 10 days prior to commencing works specified in the respective Authorization(s), a copy of the Authorization(s); and b) Trans Mountain must confirm, within 30 days after commencing operations, that any <i>Fisheries Act</i> Authorization(s) required for the Westridge Marine Terminal expansion were obtained from Fisheries and Oceans Canada and filed with the NEB pursuant to a), or notify the Board if no Authorization(s) was required.	X							
110	Authorization(s) under paragraph 35(2)(b) of the Fisheries Act and Species at Risk permit(s) – pipeline For instream activities, except for those related to the Westridge Marine Terminal: a) for any instream activities that will require Authorization(s) under paragraph 35(2)(b) of the <i>Fisheries Act</i>, Trans Mountain must file with the NEB, at least 10 days prior to commencing the respective instream activities, a copy of the Authorization under paragraph 35(2)(b) of the <i>Fisheries Act</i>. b) for any instream activities that will require a permit(s) under the <i>Species at Risk Act</i>, Trans Mountain must file with the NEB, at least 10 days prior to commencing the respective instream	X	X						

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	activities, a copy of the permit(s) issued under the <i>Species at Risk Act</i>. c) Trans Mountain must confirm, within 30 days after commencing operations, that: i) any required <i>Fisheries Act</i> Authorization(s) were obtained from Fisheries and Oceans Canada and filed with the NEB pursuant to a), or notify the Board if no Authorization(s) were required; and ii) any required <i>Species at Risk Act</i> permit(s) were obtained from the competent minister under the <i>Species at Risk Act</i> and filed with the NEB pursuant to b), or notify the Board if no permit(s) were required.								
111	Joining Programs Trans Mountain must develop Joining Programs and file them with the NEB at least 45 days prior to commencing welding of, respectively: a) field circumferential production, tie-in, and repair pipeline welds, including the tie-in welds between existing segments and Line 1 or Line 2; and b) terminals and pump stations. The Joining Programs must include: i) welder qualification requirements; ii) requirements for welding inspector qualifications and duties; iii) welding procedure specifications; iv) non-destructive examination (NDE) specifications; v) procedure qualification records for welding procedure specifications and NDE specifications; vi) a quality assurance program for field welds and welding procedures; and vii) any additional information that supports the Joining Program.	X	X			X	X	X	
112	Pressure testing a) Trans Mountain must pressure test the new and reactivated pipeline segments, terminals, and pump stations with a liquid medium. b) Trans Mountain must file with the NEB, at least 3 months prior to commencing pressure testing, a Pressure Testing Program that demonstrates compliance with applicable codes, standards, and regulatory requirements.	X	X			X	X	X	
113	Hydrostatic Testing Plan Trans Mountain must file with the NEB, at least 3 months prior to commencing pressure testing of any Project component, a Hydrostatic Testing Plan for the Project that includes: a) the locations of all water withdrawal and discharge sites; b) a discussion of any clearing activities or any other associated works, if required, that will allow for the transportation of the hydrostatic test water; c) water withdrawal rates; d) water withdrawal volumes; e) the flow rate/volume of water at the withdrawal sites; and f) site-specific mitigation measures to be implemented at the water withdrawal and discharge sites or at any other locations required to allow for the transportation of hydrostatic test water, including a description of the water quality monitoring methods to be used on hydrostatic testing water prior to discharge; and g) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information.	X	X			X	X	X	
114	NDE of final tie-in welds Trans Mountain must delay NDE of final tie-in welds (i.e.: welds which will not be subjected to hydrostatic testing) and any repairs to them for at least 48 hours following weld completion. Trans Mountain must include this requirement in the NDE specification of its Joining Program required by Condition 111.	X	X			X	X	X	

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
115	SCADA and leak detection system design Trans Mountain must file with the NEB, reports describing the final design of the expanded Trans Mountain Pipeline System's SCADA and leak detection systems. These reports must include: a) for the commercially available external leak detection systems resulting from Trans Mountain's participation in joint industry projects, at least 45 days prior to commencing backfilling on Line 2 and the new delivery pipelines, a status update, including a timeline for implementation; and b) at least 3 months prior applying for leave to open the Project: i) a status update for the following complementary leak detection technologies that Trans Mountain is considering, including a timeline for implementation: 1) a secondary Computational Pipeline Monitoring (CPM) system operating in parallel with the Project's proposed CPM; and 2) aerial surveillance systems resulting from Trans Mountain's participation in joint industry projects; ii) an explanation of how Trans Mountain's complementary leak detection system(s) supports the leak detection capabilities of the primary CPM system(s); iii) for all leak detection systems applicable to the Project, performance targets for: 1) sensitivity; 2) accuracy; 3) reliability; and 4) robustness; iv) a validation plan for the performance targets in iii), including alarm testing, to be implemented within the first year of Project operation; v) rationale for the selected time windows(s) (i.e., averaging periods) for the CPM system(s); vi) a copy of Trans Mountain's public awareness program on recognizing and reporting leaks; vii) a description of how the leak detection system and its relevant procedures comply with CSA Z662 Annex E; viii) a list of other best practices such as API (American Petroleum Institute) recommended practices related to leak detection and control centre management; ix) a description of how Trans Mountain's revised procedures have introduced a rule directing the Control Centre Operator to perform a controlled shut down of the pipeline when a leak cannot be ruled out in a given time period; and x) a plan, including a timeline for implementation, for upgrading the existing measurement and data acquisition instrumentation to improve the leak detection performance of Line 1.	X	X						
116	Control system, SCADA, instruments, and communication Trans Mountain must file with the NEB, at least 2 months prior to completing dry commissioning activities, the block diagrams of the control system for its proposed pipeline that include the interconnection between various devices and components such as: a) programmable logic controllers; b) flow meters, and pressure and temperature measuring devices; c) critical protective elements; d) emergency shut-down systems; e) variable frequency drives; f) control valves; g) block valves; and h) local human machine interface. The block diagrams must demonstrate the primary and backup communication systems, supervisory and control layers of software, firewalls, and how all elements are integrated with the SCADA system.	X							
117	Reporting on improvements to Trans Mountain's Emergency Management Program Trans Mountain must file with the NEB, at least 2 years and 1 year prior to commencing operations, detailed updates for the company's review of its Emergency Management Program (toward meeting the requirements of Condition 124). This filing must include: a) a summary of work undertaken to-date; b) the approximate timing for completing remaining work; and c) a summary of parties that were consulted (Condition 90) and how their comments and feedback were considered in improving the program.	X					X	X	
118	Firefighting capacity at terminals	X						X	

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	Trans Mountain must file with the NEB, at least 1 year prior to commencing operations at the terminals: a) the following information regarding developing appropriate firefighting capacity for a safe, timely, and effective response to a credible worst-case fire at the Westridge Marine Terminal and at the Edmonton, Sumas, and Burnaby Terminals: i) an assessment of necessary resources and equipment, including an explanation of how the assessment was informed by Trans Mountain's terminal risk assessments; ii) a summary of Trans Mountain's consultation with appropriate municipal authorities and first responders, that includes any issues or concerns raised regarding each municipality's respective firefighting capacity and how Trans Mountain has addressed or responded to them; iii) a Firefighting Capacity Framework, informed by the assessment in i) and consultation in ii), and that includes a list of and timeline for completing key activities and milestones leading to the establishment of appropriate firefighting capacity; and b) a plan for responding to a fire exceeding a credible worst-case scenario.								
119	Emergency Preparedness and Response Exercise and Training Program Trans Mountain must file with the NEB, at least 1 year prior to commencing operations, an Emergency Preparedness and Response Exercise and Training Program for the pipeline; the Edmonton, Sumas, and Burnaby Terminals; and the Westridge Marine Terminal. The program's objective is to demonstrate the continual improvement of responder competencies (including control centre personnel) at all levels of the company to prepare for, respond to, recover from, and mitigate the potential effects of emergencies of any type, including tank fires and earthquakes. The program must include the following: a) a defined scope, other objectives in addition to those noted above, and program targets that address responder turn-over and ensure responders' ongoing training and practice; b) a list of mandatory courses for responders; c) a discussion of how Trans Mountain will train its personnel to respond to all hydrocarbon spill scenarios in various seasons, including releases of hydrocarbons in mountain regions during winter conditions, into ice covered watercourses, into watercourses under varying flow conditions and into waterbodies (aquifers or streams) that are used as municipal water supply sources; d) a description of, and schedule for, all emergency response exercises (full-scale, tabletop, drills, functional) that Trans Mountain will conduct prior to operations to test a variety of scenarios; e) a plan, including rationales, for determining the schedule and frequency of all emergency response exercises (full-scale, tabletop, drills, functional) to test a variety of scenarios during the Project's operational life; f) a discussion of how emergency response exercises will meet the objectives of testing Trans Mountain's: i) emergency response procedures; ii) company personnel training; iii) communications systems; iv) response equipment; v) safety procedures; and vi) the effectiveness of its liaison and continuing education programs; g) a learnings implementation plan for exercises that considers how Trans Mountain will update and amend its Emergency Response Plans and related documents following exercises. The learnings implementation plan must consider three main purposes: i) to validate plans; ii) to develop Trans Mountain responder competencies (including control centre personnel) and provide them with the opportunity to carry out and understand their roles in emergency response; and iii) to test Project-specific emergency response procedures; h) a plan for addressing the training requirements contained within the <i>National Energy Board Onshore Pipeline Regulations</i>; and i) confirmation that an independent third party has reviewed and assessed the Emergency Preparedness and Response Exercise and Training Program and that Trans Mountain has considered and incorporated the comments generated by that review and assessment into the program.	X					X	X	

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
120	Notification and reporting on emergency response exercises For any tabletop, functional, and full-scale emergency response exercises undertaken as part of its Emergency Preparedness and Response Exercise and Training Program required by Condition 119: a) Trans Mountain must notify the NEB and all potential exercise participants and observers, including Appropriate Government Authorities, first responders and potentially affected Indigenous groups, at least 45 days prior to the date of each exercise, of: - the exercise's date and location(s); - the exercise's objectives; - the participants in the exercise; and - the scenario for the exercise. b) Trans Mountain must file with the NEB, and provide to Appropriate Government Authorities, first responders and potentially affected Indigenous groups, within 3 months after completing each full-scale exercise, a report on the exercise that includes: - the results of the completed exercise; - areas for improvement; and - steps to be taken to correct deficiencies.	X					X	X	
121	Financial Assurances Plan – operations phase a) Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to applying for leave to open Line 2, a Financial Assurances Plan that includes details of the financial resources and secured sources of funds that will be necessary to pay, without limitation, all actual loss or damage, costs and expenses, including cleanup and remediation, and loss of non-use value relating to non-use of a public resource associated with an unintended or uncontrolled release from the Project during the operations phase.¹⁴² These costs may arise from, among other things, potential accidents, malfunctions, and failures during the Project operations phase, including all spills originating from the pipeline and the terminals. The Financial Assurances Plan must be signed by an officer of the company, verifying that it is accurate, complete, and, at a minimum, meets the criteria and coverage levels described below: i) Criteria for financial assurance instruments and plan: - Any letter of credit that forms part of the Financial Assurances Plan must be unconditional and irrevocable, segregated from Trans Mountain's day-to-day business activities, and be dedicated to providing funds to cover the costs described in sub a) above, without limitation. - Third party liability insurance must be current, and broad, respecting the scope of environmental damages covered by the policy; <u>the policy will be consistent with provisions available in the insurance market</u> (i.e., only exceptional / non-standard perils, taking into account the Project's nature and scope, would be excluded from coverage). Such insurance must be structured on a multi-year basis, recognizing potential loss of income by persons sustaining damage caused by Trans Mountain, over a reasonable number of years after the event. - A portion of cash reserves or a portion of future cash flows of the Project may be included as instruments in the Financial Assurances Plan, provided they are secured by a commitment letter from an officer of the company confirming that the funds will be dedicated to the Financial Assurances Plan without restrictions for the period specified by the officer. - Parental and other third party guarantors must be registered within a Canadian jurisdiction and must have financial strength that is demonstrated in balance sheet values and ratios and credit ratings. For example, total assets less total liabilities of the guarantor should be several multiples of the liability assumed in the Trans Mountain guarantee. ii) Financial assurance components and coverage levels: Trans Mountain's Financial Assurances Plan must provide a total coverage, for the Project as a whole, of \$1.1 billion¹⁴³ for the costs described in sub a) above, without limitation. The plan should include the following components and minimum coverage levels:	X	X			X	X	X	

¹⁴² In the context of this condition, "operations phase" refers to the period after the Project receives leave to open approval and prior to it being fully abandoned.

¹⁴³ The NEB's basis for any final coverage level is described in its report to Governor in Council.

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	1) Ready cash: Trans Mountain must have unfettered access to at least \$100 million to cover costs, including compensation to third parties for losses and damages in the near term, while insurance claims are being processed. Once used, this source of cash must be replenished immediately to cover the costs of a potential future spill. This can be in the form of a letter of credit, surety bond or other form acceptable to the NEB. 2) Core coverage: Trans Mountain must put in effect and maintain current at all times a core financial coverage of at least \$1 billion that includes third party liability insurance and other financial assurance instruments that comply with the criteria. Core coverage must be a portfolio approach with multiple financial instruments used and may not be composed of a single financial instrument (e.g., only third party liability insurance). At least one component of core coverage must be funds that are readily accessible to Trans Mountain (e.g., cash reserves held by the general partner and not distributed to the limited partners). Trans Mountain may use a number of financial and insurance instruments in its Financial Assurances Plan. However, sales of Project assets used for transporting hydrocarbon commodities will not be eligible candidates. Below are some illustrative financial and insurance instruments that could be potential candidates for the Financial Assurances Plan: · Irrevocable, unfettered letter of credit. · Secured line of credit. · Cash reserves held by the general partner and not distributed to the limited partners (and verifiable on Trans Mountain Pipelines Limited Partnership's balance sheet). · Internal cash flow, committed by Trans Mountain to financial assurances. · Industry pooled fund. · Third party liability insurance with exclusions for only exceptional / non-standard perils. · No fault third party liability insurance. · Parental and other third party guarantees provided by parties demonstrating financial strength through balance sheets and credit ratings. · Other instruments developed by Trans Mountain and the insurance and financial markets. b) Trans Mountain must file the following with the NEB: i) At least 6 months prior to applying for leave to open Line 2, a report from an independent third party that has assessed the Financial Assurances Plan and its key components against the criteria and actual experiences of industry damage claims. The report must summarize the key features of each financial and insurance instrument proposed for inclusion in the Financial Assurances Plan. ii) At least 3 months prior to applying for leave to open Line 2, a supplement to the report described in b)i) that provides verification of any third party liability insurance coverage, a copy of the insurance certificate, and a summary of the insurance policy's key features. This summary must include: limits on insurance coverage, deductible amounts, the risks and perils and properties covered by the insurance policy, the exclusions from coverage, Trans Mountain's obligations, effective dates, and names of insurers and reinsurers. iii) With its first leave to open application for Line 2, a report describing the steps it took to eliminate any deficiencies in its Financial Assurances Plan that were identified in the independent third party report referenced in b)i) and the NEB's subsequent review. iv) On or before 31 January of each year after commencing operations, a letter signed by an officer of the company verifying that all components of the Financial Assurances Plan remain as the NEB approved and sufficient to meet the financial assurance coverage levels described in ii). v) At least 2 months prior to any intended change(s) to the Financial Assurances Plan during the Projects operations phase, a letter, <u>for approval</u>, detailing the intended change(s) and how the change(s) provides the same or greater level of protection. vi) Within 30 days after accessing any component of the Financial Assurances Plan, a report detailing the component accessed, the reason for accessing it, and Trans Mountain's plan to ensure that it continues to meet the requirements of its NEB-approved Financial Assurances Plan.								

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
122	Changing pipeline segment operating conditions (Hinton to Hargreaves; Darfield to Black Pines) Trans Mountain must file with the NEB <u>for approval</u>, at least 6 months prior to applying for leave to open Line 2, the following: a) An engineering assessment in accordance with CSA Z662 for the above two pipeline segments which Trans Mountain proposes to change from operating on the existing TMPL to the proposed Line 2. The engineering assessment must demonstrate that the two pipeline segments are fit for their intended service under the operating conditions of Line 2, and that they meet all relevant requirements of CSA Z662. The engineering assessment must include a schedule of planned integrity monitoring activities. b) A certificate with a supporting report issued by an independent certification body¹⁴⁴, stating unconditionally that the 43-kilometre-long, 762 millimetre outside diameter (NPS 30) pipeline segment from Darfield to Black Pines, B.C. is fit for its intended service under the operating conditions¹⁴⁵ of Line 2. The supporting report must include the qualifications of the independent certification body and the justification used to grant the certificate.	X							
123	Evacuation Plans a) Trans Mountain must file with the NEB, at least 6 months prior to commencing operations at the terminals, an Evacuation Plan for people present in areas potentially affected by an incident at each of Trans Mountain's Edmonton, Sumas, and Burnaby Terminals as well as at the Westridge Marine Terminal. Each Evacuation Plan must, at a minimum: i) describe how areas for evacuation were determined; ii) describe the circumstances under which evacuation may be required, as well as the respective methods and procedures for public notification; iii) describe specific evacuation routes, methods, and destinations; iv) be prepared in consultation with Appropriate Government Authorities, first responders and potentially affected Indigenous groups with the authority to issue evacuation or shelter in place orders during an emergency; v) state how input from Appropriate Government Authorities, first responders and potentially affected Indigenous groups, with the authority to issue evacuation or shelter in place orders during an emergency, was considered in preparing the plan; vi) define the roles, responsibilities, and jurisdictional authority of all parties involved in implementing an evacuation; and vii) confirm that an independent third party has reviewed and assessed the plan and that Trans Mountain has considered and incorporated comments generated by the review and assessment into the plan. b) Trans Mountain must include with its Evacuation Plan for the Burnaby Terminal, a plan specific to Simon Fraser University that includes the requirements in a) i) to vii), above.	X						X	

¹⁴⁴ For Conditions 19, 122 and 152, an "independent certification body" is an internationally recognized company or organization, such as Lloyd's Register or Det Norske Veritas, which is able to certify compliance to statutory requirements. The independent certification body must have expertise in pipeline integrity. The NEB reserves the right to accept or reject the certificate. In addition, the NEB's decision is not contingent on the results of the certificate.

¹⁴⁵ For Conditions 19, 122 and 152, "operating conditions" must include the Project-specific operating conditions, possible transient flow conditions, slack flow conditions, and effects on operating pressure due to temperature changes.

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
124	Implementing improvements to Trans Mountain's Emergency Management Program Trans Mountain must file with the NEB, at least 6 months prior to commencing operations, a detailed summary of its review of its Emergency Response Plans (as noted in Conditions 125 and 126) and equipment (including its availability), as referenced in Volume 7, Section 4.8.2 of its Project application (Filing A3S4V5). This filing must include a description of changes made to Trans Mountain's Emergency Management Program, as required under the <i>National Energy Board Onshore Pipeline Regulations</i>, including changes to: a) the Pipeline Emergency Response Plan; b) Emergency Response Plans for the Edmonton, Sumas, and Burnaby Terminals, as well as the Westridge Marine Terminal; and c) site-specific plans and documents related to a) and b), such as Geographic Response Plans, Geographical Response Strategies, control point mapping, tactical plans for submerged and sunken oil and tactical plans for high consequence areas. The summary must demonstrate Trans Mountain's ability to prepare for, respond to, recover from, and mitigate the potential effects of emergencies of any type and in any geographic region or season and must include the following: i) a discussion of how the updated plans conform to the requirements contained within the <i>National Energy Board Onshore Pipeline Regulations</i>; ii) a discussion of how the plans consider, and would allow coordination with relevant federal, provincial, municipal and Indigenous community emergency response plans; iii) a discussion of how the results of research initiatives, such as the Scientific Advisory Committee work noted in Trans Mountain's response to NEB Information Request No. 1.63 (Filing A3W9H8) and other research noted during the OH-001-2014 proceeding, have been considered and incorporated into Trans Mountain's emergency response planning; iv) a description of the models used in response planning, including oil trajectory, fate and behavior, and air dispersion models; and v) confirmation that an independent third party has reviewed and assessed the Emergency Response Plans and that Trans Mountain has considered and incorporated the comments generated by the review and assessment into the plans.	X					X	X	
125	Emergency Response Plans for the Pipeline and for the Edmonton, Sumas and Burnaby Terminals Trans Mountain must file with the NEB, at least 6 months prior to commencing operations, updated Emergency Response Plans which must include: a) the following relevant emergency preparedness and response documents: i) an Emergency Response Plan to include the pipeline expansion; ii) updated Emergency Response Plans for the Edmonton, Sumas, and Burnaby Terminals; and iii) all related and accompanying site-specific plans and documents, such as control point mapping, Geographic Response Plans, tactical response plans, volunteer management plans, and fire safety plans; b) an emergency response and preparedness table for the pipeline (including facilities) indicating which plans and documents referenced in a) will be referred to in an emergency response for each 10-kilometre-long pipeline segment. For each pipeline segment, the table must also identify, at a minimum: i) high consequence areas, including environmentally sensitive areas (e.g., wetlands), heritage sites and water supply wells (Condition 93); ii) potentially affected persons or groups; iii) available access to the right-of-way and high consequence areas; iv) nearest control point(s); v) nearest available equipment cache(s); vi) response times for deployment of equipment and Trans Mountain personnel, mutual aid personnel, and third party contractors; vii) the available equipment and trained personnel, whether employed by Trans Mountain, contracted, or available through mutual aid (including contact information); and viii) geological, meteorological, and geographical hazards (e.g., snow avalanche, mud slides, rock slides, and steep slopes); and c) maps depicting the information identified in b).	X				X	X	X	

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
126	Emergency Response Plan for the Westridge Marine Terminal Trans Mountain must file with the NEB, at least 6 months prior to commencing operations at Westridge Marine Terminal, an updated Emergency Response Plan for the Westridge Marine Terminal which must include: a) all related and accompanying site-specific plans and documents, such as Geographic Response Plans, Geographic Response Strategies, tactical response plans, volunteer management plans, and fire safety plans; b) a list of high consequence areas, including environmentally sensitive areas; c) a list of potentially affected persons or groups; d) nearest available equipment cache(s); e) response times for deployment of equipment and personnel to the incident location and high consequence areas; and f) maps depicting the information identified in a) to e).	X							
127	Terminal fire protection and firefighting systems a) Trans Mountain must file with the NEB <u>for approval</u>, at least 3 months prior to applying for leave to open of any Project component at each respective terminal, an independent third party report confirming the adequacy of the proposed fire protection and firefighting systems implemented or planned to be implemented at the Edmonton Terminal West Tank Area, the Burnaby Terminal, the Sumas Terminal, and the Westridge Marine Terminal. The report must demonstrate that the resources and firefighting systems are capable of suppressing fires associated with all scenarios identified in the above-mentioned terminals' final risk assessments (required by Condition 129). b) Trans Mountain must file with the NEB <u>for approval</u>, at least 2 months prior to beginning the assessment leading to the report in a), the name and qualifications of the proposed independent third party that will prepare the report in a).	X						X	

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
128	Offset Measures Plan for residual effects on caribou habitat Trans Mountain must file with the NEB for approval, in accordance with the timelines below, an Offset Measures Plan for each affected caribou range, the goal of which is to offset all unavoidable and residual direct and indirect Project-related effects on caribou habitat, after taking into account the implementation of the measures identified in the relevant Environmental Protection Plan(s) for the Project and the Caribou Habitat Restoration Plan (see Condition 37) measures. The Offset Measures Plan must include: a) A preliminary version, to be filed at least 3 months prior to applying for leave to open, with the plan's criteria and measurable goals and that includes: i) an initial quantification of the area of caribou habitat directly and indirectly disturbed by the Project; ii) a list of the potential on-the-ground offset measures available; iii) each potential offset measure's appropriate offset ratio, based on consultation with expert federal and provincial authorities and on a review of the scientific literature on conservation offsets; iv) each potential offset measure's expected effectiveness including a discussion of uncertainty and how measures align with criteria specified in the scientific literature specific to conservation offsets; v) each potential offset measure's relative qualitative and quantitative value toward achieving the offset; and vi) a conceptual decision-making tree(s) or decision framework(s) that will be used to select which specific potential offset measures and accompanying offset ratios will be used under what circumstances. b) A final version, to be filed on or before 31 January after the second complete growing season after completing final clean-up, including: i) the contents of the preliminary Offset Measures Plan, with any updates identified in a revision log that includes the rationale for any changes; ii) a tabular list of the potential offset measures and appropriate offset ratios to be implemented or already underway, including site-specific details and maps showing the locations, and an explanation of how they meet criteria in the scientific literature for offsets; iii) a description of factors considered when determining the location of offset measures, including consideration of how the measures could maximize benefits to landscape variables; iv) a schedule indicating when potential offset measures will be initiated and their estimated completion dates; v) either an assessment of the predicted offset measures' effectiveness including a discussion of uncertainty and a quantitative compilation showing how the measures would offset the previously determined residual effects, or a plan for completing an assessment of the potential offset measures' effectiveness and value; and vi) an update on the restoration success to support offset measure decisions. Both the preliminary and final versions of the plan must also include the following: 1) a summary of its consultations with Appropriate Government Authorities and potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the Offset Measures Plan; 2) a description of how Trans Mountain has taken any available and applicable Indigenous traditional land use and traditional ecological knowledge studies into consideration in developing the plan including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and /or pursuant to Condition 97, had the opportunity to review and comment on the information; and 3) evidence of Trans Mountain's consideration of any updates to the applicable Recovery Strategy, as well as to range boundaries and identified critical habitat made prior and up to the date on which leave to open is granted.								
		X	X		X	X	X		

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
129	Final terminal risk assessments Trans Mountain must file with the NEB <u>for approval</u> , at least 3 months prior to applying for leave to open for each terminal , final risk assessments for the Edmonton Terminal West Tank Area, the Sumas Terminal, the Burnaby Terminal, and the Westridge Marine Terminal, respectively, including all implemented mitigation measures. Trans Mountain must demonstrate in each risk assessment that mitigation measures will reduce the risks to levels that are ALARP while complying with the MIACC criteria for risk acceptability. The Edmonton Terminal West Tank Area, Sumas Terminal, and Burnaby Terminal must include the elements listed in Condition 22.	X						X	
130	Groundwater Monitoring Program Trans Mountain must file with the NEB <u>for approval</u> , at least 3 months prior to commencing operations , a Groundwater Monitoring Program that pertains to all terminals and pump stations, and for any vulnerable aquifers along the pipeline route. The program must include, at a minimum: - locations of groundwater monitoring wells, their depths, the rationales for well locations (including how groundwater flow direction was considered), groundwater flow velocity, parameters to be monitored and frequency of monitoring; - a description of any program changes required to meet this condition for facilities with an existing Groundwater Monitoring Program; - methods, criteria and rationale for identifying vulnerable aquifers along the pipeline route; - applicable regulatory criteria for comparing monitoring results, and a process outlining what steps will be followed should monitoring results indicate a negative change in groundwater quality; and - a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the program.	X	X			X	X	X	
131	Marine Public Outreach Program As an outcome of the Board's Reconsideration hearing (MH-052-2018), this condition was removed from the list of conditions.								
132	Marine Mammal Protection Program Trans Mountain must file with the NEB, at least 3 months prior to commencing operations , a Marine Mammal Protection Program that focuses on mitigating effects from the Project and associated cumulative effects, and on fulfilling Trans Mountain's commitments as a terminal operator with regard to Project-related marine shipping. The program must include: - the goals and objectives of the program, including a discussion on how they align with the objectives of applicable Fisheries and Oceans marine mammal Recovery Strategies and Action Plans; - a summary of the issues related to marine mammals from the Project and from Project-related marine vessels; - a summary of the initiatives that Trans Mountain has supported or undertaken to-date, including the goals of each initiative and how they relate to the goals and objectives of the program; - a discussion of the outcomes or progress updates of the initiatives identified in c), and how these outcomes have met or are contributing to the objectives of the program; - any other initiatives that Trans Mountain intends to undertake or support in the future that are relevant to the program; and - a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the program, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding, MH-05-2018 Reconsideration proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information.	X							
133	Confirmation of marine spill prevention and response commitments Trans Mountain must file with the NEB, at least 3 months prior to loading the first tanker at the Westridge Marine Terminal with oil transported by the Project , confirmation, signed by an officer of the company, that: Trans Mountain has included in its Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide a requirement for tankers nominated to load at the Westridge Marine Terminal to have a suitable arrangement for the proposed enhanced tug escort between the Westridge Marine Terminal and Buoy J prior to departure. The tug escort should be suitable for foreseeable meteorological and ocean conditions and be based on tanker	X							

No.	Conditions with initial filings due during construction / prior to commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	and cargo size; and b) an enhanced marine oil spill response regime is in place that is capable of: i) delivering 20,000 tonnes of capacity within 36 hours of notification, with dedicated resources staged within the study area; and ii) initiating a response within 2 hours for spills in Vancouver Harbour, and within 6 hours for the remainder of the Salish Sea shipping route to the 12-nautical-mile territorial sea limit.								
134	Updated Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide Trans Mountain must file with the NEB, at least 3 months prior to loading the first tanker at the Westridge Marine Terminal with oil transported by the Project, and thereafter on or before 31 January of each of the first five years after commencing operations , an updated Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide, and a summary of any revisions made to each.	X							
135	Slack line flow conditions Trans Mountain must file with the NEB, at least 2 months prior to commencing operation of Line 1, and at least 2 months prior to applying for leave to open Line 2, respectively , the following: a) a list of locations having potential for slack line flow when each of the pipelines is operated at 100 per cent of its maximum operating pressure (MOP), 80 per cent of its MOP, and 50 per cent of its MOP; and b) a description of the following regarding detecting and preventing slack line flow conditions: i) operational measures on Line 1 and Line 2; and ii) design measures on Line 2.	X	X						
136	Pre-operations full-scale emergency response exercises a) Prior to commencing operations , Trans Mountain must complete a full-scale exercise for each of the following scenarios: i) a 160-cubic-metre diluted bitumen release into Burrard Inlet as a result of a release from the Westridge Marine Terminal. The exercise must also consider emergency preparedness and response planning for a release that exceeds a credible worst-case scenario spill event; and ii) a credible worst-case release volume at the Burnaby Terminal. b) Trans Mountain must notify the NEB and all potential exercise participants and observers, including Appropriate Government Authorities, first responders, and potentially affected Indigenous groups, at least 45 days prior to the date of each exercise in a) , of: i) the exercise's date(s) and location(s); ii) the exercise's objectives; iii) the participants in the exercise; and iv) the scenario for the exercise. c) Trans Mountain must file with the NEB and provide to Appropriate Government Authorities, first responders and potentially affected Indigenous groups, within 3 months after completing each exercise in a) , a report on the exercise that includes: i) the results of the completed exercise; ii) areas for improvement; iii) steps to be taken to correct deficiencies; and iv) confirmation that an independent third party has evaluated and assessed the emergency response exercises and that Trans Mountain will consider the comments generated for future exercises.	X						X	
137	Tank roof design for tanks at the Edmonton Terminal Trans Mountain must install steel pontoon internal floating roofs and fixed roofs with odour control systems on all of its five proposed tanks at the Edmonton Terminal. Trans Mountain must file with the NEB, at least 30 days prior to applying for leave to open the five proposed tanks , a letter signed by an officer of the company that confirms that these roofs were installed.							X	
138	Confirmation of firefighting capacity at terminals Trans Mountain must file with the NEB, at least 30 days prior to commencing operations at the terminal , confirmation that appropriate firefighting capacity, in accordance with Condition 118, is in place.	X						X	

No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
139	Project completion Trans Mountain must file with the NEB, within 30 days after commencing operations , confirmation, signed by an officer of the company, that the Project was completed and constructed in compliance with all applicable [certificate/order] conditions. If compliance with any of the conditions cannot be confirmed, the officer of the company must include the reason(s) for this and the proposed course of action to achieve compliance.	X	X	X	X	X	X	X	X
140	Post-construction greenhouse gas (GHG) assessment report Trans Mountain must file with the NEB <u>for approval</u> , within 2 months after commencing operations , an updated GHG assessment report specific to the Project. The report must include: a) the methodology used for the assessment, including the sources of GHG emissions, assumptions, and methods of estimation; b) the total direct GHG emissions generated from Project construction, including land-clearing; c) a breakdown of direct GHG emissions generated by the construction of individual Project components (pipeline, pump stations, tank terminals and Westridge Marine Terminal) and by land-clearing activities; and d) a comparison and discussion of the direct GHG emissions calculated in b) with the predicted emissions in Trans Mountain's application and subsequent submissions.	X			X	X	X	X	
141	Post-construction noise surveys Trans Mountain must file with the NEB, within 3 months after commencing operations , the results of post-construction noise surveys conducted at the Sumas and Burnaby Terminals and at the Westridge Marine Terminal, demonstrating compliance with the British Columbia Oil and Gas Commission's <i>British Columbia Noise Control Best Practices Guideline (2009)</i> , and any further mitigation that Trans Mountain will undertake to achieve compliance.	X						X	
142	GHG Emissions Offset Plan – Project construction Trans Mountain must file with the NEB <u>for approval</u> , within 4 months after commencing operations , a plan for providing offsets for all direct GHG emissions generated from Project construction, as determined in Condition 140. The plan must include: a) a list and discussion of all possible offset options considered; b) the criteria against which each option was assessed for viability; c) a description of the offset option(s) selected for direct GHG emissions generated from Project construction, and the rationale for selecting the option(s); d) confirmation that the selected offset option is registered under the approved quantification protocols and has been verified by an accredited "verification body"¹⁴⁶; e) a schedule indicating when the selected offset options(s) will be initiated; and f) an accounting of offsets confirming no net GHG emissions from Project construction.	X			X	X	X	X	
143	Baseline inspections a) Trans Mountain must conduct the following pipeline inspections on Line 2 and the new delivery pipelines, at the times indicated: i) a high-resolution in-line caliper inspection (i.e., a GEOPIG™ inspection) within 6 months after commencing operations to establish accurate pipeline position and to detect pipe deformations; ii) an in-line ultrasonic crack detection inspection within 2 years after commencing operations; iii) an in-line corrosion magnetic flux leakage inspection in both the circumferential and longitudinal directions within 2 years after commencing operations; iv) an in-line ultrasonic wall measurement inspection within 2 years after commencing operations; and	X							

¹⁴⁶ In these conditions, "verification body" means a competent and independent person, or persons, with responsibility for performing and reporting on the verification process (as defined by ISO 14064).

No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	v) a close interval survey within 2 years after commencing operations . b) Trans Mountain must file with the NEB, within 6 months after completing each inspection in a) , a report that includes a summary of the inspection results, the proposed re-inspection interval, and mitigation measures for the anomalies detected through any of the inspections, if required.								
144	Ongoing confirmation of marine spill prevention and response commitments Trans Mountain must file with the NEB, on or before 31 January of each year after commencing operations , confirmation, signed by an officer of the company, that it is continuing to meet the requirements of Condition 133 regarding Trans Mountain's marine spill prevention and response commitments. Trans Mountain must provide each filing to Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority, Vancouver Fraser Port Authority, British Columbia Coast Pilots, Western Canada Marine Response Corporation, Fisheries and Oceans Canada and the Province of British Columbia at the same time as it is filed with the NEB. If a particular party mentioned above requests that it not be provided the annual filing, Trans Mountain may cease providing it to that party.	X							
145	Community Benefits Program progress reports Trans Mountain must file with the NEB, on or before 31 January of each of the first 5 years after commencing operations , a progress report summarizing the initiatives and activities undertaken as benefits that are in addition to compensation for access and potential impacts to community lands, and/or that exceed regulatory requirements. The report must summarize initiatives supported, at a minimum, in the areas of community programs and infrastructure improvements, environmental stewardship, and education and training during the reporting period, including local emergency management enhancements, improvements to community parks, as well as support for events. The filing must contain a commitment from Trans Mountain, and a description of how Trans Mountain will make progress reports publicly available until the Project is abandoned or decommissioned pursuant to the NEB Act. The progress reports must include: a) a description of the initiatives undertaken or supported; b) a list of participants or beneficiaries, including Indigenous groups, local and regional communities, service providers, or others; c) an update on the timing, status, and outcomes of each initiative, including its estimated completion date, if applicable; and d) a summary of Trans Mountain's consultation activities regarding the Community Benefits Program initiatives.	X							
146	Reports on engagement with Indigenous groups – operations Trans Mountain must file with the NEB, on or before 31 January of each of the first 5 years after commencing operations , a report on the engagement activities it has undertaken with Indigenous groups. Each report must include, at a minimum, for each Indigenous group engaged: a) the name of the group; b) the method(s), date(s), and location(s) of engagement activities; c) a summary of any issues or concerns raised; and d) the measures taken, or that will be taken, to address or respond to issues or concerns, or an explanation why no further action is required to address or respond to issues or concerns. Trans Mountain must provide a copy of each report to each group engaged (and identified in a) above) at the same time that it is filed with the NEB.	X	X		X	X	X	X	
147	Natural hazard assessment Trans Mountain must file with the NEB, within 1 year after commencing operations : a) the results of the baseline natural hazard assessment for the Project; and b) confirmation that the natural hazard assessment will be: i) updated at intervals not exceeding 5 years; and ii) integrated into the existing Natural Hazard Management Program for the Trans Mountain Pipeline system.	X				X	X	X	
148	Pipeline Geographic Information System (radio) data Trans Mountain must file with the NEB, within 1 year after commencing operations , Geographic Information System data in the form of an Esri® shape file that contains pipeline segment centre lines and right-of-way boundaries, where each pipeline segment has a unique outside diameter, wall thickness, MOP, external coating, field-applied girth weld coating, and pipe manufacturing specification. If the above values of the pipeline change at any point along the length of the Project, the pipeline(s) should be segmented at that point. Trans Mountain must also provide Geographic	X							

No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	Information System locations and names of all Project pump stations, terminals, custody transfer meters, tunnel entrances, pipeline bridges, check valves, and block valves, as applicable. The datum must be NAD83 and projection must be geographic (latitudes and longitudes).								
149	Caribou Habitat Restoration and Offset Measures Monitoring Program Trans Mountain must file with the NEB <u>for approval, on or before 31 January after the first complete growing season after commencing operations</u> , a program for monitoring and verifying the effectiveness of caribou habitat restoration and offset measures implemented as part of the final Caribou Habitat Restoration Plan (Condition 37) and the final Offset Measures Plan (Condition 128). This program must include: a) the scientific methods or protocols for short- and long-term monitoring of the restoration and offset measures, and effectiveness of the measures; b) monitoring frequency, timing, and locations, and the rationale for each; c) protocols for how restoration and offset measures will be adapted, as required, based on the monitoring results from the program's implementation; d) a summary of Trans Mountain's consultation with Appropriate Government Authorities and any species experts on the design of the monitoring program; and e) a proposed schedule for filing reports on monitoring results and adaptive management measures to the NEB, Environment and Climate Change Canada, and appropriate provincial authorities to be contained in the Caribou Habitat Restoration and Offset Measures Monitoring Program as well as at the beginning of each report filed.	X	X		X	X	X		
150	Caribou habitat restoration and offset measures monitoring report(s) Trans Mountain must file with the NEB, based on the approved schedule for the Caribou Habitat Restoration and Offset Measures Monitoring Program (required by Condition 149), a report(s) outlining the monitoring program's results, including the observed effectiveness of habitat restoration and offset measures for each affected caribou range, and how those measures will be adapted, as required, based on monitoring results. Any proposed changes to the NEB-approved reporting schedule must be included within the relevant report prior to any reporting on a revised schedule.	X	X		X	X	X		
151	Post-construction environmental monitoring reports Trans Mountain must file with the NEB, on or before 31 January following the first, third, and fifth complete growing seasons after completing final clean-up , a post-construction environmental monitoring report for the Project that must include: a) a description of the valued components or issues that were assessed or monitored; b) measurable goals for each valued component or issue; c) monitoring methods for each valued component or issue, results of the monitoring, and a comparison to the defined measurable goals; d) corrective actions taken, their observed success, and their current status; e) identification on a map or diagram of the locations where corrective actions were taken; f) any further corrective actions planned and a schedule for monitoring and reporting; and g) a summary of its consultations with appropriate government authorities and any potentially affected Indigenous groups and affected landowners / tenants. In the post-construction environmental monitoring report filed after the fifth full growing season after completing clean-up, Trans Mountain must include: i) an assessment of the effectiveness of mitigative and corrective actions and how learnings have been or will be applied to Trans Mountain's Environmental Protection Program; ii) a detailed description of all valued components or issues for which the measurable goals have not been achieved during the duration of the post-construction monitoring program; and iii) an evaluation of the need for any further corrective actions, measurable goals, assessments, or monitoring of valued components or issues, including a schedule for those. All filed post-construction environmental monitoring reports must address issues related, but not limited, to: soils; weeds; watercourse crossings; riparian vegetation; wetlands; rare plants, lichens and ecological communities; municipal tree replacement; wildlife and wildlife habitat; fish and fish habitat; marine fish and fish habitat; marine mammals; marine birds; and species at risk. No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
152	Pipeline segment reactivation (Hinton to Hargreaves; Darfield to Black Pines) – new certificate and certificate validation Trans Mountain must file with the NEB, before expiry of the previous certificate identified in Condition 19, a new certificate with a supporting report issued by an independent certification body¹⁴⁷ for the two pipeline segments identified in Condition 19. The certificate and report must demonstrate that the two pipeline segments: a) are fit for service for the specified operating conditions;¹⁴⁸ b) meet all applicable requirements of CSA Z662; and c) will meet the hydrostatic test requirements outlined in CSA Z662, at any time during the certified period. The certificate must be valid for at least 5 years and be validated on an annual basis during the certified period. The supporting report must include the qualifications of the independent certification body, the justification used to grant the certificate, and the expiry date of the certificate.		X						
153	Full-scale emergency response exercises during operations a) Within 5 years after commencing operations, Trans Mountain must complete full-scale exercises to test each of the following five scenarios: i) a full-bore rupture under ice and snow conditions in the Coquihalla Mountain Range; ii) a full-bore rupture into the Athabasca River during high spring flow conditions; iii) a full-bore rupture into Fraser River at the Port Mann Bridge, under peak flow conditions; iv) a full-bore rupture into the North Thompson River during high spring flow conditions; and v) a tank fire at the Burnaby Terminal. b) Trans Mountain must notify the NEB and all potential exercise participants and observers, including Appropriate Government Authorities, first responders and potentially affected Indigenous groups at least 45 days prior to the date of each exercise in a), of: i) the exercise's date and location(s); ii) the exercise's objectives; iii) the participants in the exercise; and iv) the scenario for the exercise. c) Trans Mountain must file with the NEB, and provide to Appropriate Government Authorities, first responders and potentially affected Indigenous groups, within 3 months after completing each exercise in a), a report on the exercise that includes: i) the results of the completed exercise; ii) areas for improvement; iii) steps to be taken to correct deficiencies; and iv) confirmation that an independent third party has evaluated and assessed the emergency response exercises and that Trans Mountain will consider the comments generated for future exercises.	X						X	
154	Riparian Habitat Reclamation Evaluation Report and Offset Plan Trans Mountain must file with the NEB <u>for approval</u>, on or before 31 January after the fifth complete growing season after completing final clean-up, a Riparian Habitat Reclamation Evaluation Report and Offset Plan. a) The report must include, for each defined watercourse crossed by the Project: i) an evaluation of performed reclamation activities against the identified measureable goals and targets (required by Condition 71), that includes an identification of the defined watercourses where riparian habitat that has not returned to, or trending towards a sufficient, pre-construction functionality; ii) a description of the proposed enhancement measures and corrective actions selected and	X	X						

¹⁴⁷ For Conditions 19, 122 and 152, an “independent certification body” is an internationally recognized company or organization, such as Lloyd's Register or Det Norske Veritas, which is able to certify compliance to statutory requirements. The independent certification body must have expertise in pipeline integrity. The NEB reserves the right to accept or reject the certificate. In addition, the NEB's decision is not contingent on the results of the certificate.

¹⁴⁸ For Conditions 19, 122 and 152, “operating conditions” must include the Project-specific operating conditions, possible transient flow conditions, slack flow conditions, and effects on operating pressure due to temperature changes.

No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
	the rationale for the selected option(s); and iii) a schedule for when the enhancement measures and corrective actions will be initiated and an estimated timeline for completion, including any monitoring that will be required. b) The plan must include, for defined watercourses crossed by the Project located in watersheds identified as being above the riparian habitat disturbance threshold (>18 per cent of riparian habitat disturbed in the watershed) or classified as High Sensitive fish-bearing by Trans Mountain, during the OH-001-2014 proceeding, and, where, after the fifth complete growing season, riparian habitat has not returned, or is not trending towards sufficient pre-construction functionality: i) a description of the proposed offset measures selected that includes details with rationales on the amount and type of offsets required, how the offset measures would be implemented, and the location of offset sites; ii) a schedule for when the offset measures will be initiated, an estimated timeline for completion, including any monitoring that will be required, and a schedule for when the results of the offsets monitoring will be filed with the Board that demonstrate offset success. iii) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the report/plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and iv) a summary of consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the report/plan.								
155	Rare Ecological Community and Rare Plant Population Mitigation Evaluation Report and Offset Plan Trans Mountain must file with the NEB <u>for approval</u>, on or before 31 January after the fifth complete growing season after completing final clean-up, a Rare Ecological Community and Rare Plant Population Mitigation Evaluation Report and Offset Plan for ecological communities of concern, rare plants and lichens, and early draft, candidate, proposed, or final critical habitat for plant and lichen species under the <i>Species at Risk Act</i>, that includes: a) an evaluation of avoidance and mitigation success with reference to the measurable goals outlined in the Rare Ecological Community and Rare Plant Population Management Plan required by Condition 40; b) identification of communities, species, and critical habitats that have not yet achieved the intended degree of reclamation success, and an evaluation of the need for ongoing monitoring, reporting and corrective actions; c) identification of any ongoing effects to ecological communities and rare plant and lichen species that have an at-risk status of S1, S1S2 or S2, or that are listed under federal or provincial legislation for protection, or on any early draft, candidate, proposed, or final critical habitat under the <i>Species at Risk Act</i>; d) for the ongoing effects identified in c), a Final Rare Ecological Community and Rare Plant Population Offset Plan that updates the Preliminary Rare Ecological Community and Rare Plant Population Offset Plan required by Condition 40, and that also includes details with rationales on the amount and type of offsets required, the offset measures to be implemented, the selection of compensation sites, identification of the parties involved in planning and implementation and their respective roles and responsibilities, a timeline for implementation, and the methods and schedule for monitoring and reporting to demonstrate offset success; e) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and f) a summary of its consultations with Appropriate Government Authorities, any species experts and potentially affected Indigenous groups. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the report/plan.	X	X		X	X	X	X	

No.	Conditions with initial filings due after commencing operations	CPCN	OC2	OC49	Temp	Pump1	Pump2	Tanks	Deact
156	Wetland Reclamation Evaluation Report and Offset Plan Trans Mountain must file with the NEB <u>for approval</u>, on or before 31 January after the fifth complete growing season after completing final clean-up, a Wetland Reclamation Evaluation Report and Offset Plan that includes: a) the extent (in hectares), by wetland type, that was impacted by Project construction and associated activities; b) for each wetland impacted, an evaluation of mitigation and reclamation success with reference to the measurable goals outlined in the Wetland Survey and Mitigation Plan required by Condition 41; c) identification of any wetlands that have not yet achieved the intended degree of reclamation success, and an evaluation of the need for ongoing monitoring, reporting and corrective actions; d) for any wetland to which no-net-loss under the Federal Policy on Wetland Conservation applies, an evaluation of any temporary or ongoing loss of any individual functional condition (e.g., habitat, hydrology and biogeochemistry); e) for any wetland that has not achieved reclamation success in terms of overall wetland function, and for any wetland to which no-net-loss under the Federal Policy on Wetland Conservation applies and that has had a temporary or ongoing loss in any individual functional condition, a Final Wetland Offset Plan that updates the Preliminary Wetland Offset Plan required by Condition 41, and that also includes details with rationales on the amount and type of offsets required, the offset measures to be implemented, the selection of compensation sites, identification of the parties involved in planning and implementation and their respective roles and responsibilities, a timeline for implementation, and the methods and schedule for monitoring and reporting to demonstrate offset success; f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and g) a summary of its consultations with Appropriate Government Authorities, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the report/plan.	X	X		X	X	X	X	
157	Grasslands Reclamation Evaluation Report and Offset Plan Trans Mountain must file with the NEB <u>for approval</u>, on or before 31 January after the tenth complete growing season after completing final clean-up, a Grasslands Reclamation Evaluation Report and Offset Plan that applies to native grasslands in the British Columbia interior and that includes: a) the extent (in hectares) of grasslands that were impacted by Project construction and associated activities; b) an evaluation of reclamation success with reference to the measurable goals outlined in the Grasslands Survey and Mitigation Plan required by Condition 42; c) an identification of any grasslands that have not yet achieved the intended degree of reclamation success, and an evaluation of the need for ongoing monitoring, reporting and corrective actions; d) for those grasslands that have not yet achieved reclamation success, a Final Grasslands Offset Plan that updates the preliminary plan required by Condition 42, and that also includes details with rationales on the amount and type of offsets required, the offset measures to be implemented, the selection of compensation sites, identification of the parties involved in planning and implementation and their respective roles and responsibilities, a timeline for implementation, and the methods and schedule for monitoring and reporting to demonstrate offset success; e) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the plan, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information; and f) a summary of its consultations with Appropriate Government Authorities, species experts, potentially affected Indigenous groups and affected landowners/tenants. In its summary, Trans Mountain must provide a description and justification for how Trans Mountain has incorporated the results of its consultation, including any recommendations from those consulted, into the report/plan. Appendix 4: Technical details about the Project

Project overview

The general overview of the Project is found in Chapter 1 of this Report. Additional details are provided here:

The existing Trans Mountain Pipeline system transports a range of crude petroleum and refined products to multiple locations in B.C. These include refined product deliveries to Kamloops and Port Moody, and crude petroleum deliveries to Burnaby, the Westridge Marine Terminal (WMT) for offshore export, and Sumas for deliveries on the Trans Mountain Pipeline (Puget Sound) LLC pipeline to Anacortes, Ferndale, and Cherry Point in Washington State. The existing system has an operating capacity of approximately 47 690 m³/day (300,000 barrels/day) shipping 20 per cent heavy crude and 80 per cent light crude and refined products.

Trans Mountain proposes to ship a larger volume of these oils on the expanded system. Line 1 is expected to transport batches of primarily light crude oils and refined products while Line 2 will transport batches of primarily heavy crude oil.

- After the expansion, the 1 147 km Line 1 pipeline will consist of:
 - the existing 229 km of 610 mm outside diameter (NPS 24) and 89 km of 762 mm outside diameter (NPS 30) pipeline segments from Edmonton, AB to Hinton, AB;
 - a reactivated 150 km of 610 mm outside diameter (NPS 24) pipeline segment from Hinton, AB, to Hargreaves, B.C. (built in 1957);
 - the existing 273 km of 610 mm outside diameter (NPS 24) pipeline segment from Hargreaves, B.C., to Darfield, B.C.;
 - a reactivated 43 km of 610 mm outside diameter (NPS 24) 4 pipeline segment from Darfield, B.C., to Black Pines, B.C. (built in 1953); and
 - the existing 38 km of 762 mm outside diameter (NPS 30) and 325 km of 610 mm outside diameter (NPS 24) pipeline segments from Black Pines, B.C., to the Burnaby Terminal, B.C.

After the expansion, the approximately 1 180 km Line 2 pipeline will consist of:

- approximately 339 km of new 914 mm outside diameter (NPS 36) pipeline from Edmonton, AB, to Hinton, AB;
- the existing 150 km of 914 mm outside diameter (NPS 36) pipeline segment from Hinton, AB, to Hargreaves, B.C. (built in 2008);
- approximately 121 km of new 1 067 mm outside diameter (NPS 42) pipeline from Hargreaves, B.C., to Blue River, B.C.;
- approximately 158 km of new 914 mm outside diameter (NPS 36) pipeline from Blue River, B.C., to Darfield, B.C.;
- the existing 43 km of 762 mm outside diameter (NPS 30) pipeline segment from Darfield, B.C. to Black Pines, B.C. (built in 1957); and
- approximately 368 km of new 914 mm outside diameter (NPS 36) pipeline from Black Pines, B.C., to the Burnaby Terminal.

Other major components of the Project would include:

- two 762 mm outside diameter (NPS 30) delivery lines from the Burnaby Terminal to the WMT (Westridge Delivery Pipelines) in B.C. (lengths are approximately 2.6 km for the tunnel option and 3.6 km for the street option);
- adding 12 new pump stations, 10 at existing pump station sites and 2 at a new common pump station site at Black Pines;
- adding 34 new pump units at the new pump stations;
- reactivated existing pump station at Niton, AB;
- re-connecting Jasper Pump Station to Line 1 and adding drag-reducing agent (DRA) injection capability;
- adding one new pump unit at Sumas Pump Station to support additional deliveries to the Puget Sound Pipeline;

- 20 new tanks at the Edmonton (5), Sumas (1) and Burnaby (14) Terminals, preceded by the demolition of two existing tanks, one each at Edmonton and Burnaby, for a net total of 18 additional tanks;
- 25 new sending or receiving traps;
- deactivate and decommission several components of its existing facilities;
- constructing one new dock complex with a total of three Aframax-capable berth faces and a utility dock; and
- ancillary components and appurtenances, including mainline block valves, scraper traps, pressure reduction or relief stations, containment, power lines, access roads, and temporary infrastructure.

Appendix 5: Hearing steps

Appendix 6: List of intervenors

The list below does not include intervenors that withdrew from either hearing.

Intervenors in both the OH-001-2014 and MH-052-2018 hearings

Adams Lake Indian Band	May, Elizabeth
Alexander First Nation	Métis Nation BC
BC Nature and Nature Canada	Metro Vancouver
BC Métis Federation	Musqueam Indian Band
BP Canada Energy Group ULC	Natural Resources Canada
Burnaby Residents Opposing Kinder Morgan Expansion	Neskonlith Indian Band
Canadian Association of Petroleum Producers	New Democratic Party of Canada
Canadian Natural Resources Limited	Nooaitch Indian Band

Appendix 7: Overview of notices of motion and rulings on other requests

Each notice of motion (motion) was decided on its own merit based on a review of the applicable legal test, evidence or information filed with the motion (or in response to the motion) and the arguments in favour or opposed to the motion. Specific motion decisions are located on the Board's public registry.

7.1 OH-001-2014 hearing

In total, the Board received approximately 291 motions and review applications as of 31 March 2016. During the course of the Board's review process, it issued 121 rulings on motions or review and variance applications. In some instances, such as motions to compel, there were numerous motions, and only one aggregate ruling.

The Board also responded to a number of letters and suggestions (not included in the numbers below). These letters included issues raised by Indigenous groups regarding Indigenous oral traditional evidence and section 18 of the *Canadian Environmental Assessment Act, 2012*. The descriptions below are meant to be summary only and numbers provided should be considered approximate in nature.

Motion category	General description	Number of motions
Late Applications to Participate (ATP) or requests to review and vary participation decisions	Request for an extension to the deadline of the ATP (4); Late application for ATP to request intervenors/commenters standing (18); review of the Board's ruling on participation denying intervenor status (3).	25
Extend Statutory timelines and excluded period or request to take no further steps in hearing process	Request to the Board to seek the Chairperson's approval to extend statutory timeline until Trans Mountain files detailed Quantitative Human Health Risk Assessments (2); request for an extension request until full details on selected and alternative corridors are received (1); section 74 determination – regarding the need for leave to transfer ownership (1); request to withhold issuing a certificate of public convenience and necessity and related approval for the Project until certain specified issues are corrected (1); request to dismiss certificate because no "company" holds the operating certificate (1); various other time to fulfil several requests (5)	11
List of Issues and Completeness of Application	Clarification request on the List of Issues and claim that the Application was incomplete (1); requests to expand List of Issues to include environmental and socio-economic effects associated with upstream and downstream activities (2).	3
Meeting request	One-on-one meeting request for the purpose of discussing issues related to the application.	1
Administrative matters	Replacement of documents with corrected version (2); request to supplement responses to Information requests (IRs) with filing ID number (1); visual aids (1); late filing of affidavit (1)	5
Oral Cross-Examination	Requests to amend the Hearing Order to include a phase for the oral cross-examination of witnesses on all evidence (2); request (after Trans Mountain reply argument filed) to have cross-examination on certain evidence (1).	3
Information requests (IRs) and letters of comment (LOC)	Several requests to extend (5) and further (4) extend the deadline of IRs of intervenors to Trans Mountain; disclosure from Trans Mountain for characteristics of product used in the Gainford study (1); Trans Mountain's request to extend deadline for response to IRs #1 from intervenors (1), striking of IRs (1); Extension of filing deadline for LOC (3), filing of late LOC (9); intervenor seeking leave to direct IRs to another intervenor (1); late filing of IR (1).	26

Motion category	General description	Number of motions
Requests to expand participation in Oct. 9 hearing regarding whether the Board should issue an access Order regarding Trans Mountain's access to City of Burnaby land	Request that the Board reconsider its decision to preclude intervenors from providing submissions regarding access to City of Burnaby lands.	3
Review of ruling	Review of Ruling 101 dated 7 December 2015	1
Constitutional matters	Request seeking a declaration that s. 55.2 of the <i>National Energy Board Act</i> (NEB Act) is unconstitutional as it is alleged to violate freedom of expression and notice of constitutional question and request an oral hearing of the Charter motion on procedural fairness and evidentiary grounds (1); Trans Mountain's rights under paragraph 73(a) of the NEB Act with respect to accessing lands for survey and examination purposes and Notices of Constitutional Question (1); review List of Issues on basis of infringement of section 7 of the <i>Canadian Charter of Rights and Freedoms</i> (1); motion on limited public access with freedom of expression raised (1); motion on independence of temporary Board Members.	5
Amending hearing/Oral Traditional Evidence dates	Requests that the Board reschedule the hearing of their oral traditional evidence to a late date.	4
Section 74	Ownership and certificate issue.	1
Evidence	Requests to remove certain evidence from the record (3); requests to file new evidence (6); filing of late evidence (7); extend the evidence filing deadline (2); replacement of evidence (5);	23
Compel further and better responses	Various requests that the Board compel full and adequate IR responses for first round IRs and second round IRs from Trans Mountain and on the TERMPOL Report by Transport Canada; late motion to compel for round 2 IRs; several motions to compel full and adequate responses from intervenors to IRs from other intervenors, late motion to compel (3).	129
Confidentiality	Various requests to file certain documents confidentially (15) and a request to identified information that was redacted (1).	16
Participant Funding Program concerns	Request to add a round of information requests if funding is provided and reconsider funding allocation.	4
Advertising Costs	Request that Trans Mountain file its advertising costs for the project, that Firm Service Fees collected not go towards advertisement etc.	1
Oral Traditional Evidence - audio recordings	Make audio recordings public and free.	1
Community benefits	Request to nullify and cease Trans Mountain from making Community Benefits Program Agreements with participants.	1
Hearing on argument	Request to attend hearing as a non-participant (1), request to have additional representatives (24), late oral summary argument request (1), motion on limited public access (1).	27
Panel	Allegation of apprehension of bias of Panel Chair – Mr. David Hamilton; request to recuse the Panel, quash the hearing, prevent Mr. Steven Kelly from communicating with Panel and a request to assign a new Panel.	2

Other relief requested and Board rulings

As part of closing argument, a number of intervenors made requests for relief other than requests that specifically addressed the intervenors' positions on the recommendation that the Board ought to make to the GIC under the NEB Act or specific findings under the provisions of the *Canadian Environmental Assessment Act, 2012* or the *Species at Risk Act* (SARA).

In some cases, these requests were presented as alternative requests to the intervenor's primary request that the Board recommend denial of the Project application. In other cases, the relief was advanced as the intervenor's primary position.

In Hearing Order OH-001-2014, issued on 2 April 2014, the Board provided direction that if a party wished to raise question of procedure or substance requiring a Board decision, it was required to file a notice of motion. The Hearing Order described the process for filing a notice of motion and also referenced section 35 of the *National Energy Board Rules of Practice and Procedure, 1995* for further information. In addition, in Procedural Direction No. 20 (PD No. 20), the Board provided direction with respect to motions and preliminary matters that could be raised during oral summary argument. The Board stated that matters should not be raised during oral summary argument which could have been raised with the Board in writing prior to the oral portions of the hearing.

Notwithstanding the Board's prior directions and the *National Energy Board Rules of Practice and Procedure, 1995*, a number of parties made requests for procedural and or substantive decisions within their written closing argument and /or oral summary argument without filing a notice of motion.

These relief requests, submitted as part of closing argument, were made in relation to:

- a) Completeness.
- b) Procedural requests relating to cross-examination and time extensions.
- c) Abandonment of the existing TMPL and changes in the scope of the proposed Project, if approved.

In addition, several intervenors made specific relief requests in relation to Indigenous consultation matters. Indigenous matters are discussed in detail in Chapter 5 of this report and, as such, the Board's views in relation to Indigenous consultation are addressed within the Board's views in Chapter 5.

As part of its Reply Evidence, Trans Mountain requested approval for proposed route re-alignments in proximity to the Lewis Estates community in Edmonton, Alberta, and United Boulevard and Hartley Avenue in Coquitlam, B.C. For the reasons provided in Chapter 11, the Board denies this late request without prejudice to Trans Mountain filing an application for a variance under section 21 of the NEB Act.

In its Reply Evidence, Trans Mountain also sought an exemption from the detailed route approval process, under section 58 of the NEB Act, for clearing activities associated with the first 10 km of each Line 2 spread.

Views of the Board

With respect to Trans Mountain's request that clearing activities associated with the first 10 km of each Line 2 spread be exempt from the detailed route approval process, the Board finds that such clearing activities would not be temporary in nature. They would have lasting consequences and should therefore not take place unless and until a detailed route for Line 2 is approved. As a result, the Board denies this request.

With the exception of PIPE UP, none of the requests for other relief were consistent with the Hearing Order direction requiring a notice of motion. In PIPE UP's case where it filed a notice of motion, this occurred after the hearing record was closed.¹⁴⁹ Most of the requests for other relief were also inconsistent with PD No. 20. For these reasons, all the requests for additional relief are dismissed.

Additional reasons for denying specific requests for other relief are as follows.

- a) Completeness

As part of closing argument, several parties made requests that the Board find the Application incomplete and that the Board therefore either decline to forward a recommendation on that basis, or that it dismiss the Application on the basis of being incomplete.

¹⁴⁹ Pursuant to Procedural Direction No. 18, the hearing record closed immediately after Trans Mountain filed its written argument.

On 2 April 2014, the Board made its finding in relation to completeness of the Application and found it to be complete. No party sought review of this determination. A finding of completeness is a prerequisite for the Board to be able to proceed with the assessment of an application for the purposes of preparing a report in accordance with s.52 of the NEB Act. The final argument stage is well beyond the appropriate time to raise questions about the completeness of a project application. The determination of completeness has already been made by the Board. The Board denies these requests.

b) Procedural requests relating to cross-examination and time extensions

As part of closing argument, the Board also received new requests for cross-examination and time extensions. B.C. Nature and Nature Canada requested that the Board amend its Hearing Order to allow for cross-examination and order Trans Mountain to provide oral testimony and be subject to cross-examination with a declaration that s.52(5) of the NEB Act applies for these purposes; or request to Minister or GIC to issue order under s.52(7) to extend time for NEB report to complete cross.

PIPE UP, as its alternative relief request in its closing argument, asked for cross-examination of experts by parties who have submitted evidence in key areas where expert evidence conflicts or there is uncertainty in respect of severe or irreversible harm. In addition, following the close of argument, on 18 February 2016, PIPE UP also filed a motion seeking this same relief. In its motion, PIPE UP stated that it was seeking a reconsideration of the Board's Ruling No. 14, the Board's ruling with respect to two motions requesting the Board amend its Hearing Order to allow for cross-examination.

In Ruling No. 14, dated 7 May 2014, the Board stated:

In the Board's view, the legislation makes it clear that the Board is master of its own procedure and can establish its own procedures for each public hearing with regard to the conduct of hearings. This includes the authority to determine for a particular public hearing the manner in which evidence will be received and tested. In the circumstances of this hearing, where there are 400 intervenors and much of the information is technical in nature, the Board has determined that it is appropriate to test the evidence through written processes. All written evidence submitted will be subject to written questioning by up to 400 parties, and the Board.

B.C. Nature and Nature Canada stated that there were deficiencies in Trans Mountain's responses to IRs and that as a result, cross-examination was necessary to test the evidence.

PIPE UP argued that it had now emerged that there was conflicting expert evidence in areas which requires the Panel to reconsider its decision to proceed without cross-examination. PIPE UP cited, as examples, conflicting evidence in Muse Stancil and Gunton Reports; conflicting evidence respecting Tank Fire and Boilover; conflicting evidence respecting Trans Mountain's Environmental Record; conflicting evidence respecting the risk and cost of spill events; and Trans Mountain's ability and willingness to finance a credible worst-case scenario.

Trans Mountain provided a response to the PIPE UP motion on 29 February 2016. Trans Mountain stated that the hearing record was closed, that PIPE UP's late request was not properly before the Board, was without basis, and should be denied.

PIPE UP did not provide a reply.

Neither B.C. Nature and Nature Canada nor PIPE UP provided explanation for the delay in their bringing these requests. The appropriate application in the case of concerns that answers to IRs are deficient is a motion to compel full and adequate response, which B.C. Nature and Nature Canada brought, and upon which the Board ruled on 27 April 2015 in Ruling No. 63, denying B.C. Nature and Nature Canada's motion. Now, many months later, and after the close of the evidentiary record, B.C. Nature and Nature Canada say that Trans Mountain's responses to IRs should support their late request for cross-examination. With respect to PIPE UP's argument respecting conflicting evidence, the fact that there is conflicting evidence on the record on various technical issues has not recently emerged. It was apparent with the filing of intervenor evidence in May 2015 that there was conflicting evidence on various topics. PIPE UP does not explain why it waited until after the closing of the record to bring its motion requesting a reconsideration of Ruling No. 14.

The Board finds that these requests for re-opening of the hearing were filed too late and no explanation was given for the late filing. The Board also finds that considering these requests at this late date would result in significant prejudice to Trans Mountain.

In considering the conflicts in evidence, much of which is scientific or technical in nature and none of which involved the credibility of the person providing the sworn evidence, the Board is of the view it is able to determine the weight to give to various evidence filed on the hearing record.

The Board declines B.C. Nature and Nature Canada's request to amend the Hearing Order to allow for cross-examination, and declines PIPE UP's request for a reconsideration of Ruling No. 14.

c) Abandonment of the existing TMPL and changes in the scope of the proposed Project, if approved

The City of Surrey made these requests. In particular, it requested that if the Board recommended approval of the Project, that it also direct that the existing TMPL that runs through Surrey should be abandoned. The City of Surrey further requested that there be an order that the Project should be either twinned or upsized through Surrey.

These requests by the City of Surrey amount to requests that the Board change the scope of the application before it.

There is no application for leave to abandon a portion of the existing TMPL before the Board. Similarly, the Project proposal does not contemplate being twinned or upsized through the City of Surrey.

Such applications, if they were to come before the Board, would be considered on their merits and would require notice to potentially affected parties.

The Board declines to approve the City of Surrey's requests that if it recommends approval of the Project, that the Board direct abandonment of the existing TMPL that runs through Surrey, and that the Project be twinned or upsized for the portion of it that runs through the City of Surrey.

7.2 MH-052-2018 hearing

The Board issued 30 rulings on notices of motions. In some instances, a single ruling addressed multiple notices of motion.

Ruling No.	General description	Summary of decision
1	124 applications to participate received by the 3 October 2018 deadline	List of Parties to the hearing (granted intervenor status to 99 applicants; did not grant intervenor status to 25 applicants)
2	10 late applications to participate	• Granted intervenor status to nine applicants • Did not grant intervenor status to one applicant
3	Late application to participate from Alexis Nakota Sioux Nation	Granted intervenor status
4	Late application to participate from Káínai First Nation (Blood Tribe)	Granted intervenor status
5	Late application to participate from T'Sou-ke First Nation	Granted intervenor status
6	Late application to participate from Malahat First Nation	Granted intervenor status
7	Requests from various Indigenous intervenors regarding the location of oral traditional evidence sessions, and concerns about time limits	Denied main request to hold oral traditional evidence sessions in Lower Mainland, B.C.; however, the Board: • added Calgary as an additional location to facilitate hearing oral traditional evidence remotely • allotted additional presentation time for Indigenous intervenors representing more than one First Nation
8	Late applications to participate from Mr. Albert R. Bud Taylor and Hydrofuel Inc.	Did not grant intervenor status to either applicant
9	Requests from Squamish Nation and Tsleil-Waututh Nation for a 15-day extension to the deadline for intervenors to file opening statements and direct evidence	Granted
10	Late application to participate from Papaschase First Nation #136	Granted intervenor status
11	Late application to participate from Saddle Lake Cree Nation #125	Granted intervenor status
12	Late application to participate from Heiltsuk First Nation	Granted intervenor status

Ruling No.	General description	Summary of decision
13	Request from Mr. Gregory John (member of the public) to attend and observe the oral traditional evidence sessions in Victoria, B.C.	Denied
14	Request from Mr. David Slik for the Board to reconsider the restriction that commenters may not file letters of comment after 20 November 2018, and to limit commenters to a single letter of comment	Denied
15	Request from Tsleil-Waututh Nation to hold its oral traditional evidence hearing session confidentially	Partially granted (the Board would hear a portion of Tsleil-Waututh Nation's oral traditional evidence confidentially)
16	Late application to participate from Neskonlith Indian Band	Granted intervenor status
17	Request from Tsleil-Waututh Nation for confidential treatment of certain evidence	Granted
18	Request from Trans Mountain for a six-day extension to file reply evidence specifically related to intervenor evidence (including confidential evidence) that it had not received by the deadline	Partially granted (provided Trans Mountain with a four day extension to respond to confidential evidence; did not provide an extension to respond to certain evidence received one day late)
19	Request from Pacheedaht First Nation for confidential treatment of certain evidence	Granted
20	Request from Yarrow Ecovillage to file late evidence	Denied
21	Request from Little Shuswap Lake Indian Band to file late information requests	The Board directed Trans Mountain and Fisheries and Oceans Canada to either respond to the questions, or provide reasons why the Board should not allow them. The information requests were responded to.
22	Application for review from Tsleil-Waututh Nation regarding the Board's 12 October 2018 decisions around: i) the spatial extent for the assessment of Project-related marine shipping ii) not holding a <i>de novo</i> hearing iii) the "need for" and "socio-economic effects" in the List of Issues Living Oceans Society and Raincoast Conservation Foundation also filed a separate application for review in relation to i)	i) Denied on the merits ii) Denied on the threshold question, and also on the merits iii) Denied on the threshold question
23	Request from Tsuut'ina Nation to file late evidence	Granted
24	Request from Living Oceans Society and Raincoast Conservation Foundation to require Trans Mountain to conduct a new risk assessment of Project-related marine shipping	Denied

Ruling No.	General description	Summary of decision
25	Request from the Friends of Ecological Reserves to compel the Canadian Association of Petroleum Producers to respond to information requests asked of it when it did not file evidence	Denied
26	Request from Heiltsuk First Nation to file late evidence	Denied (public tribunal decision did not constitute evidence, but could be relied upon by Parties in final argument)
27	Request from Raincoast Conservation Foundation to file late evidence	Denied
28	Requests from 18 Parties to compel full and adequate responses to approximately 280 information requests, or portions of information requests, asked of other Parties	Granted nine specific requests
29	Request from Malahat First Nation to file revised evidence	Granted
30	Application for review of Ruling No. 25 (from the OH-001-2014 hearing) regarding the consideration of upstream and downstream impacts of the Project on greenhouse gas emissions and climate change	Denied for lack of timeliness and on the threshold question

Appendix 8: Sources of information and evidence from Indigenous participants

The table below identifies the sources of information provided by Indigenous intervenors and commenters in the OH-001-2014 hearing, and Indigenous intervenors in the MH-052-2018 hearing.

In the MH-052-2018 hearing, any individual or group that was not an intervenor could file a letter of comment. Further, prior to issuing Hearing Order MH-052-2018, the Board afforded the public an opportunity to provide comments related to the scope of the hearing, and on the hearing process design. Some Indigenous individuals and groups that were not registered intervenors filed letters with the Board through these broader opportunities; however, these letters are not included below.

All information listed can be found in the Project's folder within the Board's online public registry. To fully understand the context of the information filed, please consult the entire public record.

Appendix 10: Amended Factors and Scope of the Factors for the Environmental Assessment pursuant to the *Canadian Environmental Assessment Act, 2012* (released on 12 October 2018)

1.0 Introduction

On 16 December 2013, Trans Mountain Pipeline ULC (Trans Mountain) filed an application with the National Energy Board (Board or NEB) proposing to construct and operate the Trans Mountain Expansion Project (Project). As the Project would require more than 40 kilometres of new pipeline and would be regulated under the *National Energy Board Act* (NEB Act), it is a designated project under the *Canadian Environmental Assessment Act, 2012* (CEAA 2012) and requires a CEAA 2012 environmental assessment for which the NEB is the Responsible Authority. On 20 September 2018, through OIC P.C. 2018-1177, the Governor in Council (GIC) referred aspects of the Board's Report for the Project back to the Board for reconsideration.

For the purposes of the environmental assessment under the CEAA 2012, the designated project includes the various components and physical activities as described by Trans Mountain in its 16 December 2013 application submitted to the NEB. On 12 October 2018, the Board determined that Project-related marine shipping between the Westridge Marine Terminal and the 12-nautical-mile territorial sea limit is also part of the "designated project" under the CEAA 2012.

As noted in the List of Issues (attached to Hearing Order OH-001-2014), the Board does not intend to consider the environmental and socio-economic effects associated with upstream activities, the development of oil sands, or the downstream use of the oil transported by the pipeline.

In accordance with paragraph 79(2)(b) of the CEAA 2012, the following provides a description of the factors to be taken into account in the environmental assessment under the CEAA 2012 and of the scope of those factors.

2.0 Factors and scope of the factors

2.1 Factors to be considered

The CEAA 2012 environmental assessment for the designated project will take into account the factors described in paragraphs 19(1)(a) through (h) of the CEAA 2012:

- a) the environmental effects¹⁵² of the designated project, including the environmental effects of malfunctions or accidents that may occur in connection with the designated project and any cumulative environmental effects that are likely to result from the designated project in combination with other physical activities that have been or will be carried out;
- b) the significance of the effects referred to in paragraph (a);
- c) comments from the public or any interested party received in accordance with the CEAA 2012;
- d) mitigation measures that are technically and economically feasible and that would mitigate any significant adverse environmental effects of the designated project;
- e) the requirements of the follow-up program in respect of the designated project;
- f) the purpose of the designated project;
- g) alternative means of carrying out the designated project that are technically and economically feasible and the environmental effects of any such alternative means; and
- h) any change to the designated project that may be caused by the environment.

In addition, the environmental assessment will also consider community knowledge and Aboriginal traditional knowledge.

¹⁵² Section 5 of the CEAA 2012 further describes the environmental effects that are to be taken into account.

2.2 Scope of the factors to be considered

The environmental assessment will consider the potential effects of the designated project within spatial and temporal boundaries within which the designated project may potentially interact with and have an effect on components of the environment. These boundaries will vary with the issues and factors considered, and will include, but not be limited to:

- construction, operation and maintenance, foreseeable changes, and site reclamation, as well as any other undertakings proposed by the proponent or that are likely to be carried out in relation to the physical works proposed by the proponent, including mitigation and habitat replacement measures;
- seasonal or other natural variations of a population or ecological component;
- any sensitive lifecycle phases of species (e.g., wildlife, vegetation) in relation to the timing of Project activities;
- the time required for an effect to become evident;
- the area within which a population or ecological component functions; and
- the area affected by the Project.

Any works and activities associated with additional modifications or associated with the decommissioning or abandonment phase of the Project would be subject to a future application under the NEB Act and assessed in detail at that time. Therefore, at this time, any works or activities associated with these phases of the Project will be examined in a broad context only. As indicated above, the environmental assessment will consider cumulative environmental effects that are likely to result from the designated project in combination with effects from other physical activities that have been or will be carried out.

Subsection 2(1) of the CEAA 2012 provides definitions potentially relevant to the scope of the factors, including:

“environment” which means the components of the Earth, including

- a) land, water and air, including all layers of the atmosphere;
- b) all organic and inorganic matter and living organisms; and
- c) the interacting natural systems that include components referred to in paragraphs (a) and (b);

and

“mitigation measures” which means measures for the elimination, reduction or control of the adverse environmental effects of a designated project, and includes restitution for any damage to the environment caused by those effects through replacement, restoration, compensation or any other means.

Appendix 11: Study area boundaries for the Environmental and Socio-Economic Assessment

The following describes the study areas that Trans Mountain used in its Environmental and Socio-Economic Assessment of the Project, and which the Board adopted for its own assessment.

Study area boundaries are defined for both the terrestrial and marine aspects considered. Generally, three different study areas were used in assessing the potential effects on each valued component:

- **Footprint study area (FSA)** – The FSA is the fixed area that would be directly disturbed by the Project facilities and associated physical works and activities. This includes the 45-metre-wide construction right-of-way, permanent and temporary access roads, camp and stockpile sites, valves and power lines, pump stations, tanks, and the Westridge Marine Terminal.
- **Local study area (LSA)** – The LSA typically varies depending on the valued component assessed. The LSA is larger than the FSA. It reflects the area where Project construction and operations activities are most likely to affect the valued component assessed. The LSA is sometimes referred to as the “zone of influence.”
- **Regional study area (RSA)** – The RSA typically varies depending on the valued component assessed. The RSA is larger than the LSA. It covers the area where potential effects on the valued component assessed might overlap with the direct and indirect effects of other activities on that valued component, causing cumulative effects.

Valued component	LSA	RSA
Terrestrial		
Soil and soil productivity	Extends 500 metres on either side of the pipeline centreline and surrounding facilities	n/a (potential effects not expected to extend beyond the LSA)
Wetland loss and alteration	Extends 150 metres on either side of the pipeline centreline, with site-specific tailoring to extend around larger wetland complexes	Generally the same as the Aquatics RSA, which includes all watersheds affected by the Project
Vegetation	Extends 150 metres on either side of the pipeline centerline.	Extends 1 kilometre on either side of the pipeline centreline
Wildlife	Area within a 1 kilometre buffer of the centre of the pipeline corridor and power lines, and around the boundary of facilities (pump stations/terminals)	Area within a 15 kilometre buffer of the centre of the pipeline corridor and power lines, and around the boundary of facilities (pump stations/terminals)
Grizzly bear		Defined by the Grizzly Bear Population Units traversed by the pipeline corridor
Caribou		The area where direct and indirect influence of other activities could overlap with Project-specific effects and cause cumulative effects on caribou. Includes the Wells Gray and Groundhog caribou ranges, associated ungulate winter ranges and wildlife habitat areas.
Surface water quality and quantity	Zone of influence likely to be affected by direct disturbance and sediment deposition during construction and operations. Also includes the area of riparian vegetation to a width of 30 metres back from each bank edge within the width of the construction right-of-way. Each watercourse to be crossed has an individually determined LSA.	Area where the direct and indirect influence of other land uses and activities could overlap with Project-specific potential effects and cause cumulative effects on fish and fish habitat indicators (includes all watersheds directly affected by the Project)
Fish and fish habitat		

Valued component	LSA	RSA
Atmospheric environment (criteria air contaminants, volatile organic compounds)	Extends 500 metres on either side of the pipeline corridor and 5 kilometres in all directions around tank terminals (due to their proximity, the Westridge Marine Terminal and Burnaby Terminal are combined into one LSA).	Extends 2.5 kilometres on either side of the pipeline corridor and 10 kilometres in all directions around tank terminals (due to their proximity, the Westridge Marine Terminal and Burnaby Terminal are combined into one RSA).
Atmospheric environment (ozone, secondary particulate matter) and visibility	No LSA and RSA defined. Instead, a Lower Fraser Valley study area was used. Emission scenarios were implemented over the inner 4 kilometre domain (boundary: 36 x 12 kilometres) centred on the Lower Fraser Valley.	
Atmospheric environment (greenhouse gas emissions)	International	
Westridge Marine Terminal		
Marine sediment and water quality	Extends 500 metres from the proposed water lease expansion	Area of Burrard Inlet east of the First Narrows, including Indian Arm and Port Moody Arm
Marine fish and fish habitat		
Marine mammals	Extends 300 metres from the proposed water lease expansion	
Marine birds		
Marine transportation		
Marine birds	Extends 1 kilometre on either side of the shipping lanes	Generally centred on the shipping lanes, which extend from the Westridge Marine Terminal through Burrard Inlet; south through the southern part of the Strait of Georgia, the Gulf Islands, and Haro Strait; westward past Victoria and through the Strait of Juan de Fuca out to the 12-nautical-mile limit of Canada’s territorial sea
Marine fish and fish habitat	Extends 2 kilometres on either side of the shipping lanes	
Marine mammals	n/a (all residual effects assessed within the RSA)	
Atmospheric environment (criteria air contaminants, volatile organic compounds)		150 x 150 kilometres – includes the shipping lanes from Westridge Marine Terminal in Burnaby, through the Burrard Inlet, south through the Strait of Georgia, Boundary passage and Haro Strait, then westward past Victoria to the end of the Strait of Juan de Fuca, close to the 12-nautical-mile limit.
Atmospheric environment (ozone, secondary particulate matter) and visibility	No LSA and RSA defined. Instead, a Lower Fraser Valley study area was used. Emission scenarios were implemented over the inner 4 kilometre domain (boundary: 36 x 12 kilometres) centred on the Lower Fraser Valley.	
Atmospheric environment (greenhouse gas emissions)	International	

Valued component	LSA	RSA
Terrestrial		
Human occupancy and resource use	For the proposed pipeline and facilities, the spatial boundary of the LSA is defined by a 2 kilometre wide band extending from the proposed Footprint (<i>i.e.</i> , the Footprint plus 1 kilometre on each side) and is based on the area that could be directly affected by localized, Project-specific effects. The LSA was established to provide adequate consideration to existing land and resource uses (<i>e.g.</i> , farming, livestock grazing, hunting, fishing, protected areas) in the Project area which may experience direct effects associated with the Project beyond the Footprint.	The spatial boundary for the RSA consists of the area extending beyond the LSA boundary and is defined as the area where the direct and indirect influence of other land uses and activities could overlap with Project-specific effects and cause cumulative effects on the HORU indicators. This includes the RSA boundaries of fish and fish habitat, wetlands, vegetation and wildlife. The RSA was selected to reflect the general Project setting and to describe resource use related elements that could be indirectly affected by the Project (<i>e.g.</i> , consumptive and non-consumptive recreation, hunting, trapping and fishing).
Infrastructure and services	No LSA was considered for infrastructure and services. The relevant study area is defined by the areas potentially directly disturbed by Project activities (<i>i.e.</i> , Footprint Study Area) and communities and regions in which people potentially affected by and benefitting from the Project reside.	The area where the direct and indirect influences of other land uses and activities could overlap with Project-related effects and cause cumulative effects on the social and cultural well-being indicators. The Socio-economic RSA considers communities close enough to the Project to potentially be a: source of labour; source of procured goods or services; location of community infrastructure / services influenced by the Project; accommodation or camp location for Project workers; or Project construction office location. This area includes the counties and regional districts crossed by the proposed pipeline corridor (or certain regional sub-areas) and communities approximately 50 kilometres from the proposed pipeline corridor that could participate in or be affected by the Project. It also includes Indigenous communities whose reserves or traditional territory is crossed by the proposed pipeline corridor.
Social and cultural well-being	N/A. The relevant study area is defined by communities and regions where people are potentially affected by and are potentially benefitting from the Project, not by a specific land area.	
Employment and economy	No LSA was considered for employment and economy. The relevant study area is defined by communities and regions in which people potentially directly and indirectly affected by and benefitting from the Project reside (not by a particular land area), as well as at the Provincial and National level.	
Heritage resources	The zone of influence in which heritage resources are most likely to be affected during construction and operations is the Footprint, including any temporary workspace. The potential for impacting archaeological, palaeontological or historical resources is limited to areas of potential clearing or ground disturbance (<i>i.e.</i> , the Footprint). A separate Heritage Resources LSA has not been defined for the Project.	The spatial boundaries of the Heritage Resources RSA for the Project comprise an area extending beyond the Footprint and are defined as an area of intersecting Borden Blocks. A Borden Block measures 10 minutes of latitude by 10 minutes of longitude which is the accepted standard division of land used by archaeologists across Canada. For the Project, the Borden Blocks intersected by the proposed pipeline corridor measure approximately 12 kilometres east-west by 18 kilometres north-south.

Valued component	LSA	RSA
Traditional land and resource use (TLRU)	The TLRU LSA encompasses and extends beyond the Footprint to include the zones of influence of water quality and quantity, air emissions, acoustic environment, fish and fish habitat, wetland loss or alteration, vegetation, wildlife and wildlife habitat and heritage resources since TLRU is dependent on these resources. The TLRU LSA is the area where there is a reasonable potential for localized Project-related effects to affect existing uses of the land for traditional purposes (e.g., trapping, hunting, fishing and gathering areas). The potential effects of the Project are primarily assessed within the Footprint and the TLRU LSA.	The TLRU RSA is the area where the direct and indirect influences of other land uses and activities could overlap with Project-related effects and cause cumulative effects on the TLRU indicators. The TLRU RSA includes the RSA boundaries of water quality and quantity, air emissions, acoustic environment, fish and fish habitat, wetland loss or alteration, vegetation, wildlife and wildlife habitat and heritage resources. Since in some cases, the focus of TLRU may be on lands within a few hundred metres of the Footprint, and in other cases broader territorial uses are identified extending several kilometres from the Footprint, the potential effects of the Project on TLRU are also assessed within the TLRU RSA.
Human health	Tank terminals: the area within a 5 kilometre radius of each of the terminals. The SLHHRA LSA represents the predicted spatial extent of the chemical emissions from the additional tanks to be installed to which people might be exposed.	Separate Air Quality RSAs apply to each of the existing tank terminals, each comprised of a 24 x 24 kilometre area centred on the terminal. The Burnaby Terminal Air Quality RSA was combined with the Westridge Marine Terminal Air Quality RSA due to the close proximity of the two terminals to one another (i.e., less than 3 kilometres apart).
Westridge Marine Terminal		
Human occupancy and resource use	Extends 500 metres from the proposed water lease expansion.	Area east of the First Narrows, including Indian Arm and Port Moody Arm.
Traditional land and resource use		
Human health	The area in the immediate vicinity of the Westridge Marine Terminal where exposure to the chemical emissions from the terminal might be expected to occur. The SLHHRA LSA represents the predicted spatial extent of the chemical emissions from the expansion of the Westridge Marine Terminal to which people might be exposed. The SLHHRA LSA extends over a 5 kilometre radius centred on the Westridge Marine Terminal.	The Air Quality RSA for the Westridge Marine Terminal is a 24 by 24 kilometre area. The Burnaby Terminal Air Quality RSA was combined with the Westridge Marine Terminal Air Quality RSA due to the close proximity of the two terminals to one another (i.e., less than 3 kilometres apart).
Marine transportation		
Marine commercial, recreational and tourism use	Extends 2 kilometres on either side of the shipping lanes.	Generally centred on the shipping lanes, which extend from the Westridge Marine Terminal through Burrard Inlet; south through the southern part of the Strait of Georgia, the Gulf Islands, and Haro Strait; westward past Victoria and through the Strait of Juan de Fuca out to the 12-nautical-mile limit of Canada's territorial sea.

Valued component	LSA	RSA
Traditional marine resource use	Generally the same as the LSA boundaries of marine fish and fish habitat, marine mammals and marine birds since TMRU is dependent on these resources.	Marine RSA encompasses a large portion of the Salish Sea and it generally extends from the western to eastern boundaries of the Salish Sea; however, it confines the northern and southern extents to exclude the central and northern Strait of Georgia and Puget Sound, respectively. Major waterways in the Marine RSA that overlap with the marine shipping lanes extending from the Westridge Marine Terminal through Burrard Inlet, south through the southern part of the Strait of Georgia, the Gulf Islands and Haro Strait, westward past Victoria and Strait of Juan de Fuca out to the 12-nautical-mile limit of Canada's territorial sea.
Human health	Includes the inbound and outbound marine shipping lanes, the area between the shipping lanes, where it exists, and a 5 km buffer extending from the outermost edge of each shipping lane. The shipping lanes extend from the Westridge Marine Terminal in Burnaby, through Burrard Inlet, south through the southern part of the Strait of Georgia, the Gulf Islands and Haro Strait, then westward past Victoria and through the Strait of Juan de Fuca out to the 12-nautical-mile limit of Canada's territorial sea. The LSA represents the predicted spatial extent of the chemical emissions from the Project-related marine vessel traffic to which people along the shipping lanes might be exposed.	A 150 x 150 kilometre area, generally centered on the marine shipping lanes, which extend from the Westridge Marine Terminal through Burrard Inlet, south through the southern part of the Strait of Georgia, the Gulf Islands and Haro Strait, westward past Victoria and the Strait of Juan de Fuca out to the 12-nautical-mile limit of Canada's territorial sea. The Marine Air Quality RSA was used for the purposes of assessing the cumulative health effects associated with the chemical emissions from the increased Project-related marine vessel traffic.

Appendix 12: Criteria, ratings and definitions used in evaluating the likelihood of significant effects

Criteria	Rating	Definition
All criteria	Uncertain	When no other criteria rating descriptor is applicable due to either lack of information or inability to predict.
Temporal Extent	Short-term	An effect, either resulting from a single project interaction or from infrequent multiple ones, whose total duration is usually relatively short-term and limited to or less than the duration of construction, or one that usually recovers immediately after construction. An effect usually lasting in the order of weeks or months.
	Medium-term	An effect, either resulting from a single or infrequent project interaction or from multiple project interactions each of short duration and whose total duration may not be long-term but for which the resulting effect may last in the order of months or years.
	Long-term	An effect, either resulting from a single project interaction of long lasting effect; or from multiple project interactions each of short duration but whose total results in a long lasting effect; or from continuous interaction throughout the life of the project. An effect usually lasting in the order of years or decades.
Reversibility	Reversible	An effect expected to, at a minimum, return to baseline conditions within the life of the Project.
	Permanent	An effect that would persist beyond the life of the project, or last in the order of decades or generations. Some social or cultural effects that persist beyond a single generation may become permanent.
Geographic Extent	Project Footprint	Effect would be limited to the area directly disturbed by the Project facilities and associated physical works and activities, including the width of the right-of-way and temporary work space.
	Local Study Area	Effect would generally be limited to the area in relation to the Project where direct interaction with the biophysical and human environment could occur as a result of construction or operation activities. This area varies relative to the receptor being considered (e.g., 150 metres on either side of the pipeline centerline for Wetlands and Vegetation).
	Regional Study Area	Effect would be recognized in the area beyond the Local Study Area that might be affected on the landscape level. This area also varies relative to the receptor being considered (e.g., for vegetation, the Regional Study Area extends 1 kilometre on either side of the pipeline centreline).
	Global	Effects would be recognized at the global level.

Criteria	Rating	Definition
Magnitude	Low	Effect is minimal, if any; restricted to a few individuals/species or only slightly affects the resource or parties involved; and would impact quality of life for some, but individuals commonly adapt or become habituated, and the effect is widely accepted by society.
	Moderate	Effect would impact many individuals/species or noticeably affect the resource or parties involved; is detectable but below environmental, regulatory or social standards or tolerance; and would impact quality of life but the effect is normally accepted by society.
	High	Effect would affect numerous individuals or affect the resource or parties involved in a substantial manner; is beyond environmental, regulatory or social standards or tolerance; and would impact quality of life, result in lasting stress and is generally not accepted by society.
Evaluation of Significance	Likely to be significant	Effects that are either: (1) of high magnitude; or (2) long-term, permanent, and of regional/global in extent.
	Not likely to be significant	Any adverse effect that does not meet the above criteria for "significant."

Appendix 13: Federally listed terrestrial wildlife species at risk potentially affected by the Project

Species listed under Schedule 1 of the <i>Species at Risk Act</i>	Status	Status of critical habitat under the <i>Species at Risk Act</i>				
		Final	Proposed	Candidate	Early draft	Not yet identified by ECCC
American badger (<i>jeffersonii subspecies</i>)	Endangered				Ü	
Little brown myotis	Endangered					Ü
Northern myotis	Endangered					Ü
Townsend's mole	Endangered		Ü			
Pacific water shrew	Endangered	Ü				
Western screech-owl (<i>macfarlanei subspecies</i>)	Endangered				Ü	
Spotted owl	Endangered					Ü ¹⁵³
Burrowing owl	Endangered	Ü (none identified in Regional Study Area)				
Williamson's sapsucker	Endangered	Ü				
Horned lark (<i>strigata subspecies</i>)	Endangered					Ü
Vesper sparrow (<i>affinis subspecies</i>)	Endangered		Ü (none identified in Regional Study Area)			
Western painted turtle (Pacific coast population)	Endangered					Ü
Oregon spotted frog	Endangered		Ü ¹⁵⁴		Ü	
Oregon forestsnail	Endangered		Ü			
Woodland caribou (southern mountain population)	Threatened	Ü				
Northern goshawk (<i>laingi subspecies</i>)	Threatened					Ü
Ferruginous hawk	Threatened					Ü
Red knot (<i>roselaari subspecies</i>)	Threatened					Ü
Common nighthawk	Threatened					Ü
Lewis's woodpecker	Threatened			Ü		
Olive-sided flycatcher	Threatened					Ü

¹⁵³ As proposed, the Project would cross the Sowaqua Spotted Owl Wildlife Habitat Area (Long-term Owl Habitat Area).

¹⁵⁴ Proposed recovery strategy exists; however, at the time of this report, ECCC had identified two new sites as early draft critical habitat.

Species listed under Schedule 1 of the <i>Species at Risk Act</i>	Status	Status of critical habitat under the <i>Species at Risk Act</i>				
		Final	Proposed	Candidate	Early draft	Not yet identified by ECCC
Loggerhead shrike (prairie population)	Threatened	Ü (none identified in Regional Study Area)				
Sprague's pipit	Threatened	Ü (none identified in Regional Study Area)				
Canada warbler	Threatened					Ü
Western rattlesnake	Threatened				Ü	
Great basin gophersnake (<i>deserticola subspecies</i>)	Threatened				Ü	
Coastal giant salamander	Threatened				Ü	
Great basin spadefoot	Threatened				Ü	
Dun skipper	Threatened					Ü
Mountain beaver (<i>rufa subspecies</i>)	Special concern					Ü
Spotted bat	Special concern					Ü
Great blue heron (<i>fannini subspecies</i>)	Special concern					Ü
Peregrine falcon (<i>anatum subspecies</i>)	Special concern					Ü
Yellow rail	Special concern					Ü
Long-billed curlew	Special concern					Ü
Band-tailed pigeon	Special concern					Ü
Barn owl (western population)	Special concern			Ü		
Flammulated owl	Special concern					Ü
Western screech owl (<i>kennicottii subspecies</i>)	Special concern				Ü	
Short-eared owl	Special concern					Ü
Rusty blackbird	Special concern					Ü
Western painted turtle (Intermountain – Rocky Mountain population)	Special concern					Ü
Western yellow-bellied racer	Special concern					Ü
Northern rubber boa	Special concern					Ü
Western toad	Special concern					Ü
Coastal tailed frog	Special concern					Ü
Northern red-legged frog	Special concern					Ü
Monarch	Special concern					Ü

Appendix 14: Summary of Indigenous concerns, and applicant, government, and NEB responses

This appendix provides a summary of the general and specific concerns and issues raised by Indigenous communities through the MH-052-2018 hearing, as well as summaries of the responses to these concerns provided by the applicant, responses by the Board (including conditions), comments from the Federal Authorities, and applicable requirements provided through regulation and/or legislation. The issues and concerns include those raised directly by Indigenous peoples through their participation in the hearing, as well as summaries of Indigenous concerns and interests as recorded by the applicant in its evidence. Appendix 8 refers to the written and oral submissions by Indigenous Intervenor who participated in the hearing. The Board notes that identifying and referring to issues and concerns as contained within the record (as provided in this appendix) may have resulted in some issues being categorized in a summary manner. Some direct and indirect references within the record of the hearing may therefore not be exhaustively listed in the issues below. Anyone wishing to fully understand the context of the information and evidence provided by Indigenous communities, as well as the applicable responses to these concerns by the applicant, should therefore familiarize themselves with the entire record of the hearing. The Board also notes that Indigenous communities raised concerns regarding the Project beyond marine-shipping related impacts. As these were beyond the scope of the issues being considered in this MH-052-2018 hearing, they are not captured in this chapter or elsewhere in the Report. Instead they have been tracked in a separate document which will be shared publicly with the Government of Canada directly through the Major Projects Management Office which the Board understands will then consider the information as part of its Phase III Consultation process.

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Consultation with Indigenous Communities					
Adequacy of Trans Mountain's engagement with Indigenous Communities	BC Métis Federation	Trans Mountain confirmed that it continues to engage Indigenous communities affected by the Project and will continue to update the Board through compliance with Condition 96. Trans Mountain has started collaboration activities with the Federal Government in relation to the resumption of Phase III consultation, and will participate as appropriate in subsequent consultations with Indigenous groups, to provide proponent and project specific information. Trans Mountain is committed to participating in meaningful dialogue and consultation with Indigenous communities across the Project.	Canada has not delegated the procedural aspects of its Duty to Consult to Trans Mountain. However, it noted that representatives of Trans Mountain will be part of the consultation and accommodation process and participate in meetings with representatives of Indigenous communities, government and nations, where appropriate, although the ultimate responsibility for ensuring that the duty is adequately fulfilled remains with the Crown under the leadership of the Minister of Natural Resources.	In assessing the engagement undertaken by Trans Mountain with Indigenous peoples, the Board evaluated the implementation of Trans Mountain's ongoing engagement activities with regards to Project-related marine shipping. The Board considered the company's activities to engage Indigenous communities and to learn about their concerns and interests, as well as the concerns and views expressed by Indigenous communities within the MH-052-2018 hearing.	5.2.2.1
	Blood Tribe (Kainai First Nation)				5.2.2.6
	Driftpile Cree Nation				5.2.6.1
	Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee (IAMC)				
	Louis Bull Tribe			Trans Mountain has engaged with Indigenous communities since the close of the OH-001-2014 Hearing, and has committed to continue to work with Indigenous communities. The Board expects Trans Mountain to continue to learn about the concerns that Indigenous communities may have about Project-related marine shipping and to discuss ways to address those concerns to the extent possible. The Board also encourages Indigenous communities with an interest in Project-related marine shipping to continue to engage with Trans Mountain.	
	Lyackson First Nation			The Board is satisfied that, with Trans Mountain's commitments and the Board's Conditions 96 and 146, Trans Mountain will continue to engage with Indigenous communities in order to learn more about their interests and concerns and address issues raised by Indigenous communities throughout the Project's operational life. With respect to issues of concern raised by Indigenous communities that were beyond the scope of this MH-052-2018 hearing, The Board expects and encourages Trans Mountain to continue to engage with Indigenous communities on all aspects of the Project that are of concern to the communities themselves	
	Musqueam Indian Band				
	Neskonlith Indian Band				
	Papaschase First Nation #136				
	Stó:lō Tribal Council				
	Tsawwassen First Nation				
	Tsuut'ina Nation				
	Whitefish Lake First Nation #459				

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Crown's duty to consult and accommodate Indigenous peoples					
Adequacy of the Crown's consultation process	Blood Tribe (Kainai First Nation) Ditidaht First Nation Driftpile Cree Nation Lyackson First Nation Musqueam Indian Band Papaschase First Nation #136 Seabird Island Band Shxw'owhámel First Nation Stk'emlupsemc te Secwepmc of the Secwepmc Nation Stó:lō Collective Stz'uminus First Nation Tsartlip First Nation Tsawwassen First Nation Tsleil-Waututh Nation Whitefish Lake First Nation #459	Trans Mountain has continued to engage with all potentially affected Indigenous communities in relation to Project-related marine shipping since the conclusion of the OH-001-2014 hearing. Trans Mountain noted that the MH-052-2018 hearing provided opportunities for potentially affected Indigenous communities to learn more about Project-related marine shipping, to ask information requests of Trans Mountain and federal government agencies, file written evidence and present oral traditional evidence. Trans Mountain said that Indigenous communities have been provided with extensive opportunities to engage on all aspects of Project-related marine shipping. Trans Mountain noted that the Board's task is not to assess the adequacy of Crown consultation in its MH-052-2018 Report. Trans Mountain noted that the Government of Canada has indicated that it intends to carry out additional consultation beyond and outside the NEB process. Trans Mountain submitted that the adequacy of Crown consultation can only be assessed once all consultation has been completed and at such time when the Crown (in this case, Cabinet) renders its final decision on the Project. As such, while the Board can assess the adequacy of Trans Mountain's consultation for the purposes of this Reconsideration, Trans Mountain argued that the Board need not and cannot at this time assess the adequacy of Crown consultation overall. Trans Mountain argued that such an assessment would be premature and beyond the purview of the Board.	The Crown can rely on existing regulatory processes, to the extent possible, to fulfill the duty to consult. As such, the Crown may rely on the NEB MH-052-2018 hearing, to the extent possible, to identify, consider and address how the Crown's conduct in relation to Project-related marine shipping might adversely impact potential or established Indigenous and Treaty rights. NRCan said that this approach avoids duplication and ensures that the NEB, which has broad powers to set conditions for the Project, has full access to relevant information on potential adverse Project-related marine shipping impacts on Indigenous and Treaty rights. The Crown will also consult on Project-related marine shipping impacts in its re-initiated Phase III of the consultation process. The Minister of Natural Resources wrote to potentially impacted Indigenous communities, governments and nations following the announcement that it would re-initiate Phase III consultations on the Project, outlining the Crown's intentions to engage in a specific and focused dialogue on the Project. NRCan said that the Crown's Phase III consultation and accommodation process will work with Indigenous communities, governments and nations in a manner that aligns with the Crown's commitment to strengthen and renew its relationships with Indigenous peoples while respecting and upholding the rights of Indigenous peoples in Canada. A recommendation on whether to approve the Project will only be considered by the GIC once it is satisfied that: (1) the Crown has adequately fulfilled its duty to consult and that consultations with potentially impacted groups have been offered and / or carried out in a meaningful and responsive manner; and (2) accommodations have been considered, where appropriate, and responses have been provided to Indigenous communities, governments and nations.	Recognizing the role of the Board's hearing in the consultation process for this Project, as well as the Government of Canada's ongoing efforts relating to Phase III consultation, the Board is satisfied that its process was impartial and fair and is able to contribute, to the extent possible, to the Crown's obligation to consult and accommodate.	5.2.5.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Adequacy of Phase III Consultation / Accuracy of 2016 Consultation and Accommodation Report (CAR)	Blood Tribe (Kainai First Nation) Driftpile Cree Nation Louis Bull Tribe Lyackson First Nation Musqueam Indian Band Neskonlith Indian Band Papachase First Nation #136 Squamish Nation Stoney Nakoda Nations Tsawout First Nation Tsleil-Waututh Nation Tsuut'ina Nation Whitefish Lake First Nation #459	Trans Mountain noted that the Government of Canada has indicated that it intends to carry out additional consultation beyond and outside the NEB process. Trans Mountain submitted that the adequacy of Crown consultation can only be assessed once all consultation has been completed and at such time when the Crown (in this case, Cabinet) renders its final decision on the Project. As such, while the Board can assess the adequacy of Trans Mountain's consultation for the purposes of this Reconsideration, Trans Mountain argued that the Board need not and cannot at this time assess the adequacy of Crown consultation overall. Trans Mountain argued that such an assessment would be premature and beyond the purview of the Board.	The Crown will re-engage in Phase III consultations, outside of the MH-052-2018 hearing, with all impacted Indigenous communities, governments and nations to meaningfully fulfill its duty to consult through understanding, and identifying measures to avoid, mitigate or accommodate, where appropriate, impacts of the project to Indigenous and Treaty rights. The NEB recommendations will inform the Crown's Phase III consultation. A recommendation on whether to approve the Project will only be considered by the GIC once it is satisfied that the Crown's obligation to consult and accommodate has been fulfilled. NRCan offered participant funding to impacted Indigenous communities, governments and nations in November 2018, to support participation in consultation activities with the Crown. The re-initiated Phase III consultation process will build on existing relationships, information submitted by Indigenous communities, governments, and nations to date, and the existing consultation record, while making improvements to ensure the duty to consult is appropriately fulfilled. This new process will result in an updated CAR that will be presented to the Governor in Council prior to a decision being made in accordance with section 54 of the <i>National Energy Board Act</i> , which includes provisions allowing the Crown to seek an extension beyond the mandated three month review period. Prior to completion, Indigenous communities, governments and nations' views and comments on this document will further inform the Crown's assessment, which will then be reflected in the report.	The Board acknowledges the concerns raised by Indigenous intervenors regarding the Crown's overall consultation process, including the 2016 CAR being filed on the Board's record by the Federal Authorities, as well as assertions that the information does not accurately capture the concerns that were raised with the government during the Original Phase III Consultations. The Board understands that this information was filed by the Federal Authorities in an effort to help make the Board aware of Indigenous interests and concerns related to the Project (and in particular to Project-related marine shipping) as they were understood by the Crown as of 2016. The Board notes that this MH-052-2018 hearing is not the appropriate venue to make a determination on the accuracy of the information in that document. The Board also notes that the MH-052-2018 hearing was an opportunity for Indigenous communities to provide information directly to the Board regarding their concerns about Project-related marine shipping through their participation as intervenors and commenters, and the Board has considered all of this direct evidence. The Board notes that as part of the re-initiated Phase III consultations on the Project, new information outlining the potential impacts to the rights and interests of Indigenous communities will be consolidated into an updated CAR, and prior to completion, comments on the CAR from Indigenous communities will be reflected in the document to further inform the Crown. Given that this Phase III Consultation Process is taking place outside the Board's MH-052-2018 hearing and will continue beyond the timelines of the MH-052-2018 hearing, the Board is not making a determination on the adequacy of the Phase III Consultation Process. The Board's mandate, as indicated in Order in Council P.C. 2018-1177, is to reconsider its recommendation taking into account the effects of Project-related marine shipping. It is the Governor in Council's role to make the final decision on the Project, taking into account the Board's Report and the information to be provided by the Federal Authorities regarding the adequacy of the Crown's consultation and accommodation.	5.2.5.3 5.2.2.6 5.2.6.3
	Adam Olsen Adams Lake Indian Band Cowichan Tribes Driftpile Cree Nation	Trans Mountain stated that procedural fairness of the MH-052-2018 hearing was satisfied. Its arguments included the following points: Procedural fairness varies with the context and interests at stake and here the	The Crown was following the guidance from the Federal Court of Appeal and the Crown Recognizes the MH-052-2018 hearing is operating within the broader context of the re-initiated Phase III consultation process. The NEB MH-052-2018 hearing provides a mechanism for	The time limit set out in OIC P.C. 2018-1177 required the Board to issue its Reconsideration report no later than 22 February 2019. Despite the expedited hearing process and narrow scope of the issues, the MH-052-2018 hearing had many steps that were similar to the OH-001-2014 Certificate Hearing. Evidence was	1.5.1 5.2.2.6

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Little Shuswap Lake Indian Band Louis Bull Tribe Malahat First Nation Neskonalith Indian Band Nooaitch Indian Band Shxw'ōwhámél First Nation Snuneymuxw First Nation Squamish Nation Stk'emlupsemc te Secwepmc of the Secwepmc Nation Stó:lō Collective Stz'uminus First Nation First Nations of the Maa-nulth Treaty Society Tsartlip First Nation Tsawout First Nation Tsawwassen First Nation Tsleil-Waututh Nation T'Sou-ke First Nation Tsuut'ina Nation Whitefish Lake First Nation #459	Reconsideration was narrow in scope which should inform procedural fairness. • Having a fair but expedited hearing was consistent with the NEB Act and the direction from both the Federal Court of Appeal and the OIC for a prompt redetermination. • All parties had an opportunity to fully and fairly present their case. • In response to a notice of motion from Squamish Nation and supported by other intervenors the Board granted the request for an additional 15 days for filing intervenor evidence. In contrast Trans Mountain had a very limited time to file its reply evidence.	Indigenous communities, government and nations to express their concerns regarding how Project-related marine shipping might adversely impacts potential or established Indigenous and Treaty rights, and related avoidance, mitigation and other accommodation measures. NRCan said that the Crown will rely on the NEB Reconsideration Process, to the extent possible, to consider all forms of mitigation to Project-related marine shipping and to assess the residual effects. The Crown will then assess the potential seriousness of any residual effects of the Project on Indigenous and Treaty rights, taking into account proposed mitigation and/or accommodation measures.	presented in writing and testing of that evidence was carried out through written IRs. Parties had the opportunity to ask the Board to compel other Parties to provide more complete responses to IRs and also to file final argument. The Board offered to hear oral traditional evidence in person at any of the announced locations, or remotely while it sat in Calgary While the Reconsideration time lines were expedited, the Board is satisfied that parties had a fulsome opportunity in the Reconsideration to make their case and challenge evidence from Trans Mountain and federal departments. As stated above, if there were particular circumstances requiring additional time, the Board was open to considering such requests. The Board is of the view that hearing process deadlines, as amended, allowed parties to fully and fairly present their case and challenge evidence, and resulted in a procedurally fair hearing.	1.4.2 1.4.5 1.5.1
Effects on interests, including asserted and established Treaty and Indigenous Rights of Indigenous Communities					
Anchorage in the Southern Gulf Islands	Cowichan Tribes Lyackson First Nation Snuneymuxw First Nation Stz'uminus First Nation	Trans Mountain said that vessels destined to the WMT do not currently anchor and will not anchor in the future, in the areas of concern raised by Indigenous intervenors. It also stated that it intends to manage arriving vessels to minimize the use of anchorages. Trans Mountain said it expected that tankers will anchor at the three anchorages east of Second Narrows, and pressure on anchorages will be reduced by holding tankers at the dock whenever a berth is available.	The Pacific Pilotage Authority confirmed that there were no WMT bound or departing vessels that anchored in the Southern Gulf islands in the last five years. Through the National Anchorages Initiative, Transport Canada is conducting research studies to inform the creation of a National Anchorages Framework, which are expected to be completed in 2019. Transport Canada said that it is consulting with stakeholders and Indigenous communities to develop an approach to identify anchorage sites. Traditional knowledge will be collected during this process. Transport Canada said that it will be undertaking a review and evaluation of the need for regulatory changes for oversight and management of anchorage sites. These activities will allow for the development of a national anchorage framework and best practice guide for ships at anchor.	The Board is satisfied with the evidence of the PPA that no transiting tankers to WMT have used anchorages in the Southern Gulf Islands in recent years, as well as Trans Mountain's evidence that Project-related vessels do not currently anchor and will not anchor in the future, in the areas of concern raised by Indigenous intervenors. The Board also notes that Transport Canada has initiatives underway to mitigate adverse effects due to the use of these anchorages and that these initiatives will include consultation with Indigenous peoples.	5.2.5.3 5.2.6.2

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Adequacy of government programs and initiatives, including Crown consultation on these	Adams Lake Indian Band Cowichan Tribes Ditidaht First Nation Heiltsuk First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Lyackson First Nation Musqueam Indian Band Pacheedaht First Nation Squamish Nation Tsartlip First Nation First Nations of the Maanulth Treaty Society	Trans Mountain, as a pipeline operator with no direct control over Project-related marine shipping, believes that multi-party solutions with active collaboration between industry and government are required to ensure continued maintenance and advancement of the marine safety regime. Trans Mountain supports the approach proposed under the OPP, whether or not the Project proceeds.	Canada has a dedicated OPP engagement team that continues to support ongoing dialogue with South Coast First Nations. Transport Canada pointed to the recently launched Indigenous and Local Communities Engagement and Partnerships Program (ILCEPP) as a measure to support any future agreements on the South Coast. The objective of the ILCEPP is to support relationship building and encourage participation in longer-term engagement work on one or more OPP initiatives. Over \$13 million is being made available to eligible Indigenous and local communities to be engaged and participate in the OPP. If Canada contemplates further actions related to Oceans Protection Plan initiatives, and these actions have the potential to impact Indigenous rights, Canada will consult with potentially affected Indigenous communities.	While the Federal Authorities have indicated that the OPP is not Project-specific, components of the OPP directly respond to marine safety concerns raised through previous public consultation, including those on the Trans Mountain Expansion Project, and that certain OPP initiatives apply to the Project's marine shipping components. The Federal Authorities presented evidence describing how these components of the OPP include consultation and partnerships with Indigenous communities that will provide opportunities for Indigenous communities to play a meaningful role in marine safety, including decision-making, and environmental protection. The Board acknowledges the concerns raised by Indigenous communities regarding the level and depth of consultation that is taking place regarding the many initiatives that form the OPP. The Board notes that it is not within the scope of this Reconsideration to assess the adequacy of consultation related to Canada's consultation related to the OPP or other broad initiatives related to marine shipping. That said, the Board is of the view that the OPP is a positive step to addressing concerns related to marine shipping on the south coast of B.C., and is encouraged by Canada's commitment to strengthen partnerships with Indigenous communities. The Board notes that the Federal Authorities have said that if Canada contemplates further actions related to Oceans Protection Plan initiatives, and these actions have the potential to impact Indigenous rights, Canada will consult with potentially affected Indigenous communities. The Board notes that the OPP is a large initiative with many programs and initiatives in various states of progression and encourages continued one-on-one discussions between the Federal Authorities and Indigenous communities so that they are able to understand all of the plans and programs, including how these may be appropriate to address community-specific concerns.	5.2.5.3 5.2.6.2
Involvement of Indigenous peoples in monitoring Project-related marine shipping / IAMC	Chawathil First Nation Cheam First Nation Ditidaht First Nation Driftpile Cree Nation Ermineskin Cree Nation Indigenous Caucus for the	Trans Mountain understands that the IAMC is an Indigenous-led committee, established with a goal to form the basis of a new relationship between Indigenous communities, the government and the NEB in respect of Trans Mountain's activities. Trans Mountain's understanding is that the IAMC is already advancing Indigenous interests with respect to	IAMC participation in the monitoring and oversight of Project-related marine shipping and its potential impacts to the marine environment is pursued primarily by the Marine Shipping subcommittee (the Subcommittee). Between October 2018 and March 2019, the Subcommittee will be engaging with Indigenous communities with interests related to the marine corridor	The Government of Canada established the IAMC as a measure that was to supplement Trans Mountain's commitments to Indigenous communities, the NEB conditions on the Project, and the commitments made by Canada in the OPP. The Board recognizes that the IAMC is not a consultative body and does not take the place of mandated one-on-one consultation between Trans	5.2.5.3 5.2.6.2

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Trans Mountain Indigenous Advisory and Monitoring Committee Kwantlen First Nation Louis Bull Tribe Lyackson First Nation Malahat First Nation Métis Nation BC Musqueam Indian Band Seabird Island Band Shackan Indian Band Squamish Nation Stk'emplupsemc te Secwepmc of the Secwepmc Nation Stó:lō Collective Stó:lō Tribal Council First Nations of the Maa-nulth Treaty Society Tsawout First Nation T'Sou-ke First Nation Whitefish Lake First Nation #459 Whitefish (Goodfish) Lake First Nation #128	guardianship and stewardship over land and water operations during the lifecycle of the Project. Trans Mountain said it is supportive of the IAMC's role as it pertains to the Project.	toward a number of marine-related objectives. Canada has committed \$64.7 million to support the IAMC for the Project. So far, the Committee is reviewing or supporting 13 community projects related to the effects of Project-related marine shipping, including projects that analyze vessel traffic associated with the Project, the enhancement of emergency planning, the development of environmental management, and the hiring of emergency response personnel in individual First Nations, among others.	Mountain or the Crown and individual First Nations. That said, the Board is of the view that the existence of the IAMC is a valuable measure to address concerns from Indigenous communities regarding marine shipping activities, including facilitating further Indigenous involvement in the marine safety, inspection and enforcement regime. Thus the Board has included Recommendation 11 as part of this Report, which would require the GIC to work with Transport Canada and the Canadian Coast Guard, to facilitate opportunities, as appropriate, to engage and seek feedback from the Indigenous Advisory Monitoring Committee on the marine safety system, including on the marine inspections and enforcement regime, as well engagement opportunities for Project-related marine shipping activities that intersect with Canadian Coast Guard operational programs.	
SRKW critical habitat proposal for Swiftsure Bank	Ditidaht First Nation Pacheedaht First Nation		DFO explained that the identification of new critical habitat areas is based on scientific advice stemming from research carried out over the last 40 years. It also noted that there is no immediate plan to add new closures or change the fisheries closures that protect the key SRKW foraging areas. DFO will be reviewing its fishery closure approach with Indigenous communities going forward and through these discussions, DFO can address questions such as understanding the information used to inform management measures, considering how other threats interact with the threat of lack of available prey for SRKW, and understanding how best to include and incorporate Indigenous and local knowledge to adaptively manage the mitigation of these threats.	The Board does not have the ability within this proceeding to address the issue of the potential of future fisheries closures, but is of the view that the commitments from the Federal Authorities are appropriate and notes that this is an issue that can be further discussed as part of the Phase III consultation process.	5.2.5.3 5.2.6.2

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Issues beyond scope of the MH-052-2018 hearing	Adams Lake Indian Band Blood Tribe (Kainai First Nation) Driftpile Cree Nation Little Shuswap Lake Indian Band Louis Bull Tribe Stk'emlupsemc te Secwepmc of the Secwepmc Nation Tsuut'ina Nation Whitefish Lake First Nation #459	Trans Mountain noted that many intervenors raised issues and concerns that were fully canvassed and considered by the Board in the OH-001-2014 proceeding. Trans Mountain submitted that these issues were adjudicated in the OH-001-2014 Hearing and as such it did not provide a reply to these concerns.	NRCan stated that the government will re-engage consultations with all 117 Indigenous communities potentially impacted by the Project. On 5 October 2018, the Minister of Natural Resources communicated the Government's intentions to engage in a specific and focused dialogue with Indigenous communities on the Trans Mountain Expansion Project. It stated that the next round of consultations will lead to an updated CAR that will outline the potential impacts to rights and interests of Indigenous communities in relation to the Project, and how these impacts have been mitigated and, where appropriate, accommodated.	The Board recognizes that Indigenous communities have a broad range of matters and concerns that they wish to raise, discuss and resolve with both the federal and provincial governments. The Board is sharing those concerns it heard that are not in the scope of the Reconsideration with NRCan in a separate document, that will be available on the Major Projects Management Office website and can be used to assist NRCan in its Phase III consultations with Indigenous peoples.	5.2.5.3
					5.2.6.2
Indigenous governance and stewardship	Tsawout First Nation Tsleil-Waututh Nation Little Shuswap Lake Indian Band Neskonlith Indian Band Stk'emlupsemc te Secwepmc of the Secwepmc Nation Shxw'ōwhámél Tsawout First Nation Tsuut'ina Nation First Nations of the Maa-nulth Treaty Society	Trans Mountain's understanding is that the IAMC is already advancing Indigenous interests with respect to guardianship and stewardship over land and water operations during the lifecycle of the Project. Trans Mountain noted that the IAMC provides for collaborative, inclusive and meaningful Indigenous involvement in the review and monitoring of environmental, safety and socio-economic issues, and Trans Mountain is supportive of the IAMC's role as it pertains to the Project.	The Federal Authorities noted that one of the measures for the Species at Risk Action Plan for Northern and Southern Resident Killer Whale (<i>Orcinus orca</i>) in Canada (2017) is to incorporate Indigenous Traditional Knowledge on the behaviour and distribution of Southern resident killer whales and their prey into measures for the recovery of the species. DFO said that Indigenous communities are being engaged through governance bodies such as the SRKW Indigenous and Multi-stakeholder Advisory Group, and the DFO-led SRKW prey availability working group. The Federal Authorities noted that Pillar 3 of the OPP is to strengthen partnerships and launch co-management practices with Indigenous communities, by building local emergency response capacity, marine training and governance strategies for northern shipping.	The Board recognizes that Project-related marine shipping has the potential to affect the rights of Indigenous communities, including those rights established through the Douglas Treaties, the Tsawwassen First Nation Final Agreement, and the Maa-nulth Final Agreement. The Board acknowledges the responsibilities expressed by many Indigenous communities to look after the land and water located within their traditional territories: to be stewards, protectors, and follow their laws and sacred responsibilities. As a result, the Board has included Recommendation 1 which would require the GIC to develop and implement a regional cumulative effects management plan implemented in consultation with Indigenous peoples, other marine users, the Province of British Columbia and local governments, VFPA, and other relevant stakeholders. The Board also notes that the marine shipping aspect of IAMC activities may not be as advanced as the work being done along the pipeline route and within the WMT, but it believes that the IAMC has a valuable role to play in sharing the capacity and knowledge of Indigenous communities in relation to spill preparedness and response, marine stewardship, planning and monitoring, including working with industry, regulators and other governmental bodies.	5.2.5.3
					14.8.3 5.2.5.2 5.2.6.2
Salish Sea marine use planning and establishment of Marine Protected Areas	Chawathil First Nation Cheam First Nation Ermineskin Cree Nation	Trans Mountain said that it is advancing the concept of a Salish Sea Initiative as part of an existing commitment with marine Indigenous communities to enhance their stewardship over the Salish Sea. While conceptual at this	Marine Protected Areas (MPAs) established under section 35 (1) of <i>Oceans Act</i> may prohibit or impose restrictions on classes of activities, such as marine shipping, for the purpose of marine conservation through regulations. For example, the Hecate Strait and	The Board realizes the importance of establishing National Marine Conservation Areas (NMCA), and hence recommends the GIC to expedite the work in completing the feasibility study for establishing a Southern Strait of Georgia National Marine	14.8.3
					14.7.5

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Heiltsuk First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Kwantlen First Nation Malahat First Nation Seabird Island Band Squamish Nation Stó:lō Tribal Council Tsartlip First Nation Whitefish (Goodfish) Lake First Nation #128	time, the Salish Sea Initiative has been introduced to marine Indigenous communities with a focus on where there is an already existing commitment, and the intention is for the Initiative to be Indigenous-led and developed in partnership with Trans Mountain. Due to Project-uncertainty the long-term initiative was suspended, but pending the resumption of the Project, Trans Mountain said that it would re-engage with interested Indigenous marine communities in the design and scope of the initiative, together with, as appropriate, other marine organizations and authorities.	Queen Charlotte Sound Glass Sponge Reefs Marine Protected Areas Regulations (outside of the Marine RSA) enable navigation activities throughout the MPA, but no anchoring in the core protection zones. It said that no MPAs have yet been established in the Marine RSA, but under the <i>Oceans Act</i> the Minister retains the authority to recommend to the Governor in Council that regulations be made to designate new MPAs at a future time.	Conservation Area, and publicly report on the outcomes of that study, and (if considered feasible) proceed to establish it (Recommendation 4). The Board also notes that Recommendation 2 would also be relevant in that it includes a description of the progress on each of the recommendations. The Board recognizes Canada's commitment to meet marine conservation targets established under the Convention on Biological Diversity to conserve 10 percent of coastal and marine areas through effectively managed networks of protected areas and other effective area-based conservation measures by 2020. The Board notes that network planning has always been emphasized as one of the primary tools in fulfilling government mandates to protect conservation and the protection of the natural environment. The Board expects Government of Canada to consider the possibility of identifying and creating a network of marine protected areas in the Salish Sea as part of its implementation of Recommendation 1.	
Environmental effects of Project-related marine shipping					
Alternative means	BC Métis Federation Squamish Nation Tsleil-Waututh Nation	Trans Mountain said that during the initial Project scoping process, it considered six alternative marine terminal locations, including two locations in Washington State. Trans Mountain said that it assessed information about these locations in the OH-001-2014 hearing, and explained that the Washington locations were eliminated from future consideration early in the planning process because they would require a longer pipeline and would pose complex regulatory issues including additional permits required by Washington State and the United States federal government		The Board is of the view that Trans Mountain has provided an adequate assessment, including consideration of technical, socio-economic and environmental effects, of technically and economically feasible alternative marine terminal locations. The Board finds that Trans Mountain's assessment is consistent with the Board's Filing Manual and Canadian Environmental Assessment Agency guidance relating to alternatives means.	14.6.2
Air and Greenhouse Gas emissions from tankers	BC Métis Federation Tsuut'ina Nation Blood Tribe (Kainai First Nation) Driftpile Cree Nation Louis Bull Tribe Shackan Indian Band	Trans Mountain said that it has set the age limits for tankers that would be acceptable to call at the WMT, as part of its Vessel Acceptance Standards. Trans Mountain anticipates that the ongoing improvements to the global fleet with respect to emissions reduction requirements will apply to tankers that transit to and from the WMT. Trans Mountain said that it believes the authorities that regulate marine transportation (i.e., one or more of Transport Canada, Environment and Climate Change Canada, and	Transport Canada said that in 2017, the IMO Member States agreed on an initial strategy for reducing greenhouse gas emissions from ships, which targets at least a 50 per cent reduction from 2008 levels by year 2050. ECCC noted that a federal Clean Fuel standard is under development and will require producers and importers of fossil fuels to reduce the carbon intensity of the fuels they produce and import. ECCC said that pending the ultimate design of these regulations, the carbon intensity of marine fuels sold in Canada could be required to be lower, resulting in greenhouse gas	The Board finds that greenhouse gas emissions from Project-related marine vessels are likely to be significant. The Board recommends that the GIC should support the development and implementation of greenhouse gas reduction measures related to marine shipping that would align with the final International Maritime Organization Strategy in year 2023 for reducing greenhouse gas emissions (Recommendation 10). These measures could include, but not be limited to facilitating the use of low-carbon alternate fuels, use of energy efficient technologies, and market-based	14.7.1

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
		the Canadian Coast Guard), would be better placed to establish any requirements for greenhouse gas emissions, and to monitor and enforce such programs, for all vessels. Trans Mountain said that the IMO (under MARPOL Annex VI) has established emission control areas (ECAs) to reduce emissions of SO_x, NO_x and particulate matter in designated sea areas. Trans Mountain said that for large ships like oil tankers constructed after 1 January 2016, Tier III emission standards for NO_x must be met for a vessel to operate in an Emission Control Areas such as in the Port of Vancouver. It said that relative to Tier I emission standards from year 2000, the Tier III standards are expected to provide a significant reduction in NO_x emissions by 80 per cent or a factor of five. Trans Mountain said that an internationally registered oil tanker that would call at the WMT would be subject to this IMO reduction target. Trans Mountain said that the IMO regime includes two primary measures for improving energy efficiency: Energy Efficiency Design Index and Ship Energy Efficiency Management Plan (SEEMP).	emissions reductions. ECCC said that proposed regulations are planned for spring/summer 2019, to be published in the Canada Gazette, Part I.	measures, such as providing economic incentives for industry investment in the development and use of energy efficient technologies and offsetting any increases in ship emissions. The Board notes that Recommendation 2 would also be relevant in that it includes a description of the progress on each of the recommendations. If the GIC implements the Board's recommendation around development and implementation of GHG reduction measures related to marine shipping that aligns with the final IMO strategy by 2023, GHG emissions from Project-related shipping would be reduced. With the new energy efficiency standards adopted by the International Maritime Organization, and with proposed regulations for federal clean fuel standard planned for spring/summer 2019, GHG emissions will be further diminished.	
Effects on SRKW from Project-related marine traffic operations	Cheam First Nation Chawathil First Nation Ditidaht First Nation Driftpile Cree Nation Kwantlen First Nation Louis Bull Tribe Lyackson First Nation Makah Tribal Council Malahat First Nation Neskonlith Indian Band Nooaitch Indian Band Pacheedaht First Nation Shxw'owhámel First Nation Snuneymuxw First Nation Stó:lō Tribal Council Tsartlip First Nation Tsawout First Nation Tsileil-Waututh Nation T'Sou-ke First Nation Swinomish, Tulalip,	Trans Mountain observed that initiatives solely aimed at Project-related vessels would be inefficient and would have no material benefit to SRKW without also addressing the shipping industry in general.	Since the NEB's OH-001-2014 Report, the Government has advanced a comprehensive strategy to protect ocean ecosystems and to support the recovery of SRKW, which has advanced in three stages: - under the \$1.5 billion national Oceans Protection Plan (OPP) launched in late 2016; - under the \$167 million Whales Initiative launched in June 2018; and - an additional \$61.5 million for additional measures announced in October 2018 designed to further address the imminent threats to the survival and recovery of SRKW Various research and data collection projects are underway, including a Coastal Environmental Baseline Program that will collect data at six pilot sites over the next four years, including in the port of Vancouver; and a national Cumulative Effects of Marine Shipping Initiative at six pilot sites, including one in South Coast B.C., which will include regional cumulative effects assessments at each pilot site and the identification of potential tools and strategies that can be applied to existing or future vessel movements.	The Board recommends that the additional underwater noise and strike risk created by Project-related marine vessels be offset by applying measures to all appropriate vessels, including Project-related marine vessels (Recommendation 5). While the Board maintains its recommendation that there are likely significant adverse effects on SRKW, this offset approach could allow for a reduction in that finding to non-significance if and when Project-related shipping effects have been effectively reduced to net-zero in each section of the shipping route. As noted in Recommendation 5, monitoring is necessary to track progress, and changes should be made if voluntary measures prove ineffective over time, including consideration of mandatory measures. The annual reporting recommended in Recommendation 2 would also be relevant given that it includes a description of progress on each of the other recommendations, as well as a description of consultation activities related to each. In Recommendation 6, the Board recommends that each of the following five mitigations be further considered and their feasibility be publicly reported on: 1. Slowdowns in each section of the marine shipping route.	14.7.2

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Suquamish, and Lummi Indian Nations (US Tribes) Whitefish (Goodfish) Lake First Nation #128			2. Limits on the impacts from whale watching boats. 3. Accelerate and confirm the schedule for noise reduction efforts for regularly operating ferries in the area. 4. Identification of specific congregation and migration areas for SARA-listed species, and consideration of mitigations in those areas. 5. Further incentives and requirements for quiet vessel design and refits to address underwater noise over the long term, including maximal international participation. The Board has included two recommendations that seek to address the broader issue of cumulative effects on the marine ecosystems through which Project-related vessels will pass: • In Recommendation 1, the Board recommends GIC develop and implement a regional cumulative effects management plan to assess the overall environmental state of, and cumulative effects on, the Salish Sea, including a long-term strategy to manage those cumulative effects. • In Recommendation 2, the Board recommends GIC annually report on the oversight, progress and status of initiatives and measures to address cumulative effects on, and to support the health of, the Salish Sea.	
Marine fish and fish habitat	Cheam First Nation Chawathil First Nation Heiltsuk First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Louis Bull Tribe Kwantlen First Nation Little Shuswap Lake Indian Band Makah Tribal Council Malahat First Nation Musqueam Indian Band Seabird Island Band Snuneymuxw First Nation Stó:lō Tribal Council Squamish Nation	In the MH-052-2018 hearing, Trans Mountain referenced its previous individual assessments for eight marine fish species. Trans Mountain provided new individual assessments of potential residual effects of Project-related marine shipping on Longspine Thornyhead and on Leatherback sea turtle. For each species, Trans Mountain noted either no critical habitat identified in Canadian waters, or (for Northern abalone) no spatial overlap with identified critical habitat. Trans Mountain's assessments concluded that residual effects of routine operation of Project-related vessels on each SARA-listed marine fish are predicted to be negligible or low in magnitude, low in probability, and not significant.	DFO maintained its position that potential effects on marine fish and fish habitat from Project-related marine shipping are likely to be low risk (excluding potential accidents or malfunctions). DFO said, given that there have been no significant changes to the proposed marine shipping component of the Project, it does not anticipate any meaningful changes to its assessment of effects on marine fish and fish habitat, including potential effects on chinook salmon and species that have seen a change in designation, since the filing of its written evidence in the OH-001-2014 hearing.	The Board's recommendations to government concerning the overall cumulative effects on the Salish Sea (see Recommendations 1 and 2) include consideration of the cumulative effects on, and initiatives and measures for, salmon and other fish stocks. The Board is of the view that Project-related marine vessel traffic is not likely to cause significant adverse effects on marine fish and fish habitat.	14.7.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Stz'uminus First Nation Tsawout First Nation Tsartlip First Nation Swinomish, Tulalip, Suquamish, and Lummi Indian Nations (US Tribes)				
Marine birds	Driftpile Cree Nation Tsawout First Nation Tsleil-Waututh Nation	Trans Mountain said that it is committed to exploring ways to help collect monitoring data in cooperation with local communities, Indigenous groups, regulatory authorities, common marine users, and other stakeholders. Trans Mountain said that it would support an industry-wide marine bird monitoring program led, coordinated, financed (with industry support), and overseen for technical and scientific merit, by government agencies. Depending on the type of monitoring program adopted, and of the specific details required for implementation, Trans Mountain could provide support that might include, but not be limited to, financial support, technical expertise, and direct participation. Trans Mountain said that it remains interested in contributing if collaboration is through the OPP, managed by ECCC and/or TC, and with an emphasis on baseline monitoring on British Columbia's southern coast,. Trans Mountain said it envisions that its contribution to the OPP would be directly linked to establishing and growing the capacity of a local group by providing a means for them to undertake a regional marine bird baseline monitoring program.	ECCC noted that it and other organizations administer a variety of monitoring and research programs related to marine bird sensitivities in the south coast region including surveys. ECCC said that its current monitoring activities focus on tracking populations (e.g., generating population estimates, identifying bird use of important habitats or generating population trend estimates for migratory bird species and some SARA-listed Migratory Birds). ECCC said it was engaged in migratory bird inventory work and the results of past regional migratory bird inventories are available in ECCC technical reports. ECCC stated that it currently allocates approximately \$200,000 annually to marine bird research and monitoring programs in the Project area.	The Board heard that there is uncertainty as to effects of marine traffic on marine birds at the population level and uncertainty as to what mitigation measures may indeed be technically and economically feasible. Given this uncertainty, the Board is of the view that a marine bird monitoring and protection program, if implemented, would allow a better understanding of impacts of vessel use within the Salish Sea on marine bird populations, including species at risk, and would inform implementation of mitigation measures through adaptive management, if warranted by the monitoring results. The Board is of the view that the Government of Canada is best placed to develop and implement a marine bird monitoring and protection program, with support of industry including Trans Mountain. The Board is of the view that this program, and any associated mitigation that follows from monitoring results, should ultimately extend to all marine shipping vessels in Salish Sea. The Board therefore sets out Recommendation 3 to the Governor in Council regarding the implementation of a marine bird monitoring and protection program for the Salish Sea.	14.7.4
Socio-economic effects of Project-related marine shipping					
Effects of operational marine shipping on marine commercial and recreational use	Heiltsuk First Nation	Trans Mountain said the information provided by Indigenous groups about commercial fishing and small vessel safety did not identify any potential effects that were not previously assessed in the OH-001-2014 hearing and the conclusions of these assessments of potential effects have not changed with the additional information provided. Trans Mountain provided an assessment of Project-related marine shipping wakes with focus on the potential for negative effects of wakes on other vessel traffic, including commercial traffic and private recreational vessels, in four locations along the shipping route (Burrard Inlet, Strait of	The Pacific Pilotage Authority said that the resultant wake of an inbound Project-related tanker will be no more than that of any other slow moving bulk carrier transiting the area, and will be a lot less than a fast moving large container ship or a Cape size laden bulk carrier. It also said that the outbound tanker in the loaded condition will be restricted in its speed due to the requirement for a tug either in the vicinity (Georgia Strait and Juan de Fuca) or tethered (Haro Strait and Boundary Passage), and the maximum speed while tethered is 10 knots which will significantly reduce any wash and wake effect and minimize any impact on private recreational vessels. The Federal authorities said that the Oceans Protection Plan outlines several initiatives being undertaken to	The Board notes Trans Mountain's commitments to provide regular updated information on Project-related marine vessel traffic to Indigenous communities, and to initiate a public outreach program prior to the Project operations phase to communicate information on Project-related timing and scheduling with Transport Canada, the Canadian Coast Guard, the Chamber of Shipping for British Columbia, commercial and tourism associations, and potentially affected Indigenous groups. The Board also notes Trans Mountain's commitment to raise awareness amongst Project-related tankers about conditions near Swiftsure Bank in its Port Information and Terminal Operations Manual. The Board acknowledges the safety concerns that were shared	14.8.1
	Lyackson First Nation Makah Tribal Council Pacheedaht First Nation Tsartlip First Nation Musqueam Indian Band Swinomish, Tulalip, Suquamish, and Lummi Indian Nations (US Tribes)				14.8.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
		Georgia, Haro Strait and Juan de Fuca Strait). The study concluded that Project-related vessel wakes are substantially smaller in height and substantially less in frequency of occurrence compared to existing and future commercial vessels (particularly ferries) operating along the same vessel routes and, therefore, Project-related wakes are insignificant compared to other vessel wakes already present. The study also concluded that vessel wakes from Project-related traffic are small or insignificant compared to naturally occurring wind waves that occur frequently in local waters and are considered routine by most experienced boaters. Trans Mountain said that raising user awareness and knowledge amongst small vessel operators is of great importance to ensure safety of all waterway users, regardless of Project-related shipping. Trans Mountain noted that multi-party solutions with active collaboration between industry and government are required to ensure continued maintenance and advancement of the marine safety regime, and it supports the approach proposed under the OPP, whether or not the Project proceeds. Trans Mountain committed to provide financial assistance to smaller vessels registered in WCMRC's Vessel of Opportunity program to be fitted with Automatic Identification Systems and radar reflectors, which will aid in locating vessel assets during standard operations, as well as while undertaking response activities, and will enhance safety.	improve marine navigational safety and enhance sharing of marine traffic information with local communities in near real time. The Federal authorities submitted that amendments are being proposed to the <i>Navigation Safety Regulations</i> to extend the requirement for Automatic Identification System to smaller passenger vessels to enhance navigation safety in terms of search and rescue efforts and collision avoidance. The VFPA said that measures to avoid, reduce, and/or offset the impacts of Project-related marine shipping vessels on non-Project-related vessels, including private recreational vessels, included the establishment of Traffic Control Zones in both the First Narrows (TCZ-1) and Second Narrows (TCZ-2) facilitating the safe navigation and efficient movement of vessels in this area of the port. The VFPA said that in addition to the relevant information published in the Port Information Guide, the VFPA publishes the safe boating guides for various parts of the ports jurisdiction, including the Burrard Inlet. The VFPA said that to support the safe and efficient movement of all vessel traffic within the Port of Vancouver, the VFPA issues annual media releases highlighting safe boating initiatives.	by Indigenous communities. Therefore, the Board has included Recommendation 12 which would require the Governor in Council, in conjunction with the Pacific Pilotage Authority and Transport Canada, to continue engagement and awareness activities targeting coastal Indigenous communities, recreational boaters, fishing vessel operators, and operators of small vessels with respect to safety of navigation and prevention of collisions with larger vessels. This should include incorporating the resources and information that Trans Mountain has already provided or will provide to the Pacific Pilotage Authority, such as applicable information on Project-related vessel timing and scheduling. The Board also sees value in the work the Federal Authorities are doing to enhance sharing of marine traffic information with local communities and promote safer navigation. The Board proposes Recommendation 13 that encourages GIC to accelerate the development and implementation of these programs. The Board also notes Trans Mountain's commitment to support the multi-party initiatives that are being led by Transport Canada, the Canadian Coast Guard, DFO, the VFPA, all of which are working to better understand and manage the potential impacts of marine shipping activity throughout the south coast of BC. The Board finds that there will be disruptions to Indigenous marine vessels and harvesters, and that this may disrupt activities or access to sites. The Board is of the view that these disruptions will be temporary, only occurring during the period of time when Project-related tanker vessels are in transit. While there is concern about interactions between Project-related marine vessels and traditional fishing vessels, the Board is of the view that disruptions that may result from interference or collisions with Project-related vessels are considered to be unlikely due to adherence to regulatory standards and navigational and safety measures by marine vessels. The Board is also of the view that any disruptions to Indigenous marine vessel users that would result from Project-related marine vessel traffic would be temporary, that the frequency of Project related marine vessels would be one return transit per day, and that all other marine vessels, including Indigenous marine vessel users, would be able to continue their movements very shortly after the transit of the tanker. In the unlikely event of a collision or damage to or loss of fishing gear, a comprehensive scheme of compensation would be available.	

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Effects of operational marine shipping on heritage resources	Blood Tribe (Kainai First Nation) Tsartlip First Nation Tsawout First Nation	Trans Mountain said there are 81 previously recorded archaeological sites located in proximity to the marine vessel corridor. The combination of existing vessel traffic, Project-related vessel traffic and reasonably foreseeable vessel traffic will increase the frequency of wake waves interacting with the shoreline. Trans Mountain said that as wakes generated by vessels will be within natural wave size variation by the time they reach the shoreline, there is no discernible impact on shorelines associated with the shipping channel.	Parks Canada Agency noted that portions of the proposed shipping route are adjacent to the Gulf Islands National Park Reserve.	The Board is not convinced that effects from the Project-related vessels would translate into impacts on heritage resources. The Board is of the view that Project-related vessel wake will be localized to the shipping lanes and within natural wave size variation by the time they reach the shoreline.	14.8.2
Effects of operational marine shipping on traditional marine resource uses, cultural practices and activities	Adams Lake Indian Band Blood Tribe (Kainai First Nation) Ditidaht First Nation Driftpile Cree Nation Heiltsuk First Nation Kwantlen First Nation Little Shuswap Lake Indian Band Louis Bull Tribe Lyackson First Nation Makah Tribal Council Malahat First Nation First Nations of the Maa-Nulth Treaty Society Musqueam Indian Band Pacheedaht First Nation Seabird Indian Band Shxw'ówhámél First Nation Snuneymuxw First Nation Squamish Nation Stk'emlupsemc te Secwepmc of the Secwepmc Nation Stó:lō Collective Stó:lō Tribal Council Stz'uminus First Nation Tsartlip First Nation Tsawwassen First Nation Tsawout First Nation	Trans Mountain said that the types of impacts presented by Indigenous communities in their written and oral traditional evidence are consistent with those assessed in the original Application, and no new information was presented that changes any of the results from that assessment. Trans Mountain said that it has reviewed the new information provided by Indigenous communities as part of the MH-052-2018 hearing in the context of its original ESA and has determined that the significance conclusions of the ESA with regard to TMRU remain unchanged for both Project-related effects and the contribution to cumulative effects.	Multi-party initiatives are being led by Transport Canada, the Canadian Coast Guard, DFO, the VFPA, all of which are working to better understand and manage the potential impacts of marine shipping activity throughout the south coast of BC.	The Board acknowledges the safety concerns that were shared by Indigenous communities. Therefore, the Board has included Recommendation 12 which would require the Governor in Council, in conjunction with the Pacific Pilotage Authority and Transport Canada, to continue engagement and awareness activities targeting coastal Indigenous communities, recreational boaters, fishing vessel operators, and operators of small vessels with respect to safety of navigation and prevention of collisions with larger vessels. This should include incorporating the resources and information that Trans Mountain has already provided or will provide to the Pacific Pilotage Authority, such as applicable information on Project-related vessel timing and scheduling. The Board also notes Trans Mountain's commitment to support the multi-party initiatives that are being led by Transport Canada, the Canadian Coast Guard, DFO, the VFPA, all of which are working to better understand and manage the potential impacts of marine shipping activity throughout the south coast of BC. The Board is of the view that not only will the Federal Authorities learn from Indigenous communities, the communities themselves will have the opportunity to become more aware of the entirety of marine traffic activity as well as the government's proposed measures in the TMRU areas that are of importance to them.	14.8.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Tsleil-Waututh Nation T'Sou-ke First Nation Tsuut'ina Nation Swinomish, Tulalip, Suquamish, and Lummi Indian Nations (US Tribes) Whitefish Lake First Nation #459 White Lake (Goodfish) Lake First Nation #128 Lyackson First Nation				
Impacts on Indigenous traditional use due to operational effects of marine shipping on SRKW	Driftpile Cree Nation Ermineskin Cree Nation Lyackson First Nation Makah Tribal Council Malahat First Nation Snuneymuxw First Nation Stó:lō Collective Stz'uminus First Nation Tsartlip First Nation Tsawout First Nation Tsawwassen First Nation Swinomish, Tulalip, Suquamish, and Lummi Indian Nations (US Tribes)	Trans Mountain said that it is of the view that multi-party initiatives are an essential approach to managing cumulative effects on the SRKW population, its critical habitat, and associated effects on traditional Indigenous use of the population. In its evidence, it provided an outline on those initiatives that were already underway, as described elsewhere in this Report, including: • The Oceans Protection Plan • The Action Plan for the Northern and Southern Resident Killer Whale • Pacific Salmon Foundation – Salish Sea Marine Survival Project • ECHO Program • Green Marine • Chair in Cetacean Research at UBC Trans Mountain noted that all of the multi-party initiatives also act in support of the requirements of Condition 132 - Marine Mammal Protection Plan (MMPP). Trans Mountain noted that its Condition 132 compliance filing is required three months prior to commencing operations on the Project, however, it said that it had plans to commence a process to solicit and obtain feedback and comments from Indigenous communities on a draft version of the MMPP no later than 18 months prior to the commencement of Project operations.	Federal Authorities pointed to multi-party initiatives noted by Trans Mountain. They noted that a key principle across all OPP activities is building Indigenous partnerships. They said that funding for Indigenous engagement and participation in the OPP gives recipients the opportunity to take part in developing and improving Canada's marine transportation system and contribute their knowledge towards tailoring marine transportation systems to local conditions and the environment. The Federal Authorities also noted that during engagement on the OPP, as well as during Project-specific reviews and engagement activities, they heard from Indigenous communities that they want to be able to monitor real-time vessel traffic in a system that identifies areas of traditional use, as a potential means to mitigate impacts on this use. Further, Indigenous communities have indicated during this engagement that they may want sensitive areas, such as SRKW habitat, identified in the system. One of the potential sources of information to be displayed in the Enhanced Maritime Situational Awareness system is data relating to the current position of marine mammals, including the SRKW. The Federal Authorities noted that there are various potential sources of this data, which could be shared directly with British Columbia Coast Pilots and the commercial shipping industry to improve their situational awareness and minimize interference with the SRKW. Although the pilot project has not yet begun, the Federal Authorities said that they understand that Indigenous peoples want to be able to monitor real-time vessel traffic in an application that identifies areas of traditional use, as a potential means to mitigate impacts on this use. The Federal Authorities said that meaningful collaboration on potential adverse effects of Project-related marine traffic could be enabled through Proactive Vessel Management forums between Indigenous communities, industry, Non-Governmental Organizations, and federal and other authorities. For example, they noted that	The Board notes that within the MH-052-2018 hearing, Indigenous communities provided additional evidence regarding their familial connections with the SRKW, including the role the SRKW have in their origin stories and the cultural teachings that have been passed down from generation to generation as result of their spiritual connection with the SRKW. The Board finds that the increase in marine vessel traffic associated with the Project is likely to result in significant adverse effects on the SRKW. The Board finds that Project-related marine vessel traffic would further contribute to total cumulative effects which are determined to be significant, with or without the Project. Given these conclusions and recognizing the stated cultural importance of the killer whale to certain Indigenous groups, the Board finds that the increase in marine vessel traffic associated with the Project is likely to result in significant adverse effects on the traditional Indigenous use associated with the SRKW. The Board notes that Indigenous intervenors have indicated that they were not satisfied with the mitigation measures that have been proposed by Trans Mountain or are currently underway as part of the Federal Authorities programs to reduce disturbances on the SRKW in the Salish Sea. The Board notes that embedded in all of these initiatives is consultation with Indigenous communities, with an aim to understanding where traditional marine use activities take place, as well as the incorporation of Indigenous traditional knowledge, where appropriate. The Board is of the view these increased opportunities for Indigenous communities to provide input about their, traditional knowledge, TMRU activities and cultural practices, could, in time, lead to improvements in the mitigation measures. As a result, the Board has included Recommendation	14.8.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
			Indigenous communities could raise their concerns in a Proactive Vessel Management Forum around the impacts of vessel traffic patterns on the SRKW populations in their local waterways. Forum participants would then work to gather information and evidence necessary to assess these concerns and identify potential, cooperative (i.e., non-regulatory) measures to address them. The Federal Authorities also noted that a contracted study on how to incorporate traditional knowledge into a proactive vessel management approach has been received and analyzed. The Federal Authorities noted that one of the measures for the Species at Risk Action Plan for Northern and Southern Resident Killer Whale (<i>Orcinus orca</i>) in Canada (2017) is to incorporate Indigenous Traditional Knowledge on the behaviour and distribution of SRKW and their prey into measures for the recovery of the species. DFO said that Indigenous communities are being engaged through governance bodies such as the SRKW Indigenous and Multi-stakeholder Advisory Group, and the DFO-led SRKW prey availability working group.	1 which would require GIC to develop and implement a regional cumulative effects management plan implemented in consultation with Indigenous peoples, other marine users, the Province of British Columbia and local governments, VFPA, and other relevant stakeholders.	
Human Health effects from Project-related marine shipping	BC Métis Federation Driftpile Cree Nation Louis Bull Tribe Shxw'owhámel First Nation Squamish Nation Stz'uminus First Nation Tsuut'ina Nation Tsleil-Waututh Nation Whitefish Lake First Nation #459	During the MH-052-2018 hearing, Trans Mountain submitted a 2017 report prepared for the VFPA titled "Environmental Air Assessment." Annual emission estimates for all of the contaminants of interest including GHGs and NO_x were provided in Tables 37 to 40 for the VFPA Study Area, which extends to the western port jurisdictional boundary at the mouth of the Burrard Inlet. This report indicated that, based on dispersion modelling results with a number of conservative assumptions, which were intended to over-estimate effects, the Project would comply with all applicable ambient air quality objectives in place at that time, including those for nitrogen dioxide (NO₂). Trans Mountain said that it intends to manage arriving vessels to minimize the use of anchorages by holding tankers at the Westridge Marine Terminal dock whenever a berth is available, even if cargo transfer is not planned immediately. Trans Mountain also said that if assigned berth is not immediately available, there is inclement weather, or for any other reason the berth or vessel is not ready, the vessel may anchor at one of the four designated anchorages that have been established within the jurisdiction of the VFPA.	Health Canada said that it is not aware of any information that would alter the views expressed in the department's 2015 Letter of Comment concerning mitigation and monitoring for the potential health effects of Project-related marine shipping. The VFPA Port Information Guide from May 2018 includes guidelines concerning noise and light for all vessels anchoring within the Port of Vancouver. For example, all vessels, while at anchor, should minimize noise levels and light usage in consideration of local residents. VFPA also created a Noise Monitoring Program to help better understand the source and intensity of port-related noise in order to better respond to community concerns. Health Canada said that it does not appear that the sound from three ships docked and idling at the same time was evaluated, which is the worst-case scenario for noise generation from docked vessels. Health Canada also said there is no apparent formal complaint resolution plan identified. In the event of public complaints related to project-related noise as it affects residents adjacent to anchorages, Health Canada recommended that a formal, transparent and readily accessible complaint-response process be in place as a means of identifying and mitigating Project-related noise complaints.	In response to Health Canada's recommendation and NS NOPE's submissions during the MH-052-2018 hearing for a formal complaint resolution process to address concerns about noise and light from tankers docked at the VFPA managed anchorages, the Board is of the view this mitigation measure is not within Trans Mountain's control. The VFPA remains the steward of the Port of Vancouver. The VFPA has guidelines concerning noise and light for all vessels anchoring within the Port of Vancouver; however, it is not clear from the evidence on the record whether the VFPA has a formal complaint resolution process. Therefore, the Board would include Recommendation 16 encouraging GIC, in conjunction with VFPA, to develop a formal complaint resolution program that gathers community feedback, brings together diverse community stakeholders to facilitate discussions about port-related impacts, and resolves complaints about vessels anchored at the VFPA-managed anchorages. Considering that Trans Mountain will be required to adhere to all federal and international emission requirements to reduce emissions from the Project-related marine shipping, the Board finds that the residual effects from Project-related marine shipping is not likely to cause significant adverse effects on human health, including the health of Indigenous people.	14.8.4

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Effects of accidents and malfunctions (oil spills)					
Environmental effects					
Adequacy of ecological risk assessment	Snuneymuxw First Nation Squamish Nation Stz'uminus First Nation Tsleil-Waututh Nation	Trans Mountain said that the information contained in Dr. Short's 2018 report is generally the same as that presented in the OH-001-2014 proceeding, that the report erroneously interpreted the intent and conclusions of Trans Mountain's evidence regarding the fate and behaviour of diluted bitumen, and the opinions presented lack substantiation through provision of specific numbers or reference to relevant expert studies. Trans Mountain said that as such Dr. Short's 2018 report does not change, or cast doubt on, the findings or conclusions in the NEB Report. Trans Mountain said that the Royal Society of Canada (2015) Expert Panel Report on "The Behaviour and Environmental Impacts of Crude Oil Released into Aqueous Environments", commented that the risk assessments conducted for Trans Mountain Expansion Project are impressive documents in their scope and detail, and are among the best of their kind.		The Board finds Trans Mountain's approach reasonable and in Board's view the locations modeled by Trans Mountain provide representative effects.	14.9.1
Effects of accidents and malfunctions (oil spills) on marine fish and fish habitat	Adams Lake Indian Band BC Métis Federation Cheam First Nation Chawathil First Nation Coldwater Indian Band Driftpile Cree Nation Ermineskin Cree Nation Kwawwaten First Nation Little Shuswap Lake Indian Band Musqueam Indian Band Nooaitch Indian Band Seabird Island Band Squamish Nation Stk'emlupsemc te Secwepmc of the Secwepmc Nation Tsartlip First Nation Tsuut'ina Nation Whitefish (Goodfish) Lake First Nation #128	Trans Mountain evaluated potential environmental effects of worst-case and smaller oil spills resulting from marine transportation and these results can be applied to evaluate potential spill-related effects on salmonid fish including Chinook Salmon and Steelhead Trout. Trans Mountain said that the potential effects of marine oil spills on salmonid species, including Coho Salmon and Steelhead Trout, were evaluated and tested during the OH-001-2014 proceeding. It said that there has been no change in Trans Mountain's assessment of potential effects to Pacific salmon species resulting from hypothetical spills along the marine transportation route.	DFO said that in the case of significant spills, it provides advice and input about environmental sensitivities in the spill area and the prioritization of protection measures through the Incident Command System (ICS). It said that the Environmental Unit under the ICS is where technical experts from all response partners combine to provide advice on environmental protection objectives and priorities, strategies and tactic implementation. Species of conservation concern (e.g., <i>Species at Risk Act</i>-listed species) are considered an "elevated priority" when the Environmental Unit determines the protection objective and its subsequent protection strategies and tactical implementation. DFO said that a holistic approach for the protection and treatment of marine mammals, invertebrates, fish and turtles for an oil / chemical spill will draw on all relevant information including physical, chemical, biological, and geographic information.	The Board is of the view that the environmental effects of a spill from a tanker would be highly dependent on the particular circumstances, such as the amount and the type of product(s) spilled, location of the spill, response time, the effectiveness of containment and clean-up, the valued components that are impacted, and the weather and time of year of the spill. In the Board's view, there is a spectrum of potential spill outcomes ranging from small quickly contained spills that do not result in significant effects to credible worst-case spills that would result in significant effects. In between these two extremes are other spills that could also result in significant effects depending upon the circumstances. The Board finds the probability of a worst-case event is very low.	14.9.4

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Effects of accidents and malfunctions (oil spills) on marine mammals	Shxw'ówhámel First Nation Snuneymuxw First Nation Squamish Nation Stz'uminus First Nation		DFO said that a marine mammal oil spill response plan is in development. It focuses on preventing exposure of marine mammals, including resident killer whales, to spills. This includes strategies for monitoring and tracking SRKW; prevention of exposure to oil spills by prioritizing cleanup and booming efforts for key areas; and prevention of exposure using acoustic deterrents to keep resident killer whales away from spill affected areas. There are a number of actions completed or underway to support the strategies described above, including: a real time SRKW tracking network in SRKW critical habitat is in development to assist with locating and determining the direction of travel of SRKWs using hydrophones and cetacean sighting. It said that the current Fisheries and Oceans Canada (DFO) approach is to develop a single marine mammal spill response plan that covers all marine mammal species, including Species at Risk Act-listed species. It focuses on preventing exposure of marine mammals, including resident killer whales, to spills. This includes strategies for monitoring and tracking SRKW; prevention of exposure to oil spills by prioritizing cleanup and booming efforts for key areas; and prevention of exposure using acoustic deterrents to keep resident killer whales away from spill affected areas. DFO said that in the case of significant spills, it provides advice and input about environmental sensitivities in the spill area and the prioritization of protection measures through the Incident Command System (ICS). It said that the Environmental Unit under the ICS is where technical experts from all response partners combine to provide advice on environmental protection objectives and priorities, strategies and tactic implementation. Species of conservation concern (e.g., Species at Risk Act-listed species) are considered an "elevated priority" when the Environmental Unit determines the protection objective and its subsequent protection strategies and tactical implementation. DFO said that a holistic approach for the protection and treatment of marine mammals, invertebrates, fish and turtles for an oil/chemical spill will draw on all relevant information including physical, chemical, biological, and geographic information.	The Board is of the view that the environmental effects of a spill from a tanker would be highly dependent on the particular circumstances, such as the amount and the type of product(s) spilled, location of the spill, response time, the effectiveness of containment and clean-up, the valued components that are impacted, and the weather and time of year of the spill. In the Board's view, there is a spectrum of potential spill outcomes ranging from small quickly contained spills that do not result in significant effects to credible worst-case spills that would result in significant effects. In between these two extremes are other spills that could also be result in significant effects depending upon the circumstances. The Board finds the probability of a worst-case event is very low.	14.9.4
Effects of accidents and malfunctions (oil spills) on marine birds	Malahat First Nation Snuneymuxw First Nation Squamish First Nation Stz'uminus First Nation Tsawout First Nation Tsawwassen First Nation	Trans Mountain said that ECCC would be best placed to collect migratory bird and species at risk data, conduct assessment strategies, identify response strategies, and determine the type and extent of monitoring in relation to informing Wildlife Emergency Response Plans] for marine transportation. Through participation in regional planning and preparedness efforts, Trans Mountain understands that other federal	ECCC said it has been resourced (initially under World Class Tanker Safety Phase II, and currently under Oceans Protection Plan Regional Response Planning sub-initiative) to collect marine bird environmental sensitivities data in marine waters of southern BC, including but not limited to the Salish Sea.	The Board is of the view that the environmental effects of a spill from a tanker would be highly dependent on the particular circumstances, such as the amount and the type of product(s) spilled, location of the spill, response time, the effectiveness of containment and clean-up, the valued components that are impacted, and the weather and time of year of the spill.	14.9.4

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Tsleil-Waututh Nation	government agencies, provincial government agencies, Indigenous and local communities, vessel operators, Western Canada Marine Response Corporation, and other stakeholders would also have a role in one or more aspects related to informing a WERP. Trans Mountain said that it would consider opportunities to implement or support or participate in the collection of information that could be used in a WERP.		The Board notes the concern raised by Dr. Short said that small to medium sized oil spills on the order of 100 to 1,000 m3 from the Project can cause substantial mortalities to seabirds, and estimated effects for small to medium spills in Canada and in Alaska. In the Board's view, there is a spectrum of potential spill outcomes ranging from small quickly contained spills that do not result in significant effects to credible worst-case that would result in significant effects. In between these two extremes are other spills that could also be result in significant effects depending upon the circumstances. The Board finds the probability of a worst-case event is very low.	
Effects of accidents and malfunctions (oil spills) on sand verbena moth	Tsawout First Nation	Sand-verbena Moth and Yellow Sand-verbena are terrestrial species that occupy habitats above the high tide limit. There are no identified direct interactions between Sand-verbena Moth (and its host plant) and Project-related marine transportation (routine operations or accidents and malfunctions). Therefore, no adverse effects are anticipated, and no specific mitigation measures are proposed or required.		The Board accepts Trans Mountain's response to this concern.	14.9.4
Socio-economic effects					
Effects of accidents and malfunctions (oil spills) on heritage resources	Tsleil-Waututh Nation	Trans Mountain did not provide updated views on effects of accidents and malfunctions on heritage resources. In the OH-001-2014 hearing, Trans Mountain said that heritage resources could be affected by a spill in a number of ways. Oil and cleanup activities can directly damage artifacts and sites or disturb their context, which may result in permanent loss of information.	The Canadian Coast Guard said that it is the on-water federal lead agency for marine pollution response. It provides oversight of every marine incident and is responsible for ensuring the cleanup of ship-source and mystery-source spills of oil and other pollutants into Canadian waters. Should the polluter be unable, unwilling, or unknown, the Canadian Coast Guard would assume command of the situation and ensure an appropriate response to the incident.	The Board acknowledges the high degree of concern Indigenous groups have regarding potential spills or contamination of the ocean, and how it would impact archaeological sites located on the shoreline. The Board is of the view that the effects of a spill from a tanker would be highly dependent on the particular circumstances, such as the amount and the type of product(s) spilled, location of the spill, response time to contain and recover the spill, the effectiveness of containment and clean-up, and the weather and time of year of the spill. A credible worst-case spill would have adverse effects. The Board is of the view that the effects of a credible worst-case spill on heritage resources could be adverse and significant. However, the Board is of the view that the probability of such an event is very low. The Board encourages Indigenous groups to participate in the spill response planning process with regulatory authorities such as the Canadian Coast Guard and Transport Canada, and the certified response organization WCMRC. The Board also encourages Indigenous groups to share information regarding potential archaeological and cultural heritage sites with the B.C. Ministry of Forests, Lands & Natural Resource Operations.	14.10.2 14.11.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Effects of accidents and malfunctions (oil spills) on traditional marine use	Adams Lake Indian Band	Trans Mountain acknowledged the concerns raised by Indigenous communities related to the potential for a marine spill and the adequacy of spill response procedures and mechanisms and the ultimate effect of any oil spill on Indigenous culture and way of life. Trans Mountain submitted that the original assessment conclusions have not changed as a result of the additional evidence provided by Indigenous communities in the MH-052-2018 hearing. Trans Mountain also acknowledged the concerns raised by non-coastal Indigenous communities regarding the impacts of a marine spill adversely affecting the salmon resources returning from the ocean to inland areas. Trans Mountain said it understands the integral cultural and economic importance of the Thomson and Fraser River fisheries to inland Indigenous communities in BC. Trans Mountain noted that Geographic Response Strategies (GRS) are being developed by WCMRC as part of implementing the Enhanced Response Regime (ERR). It further noted that WCMRC continues to develop partnerships with Indigenous and/or coastal communities as part of their overall community engagement process and in order to develop new and improve existing GRS, including the collection of Traditional Marine Resource Use/Traditional Ecological Knowledge information from Indigenous communities to incorporate into its GRS. Trans Mountain stated that upon request of WCMRC it is ready to assist or facilitate conversations between WCMRC and Indigenous communities.	The Canadian Coast Guard said that it is the on-water federal lead agency for marine pollution response. It provides oversight of every marine incident and is responsible for ensuring the cleanup of ship-source and mystery-source spills of oil and other pollutants into Canadian waters. Should the polluter be unable, unwilling, or unknown, the Canadian Coast Guard would assume command of the situation and ensure an appropriate response to the incident.	The Board is of the view that the effects of a credible worst-case spill on the current use of lands, waters and resources for traditional purposes by Indigenous people would likely be adverse and significant. The Board finds that although impacts from a credible worst-case spill would probably be adverse and significant, natural recovery of the impacted areas and species would likely return most biological conditions to a state generally similar to pre-spill conditions. Certain values and uses could be lost or diminished in the interim. The Board notes Trans Mountain's commitment to use available spill response technologies to mitigate spill impacts to ecosystems and assist in species recovery. The Board is of the view that implementation of an appropriate spill response, and measures such as compensation and harvest restrictions or closures would lessen the effects experienced until resource-dependent species recover. The Board finds the probability of a worst-case event is very low.	14.10.5
	Blood Tribe (Kainai First Nation) Ditidaht First Nation Coldwater Indian Band Driftpile Cree Nation Heiltsuk First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Little Shuswap Lake Indian Band Lyackson First Nation Neskonlith Indian Band Nooaitch Indian Band First Nations of the Maa-nulth Treaty Society Makah Tribal Council Malahat First Nation Musqueam Indian Band Shxw'ōwhámel First Nation Snuneymuxw First Nation Squamish Nation Stk'emlupsemc te Secwepmc of the Secwepmc Nation Stz'uminus First Nation Stó:lō Collective Stó:lō Tribal Council Tsartlip First Nation Tsawout First Nation Tsawwassen First Nation T'Sou-ke First Nation Tsuut'ina Nation Tsleil-Waututh Nation Swinomish, Tulalip, Suquamish, and Lummi Indian Nations (US Tribes)				14.11.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Human Health effects from accidents and malfunctions (oil spills)	Chawathil First Nation Cheam First Nation Kwantlen First Nation Seabird Island Band Squamish Nation Stó:lō Collective Stó:lō Tribal Council Tsartlip First Nation Tsilil-Waututh Nation	Trans Mountain said that effects of an oil spill from Project-related marine shipping was thoroughly canvassed in the OH-001-2014 hearing. Overall, none of the information filed by Intervenor in the MH-052-2018 hearing is new or updated information that is materially different from the information the Board considered in the OH-001-2014 hearing. As a result, Trans Mountain said that the Board's findings in OH-001-2014 hearing remain valid and no changes to the Conditions are warranted. Trans Mountain said an evaluation of the combined effects of crude oil and dispersants in the Ecological Risk Assessment of Marine Transportation Spills Technical Report is not warranted, given that the use of dispersants is not a pre-approved response technique in the marine RSA,	The Canadian Coast Guard said that it undertakes emergency response planning for marine spills within its mandate, which includes potential spills from Project-related marine shipping. The approach and principles described in the Canadian Coast Guard's response plans are consistent with those described in Health Canada's "Guidance for the Environmental Public Health Management of Crude Oil Incidents – A Guide Intended for Public Health and Emergency Management Practitioners." Both Health Canada and the Canadian Coast Guard prioritize the health and safety of first responders and the public during the spill response. The Canadian Coast Guard submitted version 2.0 of the Greater Vancouver Integrated Response Plan (GVIRP) for Marine Pollution Incidents. At a local level, the GVIRP integrates public health management during both preparedness and response. There are many organizations that were instrumental and agree in principal to support the implementation and ongoing maintenance of the Plan, including First Nation Health Authority and Vancouver Coastal Health Authority. The GVIRP includes information about the role of health authorities during response to marine pollution incidents that occur, or may occur, in the Greater Vancouver Area. CCG said that no dispersants are currently approved for use in response to ship-source oil spills in Canada.	The Board is of the view that, in the event of a spill in the marine environment during shipping, including a large spill, there would be adverse effects on human health. These effects would vary over time and space depending on the location and extent of the spill, and there would likely be exceedances of certain short-term exposure limits for some chemicals of potential concern, including both carcinogenic and non-carcinogenic chemicals, but these would be expected to diminish in the hours following a spill. The Board notes some of the concerns from the OH-001-2014 hearing about the inclusion of local and Indigenous health authorities in marine pollution incidents. The Board is encouraged to see, in the evidence submitted in the MH-052-2018 hearing, that the First Nation Health Authority and Vancouver Coastal Health Authority were instrumental and agree in principal to support the GVIRP. The Board also notes concerns raised by municipalities in the MH-052-2018 hearing about the inclusion of more detailed information in the GVIRP around air quality monitoring. The Board is not including a recommendation to GIC on this topic because the GVIRP is the product of a cooperative effort and the Board is not well positioned to prescribe detailed requirements. In response to the suggestion for Trans Mountain to expand its Marine Public Outreach Program to include risks to public health in the event of a marine spill, the Board is of the view that the federal government has the authority to address such matters. Therefore, the Board would include Recommendation 12 encouraging GIC, in conjunction with the Pacific Pilotage Authority and Transport Canada, to continue engagement and awareness activities targeting Indigenous coastal communities, recreational boaters, fishing vessel operators, and operators of small vessels with respect to safety of navigation and prevention of collisions with larger vessels. The focus of these engagement and awareness activities should be determined by the regulatory authorities who have the appropriate jurisdiction and expertise. Based on the evidence before it, the Board finds that a large spill in Burrard Inlet is not a likely event. The Board is therefore of the view that the potential effects on human health that are predicted to result from such spill scenarios are also not likely to occur.	14.10.6

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Spill prevention, risk analysis, emergency preparedness and response					
Adequacy of spill prevention measures	Makah Tribal Council Heiltsuk First Nation	Current data from the International Tanker Owners Pollution Federation filed by Trans Mountain indicated that there is a continued downward trend in large oil spills (>700 tonnes) and medium sized spills (7 – 700 tonnes) from tankers on a world-wide basis despite a world-wide increase in seaborne oil trade. Trans Mountain said that since the issuance of the OH-001-2014 Report, it has continued to engage and work with the BC Coast Pilots Ltd., Pacific Pilotage Authority, Transport Canada, Canadian Coast Guard and the Vancouver Fraser Port Authority to complete its commitments under the TERMPOL Review Committee's Findings and Recommendations.	The Canadian Coast Guard provided an update on improvements and initiatives related to Marine Communications and Traffic Services (MCTS) and the safe navigation of vessels. The role of the MCTS program is to provide communications services to mariners in Canadian waters on a 24/7 basis. This includes responding to vessels in distress, providing safety services to mariners, communicating with vessels, regulating traffic in vessel traffic zones and identifying and tracking vessels operating in Canadian waters through data sensors such as radar and Automatic Identification System. The Canadian Coast Guard said that modernization and consolidation of MCTS centres across the country and a preliminary assessment of the existing aids to navigation system along the route identified in the Trans Mountain's TERMPOL submission was completed. The Canadian Coast Guard said it is continuing to explore and test e-Navigation concepts and technologies in order to provide current and contextualized marine navigational information to improve marine safety when operating in Canadian waters. From 2024 to 2026, the Canadian Coast Guard will replace its RADAR systems as part of its lifecycle management of these assets. Transport Canada said that pre-identification of potential places of refuge is key in a time-sensitive situation. Pre-planning allows for the deliberate compilation and consideration of information prior to an incident such as information on logistics, environmental sensitivities, human use, navigation, potential use conflicts and local knowledge. It said that it is reviewing and updating the 2007 Places of Refuge Contingency Plan and associated regional plans, with engagement from key partners. The intent is for the work to be completed by 2022. The Vancouver Fraser Port Authority said that it has developed and formalized Traffic Control Zones, formerly known as Movement Restricted Areas, for the purpose of promoting safe and efficient navigation and environmental protection in the waters of the port. The Vancouver Fraser Port Authority also noted that it had proposed to Transport Canada Marine Safety and Security in 2018 that the Vancouver & Approaches Traffic Separation Scheme be amended, with a target date for implementation of 2019. Transport Canada continues to support Trans Mountain's commitment for enhanced tug escort for Project-related tankers being made mandatory through the certificate terms and conditions through the Board's permitting process.	To bolster regulatory oversight and make enhanced tug escort mandatory for Project-related tankers in the Salish Sea, the Board recommends that the Governor in Council develop a regulatory framework for making such tug escort mandatory for Project-related tankers (Recommendation 8). GIC should also consider mandatory enhanced tug escort for other vessels as appropriate. The Board is of the view that the evidence filed by those bodies that regulate marine shipping and by Trans Mountain indicate that there is an acceptable level of safety in place regarding marine shipping associated with the Project.	14.11.1. 14.11.2

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
Adequacy of marine shipping risk analysis	Makah Tribal Council Snuneymuxw First Nation Squamish Nation Stz'uminus First Nation Tsleil-Waututh Nation	Trans Mountain said that the results of its own application of the United States Bureau of Ocean Energy Management's Oil Spill Risk Assessment Model validates the refined results of the risk assessment conducted as part of the original proceeding on the likelihood of oil spill by a Project-related tanker. These results indicated a 16 percent likelihood of an oil spill over 50 years for Project-related tankers.		The Board accepts Trans Mountain's evidence that there are no proposed or widely accepted risk acceptance criteria for marine oil spills. The Board understands that the marine shipping risk assessment performed for the Project-related tankers and the marine shipping risk assessment undertaken for Transport Canada and the report of the Tanker Safety Expert Panel do not recommend stoppage of marine shipping in the area. Rather, such risk assessments are intended to inform mitigation to lessen the potential for an accident to occur, and for spill response planning. That is, the Board does not view the results of these risk assessments as absolute indicators of the actual probability of a spill occurring. The Board has recommended that the Governor in Council consider the need for a transboundary vessel traffic risk assessment in conjunction with relevant United States regulatory authorities (Recommendation 9).	14.11.2
Adequacy of emergency preparedness and response	Chawathil First Nation Cheam First Nation Cowichan Tribes Ditidaht First Nation Driftpile Cree Nation Ermineskin Cree Nation Heiltsuk First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Kwantlen First Nation Lyackson First Nation Makah Tribal Council Malahat First Nation Pacheedaht First Nation Nooaitch Indian Band Seabird Island Band Snuneymuxw First Nation Stó:lō Tribal Council Stz'uminus First Nation Tsleil-Waututh Nation T'Sou-ke First Nation Tsuut'ina Nation	Trans Mountain said that it has made numerous enhancements to its Emergency Management Program since the date of the Board's OH-001-2014 Report. These enhancements strengthen marine oil spill prevention, emergency preparedness, and response measures. Trans Mountain concluded that with implementation of its proposed enhanced marine oil spill response regime, WCMRC's response capacity would be commensurate with the legislated worst-case discharge planning standards in the US. It said that the intent of the Canadian regime is to ensure that a level of preparedness exists such that a suitable response is in place and ready to be deployed in the event of any spill, regardless of size and condition. National and international mutual aid agreements are also part of a response organization's capability for spills that exceed their capacity. Trans Mountain said that use of chemical dispersants in response to any oil spill would only be considered on a case by-case basis, in consultation with federal regulators, local authorities and other experts, and where this use would result in net environmental benefit. It also said that the use of Spill Treating Agents in Canadian waters is prohibited under federal law except under certain conditions in relation to	The Canadian Coast Guard said that environmental response planning in the Lower Mainland and South Coast is ongoing as part of regular Coast Guard spill response preparedness activities. The Canadian Coast Guard Marine Spills Contingency Plan – National Chapter establishes the requirement for Geographically Specific Response Planning, and the Coast Guard is working directly with Indigenous communities and other partners on the Lower Mainland and South Coast to develop Geographically Specific Response Plans, like the Greater Vancouver Integrated Response Plan. Canadian Coast Guard said that it maintains a close working relationship with WCMRC. When an incident occurs, the Coast Guard advises WCMRC of the developing situation to initiate any required preparation for response. This enables the WCMRC to mobilize and deploy staff, vessels and equipment accordingly. The Coast Guard and WCMRC maintain regular communication as the incident evolves. The Canadian Coast Guard and other federal participants discussed a number of response planning initiatives under the Oceans Protection Plan and other improvements to federal prevention, preparedness and response capabilities since 2015. The Vancouver Fraser Port Authority said that it co-chairs the Marine Emergency Response Coordination Committee with Canadian Coast Guard. The Marine Emergency Response Coordination Committee provides a venue for interested organizations to dialogue on the coordination of	To promote continued improvement in the marine oil spill response regulatory framework, the Board included Recommendation 7 which would require that the Governor in Council review and update federal marine shipping oil spill response requirements. This recommendation has been crafted such that it would include consideration of the concerns noted by the above parties. To the extent that response planning approaches and methodologies noted by the Nuka report would further enhance marine oil spill response, the Board recommends that the Governor in Council consider such approaches and methodologies as part of any work undertaken in response to Recommendation 7.	14.11.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Whitefish (Goodfish) Lake First Nation #128 Whitefish Lake First Nation #459	offshore oil exploration and production. Trans Mountain said that it provided comments on requirements for oil spill response organizations to Transport Canada in 2018, as part of the government's consultation on the Oceans Protection Plan Trans Mountain had proposed that the planning standard for response times of response organizations in a local area should be commensurate to the level of risk contributed by industry in the local area. Trans Mountain submitted that this was Trans Mountain's approach in facilitating the largest-ever expansion of spill response personnel and equipment on the BC coast by WCMRC.	marine assets in the Metro Vancouver area during emergency or security response and recovery activities. Under the Marine Emergency Response Coordination Committee is the Environmental Response Sub-Committee which addresses emergency response planning in the Greater Vancouver area. The Environmental Response Sub-Committee also serves as the primary source of subject matter expertise relating to any changes to the Greater Vancouver Integrated Response Plan. The Vancouver Fraser Port Authority noted that it cooperates with the Canadian Coast Guard, Western Canada Marine Response Corporation, first responders, and other agencies in emergency response through training and exercises and by providing information through its operations centre and patrol boats. Canadian Coast Guard said that it maintains storage capacity in the region to store and transport oily waste and that additional Canadian Coast Guard capacity could be cascaded to the impacted area from other regions of Canada, if required. Additional storage capacity, such as tankers and barges, could also be contracted during a response operation to meet any anticipated volume of oily waste. It said that incident-specific waste management plans are developed at the time of an incident based on the specific products, volumes and locations, and are reviewed to ensure that they meet local, provincial and federal laws and regulations. Canadian Coast Guard also described methods for transferring highly viscous oils such as weathered diluted bitumen as part of oily waste management. Transport Canada noted that a response organization must demonstrate that it has sufficient storage capacity to maintain oil/oil water waste recovery operations 24 hours a day. In addition, through mutual aid agreements and arrangements with other response organizations and contractors, responders have access to cascading resources that expand capabilities beyond the Transport Canada-mandated spill threshold of 10,000 tonnes		
Inclusion of Indigenous People in marine oil spill response and planning	Chawathil First Nation Cheam First Nation Indigenous Caucus for the Trans Mountain Indigenous Advisory and Monitoring Committee Kwantlen First Nation Pacheedaht First Nation Seabird Island Nation	Trans Mountain noted that Geographic Response Strategies (GRS) are being developed by WCMRC as part of implementing the Enhanced Response Regime (ERR). It further noted that WCMRC continues to develop partnerships with Indigenous and/or coastal communities as part of their overall community engagement process and in order to develop new and improve existing GRS, including the collection of Traditional Marine Resource Use/Traditional Ecological Knowledge information from Indigenous	Through the Indigenous Community Response Training initiative under the OPP, the Canadian Coast Guard has provided training to Indigenous communities that is then applied in joint operational exercises that incorporate all on-water first response partners, such as the Coast Guard Auxiliary, Indigenous communities, Parks Canada, other federal, provincial and municipal partners and any other implicated organizations. Regional training workshops are available to all coastal Indigenous communities.	The evidence before the Board indicates that since its OH-001-2014 Report, there have been substantial investments made by the federal departments and agencies and WCMRC aimed at including Indigenous people in marine oil spill planning and response. The Board also heard concerns from First Nations regarding the actual implementation of such initiatives. The Board notes that the IAMC has been operational since 2017 and is already participating in emergency	14.10.5 14.11.3

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
	Stó:lō Tribal Council	communities to incorporate into its GRS. Trans Mountain stated that upon request of WCMRC it is ready to assist or facilitate conversations between WCMRC and Indigenous communities.	Canadian Coast Guard said that as a result of training and exercise programs and response planning initiatives, Indigenous groups are pre-established as Incident Commanders in Canadian Coast Guard contingency response plans. Consequently Indigenous governments may choose to participate and lead in environmental response operations activated by the Canadian Coast Guard within their traditional territories in British Columbia.	management and marine exercises. The Board sees value in the role of this existing committee and encourages its participation in ongoing spill planning and response efforts. To promote the continued participation of Indigenous people in marine oil spill planning and response, the Board has specifically included the need for such inclusion in Recommendation 7. Recommendation 11 addresses engagement with, and feedback from, the Indigenous Advisory and Monitoring Committee on the marine safety system and Project-related marine shipping activities that intersect with Canadian Coast Guard operational programs.	
Financial Responsibility, Liability, and Insurance					
Ship-source oil pollution fund	First Nations of the Maa-nulth Treaty Society Esquimalt Nation Scia' new First Nation Pauquachin First Nation Tsleil-Waututh Nation Squamish Nation Stz'uminus First Nation Snuneymuxw First Nation		In October 2018, the Government of Canada introduced legislation to modernize Canada's Ship-Source Oil Pollution Fund, which includes a number of changes from what was described in the OH-001-2014 Hearing to ensure that unlimited compensation would be available to all eligible claims from victims and responders of oil spills from ships. If the Ship-Source Oil Pollution Fund contained insufficient funds to fully pay for a spill, then the Minister of Finance could grant a loan to the Ship-Source Oil Pollution Fund to pay all eligible claims. The Ship-Source Oil Pollution Fund can be replenished through an annual levy on oil receivers and exporters, as well as providing the option to impose a temporary supplementary levy if the annual levy is insufficient. The Ship-Source Oil Pollution Fund would provide emergency funding to the Canadian Coast Guard to respond to a significant oil spill. The Canadian Coast Guard would use these funds to respond to the oil spill and compensate third parties for their response activities under its direction. A simplified and expedited process for claims under \$35,000 would be established, allowing the Ship-Source Oil Pollution Fund to accept small claims without conducting a full investigation and assessment. Transport Canada described the types of losses and damages compensable under the <i>Marine Liability Act</i> to include measures to prevent or minimize damage; clean-up and containment costs; property damage; environmental damage limited to loss of profit, post-spill studies and costs of reasonable measures of reinstatement undertaken or to be undertaken; and economic losses. An economic loss occurs when oil pollution has caused a loss of earnings to persons whose property has not been polluted. Transport Canada listed a number of examples: individuals who derive income from fishing, from the production, breeding, holding or rearing	The Board notes that the <i>Marine Liability Act</i> allows individuals who fish or hunt for food or animal skins for their own consumption or use to claim for losses under the Ship-Source Oil Pollution Fund. [Marine Liability Act, Section 107 (2)(d), Link, Accessed 30 January 2019] The Board notes that Transport Canada held consultations with Indigenous groups regarding the recent changes to the Marine Liability Act, where concerns regarding the scope of the Ship-Source Oil Pollution Fund was discussed. The Board is of the view that the Ship-Source Oil Pollution Fund is a compensation fund where Indigenous communities who have sustained loss or damage, or incurred costs and expenses, in respect of oil pollution may file a claim.	14.12.1

Concern	Indigenous Communities	Company response	Government Response	NEB response	Reconsideration Report Section
			of fish, or from the culture or harvesting of marine plants; owners of fishing vessels, derives income from the rental of fishing vessels to holders of commercial fishing licenses issued in Canada; individuals who derives income from the handling of fish on shore in Canada directly after they are landed from fishing vessels; any person who rents or charters boats in Canada for sport fishing; and workers in a fish plant in Canada. In the case of an incident, Transport Canada noted that any person, entity, or organization, including local governments, may make a claim for costs or damages resulting from a ship-source oil pollution spill either directly to the ship owner and their insurer, or with the Ship-Source Oil Pollution Fund.		
Non-monetary compensation in event of spill	Heiltsuk First Nation T'sou-ke First Nation Nooaitch Indian Band			The Board agrees that it is unclear if all losses are eligible to be claimed under the Ship-Source Oil Pollution Fund. The Ship-Source Oil Pollution Fund does not appear to compensate for losses to non-use values, for Indigenous and non-Indigenous communities. In the event of an oil spill from a ship, not just a Project-related tanker, these losses may occur. The Board notes that section 48.12 of NEB Act establishes that pipeline operators are liable for the loss of non-use values relating to a public resource affected by a release and that the Crown may institute proceedings to recover the loss of non-use values. Thus, the Board has included Recommendation 15, which encourages GIC to work with Transport Canada to determine how a federal marine oil spill compensation regime, existing or otherwise, can include compensation for non-use values, for Indigenous and non-Indigenous communities, including any non-coastal communities that may be impacted as a result of a marine oil spill.	14.12.1

Appendix 15: Summary of comments received on draft conditions and recommendations

On 10 January 2019, the Board issued draft amendments to conditions and recommendations to parties for comment in their written argument-in-chief. The Board received a number of comments, which it considered. Some conditions and recommendations were adjusted in response to comments received. The various chapters of this MH-052-2018 Report provide reasons for changes made or not made, as do the summaries in Parts A and B below. Note that these summaries are not a comprehensive list, anyone wishing to see all submissions should review the entire record of the hearing. Part C provides a comparison of the draft and final versions of the conditions and recommendations.

A. Comments on draft conditions

Subject	Board views / comments
Response time	Some comments said that Condition 133 did not adequately address response times. The condition was changed to address these comments.
Compliance timing	Some comments said that Condition 91 did not clearly set out the timing of compliance requirements. The condition was changed to address these comments.
Specificity	Some comments requested increased specificity in certain conditions, including requests to list specific groups and people to be consulted. The Board has generally left wording broad, which accommodates the intent of the requests, and does not limit the intended scope of the conditions. Therefore, the Board has not made these changes.
Indigenous consultation	Some Indigenous intervenors requested that conditions include additional consultation with them. Consultation with, and participation of, Indigenous communities is already a part of federal government measures (enshrined as one of the pillars of the Oceans Protection Plan). Consultation and inclusion of Indigenous knowledge is already a requirement of many of conditions. Therefore, the Board has not made these changes.
Condition filings for approval	Some comments requested that certain condition filings be subject to Board approval. Regardless of whether this is indicated in a condition, the Board will assess all condition filings to ensure that Trans Mountain is in compliance prior to Trans Mountain being able to commence work on the applicable Project phase or component. If the Board is of the view that Trans Mountain is not in compliance, the Board may ask for further information until compliance is achieved. Therefore, the Board has not made these changes.
Condition commitments made by Trans Mountain	Some comments requested that certain commitments made by Trans Mountain be included in conditions, or be made into conditions themselves. Condition 2 requires Trans Mountain to meet all commitments it has made. Its commitments need not be made into, or added to, conditions for this obligation to continue. Therefore, the Board has not made this change, although it has updated Condition 2 to include commitments made during the MH-052-2018 hearing.
Rules to apply to Project-related marine vessels	Some comments suggested that more rules (e.g., further speed reductions, lighting) be applied specifically to Project-related marine vessels. In these cases, the Board considered whether they more appropriately applied to a broader range of marine vessels. The Board addressed these comments in its recommendations to the GIC, rather than in the conditions related to specifically to the Project and Project-related marine vessels. Therefore, the Board has not made these changes in the conditions.
Condition 131 should remain a condition	In response to the Board's proposal to convert Condition 131 (Marine Public Outreach Program) into a recommendation, some intervenors were of the view that it should remain a condition. Given that the work involved falls within the reach of government (and not Trans Mountain), the Board has made the conversion.

B. Comments on draft recommendations

Subject	Board views / comments
Definition of “Salish Sea”	Some comments requested that “Salish Sea” be defined in the recommendations. The Board has made changes to address these comments.
Additional consultation	Some comments requested that recommendations include additional consultation with Indigenous peoples and other stakeholders. The Board has made changes to address these comments.
Clarity regarding mitigation and monitoring	Some comments requested that recommendations include clear wording to show that they involve mitigation that was feasible and effective, and would involve monitoring. The Board has made changes to address these comments.
Clarity regarding offsets	Some comments suggested there was a lack of clarity in the recommendations regarding offsets and the distinction between them. The Board has made significant adjustments to be more specific about the purpose of these recommendations, and to add specific consultation requirements. Specifically, changes were made to clarify that Recommendation 5 is the overall offset program, whereas Recommendation 6 notes some individual potential mitigation for further consideration within that program.
Cumulative impacts on Indigenous rights and title	Some Indigenous intervenors provided comments regarding the cumulative impacts on the exercise of Indigenous rights and title, and that these matters should be addressed through consultation. While such wording has not been explicitly added to the recommendations, the inclusion of wording regarding consultation with Indigenous peoples will allow for input with respect to impacts on rights and title.
Including the Fraser Watershed in a regional study	Some comments requested that the Fraser Watershed be included in a regional study (Recommendation 1). The recommended study is to look at cumulative impacts on the Salish Sea. The geographic boundaries of the relevant cumulative effects would be determined as part of the planning process.

C. Comparison of draft and final versions of the conditions and recommendations

#	Draft wording	Final wording
Conditions		
91	Plan for marine spill prevention and response commitments Trans Mountain must file with the NEB, at least 2 months prior to commencing construction, a plan describing how it will ensure that it will meet the requirements of Condition 133 regarding marine spill prevention and response. The plan must be prepared in consultation with Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority, Vancouver Fraser Port Authority, British Columbia Coast Pilots, Western Canada Marine Response Corporation, Fisheries and Oceans Canada and the Province of British Columbia, and must identify any issues or concerns raised and how Trans Mountain has addressed or responded to them. Trans Mountain must provide the plan to the above-mentioned parties at the same time as it is filed with the NEB.	Plan for marine spill prevention and response commitments Trans Mountain must file with the NEB, within 6 months from the issuance date of the Certificate, a plan describing how it will ensure that it will meet the requirements of Condition 133 regarding marine spill prevention and response. The plan must be prepared in consultation with Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority, Vancouver Fraser Port Authority, British Columbia Coast Pilots, Western Canada Marine Response Corporation, Fisheries and Oceans Canada and the Province of British Columbia, and must identify any issues or concerns raised and how Trans Mountain has addressed or responded to them. Trans Mountain must provide the plan to the above-mentioned parties at the same time as it is filed with the NEB.
131	Marine Public Outreach Program The Board proposed converting this condition into a recommendation (see Recommendation 12).	Marine Public Outreach Program The Board has converted this condition into a recommendation (see Recommendation 12).
132	Marine Mammal Protection Program Trans Mountain must file with the NEB, at least 3 months prior to commencing operations, a Marine Mammal Protection Program that focuses on mitigating effects from the Project and	Marine Mammal Protection Program Trans Mountain must file with the NEB, at least 3 months prior to commencing operations, a Marine Mammal Protection Program that focuses on mitigating effects from the Project and associated cumulative effects, and

	associated cumulative effects, and on fulfilling Trans Mountain's commitments as a terminal operator with regard to Project-related marine shipping. The program must include: a) the goals and objectives of the program, including a discussion on how they align with the objectives of applicable Fisheries and Oceans marine mammal Recovery Strategies and Action Plans; b) a summary of the issues related to marine mammals from the Project and from Project-related marine vessels; c) a summary of the initiatives that Trans Mountain has supported or undertaken to-date, including the goals of each initiative and how they relate to the goals and objectives of the program; d) a discussion of the outcomes or progress updates of the initiatives identified in c), and how these outcomes have met or are contributing to the objectives of the program; [previous e) and f) deleted] e) any other initiatives that Trans Mountain intends to undertake or support in the future that are relevant to the program; and f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the program, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding, MH-052-2018 Reconsideration proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information.	on fulfilling Trans Mountain's commitments as a terminal operator with regard to Project-related marine shipping. The program must include: a) the goals and objectives of the program, including a discussion on how they align with the objectives of applicable Fisheries and Oceans marine mammal Recovery Strategies and Action Plans; b) a summary of the issues related to marine mammals from the Project and from Project-related marine vessels; c) a summary of the initiatives that Trans Mountain has supported or undertaken to-date, including the goals of each initiative and how they relate to the goals and objectives of the program; d) a discussion of the outcomes or progress updates of the initiatives identified in c), and how these outcomes have met or are contributing to the objectives of the program; e) any other initiatives that Trans Mountain intends to undertake or support in the future that are relevant to the program; and f) a description of how Trans Mountain has taken available and applicable Indigenous traditional land use and traditional ecological knowledge into consideration in developing the program, including demonstration that those Indigenous persons and groups that provided Indigenous traditional land use information and traditional ecological knowledge, as reported during the OH-001-2014 proceeding, MH-052-2018 Reconsideration proceeding and/or pursuant to Condition 97, had the opportunity to review and comment on the information.
133	Confirmation of marine spill prevention and response commitments Trans Mountain must file with the NEB, at least 3 months prior to loading the first tanker at the Westridge Marine Terminal with oil transported by the Project, confirmation, signed by an officer of the company that: a) Trans Mountain has included in its Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide a requirement for tankers nominated to load at the Westridge Marine Terminal to have a suitable arrangement for the proposed enhanced tug escort between the Westridge Marine Terminal and Buoy J prior to departure. The tug escort should be suitable for foreseeable meteorological and ocean conditions and be based on tanker and cargo size. b) An enhanced marine oil spill response regime capable of delivering 20,000 tonnes of capacity within 36 hours of notification, with dedicated resources staged within the study area is in place.	Confirmation of marine spill prevention and response commitments Trans Mountain must file with the NEB, at least 3 months prior to loading the first tanker at the Westridge Marine Terminal with oil transported by the Project, confirmation, signed by an officer of the company that: a) Trans Mountain has included in its Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide a requirement for tankers nominated to load at the Westridge Marine Terminal to have a suitable arrangement for the proposed enhanced tug escort between the Westridge Marine Terminal and Buoy J prior to departure. The tug escort should be suitable for foreseeable meteorological and ocean conditions and be based on tanker and cargo size; and b) an enhanced marine oil spill response regime is in place that is capable of: i) delivering 20,000 tonnes of capacity within 36 hours of notification, with dedicated resources staged within the study area; and, ii) initiating a response within 2 hours for spills in Vancouver Harbour, and within 6 hours for the remainder of the Salish Sea shipping route to the 12-nautical-mile territorial sea limit.
134	Updated Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide Trans Mountain must file with the NEB, at least 3 months prior to loading the first tanker at the Westridge Marine Terminal with oil transported by the Project, and thereafter on or before 31 January of each of the first five years after commencing operations, an updated Vessel Acceptance Standard and Westridge Marine Terminal Regulations and Operations Guide, and a summary of any revisions made to each.	same

#	Draft wording	Final wording
144	Ongoing confirmation of marine spill prevention and response commitments Trans Mountain must file with the NEB, on or before 31 January of each year after commencing operations confirmation, signed by an officer of the company, that it is continuing to meet the requirements of Condition 133 regarding Trans Mountain's marine spill prevention and response commitments. Trans Mountain must provide each filing to Transport Canada, the Canadian Coast Guard, the Pacific Pilotage Authority, Vancouver Fraser Port Authority, British Columbia Coast Pilots, Western Canada Marine Response Corporation, Fisheries and Oceans Canada and the Province of British Columbia at the same time as it is filed with the NEB. If a particular party mentioned above requests that it not be provided the annual filing, Trans Mountain may cease providing it to that party.	same
151	Post-construction environmental monitoring reports Trans Mountain must file with the NEB, on or before 31 January following the first, third, and fifth complete growing seasons after completing final clean-up, a post-construction environmental monitoring report for the Project that must include: a) a description of the valued components or issues that were assessed or monitored; b) measurable goals for each valued component or issue; c) monitoring methods for each valued component or issue, results of the monitoring, and a comparison to the defined measurable goals; d) corrective actions taken, their observed success, and their current status; e) identification on a map or diagram of the locations where corrective actions were taken; f) any further corrective actions planned and a schedule for monitoring and reporting; and g) a summary of its consultations with appropriate government authorities and any potentially affected Indigenous groups and affected landowners / tenants. In the post-construction environmental monitoring report filed after the fifth full growing season after completing clean-up, Trans Mountain must include: i) an assessment of the effectiveness of mitigative and corrective actions and how learnings have been or will be applied to Trans Mountain's Environmental Protection Program; ii) a detailed description of all valued components or issues for which the measurable goals have not been achieved during the duration of the post-construction monitoring program; and iii) an evaluation of the need for any further corrective actions, measurable goals, assessments, or monitoring of valued components or issues, including a schedule for those. All filed post-construction environmental monitoring reports must address issues related, but not limited, to: soils; weeds; watercourse crossings; riparian vegetation; wetlands; rare plants, lichens and ecological communities; municipal tree replacement; wildlife and wildlife habitat; fish and fish habitat; marine fish and fish habitat; marine mammals; marine birds; and species at risk.	same

#	Draft wording	Final wording
Recommendations		
1	The Governor in Council should develop and implement a regional cumulative effects management plan that assesses the overall environmental state of, and cumulative effects on, the Salish Sea, and use that better understanding to help inform a long-term approach to managing those cumulative effects, as well as informing the consideration of future proposed projects. This plan should include, but not be limited to: a) consideration of the many impacts on the Salish Sea, including contamination from point and diffuse land-based sources, the multiple impacts on salmon and other fish stocks, and the impacts from all vessel traffic; b) incorporation of the work the federal authorities are already planning in the area, such as under the Coastal Environmental Baseline Program and the Cumulative Effects of Marine Shipping initiative (including its regional cumulative effects assessment); c) development of short-, medium-, and long-term targets for addressing cumulative effects, including consideration of the feasibility of reducing total underwater noise, strike/collision risk of vessels with marine species, and key contaminant levels over time; and d) any monitoring necessary to help determine the extent of cumulative effects, the success of measures to manage those effects, and progress towards meeting targets.	The Governor in Council should develop and implement a regional cumulative effects management plan. This plan should assess the overall environmental state of, and cumulative effects on, the Salish Sea (including the Strait of Juan de Fuca and out to the 12-nautical-mile territorial sea limit), and should include a long-term strategy for managing those cumulative effects. It should also be used to inform the consideration of future proposed projects. This plan should include, but not be limited to: a) consideration of the many impacts on the Salish Sea, including contamination from point and diffuse land-based sources, the multiple impacts on salmon and other fish stocks, and the impacts from all vessel traffic; b) incorporation of the work the federal authorities are already planning in the area, such as under the Coastal Environmental Baseline Program and the Cumulative Effects of Marine Shipping initiative (including its regional cumulative effects assessment); c) development of short-, medium-, and long-term targets for addressing cumulative effects, including consideration of the feasibility of reducing total underwater noise, strike/collision risk of vessels with marine species, and key contaminant levels over time, and feasible and effective measures for achieving those targets; and d) monitoring to help determine the extent of cumulative effects, the success of measures to manage those effects, and progress towards meeting targets. The Governor in Council should consider whether a regional study pursuant to sections 73 or 74 of the CEAA 2012 should be undertaken as part of the cumulative effects management plan, and include in its public reporting a rationale on whether this would be advantageous. The plan should be developed and implemented in consultation with Indigenous peoples, other marine users, the Province of British Columbia and local governments, Vancouver Fraser Port Authority (VFPA), and other relevant stakeholders.
2	The Governor in Council should report publicly, on an annual basis, on the oversight, progress, and status of initiatives and measures to address cumulative effects on, and to support the health of, the Salish Sea, including but not limited to: a) progress on addressing Recommendation 1 above; b) the Ocean Protection Plan, the Whales Initiative, and any other relevant commitments made by federal authorities during the Board's MH-052-2018 Reconsideration hearing; c) relevant initiatives and measures being undertaken by others, such as the marine shipping measures of the Enhancing Cetacean Habitat and Observation Program (ECHO) Program; d) species status updates for Species at Risk Act-listed species, including any relevant measures proposed in recovery documents under the Species at Risk Act; e) progress on addressing Recommendations 3 through 13 below; and f) consultation activities related to these initiatives and measures, including with Indigenous peoples and other marine users. The reporting should include an explanation of how these various initiatives and measures work together, the identification of any notable gaps, and plans for how those gaps will be addressed.	The Governor in Council should report publicly, on an annual basis, on the oversight, progress, and status of initiatives and measures to address cumulative effects on, and to support the health of, the Salish Sea (including the Strait of Juan de Fuca and out to the 12-nautical-mile territorial sea limit), including but not limited to: a) progress on addressing Recommendation 1 above, including monitoring results and progress towards meeting targets; b) the Ocean Protection Plan, the Whales Initiative, and any other relevant commitments made by federal authorities during the Board's MH-052-2018 Reconsideration hearing; c) relevant initiatives and measures being undertaken by others, such as the marine shipping measures of the Enhancing Cetacean Habitat and Observation Program (ECHO) Program, for the duration such initiatives or measures are undertaken; d) species status updates for <i>Species at Risk Act</i>-listed species, including any relevant measures proposed in recovery documents under the <i>Species at Risk Act</i>; e) progress on addressing Recommendations 3 through 16 below, including results of monitoring to determine the effectiveness of measures and any adaptive management as part of a follow-up program; and f) consultation activities related to these initiatives and measures,

		including with Indigenous peoples, other marine users, the Province of British Columbia and local governments, VFPA, and other relevant stakeholders. The public reporting should include an explanation of how these various initiatives and measures work together, the identification of any notable gaps, and plans for how those gaps will be addressed.
3	The Governor in Council should implement, with support from industry, a marine bird monitoring program to better understand impacts of all vessel use within the Salish Sea on marine bird species, including species at risk. This program would allow for the implementation of adaptive measures by the Government of Canada to avoid or reduce marine bird mortality and sensory disturbance.	The Governor in Council should develop and implement, with support from industry, a marine bird monitoring and protection program to better understand impacts of all vessel use within the Salish Sea on marine bird species, including species at risk, and, if adverse effects are found, implement mitigation from those impacts. This program should include adaptive management measures by the Government of Canada where warranted by monitoring results, to avoid or reduce marine bird mortality and sensory disturbance. This program should be developed and implemented in consultation with relevant marine shipping stakeholders and Indigenous peoples.
4	The Governor in Council should expedite the work in completing the feasibility study for establishing a Southern Strait of Georgia National Marine Conservation Area, publicly report on the outcomes of that study, and (if considered feasible) proceed to establish it.	The Governor in Council should expedite the work in completing the feasibility study for establishing a Southern Strait of Georgia National Marine Conservation Area Reserve, publicly report on the outcomes of that study, and (if considered feasible) proceed to establish it. Its potential establishment should include consideration of other initiatives under the Oceans Protection Plan, such as the Ports Modernization Review and the National Anchorage Strategy. This work should be done in consultation with potentially affected Indigenous and coastal communities and with relevant marine shipping stakeholders including Transport Canada, Canadian Coast Guard and the VFPA.
5	The Governor in Council should implement a suite of measures to offset both the increased underwater noise and the increased strike risk posed to Species at Risk Act-listed marine mammal and fish species (including Southern resident killer whale) due to Project-related marine shipping, at each relevant section of the marine shipping route (i.e., Strait of Georgia, Boundary Pass, Haro Strait, Juan de Fuca Strait, and out to the 12-nautical-mile territorial sea limit), and at the relevant times of year. Each offset measure should apply to all appropriate vessels for that measure (i.e., not limited to Project-related vessels). There should be periodic reporting that includes measured or estimated underwater noise and strike risk due to Project-related marine shipping, and the extent over time to which that additional noise and strike risk has been offset by measures that apply to all appropriate vessels.	The Governor in Council should develop an Offset Program to offset both the increased underwater noise and the increased strike risk posed to <i>Species at Risk Act</i>-listed marine mammal and fish species (including Southern resident killer whale) due to Project-related marine shipping, at each relevant section of the marine shipping route (i.e., Strait of Georgia, Boundary Pass, Haro Strait, Strait of Juan de Fuca, and out to the 12-nautical-mile territorial sea limit), and at the relevant times of year. Each offset measure should apply to all appropriate vessels for that measure (i.e., not limited to Project-related vessels), to be determined on a case-by-case basis according to the type of measure and the type(s) of vessels it is targeted at. The Offset Program should be developed and implemented in consultation with Indigenous peoples, other marine users, the Province of British Columbia and local governments, VFPA, and other relevant stakeholders. The Offset Program should include any further research and data collection that is necessary to successfully undertake it, including consideration of whether further information on the number of vessel strikes on marine mammals can be gathered. There should be periodic public reporting that provides, at the appropriate times, the information necessary to demonstrate a robust Offset Program. This should include measured or estimated underwater noise and strike risk due to Project-related marine shipping, and the extent over time to which that additional noise and strike risk has been offset in each section of the route, including the monitoring/modelling used to demonstrate that.
6	As part of Recommendation 5 to offset the underwater noise and strike risk added by Project-related marine shipping, the Governor in Council should further consider each of the following specific measures, each applicable to all appropriate vessels (i.e., not limited to Project-related vessels), and publicly report on the feasibility of each (including consideration of socio-economic effects): slowdowns in each section of the marine shipping route (i.e., Strait of Georgia, Boundary Pass, Haro Strait, Juan de Fuca Strait, and out to the 12-nautical-mile territorial sea limit) and	As part of the Offset Program in Recommendation 5, the Governor in Council should further consider each of the following specific measures, each applicable to all appropriate vessels (i.e., not limited to Project-related vessels), and publicly report on the feasibility and likely effectiveness of each (including consideration of navigational safety, international coordination and socio-economic effects): a) Slowdowns in each section of the marine shipping route (i.e., Strait of Georgia, Boundary Pass, Haro Strait, Strait of Juan de Fuca, and out to the 12-nautical-mile territorial sea limit).

#	Draft wording	Final wording
	that apply to all appropriate vessels; - potential limits on the number of whale watching boats (and /or their time on water); - explicit noise reduction targets for regularly operating ferries in the area; - identification of specific whale congregation and migration areas (including for resident killer, Humpback, Grey, and Fin whales, as well as basking shark) and consideration of specific routing and speed restrictions in those areas; and - further incentives and requirements for quiet vessel design to address underwater noise over the long term.	b) Potential limits on the activities of whale watching boats (such as the number of boats and /or their time on water, and other potential ways to limit their impacts). c) Noise reduction efforts for regularly operating ferries in the area, and an accelerated schedule for implementation. d) Identification of specific foraging, congregation and migration areas of the <i>Species at Risk Act</i>-listed species (including Humpback, Grey, Fin and killer whales, as well as Basking shark and Leatherback sea turtle) and consideration of mitigations in those areas (including Swiftsure Bank). e) Further incentives and requirements for quiet vessel design and refits to address underwater noise over the long term, including maximal participation in relevant initiatives and committees of the International Maritime Organization. Consideration of the above measures should include consultation with Indigenous peoples, other marine users, the Province of British Columbia and local governments, VFPA, and other relevant stakeholders.
7	The Governor in Council should review and update federal marine shipping oil spill response requirements. This review should include consideration of the following: - updating response organization standards; - response planning methodologies; - public reporting by response organizations to promote transparency of information; - inclusion of Indigenous peoples and local communities in response planning; and - a requirement for additional response resources on all ocean-going vessels.	The Governor in Council should review and update federal marine shipping oil spill response requirements. This review should include consideration of the following: a) updating the 1995 Response Organization Standards; b) response planning methodologies; c) response planning for <i>Species at Risk Act</i>-listed species, including marine mammals; d) how completed and ongoing research related to oil fate and behaviour and response methods and technology will be considered in response planning, procedures, and equipment; e) salvage requirements; f) public reporting by response organizations to promote transparency of information; g) inclusion of Indigenous peoples and local communities in response planning; and h) a requirement for additional response resources on all ocean-going vessels.
8	The Governor in Council should develop a regulatory framework for making enhanced tug escort mandatory in the Salish Sea for appropriate ocean-going vessels, including Project-related tankers. The framework should include oversight and enforcement mechanisms.	The Governor in Council should develop a regulatory framework for making enhanced tug escort mandatory in the Salish Sea for Project-related tankers. The framework should include oversight and enforcement mechanisms. Mandatory enhanced tug escort should also be considered for other vessels as appropriate.
9	The Governor in Council should, in conjunction with relevant United States regulatory authorities, consider the need for a Canada/United States Transboundary Vessel Traffic Risk Assessment.	same
10	The Governor in Council should accelerate the development and implementation of greenhouse gas reduction measures related to marine shipping that would support the final International Maritime Organization Strategy in year 2023 for reducing greenhouse gas emissions. These measures could include, but not be limited to: a) facilitating the use of low-carbon alternate fuels (such as liquefied natural gas) for marine vessels by developing any necessary marine safety regulatory framework, training programs, and bunkering infrastructure requirements; and b) market-based measures, such as providing economic	The Governor in Council should actively support the development and implementation of greenhouse gas reduction measures related to marine shipping that would align with the final International Maritime Organization Strategy by year 2023 for reducing greenhouse gas emissions. These measures could include, but not be limited to: a) facilitating the use of low-carbon alternate fuels (such as liquefied natural gas) for marine vessels by developing any necessary marine safety regulatory framework, training programs, and bunkering infrastructure requirements;

#	Draft wording	Final wording
	incentives for industry investment in the development and use of energy efficient technologies, and offsetting any increases in ship emissions. In implementing the measures, the Governor in Council could also consider a mechanism to establish and monitor such reductions and to develop regulations under an appropriate legislation.	b) use of energy efficient technologies, such as engine and propulsion upgrades and hull modifications; and c) market-based measures, such as providing economic incentives for industry investment in the development and use of energy efficient technologies, and offsetting any increases in ship emissions. In implementing the measures, the Governor in Council could also consider a mechanism to establish and monitor such reductions and to develop regulations under an appropriate legislation.
11	The Governor in Council should, in conjunction with Transport Canada and the Canadian Coast Guard, facilitate opportunities, as appropriate, to engage and seek feedback from the Indigenous Advisory and Monitoring Committee on the marine safety system, including on the marine inspections and enforcement regime; in addition to identifying engagement opportunities for Project-related marine shipping activities that intersect with Canadian Coast Guard operational programs.	same
12	(in place of Condition 131 from the OH-001-2014 hearing): The Governor in Council should, in conjunction with the Pacific Pilotage Authority and Transport Canada, continue engagement and awareness activities targeting recreational boaters, fishing vessel operators, and operators of small vessels with respect to safety of navigation and prevention of collisions with larger vessels. This should include incorporating the resources and information that Trans Mountain has already provided or will provide to the Pacific Pilotage Authority, such as applicable information on Project-related vessel timing and scheduling.	The Governor in Council should, in conjunction with the Pacific Pilotage Authority and Transport Canada, continue engagement and awareness activities targeting coastal Indigenous communities, recreational boaters, fishing vessel operators, and operators of small vessels with respect to safety of navigation and prevention of collisions with larger vessels. This should include incorporating the resources and information that Trans Mountain has already provided or will provide to the Pacific Pilotage Authority, such as applicable information on Project-related vessel timing and scheduling.
13	The Governor in Council should accelerate the development and implementation of the Enhanced Maritime Situational Awareness initiative and the proposed extension of the Automatic Identification System to smaller passenger vessels.	The Governor in Council should, in order to enhance the safety of all sizes of marine vessels, accelerate the development and implementation of the Enhanced Maritime Situational Awareness initiative and the proposed extension of the Automatic Identification System to smaller passenger vessels.
14	new	In order to foster a more rapid development and employment of new oil recovery technologies, the Governor in Council should administratively combine its current initiatives and investigate the use of new paths for the delivery of government grants and contributions in order to provide financial incentives to promote innovation in such developments.
15	new	The Governor in Council, in conjunction with Transport Canada, should review the federal marine oil spill compensation regimes with regards to compensation for non-use values, for Indigenous and non-Indigenous communities, including any non-coastal communities that may be impacted as a result of a marine oil spill.
16	new	The Governor in Council, in conjunction with VFPA, should develop a formal complaint resolution program that gathers community feedback, brings together diverse community stakeholders to facilitate discussions about port-related impacts, and resolves complaints about marine vessels anchored at the VFPA-managed anchorages.
